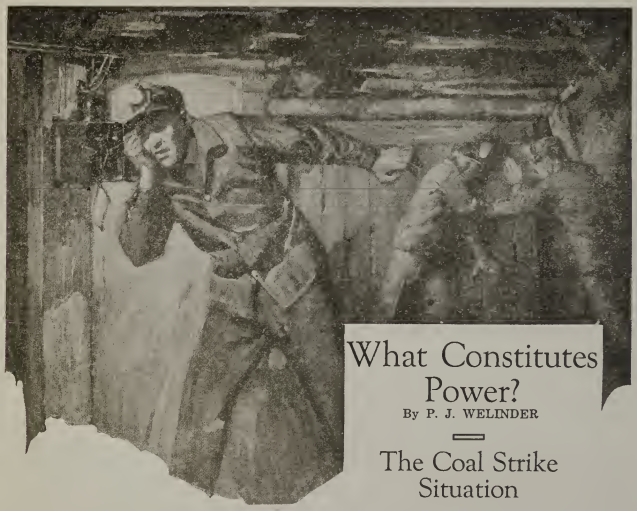
And so, we have our working class publications which have expressed the will of the wage slaves for power and freedom. The I. W. W. press has done much to make this class articulate; it has encouraged our members to develop their own arguments and to set them down black on white. We have depended almost entirely for our material upon the pens of workers. The drawbacks are not so great as to depend upon non-workers, professionals, who can never understand our mental processes nor know the attitude of the worker which can be known only through personal experience.

Heirs to the subject estate of chattel slave and serf, we proletarians in every corner of the globe have the greatest chance to observe and report facts whose nature prevents their publication in the usual channels of capitalist journalism. There should be a larger attempt made to report what we see, to make our message clear, to waken hope and to impel action among the workers. Material in abundance for articles and stories lies in all our social and industrial contacts. Let us make use of it. Let our increasing ability to state our opinions and to voice our aspirations be the harbinger of that coming literature of the free future.

**FIVE SHIFTS OF PHYSICIANS.**—When workers fall victims of illness they hesitate about sending for physicians because they know that medical attention is costly. Many of them perish for want of such care and for inability to follow prescriptions and advice calling for expenditures beyond their means. Doctors have a facile way of telling patients to get a change of climate, to take long rests, to eat good foods and to refrain from worrying. This prescribing is fatuous where workers are concerned. They are the useful members of society, and thereby are rewarded by having no property. They have nothing for sale but their labor power. Its price

permits only a bare existence when forthcoming; during periods of unemployment and illness little or nothing remains upon which to subsist.



Not so among the parasites of the rich. Mrs. J. P. Morgan, wife of the banker, recently died of lethargic encephalitis, a kind of sleeping sickness. During the illness she was confined to her palatial home on Long Island with five expert physicians in attendance, the very best that money can buy. They worked in shifts so that at no hour of the day or night was she without one of them. Of course they were assisted by a staff of nurses. In material goods, in all comforts, luxuries and leisure the useless members of society have an abundance and a surfeit. So, when ill they receive the utmost care guaranteed by a corps of doctors and paid for with wealth robbed from workers who can cut down on their rations when sick in order to pay doctors or line up at the free clinics where internes are busy practising on the paupers.

**TO BE SELF-SUSTAINING.** — Industrial depression has for a long period reacted very unfavorably on our press, to say nothing of further losses suffered through the late controversy. The latter contribution to lowering of circulation has gradually receded, and continues to fade out of the picture as the dissension agents lose such influence as they had and as they are being thoroughly discredited. Considering the decline in membership during the last year, this magazine and Industrial Solidarity have more than held their own, but neither of them is self-sustaining.

An estimation has been made which shows that with about two thousand additional circulation they can pay their own way. Without impairing either publication everything has been done to cut expenses, and we think that quite as good publications are being issued now as when circulation was at its highest point. We ask you to make a special effort to increase our circulation by keeping up your subscriptions and bundle orders and by introducing the publications to your fellow workers and friends. A decided advance can be made by this method.

With several industrial unions showing a membership growth in the last two months, we look to a rise in circulation from that progress. A. W. I. U. No. 110 has, of course, secured many members through its great organization drive this summer, and gains are reported by 310 and 510. This must have a good effect on our press. Let us do whatever we can to increase the circulation, thereby making our periodicals support themselves.

**THE POLICY OF THRIFT.** — Recently Brisbane, inspired word of the Hearst papers, deplored the lack of thrift in the American people. Because of it, and their unwise investments, he said most of them die with scarcely enough money to their names for payment of interments. This is the sort of pabulum that a gullible public is given to confuse an issue which needs but little light in order to be understood by all. Workers receive in wages just sufficient to maintain themselves and reproduce other slaves at a given standard. Saving part of these wages can not be conceived without deprivation, a reduction of their living standard. To save from our wages presupposes that we have learned to exist with less food, clothing and shelter than we previously consumed. And because labor power is a commodity bound up in the laborer, the cost of whose sustenance determines the value of the commodity, an inescapable conclusion is reached that thrift is not possible to the working class except as a very temporary venture certain to result in payment of wages reduced proportionately to the reduction in the living standard. It is not because of the "extravagance" of the workers that they die so poor that they must be buried at state expense or on the installment plan, but because they are so well exploited in the industries that any other fate is unthinkable. So far as investments are concerned, the one great, unwise investment the workers make is to invest their lives in a system of robbery where the cards are stacked against them and they can receive nothing but wretchedness in return.

# What Constitutes Power?

By P. J. WELINDER

## The Coal Strike Situation

**THE I. W. W., in its Preamble, as well as in all its literature and propaganda has constantly pointed out that real power can only be obtained from the industrial field. Those who control the industries also control society and all its functions.**

**Our position has constantly been assailed by those who see in our present form of governments a particular restrictive and deciding force, whose power extends beyond and above the industries, and who hold that the industries are subject to the dictation of the armed force of government and not the industries dictating to the government what course to pursue.**

**In the struggle waged by the British miners against their employers' attempt to lower their wages, which struggle recently terminated in a complete victory for the miners, we find the most convincing proof of our contention that only in our organized strength on the industrial field do we constitute a power in society.**

As the miners of the U. S. A. at the present time are also contesting, by means of a partial strike, the encroachment of their masters, it is certainly worth while to compare the struggle that is being waged by the American coal miners to the fight which recently terminated in a victory for their brothers of Great Britain.

In the Hearst papers we find the internationally-known capitalist apologist, David Lloyd George, shedding bitter tears over the impotency of the government against the organized strength of the British miners and their fellow workers in other industries. In the Sunday edition of the Chicago Herald Examiner for August 23rd, we find said "statesman" revealing himself to the following extent:

"In Britain, the homeland of European democracy, popular government received a rude shock when the government with its huge parliamentary majority, surrendered abjectly to a trade union frameup.

"A system of government whose sceptre shakes

in its hands with fear when confronted with a union secretary armed with a strike must necessarily lose respect."

Certainly the government loses respect when it surrenders to powers that are supposed to be governed by the government instead of governing its action. For years the workers have noted that "their democratic" governments have been solely run by the big owners of industries. The workers have long noted how shaky the hand of the government actually is when confronted with a real power from the industrial and economic field. Is it then to wonder at that finally the workers learned how to wield a similar power and to dictate to the so-called government what course to pursue? Of course, Lloyd George and his kind do not send out a war cry when the government shakes as a result of the command from the moneyed interests. It is only when labor speaks its command that it is wrong.

### Direct Action Gets the Goods

As to the value of direct action and organization on the job none speaks more eloquently in its favor than the "War Premier" of Great Britain. This is what he has to say:

"There can be no doubt in anyone's mind as to the character of the struggle going on. Workmen are already pointing out that Mr. Cook (labor representative) by his method of direct action secured greater results for the toiler in three weeks than Ramsay MacDonald managed to obtain for them in nine months parliamentary blether."

There we have it quite plain. We can obtain more in three weeks through direct action on the industrial field than through nine months of blethering in the parliament.

Of course Lloyd George describes this as a parliamentary victory for the miners, inasmuch as Mr. Cook is a member of parliament. Yet he must admit the fact that Cook could speak with such authority because he was armed with a strike. And let us state here that it was no small strike either. It was 1,300,000 workers who spoke through Mr. Cook, and it apparently made very little difference who the spokesman was and where he spoke. When more than a millon men, engaged in the basic industries, threaten to stop the wheels of production if their demands are not granted, one may rest assured that their voice will be heard whether they speak inside or outside the parliamentary building.

What was really the victory won? We are told that parliament granted a subsidy to the mine operators of fifty million dollars to guarantee the operation of the mines for six months at the old wage scale. It being assumed that the wage cut proposed would amount to that sum, or perhaps a little more. In other words, the miners of Great Britain were actually granted the tidy sum of fifty million dollars, or more, for a period of six months.

We will probably be told that, owing to the fact that the money is to be paid as a government subsidy it will reflect itself in added taxation and thereby reach the workers in another form than a wage cut. But it is not so.

### British Wealth Concentration

Recently we heard a parliament member state in the house of commons in London, that the wealth of Great Britain had accumulated into the hands of a few to the extent that two per cent of the people own more than 82 per cent of the wealth of the nation, while 82 per cent of the people own less than two per cent of its wealth. We were further informed that in the city of London poverty is so great that out of every seven persons who die, five have to be buried at the cost of the commune. It is a cinch, that those who do not leave enough behind them to take care of their funeral expenses, do not pay any taxes either. The fifty million dollars, to be paid from the national treasury, will have to be made up for by the capitalist class of Great Britain.

This fact, that the penalty has to be borne by the whole capitalist class and not only by the coal barons alone, gives to the question a far wider aspect than a mere strike of the coal miners could possibly do. The victory attained means simply that the whole British capitalist class capitulated before the united strength of the workers on the industrial field. The coal barons refused to be the goats alone, hence the combined forces of capital had to step in and shoulder the expense, and they merely used their government as a means by which to adjust the penalty.

And why did the whole capitalist class venture into the battle? Was it because of some particular high idealism, of solidarity between themselves? Nothing of that kind. It was because behind the miners stood the railroad workers and the marine transportation workers, who stated in very plain terms that unless the miners were granted their demands the industries would be brought to a standstill. Consequently it was a question for all the employers to secure peace and operation of their industries and thereby a continuance of their profit making operation. Hence they were willing to pay their share. The question was more than one of a coal miners' strike, it was part of the class war as a whole. As such it is so immensely significant.

### British Labor Solidarity Real

But this is only a small part of the story. The worst is yet to come. Listen to the next sob-spasm of our friend George. Under a sub-head "Grimmest Struggle Yet," he quotes the president of the National Union of Railway Men as follows:

". . . .they would see this year one of the biggest struggles that has ever taken place in the history of the railroads. This is going to be the grimmest, fiercest and most desperate struggle the railway men have had to face."

And then he proceeds as follows:

IN ENGLAND'S EARLY NINETEENTH CENTURY COAL MINING WOMEN PULLED THE LOADED CARS OUT IN THIS MANNER

"After Cook's startling victory, even J. H. Thomas cannot persuade his people to give in without striking a blow. What the railway and transport workers did for the miners, the miners and transport workers wil be expected to do for the railway men. The government may once more have to choose between national stoppage and subsidy."

Does not that sound very much as though Lloyd George began to understand what the workers mean with their slogan "An Injury to One is an Injury to All"? Apparently British politicians of the bourgeois type are better aware of the power of industrial unionism than are the labor politicians of America. Wonder whether the workers of America will learn as well.

### The American Mine Strike Situation

Now let us take a look at the situation in America. President Lewis of the United Mine Workers attempts to talk in similar tones as did the miners' secretary of Great Britain, and the master class merely laugh at him and the miners. A part of the miners are on strike, 158,000 miners in the hard-coal fields, while the miners in the bituminous coal fields are at work. Already the press pokes fun at them. We note the papers assure their readers that there is plenty of anthracite coal in the yards, besides the soft coal miners are working. Not even among the miners themselves do we find a united effort and an unbroken front.

But that is only half of the story. While the miners in Great Britain could speak with the railroad workers solidly behind them, likewise the marine workers, in America it is a different story. Employers are well aware of the fact that should all the miners strike at one time, their "brothers" on the locomotives and in the train service will bring in trainloads of scabs to fill the mines and bring out other trainloads of coal mined by the scabs. The "brothers" on the seas will likewise shovel scab coal to the best of their ability, and transport it to any part of the country that can be reached by water.

In the cities the truck drivers and the workers in the coal yards will gladly help to defeat their "brothers" on strike in the coal fields by handling all the scab coal they can lay their hands on, and all throughout the industry we will find the same

willingness on the part of the workers to scab on the coal miners. Under such conditions can you expect that the employers will do anything but laugh at the strike?

Already we find that the striking miners have reached an agreement with their masters to take good care of their mines, their mules and their machinery during the strike. So far there has been nothing revealed as to what the masters are going to do for the miners on strike, whether the contract stipulates that he is to take care of the miners' physical needs, feed their babies and their wives and see that no harm is being done them. One thing we may be sure of: neither Lewis, nor the coal barons will suffer any wants during this strike, nor after the strike is settled either. How it will turn out for the miners is a different story.

### The Lesson from Britain is Clear

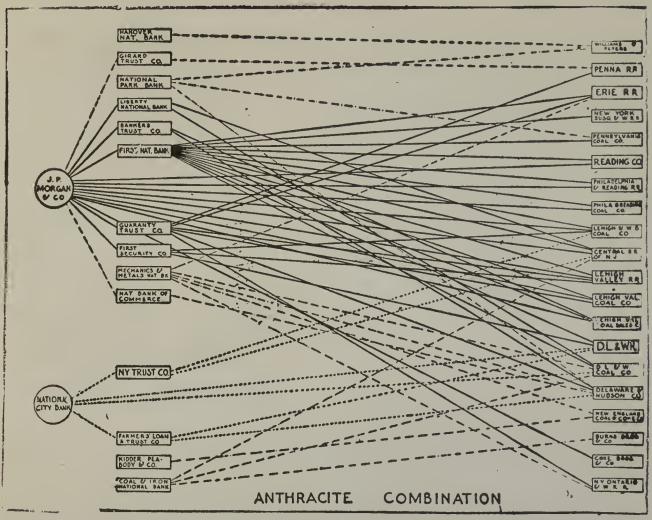
Fellow workers, is not the lesson derived from the British workers so obvious to all that we should not fail to benefit by it? Is it not clear to you yet, that we must organize as a class, and speak as a class, in order to win? Is it not clear to you that under the present system of organized scabbery we cannot win, but must constantly lose, and sink further down into misery and despair? If you can't understand that yet, then you are hopelessly lost. If you can understand it, and don't dare to act in conformity to the lesson learned, then you are equally much beyond hope of redemption.

In spite of the splendid victory won by the British miners they are confronted with a grave danger. The danger is not that the solidarity displayed by the workers of Great Britain will not endure. On the contrary that solidarity will constantly become more and more operative on the industrial field, and gain in momentum. No, the danger lies right here in America. And not only the workers in Great Britain but the workers throughout the whole world have a just cause to fear the workers of the United States.

With the highly developed machine technique in the mines in America and their richer deposits, as well as with a submissive and defeated group of workers in the mines, the danger is that when the miners in other parts of the world go on strike, the miners of America will be called upon to supply the demand for coal. Will the workers of America do it? It seems to me only logical to presume that they will. When we find that the workers within the boundaries of the republic do not hesitate to scab upon each other, they will not hesitate to scab upon workers in other countries. The real question in the present strike is: "Shall the miners, and the workers of America, allow themselves to be used as scabs in the class struggle of the world?"

We will, no doubt, in the near future, read many comments upon the coal miners' fight in Great Britain, and many interpretations and opinions as to the fight in general conducted by the workers over there. Wise people will turn their telescope upon

**When He Really Organizes Industrially and Internationally These Smiles Will Be More Frequent**



Great Britain and tell us and the astonished world, whether those workers operate wisely, and in conformity to this or that program; whether they are Marxists, Leninists, Socialists, Communists, or some other "ists." We will be so busy discussing the fight in Great Britain that we will have no time to organize over here, just as we have been so busily engaged the last seven or eight years in discussing Russia and Europe in general that we are unable even to secure a job over here at present, no matter how poor it may be.

### We Must Develop Our Unionism

If we intend to help the workers in Great Britain or elsewhere we can do it only by helping ourselves. By organizing, as they have done, and are doing, in solid industrial units, and talking together to the boss, not a few hundreds, or a few thousands, but a few millions. One million three hundred thousand workers in Great Britin made their exploiters come to terms. Twice that number in the basic industries of America can accomplish the same feat.

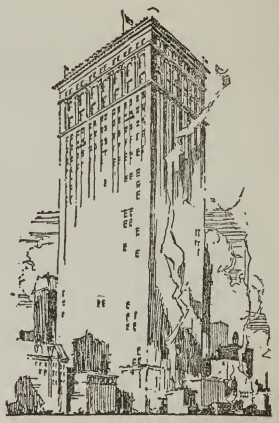
The miners, the railroad workers, marine workers and the steel workers, organized as a class, in solid industrial unions, all of them combined into One Big Union, who speak with one voice and act with one will, is the supreme dictator in America. With those workers organized we will have all the other workers equally well organized. It will then be no talk either about transporting scabs on the railroads or scab coal, neither of handling any scab-produced commodities anywhere. As it is, we threaten the whole world with being the supreme scabs of the world.

A remarkable feature of the British miners' strike is the absence of talk of coercion. We heard

**THIS MAP SHOWS HOW THE OWNERSHIP OF THE ANTHRACITE MINES HAS CONCENTRATED, AND THE TWO CHIEF BANKING DICTATORS**

nothing about mining coal with bayonets, of running the railroads with machine guns or navigating the merchant marine with torpedoes. Evidently it was found out that such phrases are of no avail when the workers are really organized. Peaceful strikes and the class struggle proceeding without bloodshed depends upon our organized strength on the industrial field. As a matter of fact, once really organized we will attain our goal without even a strike. The settlement in Great Britain indicates this quite clearly.

### I. W. W. Tactics Prove Correct



The I. W. W. finds its theories and its principles proven correct in our actual struggles on the industrial field. The I. W. W. is the only organization in the United States that advocates a sound industrial union. It is within the reach of every actual wage worker, through its low initiation fee and its low dues. And through its universal transfer system without any cost to the members, it serves equally well in all industries.

You miners especially, and all you workers in the industries in America, will, similarly to the workers of Great Britain, learn that only on the industrial field lies the real power in society. You will learn that sooner or later you MUST organize as industrial units, welded together into One Big Union of all the workers. The only such instrument at your disposal today is the Industrial Workers of the World. We have the tool here already, waiting for you to take it up and use it for your own benefit. Why don't you act? Why permit yourselves and your loved ones to live in misery and starvation when all that is needed is to speak together and act together, and you will enjoy a full and happy life together?

Fellow workers, refuse to be the scabs of the world! Refuse to be an instrument to wrench the fruit of other workers' struggle away from them. Organize together and secure for yourselves what other workers are gathering every day ,and eventually make it possible for all the workers to secure for themselves the full social product of their toil.

Join the I. W. W. today.

# Industrial Unionism and the Building Trades

By CARD No. 838639

**THE history of no industry depicts more clearly the weakness of craft unionism and the necessity of industrial organization than that of the building industry.**

**In spite of the usual glowing accounts by designing labor leaders and prosperity boosters about the big wages paid in the industry there is probably no class of workers a larger percentage of whom are living in rented homes than they who build the homes and office structures of this country. And despite the relatively high wages paid, in some instances, when we take into consideration lost time from various causes and the speed-up system in vogue, particularly on union jobs, it is doubtful if the average building worker receives as large an income per annum or in proportion to the amount of energy expended as the average in other lines.**

True, the worst forms of unionism will sometimes benefit some of the members, thus demonstrating the truism that in union there is strength and the absurdity of the individual trying to go it alone in this age of combinations. Yet there is reason to assume that a broader system of unionism would have done better in the same instance.

### Craft Unionism Digging Its Own Grave

In the past the building industry has afforded a fairly fertile field for the development of craft unionism. The different mechanical trades have not been subdivided, or in some cases, completely obliterated as in certain industries. Owing to the peculiar nature of the building industry there has not been the degree of large scale production and labor division that has prevailed elsewhere. Also the craft union leader with his habit of scheming with the small contractor, who has been able to hold on longer than in most industries, has been able to take advantage of the intermittent character of the work and convert the union into a sort of job-peddling agency and force workers to join and through a system of high initiation fees and dues he has contrived to build up a job monopoly which has greatly enhanced his power and prestige so that the professional labor leader with dictatorial powers has been more conspicuous in the building game than in any other.

However, though it may be true that the worker in the building industry has been able to benefit himself somewhat through craft unionism there is at the same time no reason to doubt that he has generated more sentiment against unionism than any other worker. The high sounding character of the wage schedules has created the impression that he is more exacting and unreasonable in his demands than other workers as the public has not

been is the habit of taking into consideration the condition under which he works. Also, in the practice of refusing permission to prospective apprentices to enter the trades, particularly in the case of plumbers and electricians (who have so completely surrounded their jobs with a network of rules and restrictions as to render it practically impossible for a person to get into the trade unless his forbears have been in it before him, for outsiders are forbidden to enter the apprenticeship as long as a member has a son desiring to do so and they have so carefully limited the number usually about five journeymen to one helper or apprentice) as practically to establish a system of hereditary titles and privileges in the building game. It is no wonder, when unions go to this extreme to outrage every principle of decency and fair dealing that they should generate a spirit of antagonism and distrust for all forms of labor organization. Acts of this kind go a long way to bolster up the open shop movement, not only in the building but in all industries, as the act of one union can reflect discredit to all.

### Craft Unionism a Fertile Field For Graft

Then there is the question of graft. While graft is not peculiar to craft unionism and will sometimes creep into any organization in spite of "eternal vigilance" there is no denying that there is no more fertile field for graft than the craft union, particularly in the building industry.

To cite a few instances: In a certain city where the writer was fairly well acquainted with the situation it was the custom in the carpenters' union, for the business agent to welcome a non-union carpenter with open arms providing he was willing to put up one-third of the initiation fee of thirty dollars and promise to pay an additional sum of ten dollars per week until it was all paid in. The official would then hustle him a job and keep him at work, in spite of the fact that other members were idle, until the money was paid in and he had collected a few months' dues. Then all at once the new member would learn that his friend was losing interest in him and whenever he showed up at headquarters in quest of a job he would read him an awful tale of woe about slack work. But he soon learned that other new men were being taken on to be later passed to the breadline when they had contributed their share to the fund out of which the official was drawing his fat salary and padded expense account.

The electricians had a different way. Although they were inside wiremen and mostly on dead wires or light voltage at the worst they insisted that every candidate should pass an examination claiming that the extremely hazardous nature of their business of hanging bells and running conduit pipe rendered it unsafe to permit any but thoroughly competent persons to work at the trade. The applicant had not only to pay the exorbitant initiation fee out of which the officials were paid

MODERN METHOD OF POURING CONCRETE FOR SKYSCRAPER

their salaries but had also to grease the itching palms of his henchmen who served on the examining board. They had another neat little scheme for coaxing along a little loose change. There were a number of students at the near by state university studying electrical engineering who were anxious to secure a little practical experience and a few dollars of spending money. So when vacation season rolled around the gang at headquarters were ready to read the idle members the usual tale of woe about slack work while they smuggled the college lads out on the jobs and shook them down for a couple dollars a day for the privilege of working.

Most people have heard of the famous (or maybe we had better say the infamous) Sam Parks. Probably a no more unscrupulous bunch of rowdies ever gathered together in an organization than were grouped around this character in the downtown district of New York. If you were a member of the structural iron workers it was as much as your life was worth to show up around headquarters unless you were in strict accord with the bunch that was running the show. All New York contractors were forced to pay heavy tribute to Sam Parks to prevent their jobs being constantly

tied up in sensless strikes and as long as they paid there was no labor trouble no matter what the conditions were and the small bunch of thugs were kept in line by being handed the choice of jobs and other petty favors. An idea of the extent of his graft can be had from the common report of that time that the most expensively dressed woman in New York was the wife of Sam Parks and of course Sam, himself, was no piker when it came to spreading the change.

### Graft and the Industrial Union

One could go on for pages citing instances similar to the above, but these few have only been introduced in the way of examples to show how the craft union furnishes a receptive soil for graft both petty and great. The above could not have occurred in an industrial union of building workers such as Building Construction Workers' Industrial Union No. 330, of the Industrial Workers of the World, no matter how many Sam Parkses or crooks of a lesser degree might be working under its jurisdiction. In the first place 330 is a part of the I. W. W. and subject to the general constitution, and under the rules it would be impossible for anyone to stand in the way of any worker getting or holding a job. No one could secure a position in the union where he could dole out jobs to favorites. While members of the I. W. W. always try to assist their fellow workers as much as possible in the matter of securing work by giving out information about jobs and employment, no official is ever allowed to act as a go-between and whenever there are more than seven members on a building they form a job branch and elect their own committees and control the job so that no group around headquarters is permitted to call a strike or say who shall work. A strike can only be called by a majority of the men on the jobs. It is easy to see here that a strike could not be called on or off without the consent of a majority of the men concerned. It is a common thing in the craft unions for an official or ring to call a strike just for the purpose of handling strike funds and to sell out a strike by calling it off just when it is about to win.

### Building Industry Ripe For Industrial Unionism

Nothing has so far been said in this article about the many advantages of the industrial form—the "One Big Union" of building workers—over the "57 different varieties" of craft unions with separate contracts expiring at different times and all working on the same building for the same boss. It has been repeated constantly in the last ten years by the speakers and publications of the I. W. W., and without any effort worthy of mention on the part of the opponents of industrial unionism to refute the arguments, so that it has practically come to be recognized that the "One Big Union" for all wage workers is the union of the future. However most workers are simply holding back waiting for the union to gain more strength, never stopping to think that it is the province of no particular worker to be first and if we would all try to be first instead of waiting for the other fellow the problem of getting the new union started on a large scale would be a very simple matter.

There is no question but that the present is the opportune time for a change in the methods used by the building workers in this country. The building industry is fast falling in line with the more advanced industries and is industrializing the building process and particularly where the open shop has been established the old trade lines are rapidly being obliterated. In San Francisco and vicinity, where for twenty years the building workers boasted of the most solid organization and greatest power of any place in the country, the open shop has been in vogue for four years and only a mere shadow of the old unions remains. Where only a few years ago a carpenter's helper was not allowed to handle tools he now has turned his former work of handling material over to the laborer and with a small kit of tools he works right alongside of the carpenter, it being the rule that the carpenter is to advise the helper and the helper to consider the advice. Otherwise their duties are about the same. In Detroit, the most advanced industrial city in the world, the complete open shop is established in all the different industries and the conditions are deplorable. Men were being sent out from the building exchange employment office during June and July of this year, to wheel brick and concrete for 50 cents per hour. Building mechanics are working at from 75 to 90 cents per hour all through the Eastern Central States, except for a few union jobs in Cleveland, Pittsburg and Chicago. Unskilled men who are not more horses than men should not try to get by on any of the union jobs in the above named towns. They get from 80 to 95 cents per hour if they are horse enough to stand it, but it will even get horse in time.

In fact, unions are in many cases only held together by a system of speeding up and handing it to the little fellow when they get a chance. The wages are higher than in non-union places but to keep up the reputation of your union you often have to do more work than the non-union man you accuse of being cheap. What is the difference between the man who lays fourteen hundred bricks for fourteen dollars and who spends the half of his time chasing a job and the one who lays seven hundred for seven dollars and works all the time?

### Proof that Wages Are Smaller In the Building Industry than in Most Other Lines

Mention has previously been made of the intermittent character of building work. Take, for example, the most numerous class of building workers, the carpenters. I am certain that the average carpenter cannot bank on more than two hundred days' work a year. When he is not held back by

the weather he is waiting for the laborers to finish the ditches and get the foundation laid or it is a car of lumber that has not arrived on time. He is also lucky if he has not to spend another hundred days hunting the work. Well, a carpenter in Cleveland will get ten dollars a day and the same in Chicago, in Detroit or San Francisco about eight dollars. In Los Angeles he gets about five dollars a day, if he gets anything at all, and in Toledo and other small places from six to seven dollars. It is safe to say that the average for carpenters throughout the country is less than fifteen hundred dollars per year or less than five dollars for the three hundred days that the average man will work if given a chance. This is less than a mail carrier or street car conductor will earn at easier work and with much less skill. Take the next most numerous, the laborers. They may earn between six and seven dollars a day in Cleveland or Chicago; in San Francisco four-fifty to six; Detroit and other eastern cities four dollars and in "Lousy Angels" from nothing to three-fifty. Well they work fewer days than the carpenters, so it is doubtful if they earn seven hundred and fifty a year or two and a half dollars average for the three hundred working days estimated for average work of the steadily employed. They can get a room fit to sleep in in any eastern city for five dollars a week and a meal that will generate the necessary energy to enable them to do the work can be had at a cheap restaurant for fifty cents or they can get board and lodging for ten to twelve dollars a week if they are willing to sleep where they are put and eat what is given them. Being mostly negroes and foreigners they are forbidden to invest in summer cottages on the lake. You know Jews, negroes and foreigners are not allowed to occupy the choice locations in the resorts in the region of the great lakes. Catholics are for the present, at least, recognized as human being in the land of supermen. All the foreign building laborer has to do to be respectable is to remain uncomplaining on the job for five years, learn who is president and the judge will give him a voting permit. With the negro it is simpler still: all he has to do is to stay in his place that has been prescribed for him by his 100 per cent American "superiors." This means that he is not supposed to flash around with white women or sleep in the Hotel Statler with the 25 cents he has left at the end of the week. However he is at liberty to spend it for a shave. It is claimed, by some, that the negro is, more and more, coming to appreciate the great things that he enjoys under the stars and stripes.

### Room For Improvement and Condition Not Hopeless

However, we of the I. W. W. believe that there is not only room for improvement in the condition of the building worker but a chance to secure that improvement as well. We also feel that the experience of the last few years teaches that that improvement cannot be gained by adhering to the wornout system of craft unionism. We feel that we are justified in suggesting that it is the duty of the building worker of today to join the Industrial Workers of the World, for it is not enough that you stop thinking of yourselves as craftsmen and laborers and view your condition from the larger aspect of a building worker, but the time has come for the workers in all industries to realize that they are a part of the working class of the world and that a man working in the building industry in this country is duty-bound to concern himself just as much about the conditions under which the worker works who produces the rubber out of which the tires are made for the truck that furnishes him with the material as the man of his own craft who works alongside of him. Wages, like water, will seek its own level in time and the wages in one industry will be forced to the level of the lower wage industries unless the workers in the other industry are organized and their wages advanced. We find this at present in the coal mining industry. The miners have organized on somewhat broader lines than most workers and for that reason there is no industry where the wages and conditions have improved as those of the coal miners. From being almost the lowest paid workers they have risen to the position of

almost the highest. However, with the campaign that is now being waged against the miners by the big moneyed interests that control the mines, it begins to look as though the miners are soon to take their place against with the lowest paid workers for the non-union fields are being used to flood the market with the products of cheap labor while the union mines are practically idle.

The miners will learn in time that nothing but a union of industrial workers of all the world that will not only include the workers that mine the coal but those who transport it and burn it as well, will suffice to meet the big combinations of capital that today rule the world and the building workers have the same lesson to learn. As long as men are working for starvation wages in the factories the only effect that will follow a rise of wages in the building industry is flooding the industry with masses of men clamoring for the work. An example of this was experienced in a small way right within the industry a few years ago when the wages of the building workers were materially decreased in Los Angeles the San Francisco Bay district was so crowded with a flood of workers that in spite of an unprecedented boom in the building line and their better wages they were worse off than in the southern city, for when one job was finished often more time was consumed trying to locate another than was worked on the last one.

### Wages, High Rents and Real Estate Values

In conclusion we will consider the oft repeated claim that the high rents that prevail in this countr are due to the "high wages" paid in the building industry.

Strange as it may seem to some, I want to start out by denying emphatically that the wages paid in the construction of a building have anything to do with the price charged for the rental of that building. Rents like wages fluctuate in strict obedience to the law of supply and demand; wages going up when there is a demand for workers and rents going up when there is a demand for houses and vice versa. It is generally supposed that high wages make houses dear and therefore force an increase in the price of rent. This is an error. The amount of wages paid out on a house has nothing whatever to do with the amount charged afterwards in rent for the house or the price for which the house may sell on the market.

What is the reason that rents are higher, say, in Los Angeles than in San Francisco with wages often almost double in the bay cities? They are lower in Chicago and in Cleveland than in Detroit, yet building mechanics work for from one to three dollars per day less and laborers on buildings for almost half.

Now what determines the price of a building? The supply and demand for houses. Not its initial cost. A cottage sells for $5,000. Why? Simply because under the circumstances there is a sufficient demand for houses like it so that the buyer has reasonable expectations of renting it at a rate that will render the $5,000 price a good investment. You may also find that the house can be replaced at the present rate of wages and price of material for $3,500 and you conclude not to build, but when you come to build you will find that you cannot hang your house on a cloud or build it below high tide mark. In other words you need a lot to set it on and when you try to buy a lot you will find that the price of the lot is just $1,500 and when you investigate the real value of the lot you will find that it is probably worth about twenty-five dollars. How come the other $1,475? It is simply the difference between the wages you got and the wages you would have got if you had had sense enough to make the boss come through with twenty dollars a day instead of ten when you built the house and in which case the price and the rent would be exactly the same. In other words: when you work cheap you help the speculator and not the consumer of your product.

Another thing to remember: When they tell you that high wages discourages building and creates unemployment they are again spoofing you. If you have any sense you know better. Speculation causes unemployment. There is always more building when wages are high until the speculator gets his work in.

At the present time the country is going through a period of unprecedeented real estate speculation. Everybody is going crazy and a hundred lots will be sold for every one that will be built on in this generation. Figuring the average price of a lot at one thousand it means that for every home that will be built ninety-nine thousand dollars that would have otherwise been spent for consumable commodities is being withdraw from circulation and sunk in the ground. There will be that much less money available to purchase the commodities that were produced when that money was being earned. No wonder jobs are getting scarce!

The remedy is for building workers to join the I. W. W. and make wages so damn high that there will no longer be any speculation in lots. A good way to start would be to make our slogan for next season: "Six hours a day and a dollar and a half an hour as the minimum wage for building workers." This will help some but of course the rest of the workers will have to come to our support by similar demands in the factories.

# The Work Peoples College

By KRISTEN SVANUM

IN THE working class movement three trends of thought can be traced. For simplicity's sake they may be called the conservative, the radical political, and the radical industrialist.

The essence of the argument of the conservative trend has been given by the sociologist L. F. Ward among others. It is a very logical argument and presented by him in a forceful and erudite manner. Though his works are much read among unionists, both conservative and radical, it would be a mistake to believe that their educational program is taken from him; but as he covers the ideas of the conservative so admirably, an outline of his main contentions can serve as an outline of their program.

Ward considers all shortcomings in our social system a result of the unequal distribution of knowledge. As long as the struggle between capital and labor, with some degree of correctness, can be described as a struggle between knowledge and ignorance, there can be no hope for labor to be victorious.

For that reason, Ward, and with him practically all the conservatives in the labor movement, see no other possible solution of the social question but through a "wide diffusion of scientific knowledge among the masses."

They point out that the great mass of people are essentially alike, with a small percentage of morons at one end of the scale, and a still smaller percentage of geniuses and near-geniuses at the other end.

While the radicals agree to that, they consider a task of that kind too gigantic to be feasible. They claim with Friedrich Engels, for example, that as long as the workers are working such long hours that they—after the working day is over—consider themselves too tired for study and for participation in the general direction of society, it is utopian to speak of and to aim at a "wide diffusion of scientific knowledge among the masses," and the resultant coming into power of the working class.

For that reason there is a divergence of opinion between radicals and conservatives when it comes to the choice of subjects and aims of labor's educational movement. The radicals claim that on account of the limited supply of funds and men it is wasteful for the labor movement to spend what little it has on education along lines where the class point of view can not be involved.

Sciences like mathematics, chemistry, physics, etc., are normally taught in a straight and unadulterated form by all educational institutions. If a worker wants to study those subjects, he can do so without going to a labor college or school and get as good or perhaps better results than he would get there.

On the other hand there are subjects like history, economics, etc., practically all the social sciences, that are subject to a systematic perversion by educational and scientific institutions that are controlled by the same financial interests controlling the big corporations.

For that reason the radical labor educators want the labor movement to concentrate its efforts on these subjects and only to take up the other and neutral subjects incidentally.

The cleavage among the radicals is caused by the difference in opinion between them as to how the capitalists are controlling society. The Plebs League in England, being one of the most successful movements of political radicals, may be considered a somewhat authoritative expression of that line of thought.

In a Syllabus for Classes, the Economics of Capitalism, in the March 1924 issue of the Plebs Magazine the following question is asked and answered:

"How do the capitalists keep their monopoly?"

By monopoly of political power (a) control over the state. This enables them to control military force, the administration of law, etc. (b) By monopoly of forming opinion—press, education, etc."

As the syllabus has been subjected to "modification and criticism by numerous comrades" it can

hardly be considered unfair to take it as the point of view of the Plebs League on this question.

The radical industrialist takes issue on this point. He can not consider this an explanation; to him explaining one monopoly by another is simply begging the question.

For him the problem is: How can a comparatively small group of capitalists retain their grip on the ownership of the means of production and thereby control the distribution of the products made by them?

It is outside the scope of this article to defend or prove the theories of the radical industrialists, so we shall simply state them here.

Originally the function of the capitalist employer was the direction of work. His ownership of the means of production went unchallenged for two reasons. It seemed in accordance with the tradition of the producer owning his own product, and he was necessary to bring together the means of production and tne propertyless wage worker. After they were brought together the work of supervision was done by him, the owner.

In modern industrial society ,the function of supervision has gone over to what L. Boudin has called the new middle class. Their income depends on their loyalty to their employer, and they are for that reason, consciously or unconsciously, biased in his favor when it comes to decide whether he is entitled to ownership and control of the means of production and the products turned out by his wage laborers.

This control of industry enables the capitalists to control governments and the agencies formulating public opinion, and not vice versa.

The three trends in labor education are then only reflections of three main currents in the labor movement as a whole. They are not rigidly defined, but merging into each other. They represent here in the United States the point of view of three organization groups: The American Federation of Labor, the socialist and communist parties, and the I. W. W.

The need for education has always been more emphasized by the radicals than by the conservatives, and with their small funds and limited personnel they have been doing much more educational work. One feature of the work has for a long time been neglected though, by radical factions as well as conservative, viz., labor resident colleges.

Only in the last couple of years a new departure has been made by the A. F. of L. in that direction by establishing the Brookwood College, the Rand School having served instead of a residential college for the socialist party and elements in the trade unions sympathetic to is.

But the pioneers in that line of work have been the Finns. Already in 1906 they started out on the venture of establishing the Work Peoples College, first under the auspices of the Socialist party and later under the auspices of the I. W. W.

It has now functioned continually for 19 years and has in that time enrolled and educated over 1,000 student workers that now are active in the political, union and co-operative movements.

It gives the lie to pessimists who claim that working class and co-operative management is always inefficient. In all its existence it has been able to pay its employees a little over ordinary wages, and at the same time not charge its students any more for board, lodging and tuition than they would be charged in an ordinary boarding house for the same kind of board and lodging alone, and it is in that manner practically giving tuition free.

From a beginning in a small national group it has expanded until it counts among its students workers of all nationalities, including a great percentage of American born.

Its teachers have come from the rank and file of the labor movement and have never lost touch with it, though many of them have used their vacations for further study and have graduated from state and other universities.

My experience with the Work Peoples College last winter has convinced me that all programs of action for the labor movement must emanate from inside the ranks of the labor movement itself.

Whatever help the labor movement may have from elements outside its ranks, it is an indisputable fact that such outside material must be absorbed and digested. One of the places where it can go through such a program, and where it can be scrutinized before accepted, is the Work Peoples College.

# The Shame of California

This is the title of a new pamphlet to be issued in a few weeks by the General Defense Committee to raise funds for all Class War Prisoners in a Christmas Drive. The pamphlet contains a large number of working class poems inspiringly written by Henry George Weiss, whose excellent revolutionary verse is well known to our readers. He has donated the poems, and all money derived from sales will be used for the Class War Prisoners. The pamphlet is to be sold at 25 cents a copy. A 40 per cent discount will be allowed on orders of 10 copies or more. If you believe in doing all that is possible for the relief and release of Class War Prisoners you should show your spirit by sending in your orders without delay, thereby assuring success to this means of raising money for our prisoners. Address: General Defense Committee, 3333 Belmont Ave., Chicago, Ill.

# Defensive?

OUR artist says that this is the way the patriotic jingo views "Uncle Sam" and his neighbors, always picturing "our fellow earthfolk as a savage, blood-thirsty beast about to pounce upon poor, harmless, angelic Uncle Sam, whose sole defense consists of a pea-shooter—and **he has no peas!**"

Yes, this is a convenient way in which to shift responsibility when military aggressions and wars come. Always the nations are armed **solely** for defense. Although the world war ended officially seven years ago writers for the different European powers which were belligerents, have been kept busy fixing the blame on the "enemy" for the precipitation of the tremendously savage and destructive conflict.

War is so terrible no state can suffer itself to be regarded the aggressor, yet all of them, proportionate to their power, are aggressive, and capitalist expansion of necessity promotes wars.

American imperialism set in quite definitely at the time of the war with Spain, and American statecraft from that time forward has been assiduously engaged advancing the empire of big business. All the acts of violent invasion, of plunder, of murder that reprehensibly stamp the memories of the Attilas, Khans, Pizarros and Bonapartes have been matched in miniature by the armed forces of the United States in this movement for commercial development. Witness Central America, the Philippines, Hawaii. And what has been done on a small scale is merely a forerunner of what is to follow as the needs of the American ruling class dictate.

When the hired assassins of five powers recently put down the Shanghai strike the first to land were American marines. China looks very appetizing to our master class robbers.

# Beyond the Barriers

By WARREN LAMSON

DURING the time that the San Diego free speech fight was in progress, in 1922, among the large number of men held in the city jail, where I too was confined, I met and became friends with a certain man. For the purposes of this narrative, I shall call him Ernest Schultz.

Occasionally, when our various means of whiling away the time palled I sought the end of the top of the cage, where he had his blankets and was usually to be found. He was well past the prime of life even then. He was a tool and instrument maker; and opened up a new and charming philosophical world to my untrained, but curious mind, always using the tenets and principles of tool-making to make his points clear. (Thus in my earliest days in the revolutionary labor movement I learned to think of something to be done, as possible only with an adequate instrument). The old man had not been highly educated, but encompassed the greatest amount of general knowledge I have ever come in contact with. No matter whether it was Marx, Bacon, St. Augustine, Pythagoras, Plato or the latest addition to the world's best thought, he was familiar with them all.

On my coming to Chicago some two years ago I was one day delighted to find that Ernest was living in the city, and particularly when discouraged sought strength from his serene character. And so not many weeks ago I sought him out. Two rooms and a small closet the old man occupies, furnished by purchases from second-hand stores, the outstanding features of his quarters being economy of effort, and books. Books everywhere, on the dresser, the table, the floor and in a hand-made case—a transformed drygoods box—books whose names always inspire me with envy and a desire to possess.

Having seated myself, I exchanged a few comments with the old man; his still massive frame seated upon the bed while I, his guest, had his big soft-cushioned chair. We talked a while longer; the old man turned on the light; till I finally set forth the cause of my discouragement, the apparent unhappy state of the entire revolutionary labor movement in America.

Then Ernest Schultz, as usual when some opening for riding his hobby occurred, began talking; his discourse proceeded first upon the need of a proper instrument to bring about any desired change, and closed with another disquisition upon how mankind would flower and unfold in a free society; during which time I hardly spoke a word, till at last in the early morning hours, he brought his dissertation to a close: A superb and complete statement of the possibilities of the race should certain means be utilized.

I listened rapt with interest, but am able to remember and commit to paper, in my own poor style, only the high points of his long monologue; much of it was too subtle for me to grasp thoroughly enough to reproduce.

### The Instrument In the Making

"You will pardon me, I know" began Ernest Schultz "for quoting Nietzsche; but this saying of his is one I like and runs as follows, 'Free from what? What doth that matter to Zarathustra! Clearly, however, shall thine eye show unto me: free **for what**?' Of all of the revolutionary groups, the industrial ones are closest to my heart. I first enlisted in the revolutionary movement some forty years ago, when there was not even a concept similar to that of the industrialists, nothing resembling them in thought or organization, but today more people accept the conception of an industrial democracy than then accepted the vaguest socialistic ideas.

"The chief trouble with all of the revolutionary groups today is that the new social order they visualize so completely concentrates their attention that they give but scant consideration to the instrument needed for the task they claim their own. In fact, some of them, from all appearances, give less thought to this social tool than the most illiterate clod-buster will give to the choosing of a tool to dig holes in which to set fence posts; this causes them all to the mere observer often to appear as rather shallow, narrow, bombastic phrase-mongers, surely most inadequate to the task they have chosen.

"When one has more knowledge of their methods, then while one is compelled to admit that they have much of value to contribute; that while those who accept the industrial method have even given some superficial thought to the instrumentality, they are still a long way from the perfected organization. He is also compelled to come to the conclusion that should the next step in social development be one in which the working class shall achieve freedom from economic exploitation, that the instrument they must wield is still in the process of development.

"Now, when we consider any job to be tackled, we must also consider the means—which must never be confused with the end—we will use, in this case, a working class organization, but this does not sufficiently describe the instrument needed. Just as a mass of unshaped iron is neither a sledge nor a spade, just so it is necessary to give shape

and purpose to the mass before it can be termed an instrument. Very well, the premise that the next social change shall be one in which the working class shall achieve freedom from economic exploitation, necessarily carries with it the supposition that the social structure or organization achieved shall be one which is concentral and founded on democratic principles, with a complete absence of any high degree of centralized authority, and this requires as a prerequisite that the instrument shall be likewise constructed—you cannot mold an injector by pouring molten metal into a water bucket.

"Now that I have opened up three subjects often liable to misinterpretation, I shall define in what sense I employ them. The first is democracy, this term, so I am informed by all historians, was used to designate the social organization of the ancient Greeks. Now, as ancient Greece consisted of city or town states, it follows that the citizens of one such city had nothing to say; no voice, no vote in the affairs of another. Thus "Demos" the rule of the people implied the rule of a quite limited number of persons, in an exactly defined district or locality, over themselves. So I employ the term to imply that the franchise of no person shall be extended into all matters, not equally important to all. That it shall be limited to those concerned, and extended only on matters in which all are equally concerned. Thus, textile workers in Lowell, Massachusetts, would have complete autonomy over their work, free from all interference from textile workers elsewhere, and all other groups of workers any place, with the exception of those matters which are of equal concern to the textile workers elsewhere, or the people of the locality, district or continent as a whole.

"The second is the absence of any high degree of centralized authority. (There would be a central authority, with greater power than any body now in existence, but it would be limited in scope, and would not unnecessarily obtrude itself upon, nor drain, the units composing the social system which it governed) which is not democratic, but which also implies a separate governing class, a bureaucracy, or some method of administration which would be the negation of freedom from economic exploitation.

"The third, that the instrument must be constructed in a similar pattern to the social change or order to be achieved.

"A view of the social changes taking place in the world today, shows that these changes proceed closely along lines contained in dominant ideas accepted by the people undergoing them; thus a dominant idea that labor is vile may render the most brilliant minds sterile, in all but mental gymnastics and subtleties, as in most of the ancient world, including Greece, which was based upon slavery and held labor vile. A dominant idea that the body is vile, and its pleasure abominable would have an entirely different effect from its opposite. Very well, the nexus between the idea to be made dominant and the nature and structure of the instrument is obvious, that is, an organization cannot differ in theory and practice without the theory becoming perverted.

"Then there remains but one way for the instrument to be shaped. All constructive power and administration of detail must reside within the industrial divison and as much as possible within the economic unit of the division. Over and above such units and divisions must stand the inhibitive administration of the whole of them. Such inhibitions must of a necessity be few, and must have the support of more than a majority of the populace to become operative; for a society with a tradition of freedom, and a complete absence of economic enslavement, will not otherwise submit to the enslavement of its units by the mass. One of the outstanding reasons why the revolutionary groups of today cannot be said to have a perfect instrumentality is the prevalence of a type whose impulse is to regulate all life to a uniform pattern, and this noxious type feels the impulse to punish any violation of their drab uniformity. They speak the language of the hangman. Their hands like the "crooked claws of Deipeithes" feel the itch of the noose. This type would pervert all of our visions of the future; not satisfied with economic security and adequate educational methods in an Industrial Democracy they would seem to desire to regulate all of the aspirations, appetites and passions in their vision of that future day.

"You will see that the final instrument is separated by a wide gulf from any of the groups employing bureaucratic methods today, and should the next step in social development be one in which the working class attempt to gain such a state of freedom as that with which we are here concerned be subject to the domination of this obnoxious type, the result would be entirely different from that of the true instrument, for the two are directly opposed in method. One means more freedom for the creative powers, and for the production of higher types through a system of self-government; the other tends to rob both the units and the individuals of initiative; to paralyze every attempt at unapproved innovation. The bureaucrat hates the zealous innovator; they are natural enemies.

"Worthwhile social regulation really extends the sphere of action for the individual and only when such regulation is easily altered or terminated does it avoid the possibility of becoming a social hindrance; this is not easily done in a bureaucratic system, it usually requires years of preparation and a final revolt to do so in such a system.

"Every bureaucratic system tends to engender and develop slavish traits, so that such an attempt at freedom on the part of the toilers might really result in a slave state, where the workers of course have economic security, their lot in life greatly improved, but still are enslaved, carrying

upon their shoulders the authoritative state; a hideous incubus of octopus-like centralism, parasitically sucking its nourishment from the creative elements of society, leaving the units drained and impotent. A true slave state, with two rigid classes: the toiling people and the bureaucratic officials.

"Liberty comes as a challenge to every slavish trait, the master's iron hand and keen lash cannot comfort our perverted bodies and senses: only by assuming the responsibility of freemen as a whole, can anything of value come from the attempts of the workers. A spirit of freedom must be inculcated before the burdens and problems of freedom can be successfully borne and negotiated.

"Liberty inspires all of the qualities needed for success of the new society, and must find a cherished home in the consciousness of an instrument; not a cold sterile cage of meatless words. She has as yet to find such a home in the consciousness of the revolutionary movement.

"The mental integrity of the movement must be raised, the personnel must learn to face realities; organization loyalty must ever be traded upon. The spirit of the warrior must be evolved; the spirit of the warrior yes, but the spirit of the soldier—never! Upon the instrument the shadow of the reformer must not fall.

"All standards of organization values of the past must be purged of their slavish taint. It is a new world we would create—we must also create new concepts—new values—new methods and this burden must fall upon the industrialists wherever found."

### The Flowering of Mankind in the Industrial Democracy

The old man paused, slowly refilled his pipe—lifted the quart bottle of the strong blood of the grape from the table—then again slowly replaced it, and again broke silence.

"You will pardon me again, I know," said Ernest, "for recalling another love quotation from 'Zarathustra,' one which suits my purpose well. 'And this is the secret,' spake Life herself unto me, 'Behold,' said she, 'I am that which must ever surpass itself.'

"The most important thing that would happen to man from living under an industrial democracy would be the unshackling of the mind; the removal of many inhibitions and restrictions, which tend to abort all attempt to produce a more perfect, though greatly varied race.

"Society, in the Industrial Democracy, would largely resemble, very much so at first, the one before it; we might say that its beginning would be the emerging of the embryo. The basis of man's welfare would still be production, but all would be producers, and industry would speedily be reorganized. It is through studying and understanding the industrial processes that man must then enslave all of the productive agencies for his service—that he may have a greater freedom. It is something hard for us to conceive of, the latent ability of man to create a slave class of cold unfeeling steel and machinery. While under the existing economic system, the tendency is for the worker to become a slave of the titanic machine he operates; but everyone's freedom will be bound up in these problems, and so we may expect that these problems will be at once attacked and shortly solved.

"Today life is too largely mechanical, our pleasures require but little cerebration; indeed a dominantly mechanical culture is one of the outstanding features of life today, but only so because the avenues to a higher culture and pleasures requiring more cerebral activity are quite definitely blocked. Under industrial democracy, the mechanical phase of life will be limited to its proper place.

"Government shall pass away, the organization and administration of a free people shall take its place. Each will be an administrator, the ones in office will merely be those chosen or elected from all, whose place can be filled at a moment's notice from the whole. Rigid organization will gradually loosen its bonds and man will form voluntary associations for following mutual pursuits, during the time they are free from industry. Mankind no longer driven by antagonistic interests will be able to live in peace. It is axiomatic that with each step higher in degree of organization mankind's efficiency increases, the results of the increase derived from attaining an industrial democratic organization will be the prosperity of all, and not the prerogative of a class. It has long been known that the seeking to satisfy desires and to abolish boredom causes the performance of all of the activities necessary to the welfare of any organism. Laws always operate to prevent the free activities of some section of society. We live under so many laws today, laws that no one respects, laws that can be broken with no harm to one's fellowmen, that it is well-nigh impossible for us to glimpse the new society—with no government, no law—merely regulation, largely confined to the extremely limited time required to man the industrial processes. Yet even today men's lives are not run by laws, that is, men do not walk abroad with a policeman dogging every step to prevent their violating a law. No, the law usually manifests itself as a class instrument. It is aimed at large groups for the benefit of its wielders, or used for the protection of property, the new order will not have the slightest need of them.

"Under industrial democracy, the crude culture founded upon a slave system will pass away, and a new one arise founded upon the worth of labor; all of the old art standards will fall, and a better music seduce the ear; and man will still march forward, glorious discontent will still be his running mate; soon he will even throw off the limited restrictions of the early years of that order and attain happiness in a society consciously and intelligently anarchistic. It is only a slave system

that tolerates laws, man living for a short time at liberty will develop those qualities needed for free association. Scientific knowledge shall be as widespread as superstition and ignorance are today or have ever been. Indeed under capitalism complete truthfulness seems to be entirely absent. It is doubtful if a man capable of the whole truth is to be found among the entire human race today.

"It is shameful that anyone thinking or speaking of this grand workers' commonwealth should for one moment be interrupted by the question of race or sex. Yet how many of our little movements of today rise superior to these questions? The new society is for the race, not a race or a sex. Racial hatred is always most violent, most strongly entrenched in the consciousness, where men have the least culture. The answer, of those who preach the new order, to the question voiced by James Weldon Johnson in these lines:

**To America**

**How would you have us, as we are—**
**Or sinking 'neath the load we bear?**
**Our eyes fixed forward on a star—**
**Or gazing empty at despair?**

**Rising or falling? Men or things?**
**With dragging pace or footsteps fleet?**
**String, willing sinews in your wings?**
**Or tightening chains about your feet?**

must be direct to all races: and ye labor. Ye are our own.

"But women today do not occupy a position of equality in any race, and throughout the consciousness of the revolutionary movement, this attitude of sexual equality must be nourished. It is not done today. The industrial democracy, in conferring racial and sexual equality upon the race, will have taken the greatest step forward in history towards social regeneration, the completion of humanity.

"The court calenders are filled with what are called divorce and matrimonial cases, they should in fact, to be properly termed, be called property cases, since always the elements of property or livelihood are the factors upon which all turn. Under industrial democracy women will be free as well as men; there will arise no question of property or support, while the children, no more child slaves, or the parents' toys, will be the product of nurture.

"What will be developed in the new order, and what should now be fostered by those who work to realize it, is not a mere legal or union status, but an attitude of equality towards race and sex; it is not what either may do but the liberty to do. Thus it is not so essential that women should become lumberjacks or sand-hogs, as the bringing about of an attitude where their doing so would occasion no astonishment, where a member of another race, than the one at any place or time dominant, may rise to the position of foreman or superintendent, and other positions of direction on merit without opposition. Sex privileges must go, sexual differences may remain—while racial amalgamation must be free, for with industrial democracy must enter a society in which mass interests, the interests of humanity supersede the interests of any mere section.

"It is said that the heat received by the entire surface of the world is equivalent to the burning of one hundred millions of tons of coal a minute. The wind contains more energy than that of the coal deposits of the earth. Can this great force be harnessed? What undiscovered, undreamed of fields and planes of life are still left for discovery and exploitation? Our senses are limited and much falls outside their range, but science answers with tools of sense, by which we gradually bring all under the possibility of perception and use; the world of the microscope is alien to the naked eye, undoubtedly there are other worlds yet to be exploited simply because the instruments for their perception are not as yet perfected. Much of this work of discovery must be the work of a free people.

"Under industrial democracy, both the moral systems and the moralists shall pass away, once the process of social labor is well entrenched, and a true social conscience is matured, and a general scientific understanding fills the place in the mind and character, now occupied by religion, superstition and ignorance. All the happiness that the talent of the race can create will be there, all of the suffering that science can prevent will be absent; and the race with no antagonistic material interests to pervert it will rise superior to the need of morals or ethics, which in the present society only minimize the friction of clashing interests. No class interests equals no morals, no ethics.

"Today we find many scholars advancing the view that the greatest need is the development of a higher type of man; but roses do not grow on brambles, and it can only be in that freer society—industrial democracy—that the true flowering of the race can take place. Misery and poverty are not the only degrading influences, as such scholars and the reformers seem to thing. The fear freely to speak one's convictions, to suffer quietly outrages from fear of that form of discipline whose lash falls upon the aspirations cannot be compensated by hygienic housing, or economic security based upon slavish compliance. The present social order places a premium upon servility, fawning and deception, fully equal if not greater than upon real merit; these cannot exist under an industrial democracy. They cannot be eliminated in a slave society.

"Under industrial democracy men and women will stand upright, with no cause to deceive or lie, the countenance need no longer be a poker mask; each mind may be an open book that all may read. The new social order will annihilate all that is ugly, and all unnecessary bodily ills. Mankind will tread

the earth truthful, healthy and happy masters.

"Is man as we know him final, or shall a new future race spring from the loins of our own? Only the story of the free race can answer this question, but matter and spirit are one; all of the elements necessary for the production of man and intelligence have existed as long as the universe. All that was needed for both to arise was proper conditions and organization. Possibly the elements or materials necessary for something superior to man and his limited intelligence and senses may under proper conditions be evolved, or formed by the proper combination of world long existent elements. This is a question that the present society cannot well approach; only a free and fully developed race could give birth to such a new one, should it be in the realms of possibility.

"Though the forces that stand between us and this glorious industrial democracy are great, they are not greater than man has already overcome; and he marches to the attack today armed with greater knowledge than ever before. 'We grasp the torch of science to light the path to power.' And after all it is so little that is required of us all, merely to enter into the knighthood of the true and the beautiful, to encourage the highest traits both in ourselves and others; to cease deceiving. To cease being bombastic. To drive out the hideous spirit that would force all to conform to some mean set by a group, no matter how large the group or how high their standard."

The old man paused, remained silent for some time, then resumed: "Yes, my boy, it's all there beyond the barriers, where we may dream and visualize but never go; and yet the workers shall scale them and force an entry for all, where the men and women of the entire race shall live in one great harmonious community of interests: and the 'rainbow-hued bridge' is the perfected instrument, forged free from all the dross of slavish traits."

# All Power to the Workers!

**In the September issue of The Industrial Pioneer W. C. Ould wrote in "The Lust for Power" these scathing words:**

**"American labor leaders fear the assumption of power."**

**The Industrial Worker of Seattle is one of the few—all too few—publications in America which is vigorously opposed to the expression of that fear.**

**"The powerless are always slaves." In opposition to that fact, the motto of the Industrial Worker is this: GET POWER! The editorial staff is imbued with the theory that once power is attained, every avenue of human progress will be opened to its expression. Power is the first and most necessary requisite for the workers in their struggles.**

**You cannot be well informed on the working class movement of America unless you read the Industrial Worker, which raises the cry in every issue.**

**Do not lose any time about it, but send your subscription to the Business Manager of the**

# Rosa Luxemburg, Her Life and Letters

By JOSEPHINE ELLSWORTH.

THIS PICTURE SHOWS THE MASSES IN REVOLT—A CONDITION FOR WHOSE ACHIEVEMENT ROSA LUXEMBURG GAVE UP HER LIFE

**The letters reprinted here that were addressed to Luise Kautsky have been published by Robert McBride and Company, New York. ("Letters of Rosa Luxemburg." Price, $2.50.) The book contains a long foreword by Mrs. Kautsky, and the work was translated by Louis P. Lochner, formerly foreign correspondent to the Industrial Worker. The letters sent to Sophie Liebknecht were published by H. S. Hermann and Company, Berlin, SW, in a volume called "Rosa Luxemburg, Letters from Prison."**

THAT race which struck for freedom from the shackles of ancient Egyptian taskmasters, and followed its Moses out of Africa to find a happier land, has given humanity many voices of protest rising high to make known the feelings, the aspirations and the determinations of those who were dissatisfied with the perennial kingdom of injustice and who would see established social relations consistent with the wellbeing of the greatest number.

The child of a Warsaw merchant of this Jewish race, Rosa Luyemburg was born on May 5, 1871. Her father's circumstances were good, which made it possible for him to give his children many educational advantages. Rosa was a serious student and by the time she was sixteen she had studied anthropology and history, and was especially interested in economics. We are told that Morgan, Bachofen, Lubbock, Kowalewski and other sociologists, with Marx and Engels made up her main diet of reading. An ambitious program for so young a girl.

Harsh legislation designed to affect revolutionaries and to discourage socialist thought, made Poland an environment not conducive to the good of Rosa Luxemburg's plans, and when only sixteen she left her native land to enter Switzerland, that asylum of revolutionaries harboring those who had been obliged to flee from the police of their own countries.

Companionship among those of her own kind in Berne and Zurich had a happy effect upon her, and she developed rapidly for the work to which she intended to devote her life. Her professors were as one in declaring her their most promising student, and in the group where she found herself by those gravitational forces pulling radicals together, she was a leading spirit. In due time, and quite early, her writings appeared in socialist organs, and for many years she contributed articles to the "Neue Zeit," the official publication of the German social democracy, founded by Karl Kautsky in 1883 and edited by him until 1916. She also contributed to other socialist papers.

With two doctor's degrees, philosophy and jurisprudence, acquired, Rosa left Switzerland for Paris to study the socialist movement. However, her greatest desire was to go into Germany and take an active part in the movement growing rapidly in that country. Being a Russian, she could not take a full-fledged part unless she employed the scheme used by other outsiders, that of marrying a German national. She married Gustave Lubeck for this purpose, and immediately after the ceremony was performed they separated. Rosa was now a German citizen, and she lost no time in joining the German social democracy. Her knowledge of Marxian economics enabled her to play a prominent part in the debate against Bernstein revisionism, which was definitely reformistic. At that time Kautsky headed the Marxians. Rosa then became associate editor of the "Neue Zeit," and she soon earned the hatred of the capitalist class.

In 1904 she was jailed for the first time, her prison being in Zwickau, and the offense being **lese majeste.** This incarceration was terminated when the Saxon king died and his successor proclaimed a general amnesty to political offenders. Rosa protested, not caring to be the object of an enemy's mercy, but she was freed with the rest.

When the storm clouds of revolution gathered in Russia in 1905 Rosa left Germany for the scene, and for two months she was able to outwit the tsar's secret police. At length, however, she was arrested and imprisoned at Warsaw. From there she writes to Luise Kautsky (the wife of Karl Kautsky):

Beloved:

For a long time I haven't written you. In the first place, because I was given hopes from day to day that I might possibly be able to telegraph you, "Auf Wiedersehen!" and secondly, because I was very industrious and yesterday completed the third pamphlet since staying here (two are already being printed, the third will be "inked" in three days). In my former quarters it was impossible to work, hence I had to make up for lost time here. Besides, I really have only a few hours in the evening at my disposal—from 9 o'clock to about 2 at night; for during the day from 4 o'clock in the morning there is a hellish noise in the whole house and in the yard; the "common" colleagues are forever quarreling and screeching, while the "myschuggen" ones have attacks of madness, which of course in the case of the fair sex usually vent themselves chiefly in a remarkable activity of the tongue. N. B. I have proven here, as well as at the city hall, to be an effective **dompteuse des folles,** and I must put in my appearance daily to quiet down with a few soft words some rabid orator who brings all the world to distraction (evidently this is an **hommage involuntaire** to an even greater gift of gab!). So that I can collect my thoughts and work only late at night, and that meant that I partly neglected my correspondence. News from you always gives me great and lasting joy, for I keep reading your letter through several times until a new one arrives. Henrietta's dear message, too, gave me great pleasure. I would write her especially, except that—yes, except that today I have once again been given flowers "for the last time" (I really receive fresh flowers here almost daily). * * * * So let us see what happens tomorrow. I am rather skeptical and continue my work as though all this didn't concern me. * * * * Your letter, dearest Lulu, was brought me today. You are touching upon the question of my flat. I should like to ask you to continue advancing the rent for it. I am so happy in anticipation of being once again in my "red" and "green" rooms. In any case I needn't move before the late fall, and need not give notice until July 1st. By that time I shall have clear sailing ahead of me and can make my decision. As far as my plans for traveling are concerned, things stand as follows: in the very near future (in reality by Easter) I must urgently look, not for a milder, but for a **much rougher** climate; I suppose I shall choose the slightly circuitous route of the black-white posts. (This is a reference to Prussian frontier posts.) But I sha'n't remain there too long—only about three weeks. And after that—where? Of course I have no thought of evading the Weimar uncle (She means the prosecuting attorney, as a case was then pending against her. The veiled language was employed to avoid censorship.), no matter what his intentions may be —provided only—as is often wont to happen, he leaves me unmolested for awhile and delays meting out the thick end. (A plastic picture!) To fall into his hospitable arms without any interlude—for a thing like that I certainly haven't the time now, and more important matters claim my attention. Therefore, my beloved friends, try to find out through well-versed Thebans, not what final result is in store for me, for that is a matter of utter indifference to me, but whether I shall not, just as soon as the tip of my nose begins to smell royal-Prussian liberty (with me the nose always projects before everything else), be seized by that selfsame nose and be "put in the cooler" for my escapade. That is the only point that interests me. I shall have heaps to tell you about my 'travel impressions" when once we are together again, and we shall laugh ourselves crooked, especially the boys. I find everything here very jolly. Especially do I take a thievish delight in all the "indecencies" that I manage to send out daily and that are returned to me again after a day or two "black upon white." * * * * The only melancholy news is that coming from the North Pole (Petersburg). Authentic news —which unfortunately reports a big hullabaloo and the absence of any decisiveness or "pep." "Thither, thither would I go as soon as possible" * * * * Kreuzhageldonnerwetter! I believe I would shake all the people there and stir them till they were blue and brown! I hope I'll have the chance to do so.—Oh, what an ass, what a rhinoceros I am! I forget the most important thing until the end: I

am of course reading your "Ethics" for the second time; I asked for and obtained it at once when I was buried here. I take delight in every line and congratulate you! Keep one copy with dedication ready for me. I embrace and kiss you all heartily. Granny, Carolus, Lulu and all the boys with Hans at the head. (Provided you find that his morals can stand this one more blow.) Moreover, "this kiss to the whole world" that is asking about me.

Heartily,

Your Rosa.

Write soon.

The cheerful tone of this letter from a prison cell is the keynote of all the many letters Rosa Luxemburg sent from prisons during her many incarcerations. She had a singularly happy nature, and was able to buoy up her spirits by plans, dreams, pleasant memories. After activity that never slackened through the years from the days of this letter in 1906, she was arrested for opposition to military abuses and spent a year in prison from February, 1915, until February, 1916.

During this period she wrote the following letter

From the Barnim street Jail, 20-1-16.

Beloved Lulu:

You are very much mistaken if you think that your visit has not been as refreshing and given as much joy to me as it did to you. And "trifles" don't exist for me as far as you are concerned; everything is important and of the greatest interest. Only, during the brief time I could unfortunately not learn everything I wanted to know from you.

But I have convinced myself that you are at work again, active and cheerful and just as of old, and that fact has given me great joy. About everything else—soon, in full freedom. Dearest, it is really better that we wait four more short weeks and then sit on the "red sofa" at Südende with the kind assistance of Mimi. That your visit might in any way tire me or be an exertion for me, as you fear, is of course out of the question. But "on general principles" I should prefer to be modest and contain myself in patience until the end.

You are asking whether I am making any plans with reference to a milder climate for recuperation. "Ask the horse," replied the Sunday rider when people asked him whither he was galloping. You forget that different gentlemen are interested in me: for instance, the state's attorney at Düsseldorf, the local state's attorney, Comrade von Kessel, etc. Whether they can spare me in the Mark in the immediate future or not, and what their intentions are with reference to me—that it something we'll have to see as it develops. Hence I cannot be so indelicate as to simply make "plans" over their heads. I cannot deny that I have just about had my fill of the gray-colored Berlin sky and that I would have no objection to breathing a different air for even a brief time; but if, as does not seem unlikely, nothing comes of such a plan, we shall have to bear this as well. Südende, too, is "a pretty piece of country." You have never really appreciated the natural beauties of that region. I hope you will soon make up for lost time. At least write me another line meanwhile. I hug you many times.

Your Rosa.

Many thanks for Dietzgen's little volume, also for the greetings.

N. B. We entirely forgot to talk about little Kate.

The war was raging, Germany's sons were dying, as were those of so many other nations, and the social democracy had failed. Luxemburg and Liebknecht were both in prison most of the time, for they espoused the same course which had no place for yellow socialist compromises. German nationalism was too strong a tide for most of these, and with their defection was that of Karl Kautsky, and a consequent breach widened, never to be closed, between that man and Rosa. But the other Karl stood up big and great, like Luxemburg, belonging to the world's masses and crying for their awakening in a voice that nothing but death could silence.

The last letter Rosa wrote to Luise Kautsky was on July 25, 1918. There are, however, other letters published which were written by her at a later date. A letter written in May to Sophie Liebknecht (Karl's wife) shows much of the beauty of this woman's character. It was written from prison.

Breslau, May 12, 1918.

Sonichka:

Your little note gave me so much pleasure that I must answer it at once. You see what enjoyment you got out of your visit to the Botanical Gardens, and how enthusiastic you are about it. Why don't you go there oftener? I assure you that it means a great deal to me when you promptly record your impressions with such warmth and color. Yes, I know those wonderful crimson flowers of the spruce-fir. They are so incredibly beautiful (as, indeed, are most other trees when in bloom) that one can hardly believe one's eyes. There are the female flowers, out of which the great cones grow, to hang point downwards when their weight increases, beside them are the far less conspicuous pale-yellow male flowers of the spruce, the ones that furnish the golden pollen.—I don't know the "pettoria." You write that it is a kind of acacia. Do you mean that it has pinnate leaves, and has blossoms like those of the sweet pea, thus resembling the pseudo-acacia? I suppose you know that the tree commonly spoken of as the acacia is really a "robinia." The true acacia is a mimosa; it has sulphur-yellow flowers with an intoxicating perfume; but I don't think it would grow in Berlin in the open, for it is a subtropical plant. When I was in Corsica, at Ajaccio, in December, I saw splendid mimosas, huge trees, blooming in the great square. . . . Here, unfortu-

nately, I can only watch the crests of the trees that show over the top of the wall a long way off. I see them turning green, and try to guess their species from the tint and general shape. The other day some one brought a fallen branch into the house. Its strange aspect attracted much attention, and every one wanted to know what it could be. It was an elm! Do you remember how in my own street in the South End I showed you an elm laden with fragrant pinkish-green clusters? This was in May, too, and you were delighted with the wonderful sight. Here people live for years and decades in a street planted with elms without ever "noticing" what an elm tree looks like when it is in flower. They are just as unobservant as regards animals. Most townfolk are really barbarians.

For my part, however, my interest in organic nature is almost morbid in its intensity. A pair of crested larks have one young bird—no doubt the other three have come to a bad end. This little one can already run. You may have noticed the quaint way in which crested larks run. They trip along with short, hasty steps, not like the sparrow which hops on both feet. This young lark can fly quite well by now, but is not yet able to find its own food (insects, grubs, etc.) at any rate while the weather is still so cold. Every evening in the court beneath my window, it utters its sharp, plaintive pipe. The old birds promptly put in an appearance, answering with a soft and anxious "tweet, tweet," and they hustle about to hunt up some food in the chill evening twilight. As soon as they find anything, it is stuffed down the throat of the clamorous youngster. This happens evening after evening at about half past eight, and when I hear the shrill note of the fledgeling and watch the eager solicitude of the parent birds I have quite a pang. I can do nothing to help, for these crested larks are timid. If I throw out crumbs they only fly away, being very different from the pigeons and the sparrows, which follow me about like dogs. It is no use for me to tell myself not to be silly, seeing that I am not responsible for all the hungry little larks in the world, and that I cannot shed tears over all the thrashed buffaloes in the world (they still come here day after day drawing the lorries laden with bags). Logic does not help me in the matter, and it makes me ill to see suffering. In the same way, though the chattering of the starling during the livelong day is tiresome, at times, if the bird is silent for a day or two, I get no rest from the feeling that something must have happened to it. I wait and wait for the nonsense talk to be resumed, so that I can be reassured as to my starling's safety. Thus passing out of my cell in all directions are fine threads connecting me with thousands of creatures great and small, whose doings react upon me to arouse disquiet, pain and self-reproach. You yourself, too, belong to this company of birds and beasts to which my nature throbs responsive. I feel how you are suffering because the years are passing beyond recall without your being able really to "live"!

Have patience, and take courage! We shall live none the less, shall live through great experiences. What we are now witnessing is the submergence of the old world, day by day another fragment sinks beneath the waters, day by day there is some fresh catastrophe. The strangest thing is that most people see nothing of it, but continue to imagine that the ground is firm beneath their feet.

Sonichka, do you happen to have "Gil Blas," and "The Devil on Two Sticks" or can you get them for me? I have never read Le Sage's books, and have long wanted to do so. Do you know them? If you have not got them, buy them in a cheap edition.

Much love,

Your Rosa.

Write soon to let me know how Karl is.

Having been liberated by the German Revolution in 1918 Rosa entered the struggle with great energy and in that encountered the hostility of the new so-called socialist regime. Noske was in charge of the troops. Presently she and Liebknecht were again arrested and placed under guard in the Hotel Eden. Ordered from the building some time later she was struck, as she stepped on the sidewalk, on the head with the butt of a gun in the hands of a non-commissioned officer named Runge. Picked up and thrown into an automobile she showed signs of life and this was then extinguished by a gun shot through the head. Liebknecht met a similar fate.

Rosa's corpse was found floating in a river some days later. A story was circulated by the authorities that she had been killed in a street fight. One fact stands out clearly: she stood by her convictions in every hour of stress, and made no attempt to

Käthe Kollwitz's "Bread"
By Courtesy of Emil Richter Verlag, Dresden, Germany

leave Berlin even when she had the opportunity to do so.

Thus died in the prime of life one of the most stirring characters ever known to revolution. She combined great intelligence and almost phenomenal activity, a union of attributes seldom found. She believed in a better world for the workers and she spent her whole life in doing what she could to advance that cause. While theoreticians by the score sought the safety of their studies, Rosa Luxemburg was proclaiming the needs of the times and fighting a brave fight to rouse the masses. For them she lived, and in their struggle she died.

She believed with Liebknecht that "The hour of the people is here," and they called for action by the people. During forty years the social democracy of Germany had been building its power. But this power was legislative, its scene was in the Reichstag and had no more to do with industry than that of liberal parties the world over in catching votes by presenting industrial reform platforms. So the people were not ready; they had been lied to and looked to representatives whose interests were not their own. These representatives constituted a parliamentary salariat and they stood for the old order in the crisis.

What has been the result? Starvation has been the portion of the German workers, sometimes with the intensity of famine, always partial at least. They are as dumb, driven cattle, while their masters amass fortunes never before dreamed of. Better far had they responded to the call to arms of the Spartacans, to have heard the cry of Liebknecht and flung themselves into the battle for their own destiny with the courage of Luxemburg.

Her life is an example of devotion to the ideal of human brotherhood based on the abolition of capitalism, that may well be an inspiration to all revolutionary workers. Her memory is cherished by all who truly feel the urge to smash these chains that bind the working class. With time's passage must come the downfall of those elements of the socialist-bourgeois coalition that destroyed Rosa Luxemburg, and with it must crumble the system of capitalism. In that hour, "The hour of the people," her memory will be clearer and dearer to men. With the new order she stood courageously challenging the old disorder, and her name is immortal.

# Unorganized vs. "Organized" Labor

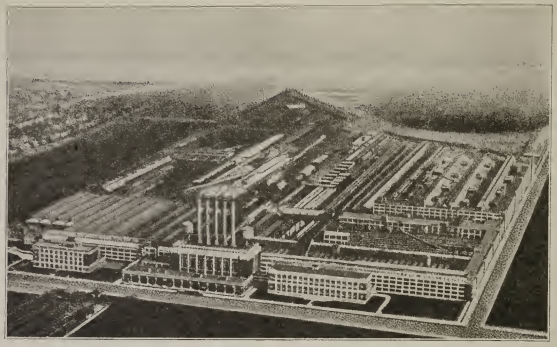
By C. A. PIERCE

JUST when is a union not a "dual union"? I asked myself the other day.

Who, other than the "constituted authorities," have the right to say when a union is and is not "dual," is or is not "legitimate"?

If only the "duly constituted authorities," then why have not Presidunce Green and his Comintern, who are certainly the only "duly constituted authority" in the great and only American (imported from England) Federation of Labor, the right to declare all unions they disapprove of "dual" and "illegitimate"? If these great men have not such right, who has?

Further, if the Comitern of the Crafts has the right to scab on and hunt down members of such "illegitimate" unions as the I. W. W. and the Railway Yardmen's Association, why have they not the same right to organize scabbery on the Amalgamated Clothing Workers when that union dares to organize clothing workers who belong by divine and vested right to the only "recognized" union in that line of work, which most surely is the United Garment Workers Union, however scabby and criminal its tactics are, always have been, and always will be?



Were the I. W. W. and the Yardmen's Association "dual" unions just because they were powerless to defend themselves against the united might of the capitalists and craftists, while the Amalgamated is not a "dual" union solely because it has conquered power?

It must be so, just as we "impossibilists" have long told the I. W. W. and the unorganized—the great thing is to get power and the intelligence to use it for yourselves. Then you not only will get the goods but the respect of all other men, women and organizations, religious, economic, and political, especially political, for power is the only thing a politician heeds or has any respect for, and at that he is absolutely right.

Once conquer by the sheer might of your own power your right to exist and to "choose your own representatives," regardless of whether or not Presidunce Green, Presidunce Coolidge, or their lords and masters, Morgan, Rockefeller, Gary, Dupont and company, "recognize" or do not "recognize" you, approve or disapprove of your representatives —once conquer power and all other rights are yours. Then you will no longer be "dual," for then you will have proved your right to "legitimacy," and only then—for then only will you have proven yourself and your organization fit to survive.

As long as we are unorganized in an organized world, as long as we submit quietly to living conditions fit only for slaves and not for men, as long as we look outside of ourselves for salvation, just so long will we, the unskilled and semi-skilled, remain unorganized, enslaved, unfit. Therefore, I say to you: **"Organize or perish."**

If we wait until "Organized Labor"—God save the mark!—comes to our aid and organizes us, verily we will wait until hades freezes over; for "Organized Labor" does not wish **us** organized.

HIGHLAND PARK PLANT OF HENRY FORD COMPANY

# Detroit, Mother of 12,000,000 Fords

By SAM MURRAY

LIKE the fertile queen bee that litters the hive with her countless progeny the great city by the northern strait that shares her name has, in a little more than a decade, poured forth over the surface of the earth an endless stream of the little black machines until no matter where you go, in the congested districts of our great industrial centers or the desert wastes of Central Asia, one of the first sounds to greet your ears is the familiar rattle of Henry's tin.

While the industries of Detroit are many and her factories scattered all over the town, with few exceptions they are all closely allied with the business of manufacturing automobiles. Detroit is called the automobile town and since, probably, more than half of the people working there owe their employment directly or indirectly to the Ford industries it can almost be called a Ford town. With a water frontage of about twenty miles it extends back into the country over a stretch of area that was until but a few years ago the abode of farmers and is littered in every part with factories.

However, any description of this city, which has grown in a few years from a town of a few thousand to a great industrial center claiming a million and a quarter inhabitants, without giving most of the space to the Ford industries would be impossible, for just as Ford's is the biggest thing in Detroit so is it the most advanced industrially, not only in Detroit, but in the world.

### The Ford Industries

Ford has two plants in Detroit and one in his home town, Dearborn, beside his assembly plants established all over the world, not mentioning the Lincoln factory in Detroit and the subsidiary holdings that he has established in the mining, lumber, agriculture and transportation industries. At present a rumor persists that he is about to take over the Hudson Motor Company also.

His Highland Park plant is still the largest and most important in the amount of work turned out and number of men employed, as the Rouge plant is still partly under construction, the first motor having been completed there in September, 1924. My advice to anyone going to Detroit, particularly if he is interested in industrial development, is to visit these two places. He will have no trouble getting a pass as all one has to do is to call at the plant to be visited and sign a card, and he will be conducted through.

### The Highland Park Plant

This is the plant where the greater part of the eight thousand Ford cars that are being turned out daily are assembled and a large amount of the parts still manufactured, but as the Rouge plant seems to be taking over a large part of the manu-

facturing as it is being completed, it is probable that it will be, in the future, used largely as an assembly plant. It cover 278 acres of ground of which 105 are under one roof. About 55,000 persons are employed at present.

I arrived at the plant about ten in the morning and desiring to see how it looked from the outside took a walk down Manchester Avenue. I could look through the bars over the windows and observe the men at work assembling cars. I passed a number of gates and doors as there must be many approaches to a plant employing 55,000 men. At one of the doors there was a line of men passing in single file to receive their pay. I suppose there is always someone getting paid at Ford's. A watchman stood by urging the men to step lively. They pay off at Ford's as they do everything else, in record time.

After passing around the plant I went to the main office on Woodward Avenue where I was presented with a booklet on the Ford industries, some postcards and a little yellow pass. On the little yellow card was a blank space for the visitor's name and address and a request to answer the questions: "Do you own a Ford car, truck, Fordson Tractor?" "Are you satisfied with your car?" etc.; "Are you interested in the purchase of one?" Not owning one I was interested in the purchase of one, so I filled out the card and passed it in.

A bunch of real estate sharks were having a convention in Detroit at the time which may have swollen our crowd somewhat. There were probably over a hundred persons in our line, and as fast as one group was dismissed another was taken through.

We were kept moving a little too fast for a thorough inspection of the works, and one guide to so many could only speak to those closest to him, but it was a very interesting sight to observe the assembling of the cars as they passed over the conveyor, a bar, a bolt or a nut being added until finally the body is dropped in place and a man jumps into the seat, kicks the starter, and away the car goes, fully equipped and ready for the buyer. Just outside of where the assembling is completed there is a room reserved for dealers who often come long distances with their customers, who buy the cars just as they come off the conveyors. They have it down so fine that just forty-one hours after the ore is dumped from the hold of a ship at the Rouge plant, that same ore converted into a Ford motor is in the hands of the ultimate buyer and taking him to his home. However, this amazingly short cycle is being beaten at the Rouge plant where only thirty hours and forty minutes are consumed from the time the ore is discharged until a Fordson Tractor is propelled by it, in the form of a motor, to the shipping yards.

They say the work is nerve wracking and I suppose it is, but doubt that it is any more so than shipyard work. True, it is very steady and for eight hours not a moment is lost in idleness or through a false move but the work generally is light. I saw nothing to compare with the air-motors used in shipbuilding. The rivet gun with which the large steel rivets are driven into the hulls and which are guaranteed to shake the strongest man to pieces in eight years if he hangs on to it that long. The Thor No. 8 drill motor with its treacherous mule-like kick, the No. 2 that will clean up the place if a careless helper should let it slip through his fingers or the straining work on the punches and shears that fashion the shell plates have nothing to compare with them in Ford's. Yet they say you earn your money, and I should say you do.

### The Rouge River Plant

A visit to this plant is more instructive and interesting than the Highland Park, as it is here that the more scientific and highly skilled part of the work is performed and besides most of the Ford worshippers seem to have exhausted their devotional enthusiasm with their pilgrimage to Highland Park and consequently you meet with a much smaller crowd and less hurry. This plant covers 1100 acres of ground and has a water frontage on the Rouge River of a mile and a quarter.

Although I struck the place at 1 p. m., there were only six of us. A parasite with two women in tow, a Kentuckey farmer and his wife, and myself. The "white collar stiff" who acted as our guide took up at once with the parasite which, by the way was a fortunate circumstance as about all he had in his head was a lot of Ford statistics, however they got there.

Leaving the head office it took us just an hour and a half to go through. For the sake of company I cultivated the acquaintance of the farmer and his wife and got some amusement out of him as well. He was a thorough partisan of Ford, and I saw that he was inclined to resent anything in the way of criticism on my part; I handled him a little diplomatically. He volunteered the opinion, or I might better say the proclamation, that Ford and Edison were the two greatest men who ever lived, and I didn't dispute him. Not being an authority on great men, for all I know they may be. However, before we got through his devotion got a few jolts.

Passing down the line we ran across several colored workers mixed in with the whites. "I didn't think you would have any of these fellows here," he remarked to the guide. "Yes, we have lots of them," the guide replied coolly. After that we saw lots of them.

After we had witnessed the assembling of the tractors he dropped out of line and struck up a conversation with one of the workmen. The guide signaled for him to come on, but he seemed to pay no attention to him. His wife after calling and signaling to him suggested to me that he was holding up the parade. "Oh, let him have a little visit," I said. Finally the guide went over to him and told him that he was not allowed to talk to

the men. "If you want to know anything, ask me," he said. But the farmer insisted that he was in the habit of talking to anyone he pleased to, but eventually he broke away and followed us up. "I would like to see anyone stop me from talking to anyone," he remarked to his wife and me as we went on. Afterwards, as we were passing through the machine shops, he turned to me and said, "I don't think I would like to work here; too much like the penitentiary."

First we visited the coke ovens—120 of them. You look in vain for the typical gashouse stiff with his shovel and sweatrag. No one is in sight with the possible exception of a sweeper in clean overalls. There may be some attendants hid away somewhere, but for all I know they attend themselves. These ovens take care of the output of several of Ford's coal mines, converting the coal into coke and by-products.

Next we visited the 500-ton blast furnaces and noted the few attendants. Everything here seems to be automatic. You are not taken through the foundry, said to be the largest in the world and where in the pouring of the metal the conveyor system is used, the molds being in motion and the attendants filling them with metal as they pass them.

In the tractor factory we enter a section where the men are at work on unassembled parts and follow and witness the process of assembling them until you come to a place where a number of men in painters' overalls each with a paint brush are painting the parts assigned to them as the finished tractor passes them on the conveyor. Finally it is cranked and a man runs it out in the yard where shipment is made to the agencies in all parts of the world. Unlike the Ford cars, Fordson tractors are all assembled right in the Detroit factory. Owing to their compact bulk this is cheaper than establishing assembly plants at distant distributing points.

Next comes the glass factory, and here we witness another triumph of the Ford industries. Plate glass is molded in an endless strip. You see Ford winshields poured into the furnace in the form of sand and other ingredients entering the process. Several men are on hand with hoes to level off the "batch" as the hoppers shoot it into the furnaces. It is melted and passed between the rolls where it is rolled, cooled, cut and polished without the attention of anyone except several men whose duty is to groom the monster machine, for in Ford's everything is kept clean and freshly-painted. Even the switch engines around the yards are kept shining like a new boot. Finally you come to hundreds of cutters who take the plates as they come from the machine and with a glass cutter and T-square cut the glass to fit the windshields in less time than an expert draftsman would take to draw the lines. Why the machine does not cut them the right size in the first place I do not know. Perhaps that is a problem the solving of which belongs to a future stage in the evolution of the Ford industries.

Next on our way out we passed through the machine shops where the motors are prepared for the cars that are assembled at the Highland Park plant. We see automatic bolt machines feeding themselves with the metal that goes into the bolts and tapscrews and threading them with the stroke of a rapidly moving piston from which conveyors take them to their ultimate destination, just enough arriving to supply the workmen who slip them into the engine part as it passes.

We pass by the shapers, lathes and other machines which shape everything so that there may not be the slightest variation in the size of the parts that may be wanted to fit a Ford machine in any part of the world. As we pass out we meet hordes of men with lunch boxes, for it is two-thirty and the sections are beginning to change shifts. The first of the night shift is coming on. Forty thousand men are a whole lot, but the Ford outfit is exact in all things and they have so nicely arranged the changing of shifts that there is no confusion or congestion or traffic, and when I board a Fort West car just as it is about to pull out I find that there are just enough workmen to fill the seats and I am left hanging to a strap.

A bright looking fellow with a slight foreign accent suggests that if they crowd up a little there will be room for me. I said, "Don't crowd yourselves; you fellows are working, I am loafing and can just as well stand. But I suppose after spending eight hours in there you are glad to get a seat." "You bet," he said; "After eight hours of it you are damn glad for a seat."

"When do you fellows come to work?"

"Six-twenty."

"And work until?"

"Two-forty; twenty minutes for lunch."

He seemed willing to answer questions, but tired, so I let him alone, and in a few minutes he was dozing off and I noticed that all conversation had ceased, and when I looked around the car I noticed that half the occupants were asleep. I thought of the words of the Kentucky farmer. "I don't think I would like to work here—too much like a penitentiary."

### Ford as an Employer

We hear a great deal of discussion as to the character of Henry Ford as an employer, but as is usually the case in trying to secure information on a debatable question much that is handed out is of too extravagant a nature to be useful. To some Ford is a great philanthropist who has practically established the millennium in his shops for the benefit of his employees, while others seem to regard him as a greedy misanthrope who is willing, for the sake of the advertising benefit, to pay a little better than the going wage, but who by an advanced system of exploitation has succeeded in driving his men to the limit and reduced them to

the lowest degree of industrial slavery. As in most cases the investigator will generally find the truth to be somewhere between the two extremes.

There is no doubt that Henry Ford treats his men better on the whole than does the average employer in the country at large. It is also true that he succeeds in extracting a greater degree of surplus value from them, but in my opinion it is idle to speculate on the motive. Ford is not the only person to discover that the well-paid worker like the well-fed horse is the more profitable in the end and the question as to whether that is the primary motive may not trouble us now. It is an economic principle that is becoming universally recognized.

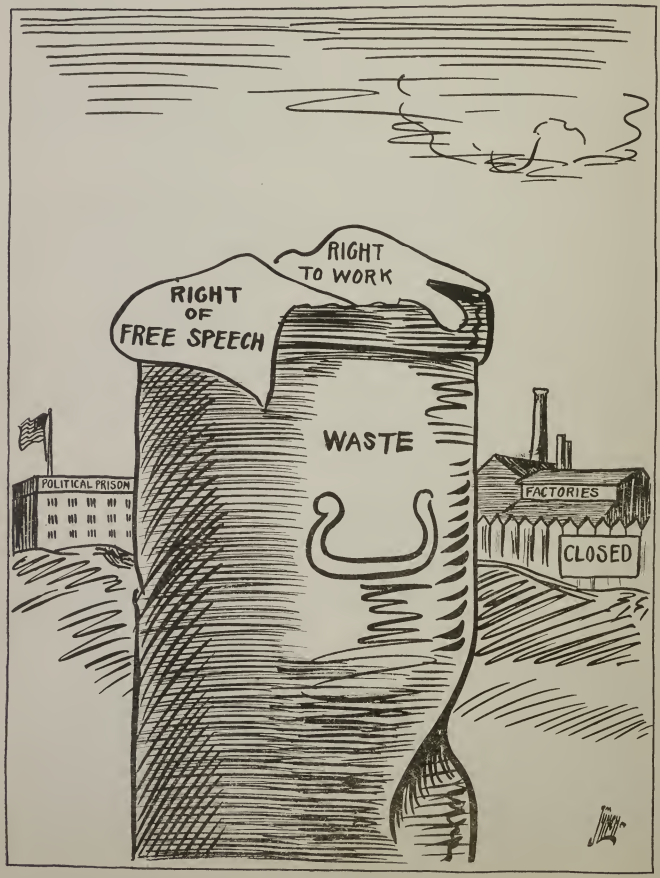
However, when we study Ford's system we find it to be strictly paternal and despotic and in no way recognizing the principle of industrial democracy. As he reported to the Russell Sage Foundation, last winter: "Technical questions are decided by facts and not by votes," and therefore he refuses representation by employees in the management of his industries. Again, in his pamphlet on the Ford industries he states that inasmuch as he gives his employees the best of wages and conditions that there is nothing left to bargain about and no necessity for union or shop committees among the Ford employees. You see that while he may be on the whole a fairly liberal and humane employer he makes himself the complete judge and absolute dictator as to what is good for his men and what they should desire accepting no advice from them whatever. It is easy to see how a system of that kind will eventually evolve into a sort of feudalism where a few industrial overlords will rule with absolute power over a race of morons whose only ambition is enough to eat and steady work.

One hears more in praise of Ford the farther he goes from Detroit. I find that men who have worked for him do not consider his jobs as being much above the average. They usually say that Ford's is all right on some of the jobs and I notice that men who have left him and are working for less money don't seem anxious to get back. In fact, what the Ford plants need is industrial unionism.

### Chances of Employment

Most people seem to think that it is a very difficult matter to get a job at Ford's. Now while the labor turnover is probably below the average, with the constant growth of the industry there is about as good a chance for employment as in the average factory. The wage for the first sixty days is five dollars and after that the minimum is six. Ford claims that sixty per cent of the employees are getting above the six dollar minimum. All work is eight hours. I understand that there is little distinction but notice an almost total absence of gray hairs among the employees.

On the whole, Detroit is quite a busy town and anyone with a good front and a sufficient stake to enable him to do a reasonable amount of rustling ought to be able to land a job, if not at Ford's at some of the many factories of the town. The pay of course is not very good, particularly in the case of the unskilled. The pay outside of Ford's ranges all the way from 45 to 85 cents per hour with an average of about nine hours per day. Living expenses are a little above the average prevailing elsewhere. Owing to the fact that machine production is a little more advanced than in most places there are few of the old line mechanics employed and positions requiring more or less skill are filled by promotion the chances of unskilled men working up to a better position are better than in most places.



### Detroit as a Town

Anyone who is interested in the growth of the I. W. W. will find Detroit a good field to work in and a good live and intelligent crowd of fellow workers to start with. As usual, the Finns are taking the lead. They have a hall and own their own park on Lake St. Clair where the picnics are held. There is no doubt that the right kind of work here will bear fruit. However, one must be patient enough to stick. Homeguard industries are not organized in a day, but success is a matter of years of effort. Nor can one expect to accomplish anything by job agitation as long as he is unskilled and unacquainted. Such a person must be contented to support the branch off the job and leave job agitation to those who know the jobs until he is acquainted. The impatient type of agitator sometimes found in the West would be entirely out of place here.

There are numerous fine boat trips and outing places. The boosters claim the most beautiful park in the world—Belle Isle. It is an island of considerable natural beauty, but as a city park I do not think it up to much. I saw nothing to compare in beauty or attractiveness to the Golden Gate Park of Frisco.

In some respects Detroit reminds one of Los Angeles. It certainly has more boosters and real estate sharks than any city out of California. Of course there is some substance to Detroit's boom while in the case of Los Angeles there is nothing but wind. However, you note the same lack of solidarity in the workers and much the same unity of purpose in the rest. They call it a city without slums but what they call the places where men must live who work for less than four dollars a day with famine prices for necessities I do not know. There is probably more employment than in the average city and since a person will accept most any kind of employment in preference to crime there is no doubt little crime but for abject slavery, Detroit sure has her share. There is lots of room to improve labor conditions and if proper tactics are followed success is sure to crown the efforts.

# American Prosperity

# Book Review

THAT "every revolution in ideas is a consequence of a revolution in the social structure that the prevailing material conditions have produced" is the fundament from which V. F. Calverton in "The Newer Spirit" raises a structure that is sure to attract hostility from critics not yet aligned as disciples of this newer spirit. Literary criticism, in the definition of a host of critics, is a fine art, but the editor of The Modern Quarterly will have nothing of the sort and tears into the opposition with brilliant, and what appeared to me as conclusive, thrusts. He says that literature must be reckoned from a sociological approach which is scientific, that literary criticism, therefore, is scientific and that describing literary values with any other method is fatuous. To know literature, he contends, one must understand the conditions surrounding its production, and to grasp the significance of this environment one is obliged to recognize that Marxian conception which declared that humankind's history since the passing of primitive tribal society has been one of class struggles. Thus we discover at the outset that while the author's knowledge of literature covers a wide range, he is a Marxain student of no mean caliber.

"Creative and critical composition . . . have altered both in style and substance with each of the vicissitudes of social evolution." Calverton shows that the Elizabethans reflected in literature the social tenets of the feudal order, and that however lustily and courageously they may have shouted, these literary artists depended for their very existence on ruling class patronage. "As long as the nobility remained the ruling class, the administering and not the administered, it would be a sociological solecism to expect ideas to be other than reflections of the aristocratic, courtly attitude." These writers were not slow to acknowledge their status. In obsequious tenor they prayed for the solicitude of their patrons. Among that distinguished group whose work has shed so much glory on their period in which we behold a preponderance of literary genius reminiscent of the effulgence of the Florentines at the time of the Da Vinci, there are no exceptions to this obeisance, an attitude compelled by economic circumstance.

Employing the producing classes as objects of utmost contempt, and presenting the merchant class in a light anything but complimentary, these writers were of unanimous opinion that ordinary persons were not the material out of which great drama could be made. A more golden fabric must lend itself to the making, Shakespeare and his contemporaries thought and exemplified in their entire labors. The lives of kings, nobles, aristocrats, furnish a worthy stuff for the texture of tragedy, and this habit has been the orthodox historian's not less than the dramatists's and the novelist's.

This literary ascendancy of the feudal period, expressed in such works as Morte d'Arthur, King Lear and Edward II, was finally challenged by a bourgeoisie rising and fighting for its own expression. As these gained power, as their productive mode won in the struggle, ideas changed and literature reflected the change by a manifestation contributing to the praise of bourgeois virtues. Then we see their goodness magnified in such works as The London Merchant, The Gamester and Sarah Simpson, to name but three of early outstanding importance. It is no longer the deeds of the aristocrat that must be treated, the aristocrat has lost the battle because a new form of producing goods has superseded the old, and those exponents of the change have their virtues to be recognized and published.

Calverton projects his thoughts on the perception in a remarkably clear manner, never being content to make statements without evincing a readiness to support them with illustrations in the concrete. When he passes from a consideration of the bourgeois literature to proletarian he seems to lose his fine sense of proportion, however, taking the works of Sherwood Anderson as pioneers in the field, when it can be effectively proven that Anderson's characters, though not persons of great influence and wealth, are certainly not proltarians. The three books which express the new proletarian spirit in Calverton's mention are Germinie Lacerteux, The Weavers and Winesburg, Ohio. The latter has gripped his imagination powerfully and he treats of its tales minutely, but the heroes and heroines of this book are seldom of the propertyless estate. They are doctors, lawyers, school teachers, clergymen. This should not be taken as any disparagement of Winesburg. It is an unusually commanding work behind which the author's motive is everywhere apparent. Anderson concerns himself with what his characters are thinking more than with what they are saying. From the point of psychological importance this method is not to be minimized, constituting a gift to sociology which will yet be found of the most far-reaching value. But the characters are not proletarians. Better to have taken Zola than Anderson as the stavar of this class, for in Germinal, to say nothing of other works, he has done more to express the proletarian than all that Anderson ever achieved. For that matter, both Anderson and Zola can be left out of the picture and there will still remain sturdy

forms of those who have chosen as their central characters persons of little or no social prominence.

The Andersonian style is masterly, and his substance is of great interest, but it does not mark him a pioneer in the field of treating producers as Elizabethan writers treated kings and aristocrats, and as the bourgeois scribes have capitalists and their importance. No country is without its writers who have quit regarding the bourgeois as worthy of further treatment in letters from a central position. That we are sure to make our voice heard in literature is just as certain as that we are to have our economic effect as a result of constantly attacking capitalism, but just as the bourgeoisie did not conquer for their own purposes the realm of letters until they had overpowered their economic adversaries and forever triumphed over the feudal power, so too it is our destiny to be without a proletarian literature in any sense even approximating fullness until we have conquered industrial opposition thoroughly.

"The Newer Spirit" is a group of essays. There is a part given to the subject of changes in esthetic values which it is difficult to sum up in a short space without danger of misinterpretation, but its message seems to be crystallized in these words of the author:

"At one time, not many centuries ago, we could have been and were stimulated and attracted by the war of the heavenly host, a theme that today not only rests purely in recollection, but is quite void of appeal. The time will come likewise, with successive changes in society, when the struggles of emperors and lords, the consequences of the strifes and aspirations of royalty, will be as remote and unfascinating as the conflicts of the angelic hierarchy, and with the coming of this period the vaue of Shakespere's dramas, like all others expressing the attitude of feudalism, will suffer distinct diminution in value."

In another essay proletarian art is discussed. Says Calverton: "The clash of class-psychologies has precipitated a revolution in art values and criteria. In literature, for instance, the working man, as distinguished from the noble, the merchant, and the magister, has become a figure essential to its evolution; tragedies formerly spun about the episodic futilities of royalties, the failures of gamesters and business men, now include the disasters of the proletariat. The proletarian is visualized as no less a hero than the knight or financier. The ethics of the bourgeois, by the very process of social antithesis, so adequately illustrated by Hegel and Plechanoff, are repudiated by the evolving proletariat."

The great man of illusion is attacked by means of an argument on environment, which, earlier in the work, the author mentions in this way: "If the theory of evolution be correct, heredity is but a product of environment and must inevitably change with alteration in environment. A son of a Hindu prince brought to America shorty after birth and forced to live in this country in an environment similar to that of other American bourgeois the rest of his life, will develop a series of mental reactions similar to those of the surrounding individuals, not those of his ancestors."

When radicals speak of this great man illusion they usually mean the theory that great men are responsible for the progress of society, and are not the results of certain social conditions. Calverton dos not go into this mattr. He mentions that J. S. Mill learned Greek at the age of three, Jeremy Bentham Latin at four, and Mozart the clavier at five—all as a result of environment which made it possible for them to receive education. Again he speaks of Robert Burns, saying that his father saw to it that his children were given an education and that without this Burns could not have been the poet he was. Life conditions acting on the individual are no less responsible for genius than they are for imbecility or mediocrity, and the important point, says Calverton, is that the forces creating these conditions are all discoverable; the peculiar causes which make for genius. Knowing these causes he contends that genius is possible to reproduce consciously by setting in motion the forces favorable to it. I regret that he did not devote some attention to the preachment that is so commonly held and propagated which holds that the individual makes the environment, and that prominent historical figures in some almost miraculous way pull society forward, or upward to higher levels from the lower depths. Some space should have been given to point out that forces of the mass movement fling up to the surface and to commanding places these characters.

Throughout the book the reader is impressed with its facile style, withal careful to present views which are not popular and whose message may well be misconstrued by antagonism. The large number of people who have taken H. L. Mencken as a bright star in the literary firmament should pay particular attention to what Calverton has to say of this man he describes as a vaudeville critic, and whose superficiality and inconsistencies are given a few needed jolts.

There is a great work to be done in literary criticism, and that the sociological method employed and advocated by Mr. Calverton is the only one that leads to understanding is the opinion that is confirmed if not inspired by reading the book. Here is a voice that speaks right out and will have no reverence for opinions just because repeated encomiums have served to make of certain works sacred objects. Calverton tears aside these veils and rips with no uncertain strokes at the pedestal. He dares to make his own appraisal unimpressed by what the notable so-and-so or the scholarly whatshisname have said. This is a voice that was needed, and it is one that will be heard, and that will make its way by sheer force of logic. —FRANK HAGAN.

# Free Speech

By JAMES LYNCH

THIS IS THE JOHN SPARGO PHIZ — JOHN RETREATED FROM RADICALISM WHEN WAR CAME

THE New York World of Sunday, August 16, devoted about two columns to an interview with John Spargo in which he pointed out the "Free Speech Error." Mr. Spargo believes in free speech but thinks that "free spech untempered by common sense may at times be treasonous." In other words, there are times when it is constitutional to be unconstitutional. His attempt to take the free out of freedom of speech by substituting "common sense" for that part of the Constitution guaranteeing free speech is amusing. The following are his own words:

"Reading the Constitution of the United States is an admirable exercise and should be practiced oftener by some of our officials, but there are times when reading the Constitution may be closely allied to treason.

"A good citizen dosn't read the Constitution during times of emergency. He doesn't even read the Ten Commandments. The Ten Commandments are the basis of our social and moral life, and yet to read them at certain critical moments when men are ready for a spark to set them aflame would be a serious moral offense.

"We all believe in free speech. I am a liberal and I know I do. Even our old friend Judge Gary, who is an avowed conservative, will not feel hurt if we say that he does. We all three believe in free speech. And we all three believe in common sense. But free speech untempered by common sense may at times be treasonous.

"Let me give an illustration. Take the town of Herrin, Ill., where there have been riots and disastrous outbreaks and where it is the duty of the authorities to guard against further outbreaks. You will grant, I believe, that it is the duty of the authorities to protect property and prevent loss of life. That, in my opinion, is the paramount duty of any democracy, and the further you get into the workings of democracy, the more important becomes the humanitarian function of the state.

"Therefore, in order to protect property and life in Herrin, the authorities must establish certain restrictions against holding public meetings and against being on the streets after a certain time, and so on. Now I may consider it my constitutional right to attend the theater. Or I may consider it my constitutional right to go to church. But for the sake of law and order I must for the time being waive those constitutional rights.

"Or again I may be a person like Roger Baldwin, who comes down from the Civil Liberties Bureau and insists on standing upon his constitutional rights by reading the Constitution in the public square at Paterson, N. J. Now it was not the reading of the Constitution that caused Mr. Baldwin to be arrested, but the fact that he chose a particularly dangerous time during strike riots to read it, and the fact that large crowds can easily be touched off in times of trouble. To read the Constitution is to draw a crowd, and to draw a crowd is to invite disaster.

"I can't go to the police chief and tell him he is wrong and I am right, and that I have a perfect

right to read the Constitution in the public square. Because the police chief is responsible for property and life, while I am not.

"This self-appointed triumvirate—you, Judge Gary, and I—probably also would agree that freedom of religious worship was a constitutional right. Every man is entitled to it, both white and black. Yet I can conceive of a time, such as during a Ku Klux Klan riot, when common sense would dictate the closing of a Negro church."

Thus speaks Mr. Spargo. Let us now turn to the Constitution itself for a little information on this point. Article I of Amendments to the Constitution of the United States says: "Congress shall make no law respecting an establishment of religion or prohibiting the free exercise thereof; or abridging the freedom of speech or of the press; or the right of the people peaceably to assemble, and to petition the government for a redress of grievances." Here we see that it is not only "the duty of the authorities to protect property and prevent the loss of life," but also to protect the right of individuals to express their opinions whether right or wrong. The police chief is not only responsible for property and life but also for the protection of persons who wish to read the Constitution in the public square. In times of Ku Klux Klan riots, the Constitution and common sense would dictate the protection of a Negro church and not the closing of it.

To read the Constitution is to draw a crowd, but to prevent the reading of it or to break up a peaceable assembly is to draw a larger crowd and to invite unconstitutional actions. If men are denied the right to express their opinions and to better their conditions by constitutional methods, how can we expect to prevent the use of violence?

If free speech is prevented during times of trouble, how can we find the cause of the trouble?

Protecting the right of free speech is the best method of protecting life and property, and destroying the causes which produce poor conditions, misery and bad times.

# I Met

By HENRY GEORGE WEISS

I MET upon the road of life
A brilliant man one day,
Whose wit was keen, whose facile tongue
With magic words did play,
Whose intellect was masterly,
Who, at his fingertips,
Had all the lore of history
And all the poets' quips.
I marvelled that the mind of man—
One mind—could e'er contain
The knowledge and the wisdom
Which he spoke and made so plain.
I met upon the road of life
A prodigy in fact,
A mental giant, a genius,
And yet one thing he lacked,
The little quirk to understand,
The inner sight to see
The heights to which the race could soar
If workingmen were free.

I met upon the road of life
A brilliant man one day
Who knew his books, could talk of things
In a most charming way,
But who for all his wealth of thought
Was blind to things sublime,
And could not soar on magic wings
To pierce the veil of time;
Who could not see,—O God knows why—
But still who could not see
The awful juggernaut that crushed
Men into infamy;
Who could not see that from a sty
The hogs of lust must come;
Who could not see that ignorance
Is what makes men's souls dumb;
Who judged success by Golden Calves
While seeking to hold him;
Who tramped the roads and preached a creed
That churches seek to dim. . . .

I met a very brilliant man
Whose inner eye was dim,
And though he had a master-mind,
By God, I pitied him!

# Unwritten Books Reviewed

By ROBERT WHITAKER

**Our New Book Department is unlike that of any other periodical in the world. As THE INDUSTRIAL PIONEER is emphatically a "forward-looking" magazine this original book department will deal with books which have not yet been written, but which obviously ought to be written, and will be written as the new social order gets more and more control of world affairs. We can say with confidence that the author of this department is peculiarly well qualified to anticipate the publications of tomorrow, not only as to their titles, and the publishing house which will have the courage and enterprise to put them forth, but also as to the lines of survey and argument which the most worth while publications of tomorrow will follow. Any of our readers who wish to contribute information and suggestions concerning books which they have discovered in the offing are invited to send them to this office, or write direct to Mr. Whitaker, at 506 Tajo Building, Los Angeles, California.**

## The Failure of American Rationalism

By A FREE-THINKER

Published by THE REALIST PRESS, Is-land, Ind.

WHO the author of this book may be we do not know, but we do know that he is the first "free-thinker" we have read who seems to us to have taken the word seriously. Generally speaking "free-thinkers" are about as free in fact as the most hide-bound fundamentalists. They react to the names of Voltaire, or Paine, or Ingersoll as emotionally, and extravagantly as do the religious folk to the names of Luther or Calvin or Wesley or Moody, or whoever their particular demigod may be. They have their own shibboleths and creeds to which they are as strenuously attached as any church in Christendom. And usually they are as far away from a truly scientific realism, especially a realism based upon the analysis of actual workaday conditions, as are any of the ideologists of any section of the metaphysical field. They are filled with the superstition of **individualism and the idea**, and quite ignorant of the part which the common man has played and does play in the shaping of human affairs, and how the relation of all of us to land, and tools, and capital has operated to produce not only slave conditions for the masses of mankind but a slave psychology which has resulted of course in all kinds of superstitions and beliefs whereby the minds of men and women could be controlled and diverted from the business of making themselves free.

Here is a writer, who however much of a "free-thinker" he may be in the matter of rejecting the ordinary orthodox religious dogmas, shows himself a good deal more than a mere dogmatist of a negative sort. He sees clearly enough that so far as the wage slave is concerned wrangling for "infidel" doctrines is as futile as wrangling for any other theological stuff. If the boss can keep a man contented while the capitalist absorbs the major part of the product of his labor by letting the chap argue noisily that there isn't any god why should the boss worry? Or what is the difference between affirming the Virgin Birth or denying it, if the workers can be diverted and divided by verbal fighting over it? Doubtless orthodoxy is on the whole a little safer, especially as there are so many brands of it that the workers can always be lined up in contending camps of ecclesiastical confinement when they ought to be out in the open with each other knocking the fetters off of each other's wrists instead of welding them on to each other's minds. But heterodoxy will do quite as well as orthodoxy so long as it isn't a heterodoxy that gets the worker to see what is his own interest in the ownership and control of his own tools and in economic solidarity with all his fellow workers, whatever their theological notions may be.

This the writer sees, and says it with refreshing frankness, and shows up his fellow rationalists to be as pitiful "fundamentalists" themselves as any who ever came up the pike from Tennessee. But he goes a good deal further in his frank and fearless exhibit of the utter failure which has fallen upon the rationalist program in America. He recites at some length the favorable conditions from the viewpoint of free thought presented by pioneer America. He writes with enthusiasm, yet with intelligent restraint, of the leaders and teachers of American ra-

tionalism, especially of the distinguished services of Thomas Paine to the cause of American liberty, and his extraordinary ability as a pamphleteer, his fascinating personality, his exceptional gifts as an orator, and the moral soundness of his indignation at the blood-thirstiness of "the people of God" in Old Testament times, if their wholesale slaughterings were to be taken as done under the immediate direction of the Almighty. Generous mention is made of other leaders of American free thought who are less known to the public than their abilities and services would seem to deserve.

And then the author brings home his charge that in view of this exceptional opportunity which America presented, and the large hearing that Paine and Ingersoll and their confreres have had, the results for rationalism are pitiably small and the present strength of the most conservative types of American religious creedalism are an amazing exhibit of the ineffectiveness of the rationalist attack. The writer details at length the rival forces with which the churches have had to deal in our time, the secularization of education and medicine and other activities which the church of yesterday controlled, the coming of the automobile, the movie, the radio, and the development of out-door life, and shows that in spite of all these counter attractions the churches maintain a remarkable hold upon public interest and support. His treatment at this point might be fuller, and more scientific, but it is sufficient as it is to explain much of the alleged loss of ground by the churches, and to prove how powerful and vital the churches yet are, in spite of this natural, untheological opposition. And it helps to bring home the main indictment of the book, which is to the effect that rationalism as such has utterly failed here in America to check the progress of religious conservatism, has rather contributed to it. To recall the fable of the sun and the wind, the rough blasts of a defiant and contemptuous rationalism have not persuaded the ordinary American to take off his coat of orthodox religion, but have led him to reach for a thicker coat and hug it closer to him.

The book closes with an eloquent appeal, in which the writer himself seems to have no great confidence, but by means of which he seeks to persuade his free-thought comrades to take honest account of the short-comings of their own program up to this time, and to revise it in the interests of a more intelligent, more generous, and more promising program of defeating orthodoxy by trying first of all to understand it, and then to make use of the values which are in it. American rationalism will have to be a good deal bigger thing than it is before it will get anywhere in dealing with American religionism.

But, as someone has cynically said, "You can tell a failure when you meet him, but you can't tell him very much." Can American rationalism learn anything by its present miserable plight?

# The Weary Wobbly, and Other Essays

By PETER STEADFAST.

(The People's Press, New York, N. Y.)

THE initial essay in this little volume is a cure both for the over-buoyant optimism which affects many of those who engage in the fight for labor, and the pessimistic paralysis which too often follows upon it and leaves the social enthusiast of today a derelict of cynical despair tomorrow.

The writer is a minister evidently, or has been such, and uses the phraseology of religion, but with a quickening, human touch. He begins with this incident, which is characteristic of the style of the whole book.

" 'Inside of three years your church will be crowded to the doors,' my friend assured me the other night. He isn't a churchgoing man himself, and has in fact no use for the doctrines or ritual or the emotional responses of religion. But our church is "different," enough so that even he, agnostic as he is, attends with enthusiasm now and then because this pulpit is so outspoken for labor. After making the prophecy which I have quoted above he offered to treat me to chicken dinner if the prophecy didn't come true. And this is the way he reasoned out his confidence. 'There is a smash just ahead of us. Millions will be unemployed. Credit will be gone, property will be at a standstill, actual starvation will be here. The revolution will be forced upon the people. And then they will be willing to listen to the radical, and we shall have our innings, everywhere.' "

The writer goes on: "I said this happened 'the other night,' but on checking up I find it was **four years ago.** The church isn't crowded yet, though many and various have been the liberal programs put over to get a hearing, and the chicken dinner is over-due. Also the 'smash just ahead' is still deferred, and 'millions of unemployed', and all the rest of the natural and 'inevitable' antecedents of a social revolution. And my friend has gone into his shell and has ceased either to work or talk very much for the new order. It is not for his day, he thinks now."

Many other incidents the author of these essays gives, illustrating the passing of yesterday's enthusiasms, and the decline of interest in social revolt on the part of some of the most active workers of other years. He deals at length, and sympathetically, with the story of the I. W. W. and the "weary Wobbly," whom he has met in many and various places, resting on his oars or grown cynical about the whole effort on behalf of the workingman.

"What's the use of going to jail for fellers who haven't sense enough to turn a hand for themselves?" asks one man who has put in years behind the jail bars as a class war prisoner. "Never again," many another "soldier of the common good" has said, as he contemplated the "vain Calvary" he has climbed for the saving of a people who do not want to be saved.

"Then wherefore the fuss and the flurry,
And wherefore the thorns and the cross?
Were it not as well to be merry,
And leave the world to its loss?
What profit have all the martyrs
Of all their belated fame?
For their very praise in the later days
But hideth the later shame."

That is, as the writer says, "the heroes of today are the hitching posts of tomorrow. When a man does stand out because of his sacrifices for the cause and wins a following, that very following uses his name to stabilize and conservatize themselves. If a radical success means crowds and appreciation and understanding, it isn't coming for years, and when it does come it is as likely as not to be capitalized in the interests of some later conservatism."

That is putting it plainly enough, and facing the worst frankly. But when it is all said, the writer makes it quite as plain that the battle is worth while to any man who has the real spirit of the fighter in him. "No man," said "Fellow Worker Jesus," "sets about building a house without first counting the cost." Which means, translated into terms of our time, that no man has any business to set about being a radical unless he is willing to pay the price. And the price isn't "pills" now, and "candy" tomorrow. It isn't "take you medicine, and Santa Claus will bring you a rocking horse when Christmas comes." That may do for children, but it isn't for grown men and women. Grown men and women must learn to do the thing that is worth while for the doing's sake, and to get their satisfaction even in the midst of the suffering which any real living involves. Also they must learn that no one is ready to play much of a part in building over the world and shaping it "nearer to the heart's desire" who cannot work with the enthusiasm of him who looks for the great chance just around the corner, and with the unwearied persistence of him who can wait for the new order if need be a thousand years. "The Weary Wobbly" is good stuff for any man to think upon who has gotten a little slack in his tension. "For in due season we shall reap if we faint not."

# The Essence of Industrialism

By WARREN LAMSON

(Continued From September Issue)

**MANY volumes of research into primitive and ancient societies together with others which treat sex from a biological standpoint affirm the view of the industrialists that there is nothing inherent in either sex to justify a position of superiority in the future society. The mere existence of such inequality today is not sufficient to justify its need or existence in the future. Those who would change this condition of sexual inequity must look to fundamental social changes, not merely to legislate enactments, for so far these have only followed alterations in the social structure. The industrialists, however, are not primarily concerned with the emancipation of woman, but with the emancipation of labor, but this necessarily develops a relationship to the status of woman.**

## THE INDUSTRIALISTS AND WOMAN

Whether woman once occupied a position of superiority matters but little, the facts are today that woman does occupy a position of inferiority and generlly speaking she is man's inferior in talent.

This is socially bad. An undeveloped class from an economic standpoint, is a social drag. But if as is well known woman has occupied a socially inferior position during the centuries in which man has so wonderfully advanced, then it is but natural that she should today be his inferior in talent for as previously shown (Industrialists and Education and the opening premise) the inferiority in ability or talent for any considerable number, sexually as well as by class divisions, is merely the result of inequality of opportunity.

Women in large numbers have been forced or lured into the industrial life of the world, yet as a citizen with a pretty little ballot, when a worker, she finds herself as fully ignored as the male worker.

The women of the working and agrarian classes, having no knowledge of preventive methods, are almost continuously pregnant, or with babes at breast, while those who wish a large supply of cheap, ignorant and unorganized labor, sufficiently

abased and beggarly to be utilized as pawns in the purely commercial wars of modern international capital, continuously sing the praises of motherhood, of which every beast is capable. The newspapers' and moving pictures' main source of sobstuff is this worship of a purely animal function. Intelligent motherhood requires something more than a continuous string of births. It requires of woman to be something more than a perennially pregnant animal. Yet those who attempt to introduce some education on the subject of birth control, constantly meet with opposition. This is most certainly one of the causes of the average woman's intellectual standards being inferior to those of men, while it fills the world with a numerous progeny to which the family purse can seldom do justice, robbing the mother of social intercourse, her time too completely taken up with the cares of the children and stretching an insufficient sum for maintenance. Despite the praise given to the home and the usual eulogy of large families both are in many senses woman's enemy.

Excluded for ages from those pursuits which enlarge mental horizons, woman today appears a mental dwarf devoid of intellectual energy or aspiration. "The small amount she has been allowed to use her mind has almost caused it to be atrophied," says L. F. Ward. The above quotation was penn'ed about twenty years ago. Changing industrial conditions have forced women in ever increasing numbers into fctories, mills, clothing shops and office work, while not a few have entered the commercial and literary world, meeting with average success. These women workers have organized, fought bitter battles, and in many instances bettered their working conditions with the same weapons used by the male worker. However, the so-called androcentric view held both by so many men and women still retards the development of the latter.

The social organization proposed by the industrialists, since it would provide equality in every detail, would eliminate all these social evils, making productive workers of the host of women now merely parasitical dependents on men, eating, wearing and expending without enriching the world one iota. This dependent position of the female is not true of the animal kingdom nor of primitive societies. The replacing of nonproducing women as producers, in their present inferior state would double the producing agents. They with the male parasites transferred to useful labor would in reality quadruple the producing agents of modern society.

But with a basis of equality for the race, male and female alike, with the mind, not only the male mind, scientifically educated there would be few if any lines of endeavor in which woman would not soon equal man, and both in the arts and industry they would probably open up new fields as yet untouched by man. While the attaining of social and economic equality would bring about an intellectual communion by which both may travel to the highlands of human growth, the new, free, joyous described by Wells and others.

### The Industrialists and the Arts

Today we live in a world where art is under the censorship of the most stupid, puritanical group that has ever befallen it. It is John Cowper Powys, who says: "No one could suppose for a moment that such a thing as the puritanical censorship of art and letters which now hangs, like a leaden weight, round the neck of every writer of original power,would be thrust upon us by the victims of the sweatshops and factories."

This is very like the position of the Industrialists, for they conceive of the revolution as a freeing of all social forces, which are in no way destructive. Our faith in this process is such that we conceive of a new mankind, surpassing the imagination. While we do not recognize culture alone as progressive, we do see in it one of the greatest elements of happiness. I believe that it was Upton Sinclair who said in substance that there is sufficient energy expended in painting, designing and writing for advertising purposes to produce a school of art and literature which would dazzle the world. L. F. Ward declares: "The love of the beautiful both in sight and sound, has ever been and ever must be a reliable social force, ready to manifest its power on every occasion, whenever the great vital demands of existence cease to absorb the energies of society."

Today the art.st must create, knowing that only a small part of the people will enjoy his work, and I believe that the true artist appreciates a public, and that the satisfaction of imparting pleasure to it is fully as powerful an incentive as income, for those who bear a real relation to products, whether they be workers of art or not, hate futile effort. The workers certainly would not favor a censorship like the present one, where women's clubs, often through perverted male employees, snoop around for something for the club to disapprove, and then through various means suppress something sufficiently artistic or out of the ordinary to attract their attention and soothe their pious, parasitical souls with the foolish idea that they are socially useful.

The idea of being a vigilant guardian angel to other's welfare develops an excessive opinion of importance, which, with a poisonous odor of sanctity that surrounds such persons causes any useful creating agent to detest them. Every artist who prostitutes his talent to secure their approval commits intellectual suicide.

The sense of beauty is a characteristic of civilized man alone, and the extent that those who beautify our lives are free from interference may well be a measure of our progress.

### The Industrialists and the Scholar

The revolutionary organizations have all done more to make the mass of the people acquainted with the works of the world's scholars than all

other organizations together, including press, church and state. In America the revolutionary groups have reached many, while the I. W. W. has diffused a knowledge of them to the most hopeless and overworked of the dispossessed, till today we find the workers advancing by rapid strides in their understanding of fundamental scientific truths, and it is not alone those scholars who deal with sociological questions with whom they are becoming familiar.

The scholar of today, unless independently wealthy, has much pressure brought to bear upon him to trim his sail to meet the demands of comparatively illiterate men, with but one ideal, profits. If wealthy he must couch his works in such terms as not to offend the Anglo-maniac, the church, the nationalist and all of the powerful reactionary groups. When he voices a new idea or differs from some idea now popular it must be done with humiliating apologies. The new social order will remove the straight jacket from thought, then no longer need tho scholar obscure what he has to say.

In the Southern states the socialists once propagated what some have called "White Socialism." For a party organization, not depending wholly upon the working class, this was practically unavoidable. That such tactics can be avoided by an organization of a revolutionary industrial character, was demonstrated by the Brotherhood of Timber Workers, which at the apex of its career affiliated with the I. W. W. For the industrialist knows no class lines in any climate. Just as labor has found it necessary to organize regardless of diffrent nationalities of whites, so the industrialist, in his social scheme, wants all humanity embodied in it. Today recognizing that its success depends upon the entire working class, not the white, black or brown part of it, the workers of all races are sought as members by these groups, and all enjoy equal privileges as members. The industrialists see in the future society all class antagonisms eliminated, and such conflicts as take place translated to another field, have different sources and methods; there will be no one to profit by preaching race hatred, and free science cannot support it.

The ability to think and labor is the property of no one race. In "Social Evolution" Benjamin Kidd writes: "Even those races which are melting away at the mere contact of European civilization supply evidence which appears quite irreconcilable with the prevailing view as to their great intellectual inferiority."

The facts show that these so-called inferior races have plenty of intellectual capacity for earning distinction in any branch of learning, even when confronted with hostility. No one would today think of saying that the Chinese or Japanese were not the intellectual equals of any. It is not a question, in most cases, of capacity at all, but of opportunity and equipment. The Chinese, for instance, developed a comparatively high degree of civilization, while our ancestors were howling savages. The forces that carried some races ahead and arrested the progress of others were not under the control of them, nor are these forces controlled today.

Whether humanity developed from one stock, and groups became isolated and acquired different characteristics, so different as to become distinct races, as seems to be the case (see Wells' "Outline of History; Van Loon "The Story of Mankind"), or whether the conditions necessary for the evolution of man took place separately at different parts of the earth's surface matters little, though most scholars, at present, hold the former theory.

Many quite unlike groups have in the past been assimilated into one people. It appears that, with a modification of the social structure, a process of blending will take place. In fact it is taking place, and such a change would not originate it, but only facilitate the process. Each race would contribute racial qualities which would be of great value to the whole. Some of the weaker branches, now slowly disappearing, may be more nearly blotted out than assimiliated. However, this will not prove true of those races which are numerically strong and are today distinguishing themselves. Race antipathy, even in centers of hostility, cannot completely suppress the reproductive, for men and women are often charmed by the opposite sex of an alien race; this indeed is a more attractive future than one of inter-racial warfare. Lacking such a social solution, a destructive warfare between Asiatic and American-European capitalism is now in sight, which may destroy civilization.

### The Industrialists and Violence

Listening to an I. W. W. soap-boxer in Salt Lake City (Fred Ritter) speaking about a street car strike, I heard the following voiced: "When the scab gets on the car and runs it, we don't try to wreck the car, but allow our vision to climb the trolley and follow the wires to the place where the current originates." This is indeed the stand of the industrialists on violence, their scheme gives the strength of unity, of the concerted action of every unit necessary to stopping the particular work. Their structure provides for the stoppage of work in another or all other industries if necessary to win in one. They recognize, in violence, the tactics of desperation, and ineffective organization. So much for industrial warfare for immediate demands.

The same views are put forward by them in relation to the social revolution. It was an advocate of political action who said, "Behind every socialist ballot lies a bullet," and another who said, "If they should refuse to install our elected administration, we will mount the barricades and fight like tigers." The industrialists put forward the idea of control of the new machinery of production, upon which the life of all modern nations rests. The present workers are the only ones possessing the technique actually to operate this machinery as a whole. Not so long as a large part of them remain at work, can new workers drawn

from the untrained, undisciplnied, non-producing elements be able to man even minor parts of it. Violence is the means of the owners, and the methods of one class can not be successfully used by another. It is not through violence that the workers can triumph, but through the construction of a machine to destroy the ability of the employers to use violence to enforce their ownership. Industrial organization is the ideal weapon for this pur pose, for the industries of the nation are scattered, and the soldiery, drawn from the ranks of the workers themselves, cannot be distributed and directed properly for the work of upholding the employers, against the workers who control communication, transportation, lighting, etc., acting in conjunction with all the rest.

True, some advocate the idea that capitalism shall fall rather than be overthrown. With this question I am not greatly concerned, for whether it collapses or is overthrown, the thorough organization of the producing class is necessary, and the negative basis of "watchful waiting" for it to fall is not sufficient to build upon.

Labor organizations developed because the workers had no means of escape, and no other means of defense. To prevent the onerous condition of the employers, the producer had to be armed with a weapon that suited his needs, and was shaped for his purposes. This required, and to avoid becoming obsolete still requires, increasing sagacity, while a clearly visualized goal is of the greatest importance to any social movement.

All phases of modern life have for some time overflown national boundaries and natural geographical barriers. But the triumph of an industrial organization, and the consequent overthrow of the present obsolete national governments, would for the first time in the story of man see a social organization as broad as the race and its interests. The new social order for some time would logically proceed upon lines similar to those assumed by the forces which inaugurated it. But it being hardly possible that man has reached the limits of evolution, either in a physical or intellectual sense, such an assumption would be as absurd when held in regard to the new order as when held by our primitive ancestors.

If we should grant the assumption that the most finished product of the race today has ascended to the highest peaks of development, we still would have to take cognizance of social evolution, and the result of bringing the race as a whole to such a degree of development. Consequently it is comparatively safe to assume that the new social order would itself be transitory. It would present a picture similar to that of the machinery which brought it into being, with the additional prestige of wielding the undivided and unopposed will of the entire race. "If such an organization were handled in a way to hold the allegiance of its constituent membership, its decisions on matters of importance would carry immense authority." ("The Next Step," by Scott Nearing.) Its decisions would carry so much authority that a war conducted by a continental or an industrial division would be an impossibility.

However a social war (not armed warfare) might quite possibly take place, extending throughout its fabric. Its overthrow and the inauguration of a still more advanced and freer society may take place in such a manner. It would amply provide for the settling of quarrels or rivalry originating from the material interests of any one small group. However, there are phases of life from which no institution, of which we are able to conceive, can abolish competition and friction, and the development of a social order which would eliminate, even the worst features of this from all phases of life, would necessarily be one more advanced than the "Industrial Democracy" sketched here. The presentation of the next immediate social order as an immense love affair by two billion people is absurd, but its industrial and social structure will prevent its breakup, excepting in favor of a more advanced order. For the only condition of life that can remain unchanged would be one in which evolutionary forces could not operate or innovations be introduced.

"A change has occurred in man and that change was education, the power which brought about this change was the steam engine." (Steinmetz, "America and the New Epoch"): So we can imagine a change occurring, in the order proposed, by the introduction of a means of generating power from the sun rays, spherical friction, or the decomposition of the atom, far greater in its possibilities than steam or electric power machinery.

In utilizing the industrial mechanism of today such a society of necessity progresses into a yet higher stage, for to quote the figures, not of a literary theorist, but of one of the world's greatest engineers, Steinmetz, "The elimination of obvious waste and inefficiency of duplication of production, etc., would still farther reduce the work of the world, so that without discounting improvements and inventions which are continually being made, we can see a world with a standard of living fully as satisfactory as ours, but working only four hours a day, only two hundred days during the year—that is, taking a week or two for recreation at every holiday, and two months vacation in summer. This is far away, but it is no idle dream, we have only to look across the water, toward war torn Europe, and we can see conditions which, with the waste of war removed, would not be far different from above." The Steinmetzes of that future day will no more be idle than now, while their prestige will be far greater. So we may safely assume that nothing will even be considred finally settled, knowledge will continue to increase and wil alter the conditions of life as now, so we may assume that there will be something beyond, freer than industrial democracy, itself to be the product of revolution, when the new order has laid low the ignorance,

superstition and peculiar traits of mind fostered by the present semi-savage state of mass and class oppression.

The succeeding state will probably be one of voluntary association or organization. The fact is that it will take a finer type of man than we have at present to inaugurate a social system based on voluntary association. To idealize the average man or toiler is futile. The truth is that the average man and toiler will need to pass through the social order of industrial grouping, which will not be voluntary, before he will attain the social conscience necessary for such an ideal form of life. The possession of material things, as a measure of a man's value must be eliminated from the concepts of the race, the passion for moulding every one to one model, in forcing every one to conform to the drab standard of the majority must be overcome before the great mass of men may become true individuals, before a race truly free and beautiful can be evolved, living not in the hideous primitive state of anarchism or communism, of some of the "radical" backgazers, but in the anarchism of an intelligent and capable race. Man as we know him today is more brute than intellect, a sense of beauty is the possession of but a few.

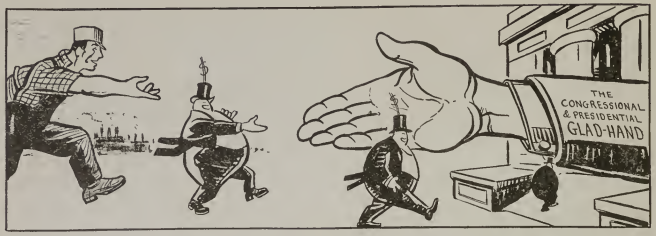
The difference between the man finally to be produced by the individual democracy, and living in the first society of free men, and the toiling cattle, scheming shysters, mercenary politicians, and prostituted journalists of today is sufficient at this time to render the evolution of such a superior man a thing inconceivable to the average person, even to the average revolutionist, who thinks of his authoritative communistic or industrial unionistic society as final.

Who still think and write in terms of majority rules see only that which is temporary, present. The real social change will make men free. Its concept, rather than the greatest good for the greatest number, majority rule, will be founded on organic, social unity, the only foundation for spontaneous sympathy and love.

# Onward

By LEWIS STONE

IN this picture of a primitive man hauling huge stones with which to build a dwelling or for some other purpose, we have an artistic idea of the fearful labor involved when industry was very young and the mind of man was little developed. Usage of tools, their continual improvement and multiplication, has sharpened the human brain and placed ease in life and comfort within the grasp of the whole race. However, the speed at which most workers in America are compelled to toil,



the consequent exhaustion endured, would not show so great a difference in the status of the primitive man and his modern wage slave descendant as might be assumed by viewing the great machines man now has to aid in creating life's necessaries.

Modern industrial plants illustrate the contrast between archaic forms of labor and those operating today. But the workers are slaves to these machines and prisoners of all the factories when they should be masters of all social tools. They lack this mastery because they are divided, ignorant, without a sense of their own due worth and without a vision of what a dreamland they could make of this old world if only they would organize and wipe away all barriers standing between equity and justice in the relations of man to man and man to industry.

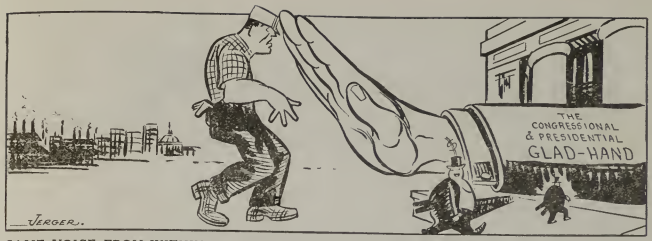
But attaining such a social readjustment, involving revolution in society, is not the highest stage men may hope to reach. It is simply battering down the walls of a confinement prejudicial to the welfare of the workers primarily, and to the human race secondarily.

At the conclusion of his greatest satire, "Penguin Island," Anatole France draws a picture of a future with industrialism unchallenged and cities of fifteen millions, crowded warrens of industry, dim and joyless. In seriousness to draw the future with the stuff of imagination or desire is utopian, but we do not want to go forward to a regimen of ironclad system, to dwell in the sunless canyons of cities and to view as the only thing worth while our attachment to industry, any more than we should care to turn back to primitive forms of existence. Solving the economic problem by instituting an industrial commonwealth is a great step, but it lays only the foundation of a life thus far unknown, one that is freed from that which is ugly, freed from drudgery, freed from industrial goosestepping.

VOICE FROM WITHIN (WARMLY)—"COME RIGHT IN, GENTS."

# Behold Here The Election Spirit!

By C. E. WOOD



WITH the election time for many national, state, and municipal offices approaching, the workers are sure to be treated again to the flattery of those who are out to catch votes. The dignity of labor will be much spoken of while acknowledgement of the workers' social contribution will fill the air. In non-election seasons there is a remarkable dearth of this homage, and even so astute a politician and so noble an idealist as the late Woodrow Wilson had his "say" about the workingman in plain language—after he had captured the presidency. When the subject of the perennially mounting cost of life was broached to Woodrow and his opinion asked as to what he thought the workers should do about it he replied: "Tell them to eat cheese." One of his distinguished political contemporaries, now gathered in the arms of his fathers also, Champ Clark, while speaker of the House of Representatives was even more blunt in the same premises. He said to tell the workers to "eat mush." But the storm of war broke on Europe and the American proletariat went to work on ships and shells and they were spared the cheese and mush, which just before that time they were having difficulty in securing. The war brought prosperity and shed its glory on the reign of the Princetonian acolyte before the hallowed shrine of democracy.

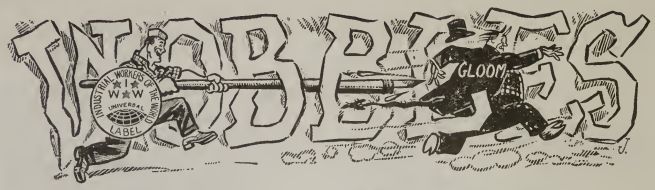
Now these mentions are made merely to remind you that on occasion the office holders in the highest seats of authority will "spill the beans" about their real atttiude regarding the welfare of the slaves—only, and it is to be well noted, these leaks come after elections. Before the elections nothing —in words, at any rate—is too good for the people. After the contest is over nothing is too bad for them.

And as the years have rolled around a growing number of workers have come to realize that they have nothing to gain from politicians. They have not read books to find this out, but experience with the whole breed by a process of party rotation in administration has shown them how alike are all factions contending for control. An election period never passes in which the tendency of workers to allow the ballot to pass unnoticed is not deplored and denounced in the capitalist press, and, for that matter, in the remnants of the socialist press as well. All are urged to flock to the polls and "do their duty." However, this exhortation does not turn the tide of indifference to political affairs, the workers feeling that the vote is a broken reed upon which it is foolish to depend.

This apathetic reception of the hortatory broadsides for them to rush pollward and stuff ballots in boxes said to be capable of issuing a magic for the common good, might be only the obverse side of the medal. We might expect to find a reverse face displaying a positive movement in a direction for action in lieu of the abandoned parliamentary sort. Such is not the case. The workers do not leave off voting to employ other methods. They do nothing.

It is an important phenomenon, this increasing neglect of employing their voting privileges, that should be turned to account by industrial unionists. While we witness this condition of disaffection we should also remember that never has the American working class given support to radical political parties. This is not a fact to be regretted, inasmuch as numerous alignments of proletarian forces with social democratic parties in Europe for about four decades, having parliamentary blocs of great strength, achieved nothing of value for the workers and fell to pieces in the debacle of 1914.

SAME VOICE FROM WITHIN (WARMLY—BUT WITH A DIFFERENCE!)—"HEY! NOT YOU! I SAID GENTS!"



America is, at least, spared these long years of experimenting with socialist saviors.

The time is more propitious to disseminate the industrial union philosophy than ever before, as examples of the constant and universal transcending of industrial control by business empire over the parliamentary influence multiply themselves. During the war business openly ran the government as it had previously and has thereafter operated it more covertly. And if we can focus attention on this economic spectacle we can detract from the parliamentary interest that still holds the minds of many workers, while arousing those to act who have already quit hoping for betterment by changes of administration on the political field.

Nothing should really be more natural for working class expression than economic direct action, and without having raised their sporadically intense contests with their masters in industry to a creed or a philosophy, the workers have depended more and more upon the strike. No action more directly suggests itself to them, and the strike is an instrument within their grasp. They do not wait for an election day to vote resistance to encroachments in factory, mill or mine; they think not at all of using ballots to reduce the hours of labor or to increase wages or to gain anything they want. What they do, if they do anything, is to demonstrate their economic power directly at the productive point. Of course this gesture is very limited in a country where unionism recruits so small a minority of the working class, but it is practiced sufficiently to influence workers' thought in general, and one is frequently in earshot of such remarks in unorganized industries as, "We ought to start a union to get more pay." It is never, "We should vote next election day for so-and-so to get bigger wages."

This is an encouraging aspect of the class struggle. Taking account of the training in subservience that is given to workers, and the consequent timidity they show toward embracing programs involving assumption of power, we must realize that our educational progress among them must necessarily be slow. We have very little influence on the eduction of minors, our work being possible only among adults, while the orthodox systems of education have a method that is elaborate and begins with small children, never ceasing "educating" the individuals in patriotism, belief in the sanctity of the existing regime, and in acceptance of their "place." We can not change this educational scheme until we have charge of education, and this, like all other institutions, is bound up with industrial ownership. Although the fact had long been observed and commented upon, it was left to Upton Sinclair to publish two books dealing with the American system of education both elementary and advanced. In "The Goose Step" and "The Goslings" he makes a complete case showing that the economic masters of this country dictate the kind of education that is to be dispensed and the kind that is to be dispensed with. When we have won the ownership of the industries we shall fall heir to ownership of all social institutions, and then we shall be obliged to shape these institutions to our own ends.

Our work is to show workers that a better life is possible for them only if they unite industrially and take it. Our business is to demonstrate that food, clothing and shelter, the three most essential needs of man, are not produced in parliaments, but in the industries and that to regulate their creation and distribution parliamentary direction is not needed but industrial organization certainly is. The horizon of a liberated humanity must be illumined by the rays of economic direct action. Slowly the industrial union idea is taking hold and the employing class is making desperate efforts to prevent its propagation. By industrial organization the bosses have gained control and they realize its merit. They know that when the great mass of workers, or even minorities of workers in certain industries, embrace this instrument of organization a will to power will be generated and the knell of economic autocracy tolled.

## HORSE SENSE

In the American Mercury for July Captain E. L. M. Burns, of the Royal Canadian Engineers of the world war, has this to say about the horse:

"The above chronicle of defects ought to be enough to convince anyone who has not had a cavalry training that the horse is not to be depended on for warfare in this enlightened age."

Thus the horse shows better sense than his master, man.

## A PATRIOTIC GESTURE

"We, Our and Us." What "we" are doing in South America. How fine "our" work down there is. All the things that now belong to "us," he tells us all about in the Saturday Evening Post. But just as my patriotic pride was beginning to bust my bosom almost, I found that "We" and "Us" were our dear old friends the Guggenheims, Morgans, and Rockefellers, while "Our" was Anaconda Copper and Standard Oil and Bethlehem Steel, who owned, there as here, all that was ours. And what do you think they went to all the trouble of annexing all that fat profit for? Just for fun? Not on your life, bless your dear, innocent soul—they done it out of pure patriotism, just because they want to protect Uncle Sam in the next war! Ain't that too noble for anything?

## QUIZZING THE M. D.

Pat had recently arrived in America from the Emerald Isle, and he was obliged to see a doctor about an illness. When the physician finished the examination Pat asked:

"Well, doctor, and how am I feeling today?"

## HARD

Dentist: So you've broken a tooth, eh?

Tough kid: Yeh.

Dentist: How did it happen?

Tough kid: I wuz shiftin' gears on an all-day-sucker.

## REALIZATION

"This is positively revolting," remarked Louis XVI on hearing of the fall of the Bastille.

## A FAIRY TALE

Once there was a young man who loved his wife and his mother. One day his sweet bride asked which of the two he loved more.

"My mother," he said, hanging his head.

"That's good," she replied sweetly.

## ANOTHER ONE

"Just as I thought," said the dentist to the new patient, "your teeth are in perfect condition."

## TIMELY ADVICE

A street speaker in Scotland was being annoyed by offensive remarks from part of his audience. He was about to call a policeman when one of his friends advised: "No need to call a bobby. Just gang roun' wi' the hat!"

## OF COURSE

Abie: Papa, what's science.

Papa: Don't be dumb, Abie, it's them things like what says "Keep off the grass."

## TYPOGRAPHICAL ERROR?

From the Provincial Record (Australia).

It is presumed that his death was due to having come in contact with a high-tension wife.

## OF NO CONSEQUENCE

The big sedan was speeding smoothly over the country highway. A one-armed driver was sitting at the werel, but other arms were well distributed in the rear seat.

"I think I heard something drop," said the chauffeur, anxiously. "I hope it wasn't my spare tire."

"No, only a pedestrian," remarked the girl reassuringly, laughing at his needless fears as the car sped on.

## NONE TODAY, THANK YOU

"Please, ma'am," said the domestic, "there's a poor man at the door with wooden legs."

"Why, Bridget," interrupted the mistress in a reproving tone, "what can we do with wooden legs? Tell him we don't want any."

# Capital is Capital

By COVINGTON AMI

WHAT is the point of effective concert between Capital and Labor, between management and men?" asks Robert W. Bruere in the Survey Graphic for August.

Bruere should learn the scientific use of these words before handling them, else he is muddling the issue and hurting the cause of labor.

It is clear that the "Management" of industries are just as much men as are the "men" working at other tasks in industry. The managers are no more capital than are the rest of the men and women engaged in production, distribution and exchange. They are merely a highly trained group of technical workers, and nothing else. In the present system of robbery of labor they do not manage the socialized industries for society, but to gouge out of the workers under them all the profit the traffic will bear for their bosses, the plutocracy, as the present dividend rate clearly proves. They are efficient, all right—efficient robbers.

It is further clear that this definition of capital is correct, viz.:

**"Capital is that part of wealth set aside for the production of more wealth through the exploitation of the labor power of the industrial and agricultural workers."**

There is no equality between capital and labor for the sufficient reason that capital is a dead thing until labor power starts it into life. It is the product of the age-long effort of the race, and what the race has created belongs by every right, natural and divine, to the race alone. The present owners of capital hold it, not by right, but by usurpation and conquest. It has been looted from the race.

It is sheer nonsense, or worse, therefore, to speak of "management" as if it were capital and of "men" as if they were something outside of and alien to the economic organization of industry. Such language will never get us anywhere.

We, the workers, are not after injuring capital. Not at all. Our whole interest is in conserving it and in developing it to still higher efficiency to the end that our lives may be freed of grueling toil and uncertainty, and that there may be more peace in leisure in the world for all.

We have nothing therefore against capital. It is to the capitalist, the alleged owner of capital that we object. We deny his right to own that which is the creation of the race as his private property. We deny it because it injures us and ours. We demand the abolition, not of capital, but of the private ownership of capital. And this we do because that private ownership carries with it the alleged right of the private owners and their autocratically selected management to do as they "damn please" with our labor power, which is the very life of our life—the strength of our hands and brains. We hold, therefore, that the only "point of effective concert between capital and labor" can be effected when capital is common wealth.

For when capital is common wealth it will no longer be capital, for then it can no longer be used for the exploitation of labor power. That is what we are aiming at—the ending of the abuse of capital by making it common wealth. That end we will achieve, "for nothing is more certain in the stars than that the workers shall yet be free."

# "Why is a Editor?"

By COVAMI

PAW, why is a editor, queried the Sweet Young Thing, looking up from the latest issue of the Daily Yellow American.

"Editors, my dear daughter," replied the fond parent, "especially editors of great journals, great dailies and official organs, are because they once were.

"Editors were originally some pumpkins in the communities in which they lived and enlightened; but today all that is changed, for, what with the Business Office on one side of them and the Policy of the Management on the other, they are now in the fix of the man who got between the devil and the deep blue sea.

"Editors are supposed to illuminate the minds of the common people on and as to affairs sundry and in general, but when a man can't express his own mind his illuminations don't dispel much darkness, my dear.

"Editors are mainly maintained on publications today, not to think, but that the Public may have somebody to cuss.

"Editors thus being between the Business Office, the Policy and the Public, develop hides thicker than politicians and consciences like unto dipomats and, even at that, only the most hardened sinners stick to the job.

"Editors canot turn around without butting into one of the three Great Powers named and must ever be on their guard against ruffling any of them, since from the Business Office they draw their pay, from the Policy their psychology and from the Public their praise, all three of which are necessary to the welfare of modern editors, for editors, like all other animals, must forage for food, clothing and shelter, my darling.

"Editors must therefore always speak wisely and well, exercising great care in the handling and illumination of the dangerous thoughts, facts and

truths that now undermine all society, lest they unwittingly expose the ship of state to a submarine, and thereby kerplunk the palladium of our liberties.

"Editors, my dear one, are, like all other big men and things of today, not what they seem, or dreamed, either; and the more widely they are heralded and advertised the more certain you can be that they are famed for saying nothing sagely or for gilding the lily of truth so perfectly that no one would recognize it once it had passed through the exotic exuberance of their imaginations.

"Editors are born and not made. Their 'why' is one of the unrevealed marvels of an unrevealed mystery."

"Gee! Paw, I didn't know it was as worse as that. Ain't you a editor?" dazedly queried the S. Y. T.

"Yes, my child," he meekly answered, "I am of the Lost Tribe of Thinkers. But please don't be too hard on poor old daddy, dear, for, remember, had I not been diplomat enough to dodge the three Terrible Powers named, you could not have been Queen of the Pippin Karnival Kub's ball this season, and it has been the dream of my life to see you Queen of the Pippins.

"When the Blue Pencil falls from my weary hand and I go hence to that Happy Land whence the Business Office, the Policy and the Public cannot come, just carve this on my tombstone, please:

" 'Here sleeps an editor. May he never wake up. Amen.' "

# Preamble of the Industrial Workers of the World

The working class and the employing class have nothing in common. There can be no peace so long as hunger and want are found among millions of working people and the few who make up the employing class, have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production and abolish the wage system.

We find that the centering of the management of industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers.

The conditions can be changed and the interest of the working class upheld only by an organization formed in such a way that all its members in any one industry, or in all industries if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."

It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown. By organizing industrially we are forming the structure of the new society within the shell of the old.

**LUMBERWORKERS RESTLESS**—During the first week of October, about 1,500 lumber workers, engaged in the saw mills of Aberdeen startled the community by going on an unorganized strike, and closing down what might be called the chief manufacturing industry of that town. News dispatches sent in to Chicago from there state that everything is unusually quiet, and add significantly, "even the whistles are silent". That is an excellent sign. If the bosses cannot get scabs, they cannot run their mills, therefore, no whistles. And if this condition lasts very long, there will certainly be gains for the strikers.

It is likewise reported that the strikers are afraid to organize. Certainly the strike was not started by any organization. It was started by the rotten conditions and the low pay. The saw mill workers suffered a cut of about 20 percent in their wages not long ago, and the mill bosses kept them quiet by telling them that there was no profit, and nothing to strike for.

But when work speeded up, and when news came in of great sales of lumber in the Orient and elsewhere, and when, especially, some of the mills began to run two shifts —that looked different.

The saw mill workers were right in striking. If they do not win it will not be because the bosses can not afford to lose. It will be because the bosses are better equipped to put up a fight, and the obvious lesson to these workers from that, is to organize. They have good solidarity—they strike together—FINE! But that is the beginning only. Whether they win or lose this round, they will have another coming up. If they win, the boss will begin, either by lengthening the hours, speeding u pthe work, efficiency systems, or in some other way, to quietly take back all he has been forced to surrender. If they do not win, he will of course, grant nothing in the first place. And either to keep what is won, or to make sure of getting it at all, it is necessary to be firmly organized, ready to fight any time, and not to have to depend on a wave of enthusiasm or of desperation to pull the men out of the mills, at a critical moment.

These lessons are so plain that the Aberdeen workers will see them before long. Once they have begun to show solidarity, the organization needed to maintain it will take place. It is all very hopeful, when one considers that the saw-mill workers are the section of the lumber industry that have always been least likely to put up a fight. If they begin to struggle, then surely, conditions favor organization and militant action everywhere in the industry.

We expect before long to hear, that not only have the saw-mill workers of Aberdeen and other Pacific Coast towns decided in greater and greater numbers to join the I. W. W., but that the woods workers, heretofore the most energetic and rebellious, and because of that the most progressive, section of the industry, are flocking to hunt up delegates in Lumber Workers Industrial Union No. 120 of the I. W. W. If the mill workers can fight unitedly and tie up four big mills in Aberdeen, the loggers, who understand organization, and have had experience in its benefits, can certainly be relied upon to get together and get results, the I. W. W. way.

**TOO MANY MINERS?**—John L. Lewis, president of the United Mine Workers of America agrees with Secretary Hoover that there are twice too many miners in this country. While Lewis jockeys for political preferment we find the union which he heads staggering under a weight of scab competition certain, if not checked, to wreck it. Kentucky, Tennessee and West Virginia scabs are receiving a wage of $2.50 a day in those enlightened communities, while the organized fields pay

$7.50. As a result of this cost advantage, and superiority of the coal in the states named, owners of these non-union mines are formig stronger blocs of economic power whose future portends a coal mine hegemony destructive of all unionism in the coal mining industry.

With speed-up systems and improved methods of taking out the coal, fewer workers are needed unless a change is made in the hours of employment. This condition holds true of all industries, the number of part-time employed and unemployed workers constantly grows, and this very resource of competitors for jobs gives the employing class a weapon with which to force their slaves to toil longer hours. In no respect is the class conflict, the clash of interests between worker and boss more clearly shown than in the matter of hours. Obviously, when the number of jobless mounts the first need is for a reduction in hours of those employed so that the unemployed can be given work. But the boss class is strengthened by this over-supply of labor and turns the situation to the account of higher profits by driving the workers to longer hours of labor and to lower rates of pay.

The same phenomenon is common to all industrial countries, and lands that formerly produced few or no manufactured articles are developing their industries. With these nascent competitors on the world market the battle is intensified and the contradictions of capitalism assume more threatening form. There is no hope through the old means of collective bargaining. The capitalist class as it throws ever more workers into the shambles of unemployment approaches its end, but without the decisive assaults of revolutionary labor capitalism can endure for a long time. Machinery exists to be the friend and liberator of the working class when this class takes possession of it for its own purposes. Today machinery in the grasp of an unsocial breed of leeches enslaves the workers.

So, if there are too many miners according to the hours worked, is there no solution to the problem? Are the extra miners to thrust themselves on a labor market already glutted? Or are they to lie down and die? So far as the trade union officialism is concerned they can adopt either course. Trade unionism has no key to the dilemma; it is bankrupt. Indeed there is no way out for the miners and for all workers except by revolution. And the hour nears, the time is being forced on the working class in which its members must make a positive offensive for possession of all the industries.

—JOHN A. GAHAN.

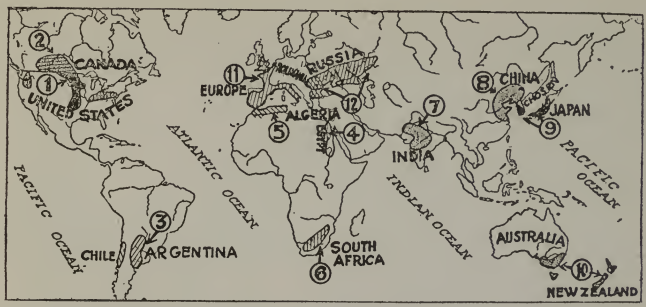
**SYMPTOMS OF DECAY.**—Chicago is one of the great cities, great in population, boasting good health conditions. And, as big cities go, we suppose that it is not worse than others in this respect, and perhaps better than many. But we recall having read a few years ago a statement by a prominent physician connected with the Chicago Board of Education, in which he said that most of the children he examined had enlarged tonsils and bad respiration due to congested living quarters and improper nourishment.

The other day Dr. Clara Jacobson made a health survey of the Scanlon school of Chicago, which has 2,000 pupils. She reported that 15 per cent of these children are potential tuberculosis cases, and that 42 per cent are anemic. Also that 75 per cent have enlarged or diseased tonsils, and 74 per cent have decayed teeth. In addition to this she says that 41 per cent have enlarged thyroid glands, 26 per cent defective posture; 40 per cent have defective vision; 6 per cent were slightly deaf in one or both ears, and rickets in infancy had left its effects on 27 per cent.

This is a record of an ordinary public school's children. Most of these children are of the working class. Nearly every disease, imperfection and tendency to disease discovered by this physician is traceable to poverty. The effects of rickets (rachitis) being peculiarly so, since this disease attacks very young children who are not properly fed. Children afflicted who survive its ravages are marked by the

disease. In a survey of a New York public school several years ago it was discovered that most of the children came to school without breakfasting, because their parents were too poor to provide them with the prescribed three meals a day. And a doctor at that time whose investigations had been nationwide said that there were several million American school children who did not receive either enough to eat or the right kind of food, due to the impoverished conditions under which they existed.

While upward of two million children are enslaved in the industries of this country, another immense host are robbed of the nutrition that is required to build strong bodies and to fit human beings for the normal conduct of life. Warfare is one of the spectacular outrages practiced on the human race because of the scheme of profits motivating industry. But here is another phase of the same monstrous power working havoc in the bodies of little children. There is no cure for poverty except freedom, and freedom means industrial freedom, justice and equality for all men and women and all who are able acting as producers.—JOHN A. GAHAN.



**BRAINS AND GAS.** — Brigadier General Amos A. Fries, chief of the American army's chemical warfare service, declares that in the next war gas is to be the dominant factor. He also mentioned that this country leads the world in this kind of war preparation. The general imparted the cheering news that with an auxiliary air force it would be possible to kill every resident in a city as large as Chicago by dropping drums of poison vapors from the clouds. And he wound up by asserting: "In ancient days it was brute force that won struggles. Now man has found that brains count more than brawn."

Such chemical progress for wiping out opponents in warfare should certainly be thrilling to the patriotic soul. How the pulses of the hundred percenter must quicken at the news, and how our chests should swell with this pride of brain over brawn for the purposes of human destruction. Advocates of gas warfare tell us it is the most humane way to kill. How glorious is the chemical science that has developed such nice ways to cut off life!

The general is a realist. He speaks of the next war in just as natural a way as one might speak of the night following day. He is correct. Capitalism creates the commercial rivalries that cause wars and there can be no abolition of armed conflict so long as capitalism exists. The logic prompting perfection of death-dealing gases and other instruments for killing is flawless. If humanity sets out to be efficient in murder, gas seems to be a very effective means to this end. But has this race that has climbed from the gibbering to the articulate, from the beast and half-beast to the full stature of manhood, armed with power over all lower orders of life and over the very elements of soil and wind and wave, no higher destiny than that of wholesale murder?

We of the I. W. W. think so, but we know the forces that make wars, and we know that only the organized workers are strong enough, and humane enough to stop the recurrent sprees of blood-letting. The human race has reached a point where the further rule of its affairs by a minority class of capitalists means nothing but misery and death in war of industry and of battlefield. The hour has struck for the workers to take charge of their world, in the interest of the working class and of humankind.—JOHN A. GAHAN.

**A NEEDED GESTURE.**—Some time ago we reported that anthracite coal shipments from Wales were being ordered to meet the deficiency created by cessation of work of 158,000 hard coal miners in this country, and that Lewis was doing nothing to stop the shipments. However, the miners and transport workers of Great Britain realize that they lose in the long run as American workers fail to advance their own interests, and a move has been made by the union miners and transport workers over there to prevent shipment of the coal to America. This is a willingness to make common cause not solicited by the American miners, but one which, nevertheless, strengthens their position.—JOHN A. GAHAN.

WORLD'S BREAD CROP—This map shows the location of the wheat granaries and fields. The figures following each number show the wheat in bushels produced in each country during the last two seasons. 1. United States, 1925, 678,000,000; 1924, 873,000,000. 2. Canada, 1925, 375,000,000; 1924, 263,000,000. 3. Argentine, including South America, 1925, record breaking acreage to harvest; 1924, 242,000,000. 4. Egypt, 1925, 37,000,000; 1924, 34,000,000. 5. Algeria, 1925, 40,000,000; 1924, 17,000,000. 6. South Africa, 1925, no report; 1924, 6,000,000. 7. India, 1925, 325,000,000; 1924, 364,000,000. 8. China, no figures available. 9. Japan, 1925, 36,000, 000; 1924, 25,000,000. 10. Australia and New Zealand, 1925, 5 percent increase in acreage yet to harvest; 1924, 115,000,000. 11. Europe, including eight countries, exclusive of Russia, 1925, 852,000,000; 1924, 718,000,000. 12. Russia and Roumania, 1925, 771,000,000; 1924, Roumania, 70,000,000; no figures on Russia.

# Reviewing the 1925 Harvest Drive

This is a picture of the court house and jail at Fargo, N. D. At one time, this summer the bourgeosie of the little town of Fargo, and the state officials of N. D., thought they had the whole I. W. W. harvest drive locked up here. Events proved they were mistaken. When the authorities decided to give up the fight, they took 119 men out of this jail and turned them over to a mob.

BY JAMES SULLIVAN

(Secretary Treasurer Agricultural Workers Industrial Union No. 110 of the I. W. W.)

**THROUGH the central area of the United States from Oklahoma to North Dakota, including part of Montana, and continuing across the line in the Dominion of Canada lies one of the world's richest granaries, contributing an enormous share of the food supply not only of North America but of the globe. Each year as the bright grain ripens in golden sunlight, the cry for men is heard. Workers are eagerly sought to play their saving part in this titanic epic of wheat. The need is urgent, for without them there can be no harvest, and devoid of harvesting farmers face ruin, while the nation is confronted with famine.**

"A friend in need is a friend indeed!" and having never given the workers even a thought during the other seasons, John Farmer now sees the harvest worker as someone very desirable to have around his acres of waving wheat. The government lends itself to the task of recruiting the large army of harvest hands required. Every post office carries an advertisement, and the country's press is employed to make known still further the imperative need for men in the grain harvest belt.

Starts then a movement of workers from the east and the west to this middle country of wheat blowing in the sun over all the millions of acres, a migration of thousands of workers to Oklahoma and Kansas, high in hope of finding opportunities to make stakes. Annually at Alva, Oklahoma, are gathered the first to reach the scene, the advance guard of the toiling horde that sweeps northward, insuring wealth to farmers and bankers, and bread to the world. And the farmers are ready for them! Great as the need is for their labor power, John Farmer is tightfisted, alert to safeguard his gains and to augment possibilities for greater profits. The farmers meet each year throughout the grain country and decide on the wages they will offer in the harvest. Here is activity of economic association by farmers. They know that their interests are served better when they stand together.

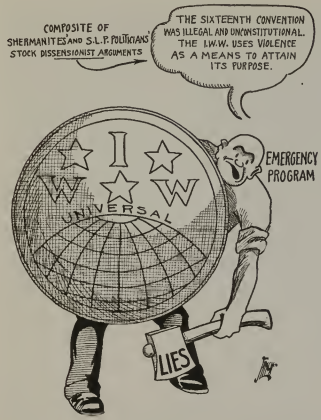
### Division Is Ruin

Now against such employing class unity the individual harvest worker is powerless to enforce demands consistent with his welfare, nor can he resist the onslaughts against his material status. Such being the case it is not remarkable that an organization so farmed as to unite agricultural workers in the manner best suited to advance their interests, came into existence. It is not necessary here, nor is there really space, to describe the history of this organization, originally called Agricultural Workners' Organization No. 400 of the I. W. W. and now named Agricultural Workers Industrial Union No. 110 of the I. W. W. Our time must be used in summing up the drive for organization for this year, which is now nearing its termination.

Beginning on May 15th last, at Omaha, Nebraska, A. W. I. U. No. 110 conducted a conference of delegates and members. This gathering considered the situation before them from all angles, and made preparations for an intensified empaign of organization. We can profitably consider the problems that loomed up at that time.

It is well understood by all exponents of industrial unionism that there can be no room in the harvest for more than one workers' organization. Any intruding union or the presence of a seceding faction could have but one effect: to lessen the strength of organization and to sap at the morale of the workers. And it was on this vital issue that the conference first acted. The Emergency Program element of disrupters had advertised their intention of entering the harvest with their pernicious propaganda. A. W. I. U. No. 110 at Omaha could be no other union in the harvest, and pledged itself to the I. W. W. Clear on that score the conference proceeded to map out plans for a successful organization drive. Many old-time members were present, whose experience and militant spirit greatly aided in making the conference a success. Determined to carry the message of industrial unionism through the grain country they planned very carefully.

They knew that organization work would have to be prosecuted in the presence of an employment crisis of vast proportions; that it would be difficult to build up organization with a working class of such marked indigence as is created by this jobless condition.



### A Dozen Dangers

It was their business to consider a broken morale caused by the severe controversy which shook the I. W. W. They realized that their hope for success lay in exemplifying the fighting spirit of other years and thereby revivifying the workers' enthusiasm.

Another obstacle in the path to success was the failure of the crop in Oklahoma and Kansas. Still, when the harvest started in these states with the farmers offering $3.50 and $4.00 a day, the delegates and active members were on hand demanding a wage of $5.00 at least. "Five dollars a day" became the workers' slogan and it speedily won. Although the unemployment crisis made competition for jobs more keen, the workers had sufficient good sense to realize that the wage offered by John Farmer was no incentive, and that the figure set as a minimum by I. U. 110 was calculated to enable them to obtain some semblance of decent livelihood. They expressed solidarity and profited by it. Our opening gun in the drive had been fired, and shattering the citadel of farmers' greed, reverberated with victory, redounding in material betterment for the workers.

### Ignorance on Wheels

At this juncture we should call attention to another disadvantage with which our organization has been obliged to contend, especially since 1921. We refer to the auto tramps whose numbers are constantly increasing in the harvest territory. This element is composed largely of farmers' sons coming from dairy and corn states. They want to see the country, their chief concern not being to gain a livelihood. As a consequence they are not deeply interested in our major concerns, hours and wages being of secondary, only incidental importance to them. With such workers it is difficult to discuss unionism. Their whole interest has always been agricultural, and not influenced by labor unionism. Again, they travel rapidly, driving right up to the farmhouses and offering their labor power at the

**THE SHIELD AND THE WEAPON OF THE E. P.**
**(The E. P. Hides Behind Our Name)**

farmers' terms. Where these auto tramps do not supply the demand the farmers must go to town and meet the workers in groups, and the bargaining is then influenced by the collective agreement of the workers, or, in other words, it tends to be concluded at the **organized workers'** terms.

This auto tramp matter is a phenomenon of proportions so large that our organization is compeled to provide for coping with it, and the solution should be found largely in the extension of our Industrial Union among stationary farm workers, those who devote their time the year around to agricultural pursuits. In this manner we hope to secure permanency of organization in agriculture, whereas we now have only the seasonal drive among migratory workers whose time is chiefly spent in other than agricultural labor. In addition to the work that is performed throughout the year on farms of general character, there are special lines of work such as are done on dairy, canning and poultry farms, all of which offers a field for the organizational efforts of A. W. I. U. No. 110. Extended in this permanent manner we can more ably spread our educational message, and more effectively reach such groups as these auto tramps we have mentioned with a view to adding them to our members and eliminating a menacing competitor.

Returning now to a consideration of the organization drive, we see it gaining momentum as it leaves Oklahoma and Kansas, where the crops were very poor and chance for organization thereby reduced. The delegates and active members kept their lines firm, advancing northward determined to effect sufficient organization in Nebraska, South Dakota, North Dakota, Minnesota and Montana to offset the reverses at the beginning.

Progress attended their efforts in a uniform manner unmarked by anything spectacular or unique until the drive reached Fargo, North Dakota. Here our delegates were met by a conspiracy entered into on the part of those moneyed groups interested in the destruction of working class organization in general, and of agricultural workers' unionism in particular.

### Force And Violence

Twenty-two of our delegates were illegally arrested in Fargo and thrown into the Cass County jail. This presented a situation of similar kind to many experienced by our organization in other years. Immediately the method that was employed previously for such emergencies was pressed into service. A call was sent out to all our members stating the facts and appealing for an exhibition of solidarity. With an alacrity that was as heart-warming to the jailed fellow workers as it was unpalatable to the instigators of the arrests, hundreds of workers hurried to Fargo to defend the right to organize.

It is said that ruling classes do not profit by the mistakes of the past. The world's history is replete with the blunders of the force, and the stupid additions of violence to quell the hosts who found birth in this very force. The imagination of these rulers is never broad. Force and violence are the twin evils which they rely upon to hold workers in subjection. So the Fargo rulers kept jailing our members until the jail was packed. And still came the surging flood of militant labor demonstrating that class consciousness is a living, pulsating reality in their lives and exemplifying to the startled vision of the Fargo outlaws of law and order the truth of Joe Hill's deathless line, "As fast as they can pinch us we con always get some more!"

The workers had won, for with the prison filled with our members, the streets were likewise thronged with other members while each train pulling into Fargo brought more. Illegality, force and violence perpetrated on union workers had lost, because you can not count victory by sowing dragons' teeth, and as a few were struck down to defeat organization many appeared to carry its standard onward. Still the Fargo authorities animated by the Chamber of Commerce and the Ku Klux Klan decided to end their labor-hating in customary violence.

In two detachments the unarmed fellow workers were led from the jail by police and citizens armed with guns and clubs. At the state line they were forced to run a brutal gauntlet and driven into Moorhead, Minnesota.

The citizens and press of this town at once raised protests against the outrageous treatment of our

# Evening

(By LAURA TANNE)

Brahms and flame . . . .
Pale people leaning against soft cushions
Listening to Brahms
While the fireplace glowed contentedly.
They spoke of music and lovely things—
Words sheltered by cool elms
Thoughts springing from a chaste aloof soil.

We sat listening to Brahms
While the fireplace flickered peacefully,
While wit and satire tiptoed in silken slippers
Across the velvet atmosphere. . . . .
While I. . . . .
I heard a rumble of thunder outside,
And saw a million impassioned faces lifted
To the darkening sky.

Somewhere reddened arrows pierced the horizon,
As we sat listening to Brahms,
As the fireplace glowed contentedly.

# Restaurant

(By LAURA TANNE)

The rats scurry over the dishes.
The cockroaches play tag in the bread jar.
Nice designs of grime embroider the greasy soup.
And inside the liquid.
Scraps of meat and potatoes float questioningly:
"Why did that chemist commit suicide?"

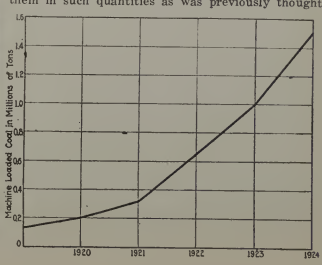
The boss says to the cook, "Step lively, there—
Keep a little cleaner, keep a little cleaner."
The cook says to the waitress, "You sleepyhead—
Where'dja go last night—where'dja go last night?"
The waitress says to the dishwasher, "G'wan, you black gal,
Move a little faster, move a little faster."

Rat traps.
Traps of enmity.
And the lock is Big Change.
And Big Change is where
The clouds drift to a summer day.

# Undercutting the Miner

By CARD NO. 794514

## MORE PROOF FOR ARGUMENT IN "UNEMPLOYMENT AND THE MACHINE"



The first step in checking the spread of unionism in the coal mines", according to Supt. T. A. Stroup, Utah Fuel Co., "will be to abolish the contract system, **then mechanicalize the mines thoroughly**, to standardize every operation down to the minutest detail so that no responsibility of any kind will fall on the worker." When this is accomplished, he points out, the United Mine Workers of America will decline like the Metal Miners' union which now is but a shadow of its former self. "In the metal mines," he says, "the tradition of the individual miner, capable and responsible, has been abolished, the mines have been thoroughly mechanicalized, all operations have been standarized. The trade of the metal miner has ceased to exist; there are now all mine workers fitting into niches and conforming to the routine laid out by their managers."

The general trend in the industry is setting in this direction, appearing particularly in the non-union fields which are rising to snatch the market from the older unionized areas. "The coal mining industry," says the U. S. coal commission, "is just entering the last stage of reducing manual labor through the introduction of machinery." C. M. Means, consulting engineer of Pittsburgh, points out that "the coal mine of the future will be operated entirely by automatic and semi-automatic machinery and manual labor in the generally accepted term will be eliminated."

Do you think this is just bragging? No, unfortunately, no. The process of eliminating the coal miner, and of smashing his organization through the use of mashinery, is well under way. While Lewis and other huge salaried officials of the U. M. W. wallow in their luxurious hotels, and such unemployment as was never before seen holds sway througout the union field, the non-union coal mines are being rushed—coal is rolling out of them in such quantities as was previously thought

ABOVE: The "Coloder" At Work, Running Miners Out of The Mine.

TO THE RIGHT: The "Fig. 1" Referred To by The "Coal Age."

impossible, and it is partly the machine that is responsible.

Approximately fifty percent of the U. S. supply of coal comes from mines owned by less than three percent of the operators (Coal Commission reports) and of these big companies, the Pochahontas is one of the biggest and best equipped. It produces the most coal with the least men. And how? Partly of course by means of an extra efficient system of management, but also by means of its coal loading and coal cutting machines.

The Pochahontas Co. has a long article in a recent issue of Coal Age, bragging about its success with such machinery. Ostensible the article is the product of the pen of Mr. Alphonse F. Brosky, Assistant Editor of Coal Age. Really of course, as everyone knows—the company itself is back of the write-up, buys a certain number of copies of the magazine in return for the advertising it gets in the article—and some stenographer writes the article around facts furnished by the company. But here is what they say.

"Mechanical loaders handled about 1,500,000 tons, or 40 per cent of the 3,700,000 tons of coal produced by the Pochahontas Fuel Co. in 1924. As the leading producer of mechanically loaded coal, this company is far ahead of the runner-up for this honor, and for some years to come may continue to lead by reason of its purpose to substitute machine-loading for hand-loading methods in all its mines.

These mines are located in West Virginia and Virginia and on the southern boundary of the Pochahontas field. The machine being used is the Coloder, the first modern machine of this type being placed in service in 1918. Since then the company has installed twenty-one additional machines, all of them are now working and others will be installed from time to time.

**"The rate at which loading machines are supplanting miners in the operations of this company is indicated by the growth in the tonnage of machine-loaded coal in the last five years.** Thus in 1920 about 200,000 tons were produced by machines; in 1921 about 320,000 tons; in 1922 about 650,000 tons; in 1923 about 1,000,000 tons and in 1924 about 1,500,000 tons. The significance of this rapid growth is better displayed by the graph in Fig. 1. Particular interest lies not only in the fact that the yearly production of machine-loaded coal grew steadily during this period, but also that the rate of growth for each successive year increased."

There you have it, "The rate at which loading machines are supplanting miners . . ." And Lewis still chasing Reds, and hobnobbing with the bourgeoisie . . . .

These machines are efficient. They load eleven tons per man per shift. The average performance per machine per day was 287 tons. It may be remarked that a day's work on the machine was nine hours. That seems to be one of the good (?) effects of machine work in coal mines—it means long hours. It is recorded that one machine last year working double shifts, loaded 8,100 tons, while driving an entry, its aircourse, and breakthrough. To accomplish this feat each place was twice **cut, shot** and loaded in each shift.

You see what **that** means? Each working face **twice shot** in each shift—the room full of powder smoke, and the men reeling to the top at the end of the day, with their eyes sticking out and sweat rolling down their brows, deadly sick from fumes . . . but of course that doesn't hurt the machine.

Another beauty about the machine is that the rooms can be made larger, and that means more roofs caving in. This difficulty is slightly alleviated by making the pillars larger too, because the coal cutters and loadres are especially efficient when removing pillars. The editor of Coal Age says:

### Cutting Payroll

"Pillar coal can be loaded by machine at lower cost than by hand. In fact, the Pochahontas Fuel Co. claims the cost of pillar coal, excluding the cost of timbering, is no more and possibly may prove to be less than the cost of room coal where, in each case, loading machines are being used. It has vindicated this claim by increasing the width of its room pillars.

"With hand-loading methods no more than two men can work in a split or on a stump of a pillar. The mine cars have an average capacity of 3¼ tons. Four of these constitute a fair day's work for one miner in a pillar section. Consequently two men will recover only about 26 tons of coal from one pillar per day. By loading one and sometimes two cuts from one pillar in a shift, it is possible to increase the output from that pillar to as much as 100 to 200 tons per shift, the quantity being dependent on the method of working whether off the butt or by spitting the pillar and removing the stumps. By machine methods, consequently, the coal is removed as much as eight times as fast as by hand. In proportion to this increased speed is the safety increased. Speed also assists by reducing the quantity of slate to be handled and by decreasing the number of timbers that must be set."

### Cutting Safety Margin

Would you have to wrack your brains very much to see where the saving comes in? It is not only the saving of men, (when men have to work longer to get out a given quantity of coal, that means more men must be employed, and conversely, when men work only a short time in getting out a pillar, that means fewer men are needed) but part of the saving comes in doing away with timbering.

It stands to reason that when the coal pillar that holds up the roof is mined away, some timber is normally needed to keep the roof from falling and killing someone. But the machine does eway with timbering by its speed—at least theoretically.

The coal is jerked out so fast that no falling roof occurs while the machine is there—and afterwards it does not matter—that is the theory. The Pochahontas Co., speaking through the editor of Coal Age, boasts that no men have been killed on these machines. But it does not say anything about the men engaged in cleaning up after the machine is gone, nor anything about other men around there. And over against the boast of the Pochahontas we have these figures.

The coal industry in this country took a toll of a human life every working hour during the past six months, according to the bureau of mines of the department of commerce.

Nor is this all. The bureau of mines when it issued these figures, last month, appended a statement that there had been a fiftypercent reduction in the loss of life from explosions. The obvious inference is that accidents from falling of roofs in coal mines did not decrease much. Reason? Just that the coal companies were letting their machines' speed substitute for timbering. Instead of proping up the roof with timber, they let the men on the machine run a ghastly race and get away—if they're lucky, things won't fall in until they're gone. And sometimes they are not lucky. One man per hour is unlucky.

Yes it's a great game. Hundreds of thousands of miners out of work, and the machine putting more out of work every day. The four hour day a crying need, and the machine establishing the nine hour day. The leaders among the employers openly threatening to wreck the union, and what is more, actually doing it, and the miner's union leaders living in luxury, chasing Reds, and "letting the rest of the world go by." When will the miners wake up to what is going on?

MOUNTED POLICE GUARD COAL COMPANIES

**Fellow Worker J. A. MacDonald's Book, "Unemployment and the Machine," gives many more incidents of unemployment caused by machinery. This book is now available in three languages: English, 87 pages, illustrated, price 15 cents; order from I. W. W. Headquarters; Finnish, illustrated, 96 pages, price 25 cents, order from Workers' Socialist Publishing Co., Box 464, Duluth; Swedish, coming off the press soon, I. W. W. Headquarters.**

# On The Anniversary of Centralia

By L. J. ENRIGHT

**THE Centralia case is one that should be held up to view as much as possible, and with this thought in mind I am calling attention to it and not because there is any new light that I can throw upon it. November is a month in which the I. W. W. has suffered three great tragedies. It was in November, 1915, that Joe Hill was murdered by the authorities of Utah. November, 1916, saw our fellow workers on the decks of the Verona at Everett being massacred by the agents of the lumber interest, and on November 11, 1919, the Centralia tragedy was enacted. Joe Hill is beyond the power of our enemies, and so are those who fell at Everett, but Centralia is a living issue because there are eight of our fellow workers locked up in the state penitentiary of Washington for their militant attitude in the workers' cause.**

Eight men, all loggers, are serving sentences from 25 to 40 years each because they defended their hall and their lives against a uniformed mob actuated by lumber trust agents at Centralia on armistice day seven years ago. These fellow workers are held because they stood up for the right to organize, to assemble peacefully and to express their opinions. These are rights existing in statutes and in the organic laws of this country, but in Washington as elsewhere in the land of the free and the home of the brave, freedom is the peculiar class possession of the exploiters. No concessions are freely made to workers. Every right that they have managed to secure is founded on power, because they have wrested by organized force certain things desirable to them they have them and for no other reason.

Centralia's conspiracy hatched almost in the open, advertised in the local papers, and passed about from one to another was an open secret. It was understood that the parade of Armistice Day was to be turned far from the usual route and that a raid was to be made on the I. W. W. hall. Knowing this our fellow workers issued a leaflet to the people of Centralia asking for fair play. Then they ascertained their legal rights in the matter and prepared to defend the hall. This was done and in the raid Warren O. Grimm, a legionnaire lieutenant, was killed with others. The mob pursued Fellow Worker Wesley Everest, brought him back terribly beaten, and he was thrown into the city jail. That night the lights of the town were conveniently extinguished and he was taken from the cell where he had lain all day in his own blood. He was unsexed en route to the scene of the lynching and hanged to a railroad trestle, the body being pulled up and flung down three times.

The Inquisition records no greater horror than this torture and that perpetrated upon the surviving defenders of the hall Indeed, Eugene Barnett, who was not in the hall nor at the scene of the shooting, was held with the others and he is with them now in Walla Walla. The farcical trial which followed the tragedy was presided over by a fixed judge who was in the employ of the lumber trust, and the jury was intimidated—troops having been brought to Montesano, where the trial took place, and they camped across from the courthouse. The verdict of guilty afforded the judge a chance to give the prisoners the maximum sentence, which he did.

> Evidence is clear that the Centralia boys were wrongly convicted. The most important government witness has recanted. Nine jurors have signed statements that the trial was not fair, and that vital facts were hidden. Two jurors admit that the verdict was to avoid mob violence. Six jurors went recently in person to ask the Governor to pardon the victims. More and more witnesses come forward to swear that the I. W. W. shot in self-defense.

Though the case is clear, the hall having been attacked by a mob of paraders the judge permitted no evidence to be admitted showing that this raid was part of a conspiracy to drive our organization from Centralia. Most of the jurors have since signed affidavits saying that the trial was unfair, and they acted as they did to save their own lives and those of the defendants.

Recently five of these jurors went in person to the governor of the state appealing for the release of the eight men being held. But the lumber interests are vindictive. The militant workers who refused to be driven from Centralia have given a bad example to the workers everywhere. So think the lumber barons. Failing to hang them they did what they could, immuring them for life, for such is practically the case, under the stern regimentation of the prison.

Is there no hope for their release? Little indeed except by the power of working class solidarity. Witness the circumstances surrounding the recent parole of Richard Ford. He was one of the strikers in Wheatland in 1913. The district attorney and a sheriff, with armed deputies, attacked the strikers and fired upon them. In the fight both cutor and sheriff were killed. Also two unknown workers. Ford and Suhr were in-

(Continued on Page 28)

# Book Reviews

**Peeking And Pecking At The U. S. A.**

More than fifty eminently capable writers have set down their thoughts on the political divisions of this government, producing in "These United States" a symposium in two large volumes containing more than 800 pages. Each writer was assigned a state or territory to cover, and we have in their combined labor analyses of present conditions, bits of past history, criticism both favorable and adverse, and laudations. Some of the authors are Willa S. Cather, Sinclair Lewis, Sherwood Anderson, H. L. Mencken, Robert Herrick, Zona Gale, Dorothy Canfield Fisher, George P. West, William Alen White, Reginald Wright Kauffman, Theodore Dreiser, W. E. Burghardt Du Bois, Bruce Rogers, Robert Whitaker, and Ernest Gruening, the latter having contributed the paper on New York City and edited the entire work very efficiently.

With few exceptions I have been impressed more by the facility of the authors' style, the charming way in wich they describe nature's beauties, than by any other consideration. Should we try to label the volumes conservative, liberal or radical the second one would fit squarely, though there are conservative touches and radical ones, too, But on thewhole the articles present the liberal viewpoint. Now just exactly what does this mean? Can we in a phrase, a thought, sum up the liberal? Perhaps not. Someone has said that a conservative is the worshiper of a dead radical, and there is much to justify such an assertion. It has always seemed to me that the liberal wants to be distinguished for respectability, and that when he protests social wrongs he does so timidly, almost with the tongue in his cheek. In advance of the conservative, though the line of demarcation is not always well defined, the liberal is a follower of radical camps.

Now, had most of these writers had the keenness to see and the temerity to denounce with appropriate language the crying evils everywhere flourishing in these United States we should have a valuable addition to the literatures of class struggle, a literary counterpart of the Final Report of the Industrial Relations Commission of some years ago. Instead we have just a few clear voices, and the rest sounds something like advertisements for the vacation and tourist trade.

But I have indicated reservations and very happily the series includes some with pens that have a deep probing quality and a power to sear into the reader's consciousness awareness of some of the hideous injustice and sham virtue of America and America's sleek parasities. Of the whole series Robert Whitaker's article is the best. Losing no ground to the others in richness of description, picturing as he does the glories of nature in the State of Washington in an unforgettable way, he goes on to examine the social movement, and dares to hold up to the world that crime of crimes against our fellow workers held these last seven years in Walla Walla Penitentiary because they defended their lives and their hall at Centralia on November 11, 1919. Every state does not have a Centralia, but every state has its bitter class warfare, growing more acute all the time, as the producing masses are subjugated in wretchedness to satisfy the wishes of the controlling few. And of this struggle, which is inescapable no matter where we turn, there is comparatively little said in the articles.

Take California for example: George P. West has written on this infamous whore in the sisterhood of states. But he does not see her shame. He does record imperfections, and wastes much ink telling how San Francisco kills its talented sons and visitors with kindness. He does not mention another sort of kindness exemplified across the bay in San Quentin and down in Repressa where so many members of the I. W. W. have been held, and are being held, under that peculiarly vicious class legislation known as the Criminal Syndicalism Law. Nor does he even breathe about Mooney and Billings, Ford and Suhr, all men who fell into the foe's hands in labor's challenge to predatory wealth.

But there is another writer who has distinguished himself for frankness and whose article fastens our whole attention. Bruce Rogers has seen the truth in Alaska and he relates it. The result is a picture of conflict between workers and drones, the endless fight of these classes in the fishing and canning

## BERMUNKAS CALENDAR

**All Hungarian workers, and all workers in contact with Hungarian workers, should get a few copies of the new calendar put out by the I. W. W. Hungarian-language paper, Bermunkas. This is a real work of art, and packed with information. Three-color cover, 200 pages, same size page as Industrial Pioneer, many artistic drawings, many articles on industries, I. W. W. constitution, literature, poems, short stories. Price 50 cents. Those who do not read Hungarian can well afford to buy this calendar for its pictures. Order from 3333 W. Belmont Avenue Chicago, Illinois.**

hells. Red-necked political crooks are limned with strong strokes. And we learn that the country's white population is dwindling; that the seasonal work is being done by slaves shipped up there and shipped back. And these vessels have been named "hell ships".

If there is much more that left a favorable impression it was Sherwood Anderson's story of Ohio. Neatly, almost genially, but devastingly he attacks the thing that is all grime and smoke-stacks and that has withered the grasses and the leaves, that has poured its poisons into the rivers and creeks and has made them the sewers of industrialism. And for this transformation what compensation? More millionaires at one side and a horde of ill-paid workers in the depths.

Still, there's lots of information in "These United States". The volumes should be widely read by those interested in keeping abreast of the times. But some day we should have a radical treatment of this Union. Perhaps in such a work less would be said of purple heath, eagle or scarlet tanager, sweet wistaria, silver streams and mirror lakes and majestic mountains; less of lovely valleys, of the local talent, of the battles between politicians in and politicians out. Probably more about embattled miners, steel slaves run under hoof by the trained mounts of satte police, General Wood and martial law, two million child slaves, wealth concentration into fewer hands, the pauperization of proletarians by increasing unemployment, industrial accidents, disease and despair among the poor, jails holding the noblest of idealists—those who stood up for a better workers' world.

What a chance these writers had! America! nothing comparable to it in all the world. But they sacrificed centering on social realities for the respectability of liberalism and the elegance of language. Nice compositions only, Whiteaker's Roger's, Anderson's and those of a few others excepted. For these we rejoice, and we salute their authors with admiration. —RICHARD HARRISON.

THESE UNITED STATES, edited by Ernest Gruening, published by Boni and Liveright, New York City. Single volumes $3.00 each, $5.50 for the two.

There is considerable merit in John O'London's "Is it Good English?", which explains many grammatical laws and presents a large array of examples on good usage of words. The book also traces the origin of a number of idioms and adages which have enriched the English language. But where patent grammatical errors appear in the Bible Mr. O'London does his best to excuse them, in fact to justify them, on the assumption that these errors give power to the expressions that correct forms would not! In this manner he tries to defend such slips as the singular verbs is these quotatinos: "For thine **is** the kingdom, and the power, and the glory," etc., and "Among which **was** Mary Magdalene and Mary the mother of James and Joses, and the mother of Zebedee's children."

**God Must Not Use Slang**

Readers of scriptures must have discovered numerous mistakes of grammar. Since the Bible, not without some basis, is regarded by many as rich in literary excellence, the book has a prestige O'London is set on protecting. And just as the author attempts to defend these incorrect forms in the Bible, he also upholds mistakes in grammar by such celebraties of written expression as Shakespeare, Milton, Wordsworth, Byron and Kipling. He seems to be incapable of thinking that they could slip into error, but ungrammatical language by ordinary mortals is never explained away, and no amount of eloquence can clear these transgressions of the laws of syntax.

One of his characteristic defenses it that "The singular verb is more intense than the plural verb"! All right, make all the mistakes you wish to if only you can plead intensity intensely. His treatment of the split infinitive betrays no such prejudice and deals sensible with this mooted matter. A split infinitive is a form in which the preposition and the verb are interposed by an adverb. An example of this error is: " To thoroughly defeat". The correct form is either: "To defeat thoroughly" or for purposes of style, "Thoroughly to defeat".

An interesting considaration of style is suggested by mentioning that Gray in his famous "Elegy" experimented with eleven **corect** forms for the line "The weary ploughman plods his homeward way."

Regarding the possessive case of names ending with "s" he says that an additional "s" should follow the apostrophe, such as boss's, Hicks's and so on. It is obviously impossible for us to give more than these few points of the many treated in this book of 189 pages, and we have selected those in the use of which, according to our experience in editing, are most often confused. In spite of the weakness mentioned at the outset of our review, the work should be a real help to the student of English. Mainly it is clear and concise.

—JOSEPH TERRIES.

IS IT GOOD ENGLISH? by John O'London. G. P. Putnam's Sons, Publishers, New York. Price $1.50.

**Sinclair Speaks for O'Henry.**

Many thousands of readers learned to admire O. Henry through his numerous tales contained in such volumes as "Cabbages and Kings", "Voice of the City", "The Four Million", "The Grafter", and others. It is easy to cultivate an affection for a writer so broadly human and great-hearted. And it is to be hoped that the recently published drmaa "Bill Porter" by Upton Sinclair will fall into a great many hands, for Bill Porter on the registration record of the Ohio State Penitentiary was William Sydney Porter, but to those who know him by his stories he was always O. Henry.

It is about that prison term served by the gifted writer that Sinclair has been inspired to write, and the scene is laid in the institution where O. Henry was buried for several years. Convicted of embezzling funds from a bank he stoutly protested his innocence throughout, and for those who would think less of the man had he really been "the second thief" (We ascribe theft to the ordinary operations of banking, since they are a part of bourgeois exploitation) this drama may serve to clear their minds of doubt, making, as it does, a strong case for the victim of the long sentence. Porter's lifelong habits show that he was not greatly interested in money, was not acquisitive, and it is hard to believe that he would risk so much for something for which he cared so little. He maintained that he was the victim of a frame-up, which is very probably true.

In prison he was assigned to take care of the drug department. His experience as a pharmacist qualified him for the work, and he spent most of his time preparing medicines and handing out pills to the long line of wretches who daily filed up to his counter for that which might bring them relief. When the last had gone in the night he used to sit and think, or create the stories upon which his fame was to be founded. The chamber where he worked as pharmacist and also where he wrote was just above that part of the prison known as "the hole", and the screams of those being beaten and tortured in this place were audible to O. Henry. A southern negro flunkey cleaning up the drug store relied upon him and confided that there were "mountains of misery" in the prison. The darkey recognized that the other man was from the South, and he told him some stories which O. Henry avidly grasped and began to work into readable tales.

The scene fades out and Sinclair's impressionism is given play. The Old South appears and what O. Henry has heard and recorded is represented vividly. Presently this all passes and once again the prison atmosphere looms up with its horrors.

Al Jennings, a friend of Bill Porter, served in this prison at the same period. He urged Porter to write under his own name, to live down the past, but the hurt was too deep and this sensitive artist always wrote under the pseudonym known over all the world.

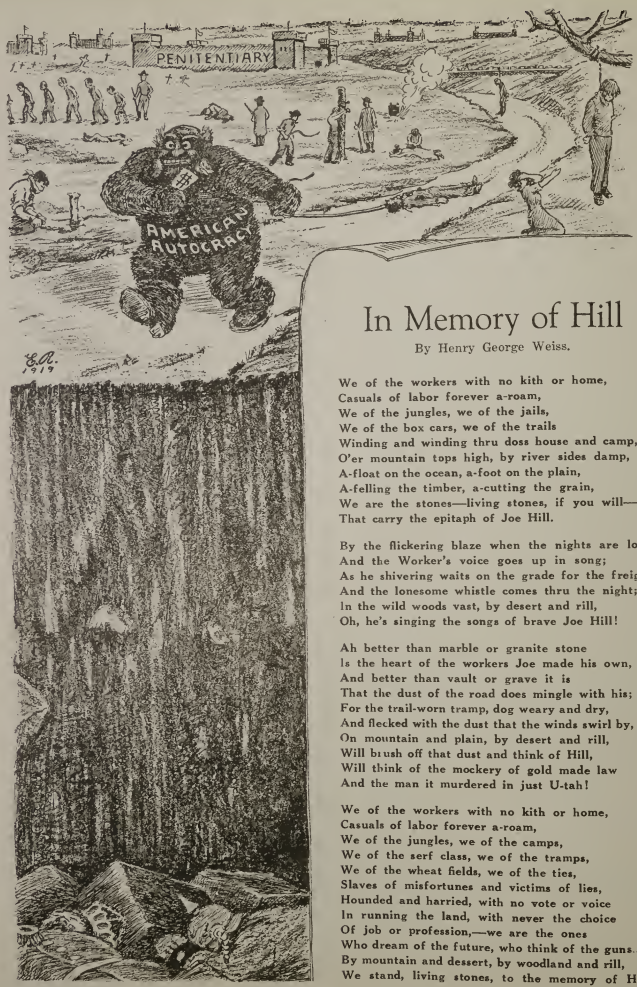
Upton Sinclair is known as a pamphleteer. Some prefer to classify him as a muckraker of the first order. We think him the country's leading pamphleteer, and in this new departure he has invaded for a second time the field of art, through drama. His "Singing Jailbirds" was powerful in many scenes, but "Bill Porter" is far better. Sinclair is creating for himself a place of honor as a literary artist.

—THOMAS SENN.

BILL PORTER, by Upton Sinclair. Published by the author at Pasadena, Calif.

# What Is The Best Literature?

What should a workingman read? Should he fill his brains with the dope of his enemies? Should he waste his time with lies that have to be answered before he can know what to believe? Shall the busy man hunting the job, or trying to improve conditions on the job rely only on his ability to disentangle the bits of truth from the Irish stew of fact and rumor and plain propaganda that the boss puts in his newspapers?



Why not get the facts straight, with the scientific explanation of them also with the least time and effort from the I. W. W. press? Why not read:

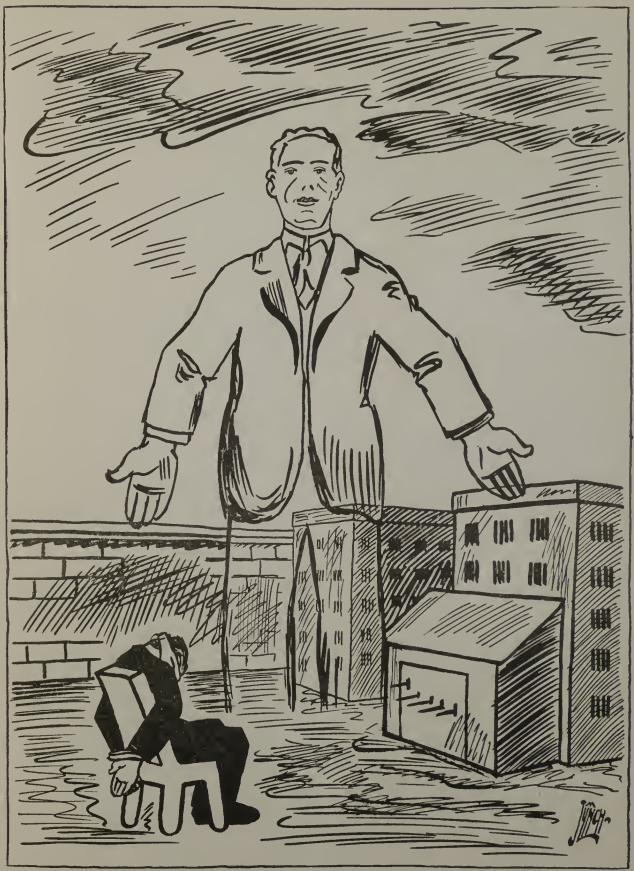
# In Memory of Hill



By Henry George Weiss.

We of the workers with no kith or home,
Casuals of labor forever a-roam,
We of the jungles, we of the jails,
We of the box cars, we of the trails
Winding and winding thru doss house and camp,
O'er mountain tops high, by river sides damp,
A-float on the ocean, a-foot on the plain,
A-felling the timber, a-cutting the grain,
We are the stones—living stones, if you will—
That carry the epitaph of Joe Hill.

By the flickering blaze when the nights are long
And the Worker's voice goes up in song;
As he shivering waits on the grade for the freight
And the lonesome whistle comes thru the night;
In the wild woods vast, by desert and rill,
Oh, he's singing the songs of brave Joe Hill!

Ah better than marble or granite stone
Is the heart of the workers Joe made his own,
And better than vault or grave it is
That the dust of the road does mingle with his;
For the trail-worn tramp, dog weary and dry,
And flecked with the dust that the winds swirl by,
On mountain and plain, by desert and rill,
Will brush off that dust and think of Hill,
Will think of the mockery of gold made law
And the man it murdered in just U-tah!

We of the workers with no kith or home,
Casuals of labor forever a-roam,
We of the jungles, we of the camps,
We of the serf class, we of the tramps,
We of the wheat fields, we of the ties,
Slaves of misfortunes and victims of lies,
Hounded and harried, with no vote or voice
In running the land, with never the choice
Of job or profession,—we are the ones
Who dream of the future, who think of the guns.....
By mountain and dessert, by woodland and rill,
We stand, living stones, to the memory of Hill!

By order of the mine owners of Utah, our fellow worker Joe Hill was shot to death in the penitentiary at Salt Lake City, November 15, 1915. His last words to the working class were, "Don't mourn for me, but organize!"

# Interviewing the Venusian

By COVAMI

DEBOUCHING onto the highway from the woods the other day, who should I plump into but the Venusian.

"Well," I said, "and what is the traveler from Venus doing 'way down here in the sticks?"

"By the great horned Joss, Covami, but I sure am glad to see you, old boy," he says. "What in thunder are you doing down here yourself?"

"O, just vegetating and scribbling," I says. "Where you been and what you seen since we last met?"

"Well," he said, as we sat down on a big, brown log in the edge of the field, "I've been almost everywhere, into nearly every nook and corner of this great country of yours."

"Yours'," says I, "where did you get that 'yours' from? I don't own any of it."

"Well, in that you've got a heluva lot of company from all I've seen," he says, "but we'll pass that up. It's a great country, all right—the very greatest on earth, I understand."

"And you understand right," says I, "and don't you forget it, either."

"Never fear," he says, "I won't—not as long as I can stay in bragging distance of you Americans. But, as I was saying, It's a great country, a 'big country,' as you all say. It has the biggest mills, the longest railroads, the widest plains, the highest mountains, the deepest rivers, the tallest buildings and the greatest cities on earth, not to mention the biggest aggregation of easy marks and working class jackasses collected under one flag in the universe. Say, Covami, are earthmen crazy, or what's the matter with them?"

"You can search me," I says. What are you driving at? I get that way myself sometimes."

"I'm driving at this," he says, smiling. "We haven't had a war on Venus in the last ten million years and here you earthmen are still at it. And that isn't all. As far as I can see, you all, especially you Americans, go out and fight like furies. You pile up ten million dead and twenty million maimed men on the battlefields and, after it's all over and peace is made, everybody on earth except a handful of plutocrats, as you all call them, are worse off than ever, own less and are deeper than ever in debt—although it was by your labor all wealth was and is made. How do you explain any such insane system and fool actions?"

"That just shows that you Venusians are not yet fully and really civilized," says I. "It is clearly evident that you have never known the blessings of Christian civilization," I says, "else you would know without having to be told that earthmen never fight and kill each other for the mere possession of such grossly material things as mines and forests and oil fields, railroads, banks and boodle, but for things of the spirit—to make the world safe for democracy, or a better place to live in, or for the right of little nations to self-determination, or for liberty, equality and fraternity—it is for these things we war, especially the workers of the earth, who have nothing but their lives to lose no matter how the peace turns out, and if this doesn't prove us altruists in the nth degree, what can?" says I.

"Yes," he says, "but when all the workers get out of it is corpses and cripples and debts galore, it looks crazy-like to me. I can't understand."

"That just goes to prove another thing," I says, "and that is that you Venusians don't know what patriotism means."

"If that's patriotism," he says, "you said a mouthful of truth, all right; all right, and I'm blamed glad we don't. But even at that, I cannot understand for what and for why you slaughter each other if you don't expect to get somethnig out of it all besides debts and dead men."

"There you go again," says I. "You must be going nutty too. Didn't I tell you that we earthmen did not ever war for material things but simply and solely for spiritual satisfaction? Can't you understand men going out a-killing and maiming each other by the millions just for the sake of an abstract ideal?"

"No, I can't," he says; "it looks looney to me. But tell me, what is an ideal abstraction?"

"It's something like this," says I. "According to what you once told me, the last war you Venusians fought was to get rid of your plutocrats, which you did and have been a classless and happy planet ever since. Well, we earthmen, especially we working earthmen, would never even think of doing such an awful act. We are patriots through and through. We would never think of fighting a war to free all the workers of the earth because we don't believe we deserve it. Then how, I ask you, could we get on without the plutes? Well, then, not being able to conceive of fighting for ourselves, we must necessarily fight for somebody and something else again. So, we fight not to establish happiness, but to establish our right to the pursuit of happiness. Do you get me?"

"O hell!" he said, and jumped into his ertherjit and vanished.

Ain't other people just too ignorant for anything?

**NEW YORK CITY.—The "outlaw" strike of the British seamen is still in effect, according to the latest information in our possession. The British seamen will win their strike, in fact they have already won it. It will be only a matter of a few days until the British shipowners will grant their demands, willingly. IN THE MEANTIME, THE M. T. W. WILL DO ALL IN ITS POWER TO PULL THE CREWS OFF BRITISH SHIPS AS THEY ARRIVE AND CONTINUE IN EVERY WAY POSSIBLE TO AID OUR BRITISH FELLOW WORKERS IN THEIR STRUGGLE FOR MORE OF THE BETTER THINGS OF LIFE.**

**STRIKE PUBLICITY COMMITEE**

**Greater New York Branches of the M. T. W. I. U. No. 510, of the I. W. W.**

—Proclamation issued when M. T. W. strike was transfered to the job—

# Indications of International Solidarity

(By VERN SMITH)

THE Reds for three generations had been having regular "Arbor Days," during which they planted nursery seedlings of International Solidarity. Though they were well watered with tears, sweat and blood, they grow very slowly. Everybody knew the little things were there in the front yard, but from one year to another they looked about the same, and were never of any particular use.

Then, one day in 1925, the villain, Mr. Capitalist, planning a secret raid on Labor's house, with intent to deprive him of a portion of his sustenance, got lost in the forest that stretched in front of the place, and everybody woke up to the fact that the little trees of International Solidarity of Labor had grown to a sufficient size to be serviceable. They were not exactly great giant redwoods yet, but they were beginning to be pretty healthy saplings.

Probably the reason why no one understood earlier what was going on was because nothing grew just the way it was intended to. The Reds not only had thought the seeds they sowed would spring to maturity, foliage and fruit in the winking of an eye, like the Hindu conjurer's magic plant, but they rather expected they would look somewhat different when they were grown. Gardeners always think the plants they set out will look like the pictures in the seed catalog.

Remember how radicals used to gather in little groups in some friend's house, or in some dingy little hall, and discuss faintly outlined but decidedly different schemes of the international solidarity of labor? Ah, those were the days when Mr. J. Caesar could have said truthfully: "All gall is divided into three parts, for those who have it are either Socialists, Anarchists or Syndicalists."

This situation, the period of blue-printing future society, and future forms of labor organization, according to one or another of three grand plans, reached its apogee in the time of the generation, 1885-1915. During these thirty years practically all Socialist were followers of Spargo and Hillquit in America, of Bernstein in Germany, of Jaures or even of Millerand, in France, of the Fabians or of H. G. Wells, in England. Their international plan was the "Second International." Their program was what this present and more sophisticated age has come to call "state capitalism," not socialism at all, and consisted of trying to get government control of railways, municipal water systems, street-car lines, etc. Christian sentimentalism was one form of it, and muckraking was another and healthier manifestation of the movement. The prophets that it listened to always suspected labor unions of too much inclination to strife and battle, and preached that "striking at the ballot boxes" was much more efficacious than striking on the industrial field. They believed in centralization and discipline, but didn't practice it, except that towards the end of the period they began to expel all fractions of the Socialist parties which advocated "direct action." The existence of these "direct actionists" proved that something was wrong with the "socialism" of Spargo and Bernstein, and likewise proved that even a dead faith can not kill all of its followers.

"We plan the death of our former policy of isolation in this conference, and in its place we plan action in our struggles against our oppressors, the capitalist class. We are carrying out this program based on the class struggle in society."

—Address of M. T. W. Headquarters to delegates assembled in First International Conference of the Marine Transport Workers of the WesternHemisphere—

The anarchists, 57 varieties, were united on one thing alone, they disapproved of the state. Some were "back to nature" enthusiasts who lauded Tolstoy and would have loved Ghandi, if any of them had stuck it out until he came. Some of them thought they were Nietzschien supermen, full of quotations from Max Stirner, and scornful of morality of any sort, though not many of them practiced their immorality. Some of them, and this was the healthy strain, and the one that added to the discussion, wanted co-operative communes, voluntary organizations using machinery and science; these looked to Prince Kropotkin for inspiration and leadership, and a good many of this group took an active part in the labor movement.

Syndicalism was partly a fact and partly a mystical theory. It recognized that there were the labor unions. These things had grown up, to the discomfort of the purely parliamentary socialists, who despised and dreaded them as disturbers of the orderly procedure of democracy, and to the wrath of the individualist anarchists, who disliked their compulsion, their centralization, their tendency to think more of wages than of liberty*.

### Fact and Fancy

Syndicalism in its original continental European form, was the philosophy of a philosopher, of an effete and perhaps neurotic intellect, Professor Sorel. It recognized, as all new philosophies which create any stir always do recognize, certain facts, not known to the founders of older theories, and in this case, the new facts were just these same old labor unions, or, as they are called in Latin countries, "syndicats."

Sorel proposed that these new and actual forms of organization be regarded as the basis of the future society, and he declared that they were the only forms of organization with which workingmen need concern themselves.

But he also had a lot of advice and a code of ethics for them. He preached decentralization (perhaps because the French labor movement with which he was most familiar, was most decentralized). He denounced thinking, as such, claiming that always and especially in all social affairs, men's natural passions and instincts, were the only proper guides for conduct, intelligence being a real detriment. He taught that violence is a good thing, in and for itself—not just as a means to an end, or a desperate measure to be used in a bitter life and death struggle. Violence, in Sorel's program, is the discipline of the classes, and the means through which character is formed in the individual. Sorel expected that a network of syndicats would be organized all over the world, similar to the anarchist plan.

It is hard to say just how much modern syndicalism believes of all this, though it undoubtedly has its effect. No branch of syndicalism so far as I know ever accepted Sorel's theories of violence at their face value, and in practice, the most successful sections of the labor movement which calls itself syndicalist, have had to abandon, step by step, most of Sorel's other doctrines, about decentralization, and about intelligence.

But Sorel's disciples put out a blueprint of the future, the book, "How We Shall Bring About the Revolution," and it bulked large in the councils of the radicals of a decade ago.

Well, syndicalism went on, and as a philosophy drew nearer and nearer to anarchism, and as it continued to lose in strength and vigor, as it continued to decrease on its practical side, increased just that much more on its mystical, theoretical side, taking in some quarters a milky tinge of Tolstoyanism, and in others a sharper, blacker outline of anarchistic individualism.*

### No More Bombs

Anarchism of the "attentat," the "propaganda by deed," has practically vanished; it is a long time since enthusiastic young men and women thought it necessary to do some courageous individual assault on capitalists or militarists in order to call attention to the evils of the system. And probably the number of anarchists of all sorts is less than at any time during the last twenty-five years.

The Socialist parties were put to the test by the great war, and found wanting. As they failed in practice, and demonstrated that they were pronouncedly petty bourgeois in character, so their philosophy was left to its fate by the workers, and many of the parties themselves have passed away. We hear little more of their ideal for the future solidarity of labor, though the "Second International" drags out a weary and crippled existence under the protection of the French and Belgian and German governments.

The international solidarity of labor has not been decided upon the basis of any of these plans, neither that of Hillquit, nor that of Kropotkin, nor that of Sorel. The "Second International" is hopeless—there is no network of anarchist groups, nor is there any such thing of syndicats (controlled by syndicalists).

But while all this was going on, and while everybody was looking for some solution from one or another of these groups, and along one or another

---

* An echo of this feeling is seen in Malatasta's article "Syndicalism and Anarchism," reprinted in the Oct., 1925, issue of the only English-language anarchist paper now published in the United States. He says, "I do not think that, TODAY, there still exists among us any one who would deny the usefulness and necessity of the organization of labor as a means of material and moral betterment of the masses, AS A FERTILE FIELD FOR PROPAGANDA, and as a force indispensible to the social transformation we are aiming for." (Empbasis mine, V. S.)

* A recent development in the syndicalism of Spain, indicated by the articles of M. Sainz, now running in Spanish syndicalist papers and reprinted in the I. W. W. paper "Solidaridad," indicate a move to separate the labor union features of syndicalism from anarchism. To this, as far as it effects organizational forms and not the right of propaganda, Malatesta at least would agree. But it is very possible that this who'e movement like the movement of the syndicats of France, is a movement towards "pure-and-simple-ism."

of the main programs laid down by them, the solidarity of labor has been growing up, though in different ways.

Labor, while it did not accept any of the blueprints, did, through the propaganda, perhaps of all the different sorts of Reds, gradually grow in international consciousness, and in some cases has begun to act united—never before so much as now.

To take up very recent events only, there is first of all the agreement between the English and Russian trade unions. This is an outgrowth of the actions of the English unions, in threatening during the blockade and famine in Russia, to strike if the British government sent military aid to the Polish imperialists, and it is also a result of the British unions' pro-Russian publicity. The alliance between these two great groups of organized workers is being fought by some of the officials of the International Federation of Trade Unions* and the entry of the Russian unions into the "Amsterdam International" is being made by them as difficult as possible, but there is continued evidence that such an affiliation has strong support among the rank and file of all unions affiliated with the I. F. T. U., and that in spite of bureaucratic opposition, it will probably take place, sooner or later. Now, without regard to the principles of either the Amsterdam or the Russian unions, we have here an objective phenomenon, of millions of workers, organized in unions, scattered over many countries, demanding a closer unity between those unions. There is a general movement towards international unity, strong enough to put great pressure on union bureaucracies which would like to prevent it.

Something of this same sort is observable in the tendency of the A. F. of L. to re-enter the I. F. T. U., rumors of which grow stronger and more definite every day. This movement would be welcomed by the very groups in Amsterdam who fight the Russian-English accord, and probably because it will result in building up the right wing of the Amsterdam International. But whatever political purposes of the rulers of European and American trade unions may be served by this return of the A. F. of L. towards, if not yet quite to, the I. F. T. U., and however weak in immediate results such a unity may be, it is significant as an example of the sort of thing the membership of the unions are glad to have. It is certain to be a popular move, and while temporarily strengthening the pie-card artists, it is likely to develop into something that will eventually weaken them.

An indication of one of the results of international unity, which must certainly burn its way into the minds of all workers, however deluded they may be by conservative leadership, is the international support for the coal strikers of America, and the promise of international support for the British coal miners when they threatened to go on strike a couple of months ago.

It is, of course, no secret that there is a hard coal strike in America, with 158,000 men out. The shameful fact is also known that before this year, when there was a coal strike in America, the miners of the Ruhr and of the Welsh mines worked overtime to produce anthracite to ship to the United States and break the strike. But this time, when Burns Bros. (a firm with which, by the way, Hillquit, the typical exponent of the old American Socialism, was connected) ordered 50,000 tons of Welsh coal, the Committee of the International Miners' Federation, meeting in Brussels on Sept. 16, decided that no such shipment should take place. And for the first time in history, labor is in a position to prevent it.

This action is similar to that taken by representatives of British, French, German and Belgian unions of coal miners, meeting in Paris during the middle of the summer, and going on record to tie up all the mines of Europe if the English strike threatened for August 1 actually materialized.

The I. W. W. immediately responded to an appeal

(Letter Sent January 1, 1924, to American Capitalists and Newspapers)

Sir:—The members of the Chinese Seamen's Union have learned with no little astonishment and dismay that nearly one hundred American workingmen are in prison on account of the California Criminal Syndicalism Law and that the only evidence presented against them was membership in an organization known as the "Industrial Workers of the World." We of the Chinese Seamen's Union have always looked upon the United States as a free and desirable country, and we are very sorry to hear it alleged that our fellow workinmen in the United States are being subjected to such persecution, unparalleled even in the history of China.

If there is reason or justice in this state of affairs, please let us know so that we can present the case to our members. Unless a reply is received from you in a reasonable length of time, the membership of the Chinese Seamen's Union will understand that American workingmen are the subjects of a brutal and unjust persecution, and it is certain that our members will then demand that some economical action be taken which will bring your attention and also the attention of all American capitalists to the fact that the Working Class of the World will no longer permit without protest the persecution and imprisonment of workingmen anywhere.

Yours for a Better World,

CHAK HON KEE

Secretary for the Chinese Seamen's Union

* The mere existence of the I. F. T. U. is significant. Before the war it existed only in a much looser "International Secretariat" form.

issued last July by the Transport Workers' International Propaganda Committee to boycott the Norwegian ships during the seamen's strike on those ships. Publication of the appeal in the Marine Worker (official organ of the Marine Transport Workers' Industrial Union No. 510 of the I. W. W.) was quite sufficient to insure that every class-conscious American seaman immediately made himself a committee of one to stop scabs from going aboard Norwegian ships.

The shame of California has become an international by-word among workers. Various unions of South America and of Mexico have boycotted California, during the last two years, and as long ago as January, 1924, the Chinese Seamen's Union addressed a vigorous message to the governors of California and other states of the U. S. A., demanding release of class war prisoners (mostly I. W. W.) and threatening a boycott if this was not done.

The threat to boycott was overshadowed by the long period during 1924 and 1925, when the Chinese Seamen's Union was engaged in a serious struggle with foreign and native capitalists. It did find time and occasion, however, to strike American ships, and organize demonstrations for American class war prisoners.

This whole organized movement of denunciation of the American white terror reached its culmination, however, in the general boycott of the American war fleet, on the occasion of its visit to Australian and New Zealand waters, about the middle of last July. The New South Wales (Australian) Labor Council, representing 120,000 workers, issued a statement to the sailors of the U. S. war fleet, hailing them as brothers if they came as individuals, or as workers, but absolutely boycotting them if they came as a navy.

Certain large Australian unions, and locals of other unions, notably the Flour Millers, the Bill Posters, Wharf Laborers, and Coach Makers Employes, went on record to boycott the U. S. fleet for release of class war prisoners in America, and they were joined by the central bodies meeting in the Adelaide, Brisbane, and Sydney Trades halls. The Australian Liquour Trades, Food Preservers, Bread Carters, Bricklayers, Boatmakers, Timber Workers, and Builders Laborers, either as whole unions or as locals, took this occasion to support, publicly, the California boycott, for release of class war prisoners in that state.

**"COMRADES AND BROTHERS OF THE UNITED STATES:—We, the members of the New South Wales Labor Council, having an affiliation of 120,000 workers, greet you in all sincerity. We shall be right glad to shake hands with you, and delighted to interchance opinion with you.**

**"But we hasten to say our welcome is extended to you as men, and not as members of the United States Navy. We regard you as men whose economic, social and political interests are identical with our own, and with those of our fellow workers in Europe, and we know that these interests are not identical with those of the capitalist class of any country!"**

—Part of the circular of welcome extended by the New South Wales Labor Council to the sailors of the U. S. Navy, July, 1925.

## INDIAN SEAMEN'S SYMPATHY.

**CALCUTTA, Sept.—At a special general meeting held to-day under the auspices of the Indian Seamen's Union, resolutions were passed, expressing sympathy for the seamen's strike in South Africa, and declaring that no Lascars from Calcutta should join in their places and requesting Messrs. Baptista, Joshi and Ginvalla of the All-India Trade Union Congress not to allow any Lascars to sign from Bombay to proceed to South Africa and also sympathising with the strikers of the Irrawaddy Flotilla Company assuring them of Seamen's Union's action to prevent the Bengal Lascars from taking their places at Rangoon.—A. P. of India.**

One of the most significant events of this present period, or of all history, for that matter, is the awakening of the working class of India and of China to class consciousness. The great strikes that shook the north of India and the coast of China not only indicate the broadening of the field within which international solidarity of labor may function, but give an opportunity for testing the attitude of the already organized workers of the white and western nations towards the newly organized workers of the colored and oriental nations. In other words, they afford an opportunity to test the effect of racial as well as nationalistic prejudices on the drift towards international solidarity.

Viewed from this angle, the results are encouraging. If we are to believe the capitalist press, the Russian workers were certainly right there with aid and comfort, moral, military and monetary, for the Chinese workers. One may discount what the capitalist press says, but there was certainly a considerable degree of international solidarity, at least. The I. W. W. as usual gave all possible aid to both these strikes, and the British Trade Union Council, and the London Daily Herald, a newspaper which is practically the official organ of the British trade union movement, supported the Chinese strike with publicity and with pressure on the British government, to prevent shipment on a large scale of gunmen from the British Indian forces to China.

However, the most important feature of all, during the whole year, was the international strike on the sea. This strike, involving the seamen of England, Denmark, Australia, South Africa, New Zealand, China, Japan and the United States, is, like the movement in the Orient, of more importance as

—Adopted Unanimously by M. T. W. Convention October, 1925—

**This convention fully realizes that following the World War the presure upon the trade and industrial unions the world over steadily increases.**

**Capitalist organization against labor is international. Nothing but efficient international organization of labor upon the basis of the class struggle and solidarity will meet the situation. Therefore this convention declares for international co-operation on the basis of the class struggle and solidarity, both for the M. T. W. I. U. No. 510, and for the I. W. W. as a whole.**

**It constitutes its G. O. C. and Secretary Treasurer a committee to set up correspondence at once with the marine transport organization of all countries, which recognize the class struggle and solidarity with a view to bringing about international co-operation, solidarity, and eventually efficient organization within our industry, reportsof progres to be submitted to the branches from time to time.**

**It constitutes the G. O. C. and the Secretary Treasurer a Committee of Action to get in touch at once with the organizations that are directly and actively in charge of the present strikes in our industry in Australia, England, South Africa and elsewhere with a view to further co-operation in the immediate struggle against the international shipping trust, likewise reporting to the branches from time to time.**

**Further, let this program be the basis of our policy in international relations at the Havana Conference, and**

**Finally, let it be determined now that our delegates to the next General Convention of the I. W. W. shall stand upon this program both for the M. T. W. I. U. No. 510, and the I. W. W. as a whole.**

a measure of the strength and healthiness of the feeling for international solidarity than any ordinary strike, and more significant than the number involved would of itself indicate, because of the way in which it was fought against by the leaders of the seamen's unions of Great Britain and of the American Federation of Labor seamen's unions. The leaders of the British unions, especialy, resorted to every jingoistic argument to split the ranks of the strikers along nationalistic lines, condemning the strikers as **American** I. W. W.'s, as **Russian** Communists, and as **Jews** who were plotting against "God and Country." All this propaganda failed. This shows, I think, that as confused as many workers may be, the time in which even official labor propaganda against international solidarity can be used to cause division in a strike, is rapidly drawing to an end.

The I. W. W. not only rallied its full strength to the support of the British unofficial seamen's strike, going off the job for a rather long period for I. W. W. marine workers to strike that way, but when the strike on the job was started, they continued the boycott of English ships—a boycott that exists until the strike is settled.

International solidarity is nothing new, in theory, for the M. T. W., and nothing new in its practical aspects, during strikes, etc. The I. W. W. has always stood firmly in support of any group of workers engaged in a bonafide struggle with the master class, wherever they may be. But lately, and especially during this year, international action has become much more systemmatized, and far-sighted, among Wobbly seamen than ever before. The resolution of the M. T. W. convention just ended is especially outspoken and vigorous, but just as important was the New Orleans conference, which was held last March—"The First International Conference of the Marine Transport Workers of the Western Hemisphere"—with representatives present from the M. T. W., Argentine Transport Workers, Cuban Longshoremen and Harbor Workers, Seamen's Union of Equador, and the Marine Transport Workers' Industrial Union of the Mexican I. W. W., and which was a real turning point in I. W. W. tactics. At that time, and for the first time, plans were really possible for general united international action on the sea. Delegates at the conference, believing that even more and larger groups of Latin American workers could be brought together if more time and more discussion was had, voted to hold another conference in Havana, Cuba, on January 15, 1925.

By one of the coincidences which the ruling oligarchy of the Western Hemisphere delights in arranging, like a Greek Fate behind the scenes, Cuba has, since the date and place of this second conference was decided upon, become a hot-bed of Fascism, reaction, and governmental interference with labor unions. The great awakening of Cuban labor to the need of more unity among the various unions, culminating in the Camaguey congress of last August, at which representatives of over 200,000 workers of Cuba established a General Federation of Labor for Cuba (and to which the I. W. W. was especially invited to send a fraternal delegate) drove the sugar and tobacco lords of Cuba to frenzy, and a period of union smashing and murders, concurrent with the formation of the Cuban National Party (a Fascist organization) has set in.

As soon as word of the events in Cuba reached the I. W. W., the Chairman of the General Executive Board wrote to the Governmental Secretary in Havana, protesting, and promising the I. W. W.

would make known the misdeeds of the Cuban government, and would come in every way possible to the support of the oppressed workers of Cuba, and especially the union called Sindicato General de la Industria Fabril, which is bearing the heaviest attack.

This sort of thing, now, is international solidarity of labor, however many organizations there may be, with however many conflicting policies and programs they may have. It is worth nothing, and a survey of the incidents mentioned above will force anyone to notice, that these exhibitions of solidarity are general, they affect in greater or lesser degree all sorts of unions, those called radical as well as those called conservative, though, of course, they affect most of all the more radical unions, like the I. W. W.

### One For All and All For One

What can we understand from these circumstances—these sorts of combined action, taking place along the lines of make-shift agreements, compromises, changes of policy excused in all kinds of ways, half denied and half recanted sometimes, but continuing more and more, in more and more different forms, one time as a tentative strike agreement, another time as a sudden outburst of righteous wrath, exhibiting itself as a boycott, or as an appeal, or as a protest to a government—what does all this mean?

It is not at all like any of the forms of international solidarity that the socialists, or the anarchists, or the syndicalists thought that international solidarity would take. It is not like an "international" at all, yet, though the demand, especially in Europe, for an all-embracing, world-wide, international of labor unions grows somewhat clearer.

I think it is international solidarity of labor in practice. in training; something which has grown up from the seed of all these old radical movements, and from their more modern developments in various directions, from the seed which the actual disturbance of world conditions, the consolidation and the imperialism of capital, has cultivated like a gigantic plow, and that this is the important thing about it, that it is something still growing, and although big enough to cause the owning class no end of trouble already, is not yet anywhere near done growing.

It is something like the I. W. W. itself, influenced by all the streams of radical propaganda, not entirely any of them, but rather a product of radicalism, the time, the people and the objective conditions, all together.

Just how this international drift will end, what developments it will have, what organizational machinery it will finally turn before it rises to such a height that it destroys capitalism—that we do not know. But we can be certain of one thing, and the whole history of the labor movement bears this out: **organization follows action.** This has been true since the days of the first formation of the first local labor unions. The workers first of all acted together—they struck, or they rioted, or they smashed a frame—they did something, and perhaps the "philosophy" they had been listening to for ages helped them to make up their minds to do it. And then, out of action, and the apparent need for action, came organization, to make more action possible.

I think the lesson of this century, so far, is that the blue-print ideas, the "charting" of the future society and of future forms of labor organization, won't work. Or perhaps, if they work at all, they will do so in ways not intended or thought of by their originators; that is, they serve as educational factors only, and maybe, put the workers in a state of mind where they wil be ready to act when the time for action comes. They hinder, too, by causing their most fanatical and sectarian adherents to struggle against all progressive action that does not quite fit in with their idea of what the future society, the international of labor, or whatever it is, should be.

But the workers themselves, when they begin to move, only then begin to realize the need of organizational structure, only then begin to create their new forms, societies, federated bodies, world unions, or what not. And they create them, they hammer them out, by compromise, by trial and error, by experiment, by adaptation of old and already existing and insufficient forms; by combinations of many things in a hundred different ways, they make a machinery that does the work, however illogical its structure may be, and for some reason, they prefer to do this, rather than to adopt any perfect plan laid down by labor philosophers, however pretty to look at such a plan may be. Happy the organization that knows how to adapt its propaganda to the situation, and to take advantage of the movement that really exists, for whatever organization remains with its eyes fixed obstinately on its chart will find itself cutting across the line of march and will surely be trodden down by the parade.

The I. W. W., I do believe, is one of the leaders in this parade. It is one of those groups, badly afflicted with a squint towards charts and blueprints in the past (and suffering from it too) which

> **"Being keenly aware of our interests in common with the workers of Cuba, we most emphaticaly protest against the coercive methods employed by the government in the interest of the capitalists; and we protest especially against the use of force in preventing union meetings, the placing of soldiers in factories to prevent communication among workers, and the arrest and deportation of foreign workers because of their union membership."**
>
> —Extract from open letter of I. W. W. G. E. B. Chairman to Secretario de Gobernacion, Cuba, October 10, 1925.

is now beginning to sense the new drift, and is beginning to take its part in the building of the world unity of labor.

In the past we have felt a fierce loyalty for the I. W. W., and that was proper. We knew that it was a good thing, and we had seen it in action, and knew that it did the work; it got the results we wanted. So when we considered international organization, we were very prone to take an antagonistic attitude towards all other unions, and to demand that their poor deluded members tear up their cards and take out one of ours, the best in the world. Undoubtedly our plan of world organization is the best in the world, but still, it is only an empty plan as long as many workers do not have their part in making it, in putting it into practice. And the poor deluded members of the Australasian Seamen's Union, or of the F. O. M. of Argentine, or the big German, French or English unions, very naturally felt the same sort of real and personal loyalty to their unions, which they had profitted by, and which they had all sorts of good reasons for believing were very nearly perfect, as we did for ours. So they didn't join us.

There is no such thing as "internationalism through absorption" in the labor world. Unity is achieved by acting unitedly against the boss. Words, promises, etc., are significant, sometimes, but not nearly as much so as actions. When we are once used to fighting side by side against the bosses of the world, as we are now beginning to do, then sectarian barriers will dissolve like racial and national prejudices, and organizational unity will follow. The industrial workers of the world will then have a real world organization, and it won't matter whether its headquarters are in Chicago or where they are. It is more important that the new world organization work well, and be a great revolutionary power, than it is that it be exactly as we originally planned it. All indications are that such a world organization is coming, and that the I. W. W. will have a large share in its formation.

## For the Cristmas Fund

**The little book of poems "The Shame of California" by Henry George Weiss which the General Defense Committee is selling for the benefit of the Christmas Fund has proven to be very popular; the first edition is already nearly exhausted. The demand justifies our publishing another edition at once, but in order not to tie up money in labor and paper for a longer time than we can afford we must get immediate returns.**

**We have decided therefore to sell this book in quantities of 100 or more for 11 cents per copy, cash in advance or on delivery. On the pay-as-you-sell-them basis the regular 40 per cent commission will be allowed. Single copies are 25 cents.—GENERAL DEFENSE COMM.**

## Locarno Internationalism

The bunk goes on forever. At Locarno, Switzerland, diplomats of the European powers have decided they will not fight each other until the next war, and the flood of piffle that has resulted is sickening. But in the midst of it, active preparations for war are speeding up, and the peace of preparedness is being urged in season and out of season. Locarno means that American Imperialism takes a forward step, and that some debtors will have to co-operate for a moment, either to pay U. S. or fight U. S.

# The Workers' Play

By Rosa Alexandra Knuuti

**1. The Purpose of the Theatre.**

The theatre to my mind is a means to an end. Classified as art it concerns itself in providing entertainment; as propaganda it provides something to think about. Most of the time however the bourgeois theatre gives us subtle propaganda in the name of art. So much so, that the theatre today is better identified as an industry pure and simple, a commercial enterprise a medium to promote and uphold the popular notions of life in general. Romance, drama, beauty, goodness are qualities that are seldom associated or written around so plebian a class as wage earners. Romance stalking about in hobnailed shoes—in overalls—in blanket shirts—in dime store finery? It is to laugh! Who ever heard of such a thing? At least not to be dramatized for the theatre.

Sometimes a person with understanding of human problems, a veritable hound for truth, comes along and gives us a real work of art; an unbiased, correct reflection of the lower depths of the human family. But this is an exception. And besides, is it received as good theatre? It is not. It is preclaimed as improper food for the public. The preachers decry it; the moralists immoralize it, the critics criticize it as poor entertainment, and the dear public, mind already warped and jared by too much entertainment, looks for a thrill elsewhere. To most people the theatre **means** entertainment pure and simple. No deep stuff for them. They go there to relax totally to the lighter stuff, or again to make believe mushy sentiment about love and romance in rose bowers and marble halls. They have been taught to accept and even appreciate distorted, adulterated facts in place of the real thing.

It does seem sometimes, that the playgoing public really wants to be kidded and fooled.

**2. The Play as Propaganda.**

Take any conventional playwright who starts out to dramatize a theme on capital and labor, and incidently to propagandize to their interest, invariably, and it needs must be, he will distort facts, invent convenient situations that will settle the whole blooming question of the class struggle amicably and in the course of three acts. I cannot recall one instance where a play was written by the accepted bourgeois writers in which the real relations of master and slave have been portrayed in a reasonable, believable way. There is always the inevitable compromise; always some poor excuse to justify master and slave conditions.

To accomplish this the writer uses a cut and dried formula, usually something like this:

Old Moneybags and his slaves are on the outs. There's a strike. Demands pro and con. A murder and some fighting thrown in for spice. But the play's got to continue and wind up too,, so maybe it's best to have old Moneybags son fall for the strike leader's daughter or vice versa. It all depends on conditions, climatic and otherwise. But the strike ends and everybody is happy . . . .

Or again, the charity theme works wonders in solving the perplexing question; Moneybags gets charitable for some reason, and he gives and gives —out of hypocritical goodness, and presto, the slaves forget and forgive and again all's well with capital and labor.

The average playwright, however, wishes to be identified as an artist, not a propagandist, be his "art" ever so "mammonized" in the interest of the class with the means. Just for fun let's take one striking example of art-propaganda: John Galsworthy's "STRIFE", a play in three acts concerned with the struggle of capital and labor.

First the attitude of the capitalist is exhibited. Then we get the workers' side. Before long a deadlock takes place between the two contending parties. This is the cue for romance to step in,—anything to straighten things out. Enid, gentle and lovely, the blueblooded daughter of the capitalist enters. She provides the heart interest . . . Her beauty, tenderness, graciousness, and "applesauce" etc. breaks the ice; strikes a "common chord" in the hard hearts of capital and labor and in no time they are rubbing noses for the "common good" of all.

Boiled down, Galsworthy's play in its essence portends to bring home this point;

The Play is propaganda, and most of all propaganda when it is most of all art. The propaganda value of the stage has been known since the time of Greek choruses and the miracle plays of the Christian Church. With the advent of Capitalism and the machine-made drama of Hollywood, the use of the older spoken play did not cease, it merely worked with a new ally, and both t o g e t h e r are propaganda, for some one, for capitalism or for labor. Industrial Pioneer takes pleasure in publishing here the first of a series of articles reviewing and interpreting present-day drama and especially workers' plays. The author has been very active in w o r k e r s' dramatics among the Finnish I. W. W.— EDITOR.

that if the poor are poor it is the fault of their stubbornness or laziness, or etc. And the rich, though they be rich and masters of workers' destinies, are still good-hearted and are well supplied with the milk of human kindness, etc. Some more applesauce. But this is typical, first class, **class propaganda**. Numerous others of this sort could be mentioned, but let this suffice.

### 3. The Finnish Workers Plays

There are others, too, that we consider among the **radical** writers that err in the capital and labor theme. They ought to know better, and maybe they do, but for some inexplainable reason they make a merry mixup of the relations of master and slave.

This brings to my mind particularly some of our budding dramatists among the Finnish people in this country. It is pertinent to state that among them are men of noticable talent, who have dramatized many of the historical happenings in the I. W. W. I want to mention Louis Lemberg in particular, because he has so effectively dramatized the tragedy of our Joe Hill. The play is entitled "SHACKLES" and is written in four acts. But there are times when even Lemberg gets caught in a snag, and uses the bourgeois formula in his theme. This is appalling when one considers that this happened in a play written about Frank Little.

There's a play of his I like to forget. He called the play "Bruno Titus". A well written continuity, the play is everything one could wish from the worker's point of view, until he throws in a blue-blooded daughter of the exploiting class for "Bruno Titus" to become sentimental about. Lemberg shows her up as the person born of "blue blood", together with the virtues usually associated with women of the upper class, nobility etc. She gives up her position in society, mind you, sacrifices herself for Bruno Titus, if not for his class and the whole sum total is a wonderful mess. I cannot, by any stretch of the imagination see the probability of this. But since then, this young playwright has redeemed himself. He has written other plays from real events in the labor movements, and quite a number on diverse subjects that can be classified in the reportoire of workers' play.

There are other plays that deserve mention. A play called "Conspiracy," by J. Korpi, an intelligent dramatization of the Centralia conspiracy. Also several plays of propaganda value by A. Mankinen of lesser renown which have found favor among the Finnish little theatre groups. However, all the above-mentioned plays are written for little theatre.

It was Bernard Shaw who once stated "fine art is the sublest, the most seductive, the most effective means of propaganda in the world . . . it works by exhibiting examples of personal conduct made intelligible and moving to crowds of unobservant unreflecting people to whom real life means nothing".

### 4. And Then There's O'Neil

So too, working class propaganda is possible in the theatre. As yet we have no proletarian theatre, but we are fortunate to have works of dramatists like Shaw, Ibsen and Gorky of the old school, Kapek and Eugene O'Neil of today to provide us with drama with their particular savoir-faire . . . I am singularly interested in the work of O'Neil. He is not content with halftruths about the various life problems: poverty, sex, wealth etc. When I think of O'Neil, I think of the "Hairy Ape" and vice versa. Up until the time I witnessed this mighty drama I was a very disillusioned patron of the theatre. I was quite convinced I would never see anything worth looking at. But I saw the Hairy Ape and became reconciled to the theatre. I raved about it for weeks, ay, for months afterward; I secured the book and read from it out loud to anyone who would listen to me. In fact, I became so pestifarious that my friends began to look askance at me. So I subdued my new born enthusiasm. And now on more sober reflection I'm quite sure it was not the play alone that upset me so, but the revelation of the possibilities for the workers in the spoken play.

Like Gorky, O'Neil, by means of his intelligent understanding and actual contact with the under dog has been able to put into form social problems and conditions without distortion. His work is art plus propaganda.

Which brings me to his latest work "DESIRE UNDER THE ELMS", now being shown at the Schubert Princess Theatre. Here is drama unadulterated. Here is romance without the trimmings. It's men beastly but natural; it's women homespun but rockhard; flannel nightgowned and 'smellin of warm plowed fields".—As a whole they are a homogenous mass of simplicity and ignorance.

Efraim Cabot, a typical farm product, a growth of the soil, is a man whose motto is "ten eyes for an eye", a man who finds his beasts, his cows, his pigs better company than the humans about him. He is an appalling mixture of selfishness and godliness. "A farm got to have a woman" he says, and sets out to get a third wife, having **outlived two** already. Besides he falls victim to spring fever inspite of his seventysix years. As old Efraim puts it: "I been hearin' the hens cluckin' an' the roosters crowin' all the durn day. I been listenin' to the cows lowin' an' everything else kickin' up till I can't stand it no more. It's spring an I'm feelin' damned—damned like an old bare hickory tree fit on'y fer burnin'."

So Afraim drives of "singin' a hymn," and returns before the end of the first act with a comely young woman to the disgust of the heirs apparent, two sons of the first wife, and one of the second. They had figured on getting the stony old farm for reasons as Simeon the elder son says scanning the fields about him; "Waal—ye've thirty year o' me buried in ye—spread out over ye—blood an' bone an' sweat—rotted away—fertilizin' ye—richin' yer soil—prime manure, by God, that's what I been t'ye!"

But with the advent of a new "maw" their chances for the farm look rather slim. So Simeon

and Peter, the older sons take their carpet bags and leave for California. Eben the younger son remains behind to fight for a share of—no not a share but the whole farm. They're all after the whole farm, Efraim, Abbie the new wife and Eben. To Efraim everything on the farm is "his'n": every stick and stone, even the woman—until she gets a glimpse of Eben and sees in him a means to get the farm herself.

Besides Abbie hasn't married old Efraim because as he says, "a hum got to have a woman", but because, "a woman got to have a hum" . . . She gets an idea. She must beget a son to make the heirship secure. Old Efraim who has already passed into senility is out of the question. No puerile sentimetality about Abbie. She's after the farm, to get it she must have a son, and as a means to an end she wants Eben. That presents about ninety percent of the **desire**—under the elms.

And then Eben is young and easy to look upon . . . Eben who feels manhood growing in him, in his own words: "I kin feel it growin' in me—growin' an' growin' till it'll bust out—."

So it isn't such a task for Abbie to seduce this unsophisticated farmer lad, in spite of his animosity toward her "fer takin' his maw's place". Things pile up high and fast. Desire keeps gathering momentum. Abbie gets a son for Eben . . . Even old Efraim feels "they's things pokin around in the dark —ye kin feel it droppin' off the elums—climin' up the roof—sneakin down the chimney . . . It's cold in this house. It's uneasy." So he goes down "whar its warm, down whar it's restful—in the barn. I kin talk to the cows. They know the farm an' me."

O'Neil is merciless. He piles up one tragic event on the other only as a matter of course. Eben questions Abbie's love. Abbie smothers her child to attest her love for Eben. The master touch is provided by giving this stark tragedy the most casual ending. Abbie and Eben are been taken by the Sheriff for their crime. Passing out in front of the old farm house, Eben says, "Sun's arisin', purty aint it?"

The play is a work of a rare genius, a realist, It is a living motif of life as it is lived, drama that can be measured by the standard of truth to life.

It's a mighty play, but not as good as the "HAIRY APE."

# The Anniversary of Centralia

(Continued from Page 12)

dicted for constructive murder, which means that they were accused of inciting the acts causing the deaths of the attorney and sheriff. The conditions at Wheatland were intolerable, but that is another story. Ford was paroled the other day and immediately rearrested. He was tried before and convicted of the murder of the district attorney. Now he is to be tried for the murder of the sheriff. This incident shows the vindictiveness of the ruling class. Its memory for revenge is long, and those it most hates and fears are workers who agitate against the rotten conditions that make high profit rates,and who dare to fight for their own interests and those of their class.

The Centralia Wobblies stood up in what was the finest spectacle for restoration of civil rights after the war period ever enacted on the soil of America. The patriots and ruffians in uniforms had been enjoying themselves during the war hysteria time without danger of defense being given or reprisals made. They smashed up many halls of the I. W. W. and of radicals. This was a service to their country, so they thought, and it gave indulgence to their sadistic impulses. Under this terrorism the employers amassed fortunes never before equaled. The sky was the limit for ruling class robbery.

Came the high tide and bourgeois violence tried the game once too often. The armed raiding heroes were met by armed workers. Henceforth a decline down to the vanishing point was seen in this sort of sport. Workers halls were not raided for a long time, and the lesson had been driven home. When the heroes paraded in 1920 past the hall that had been wrecked a year before at Centralia their line broke and all tried to get as far from the threshold as possible. Their nerve was gone. Did they fear the ghost of Wesley Everest with his gun barrel red hot? We wonder.

But the big thing for us to remember is that the raids stopped. And those who stopped them are paying with their liberty just as Everest paid with his life. Workers have never made a single advance worthy of mention with pacifism. As they are aggressive they gain. Without a Centralia the passion for raids and mobbings and lynchings would have gone on. But when this heroism of patriots involved risks, the spirit oozed out. The open season on union workers and radicals was closed.

We owe these men our support. We owe them the solidarity by which alone can their freedom be gained. As the California plutes are holding spleen for Blackie Ford, so too are the employers of Washington retaining their venom for our fellow workers who challenged their force ad violence at Centralia. If we organize the industries and make it costly to the bosses to keep Britt Smith, Loren Roberts, Eugene Barnett, O C. Bland, Bert Bland, John Lamb and James McInerney in prison we can be quite sure that their release will follow.

This should be sufficient cause for a solidification of the Industrial Workers of the World in Washington, and for the end of secession.

# Reviewing the 1925 Harvest Drive

(Continued from Page 7)

fellow workers, in which a number were so badly injured that they required medical and surgical treatment. The action in Moorhead instances that not all communities share in the savage delight such spectacles afford Fargo's enlightened citizenry. At this time two suits are pending against the participants of this revival of aboriginal cruelty. And the case of Fellow Worker Peter Weber may be considered more in detail.

Peter Weber was one of the victims of this gauntlet. He suffered a fractured collarbone, severe internal injuries and nervous prostration as a result of being terribly beaten. He is now being cared for by our organization in a Chicago hospital.

A few years ago a boy of Weber's age—19—left his home in North Dakota, and found his way to Florida. His name was Martin Tabert. He was beaten to death in a Florida road camp prison. Industrial Solidarity focussed attention to this crime and it found prominence in the press of the nation. Indignation flamed high in Tabert's native state and the North Dakota legislature sent an attorney to Florida to prosecute Higgenbotham—the beast who killed Tabert. The outcome was that the murderer was convicted and sent to prison.

Now we have a case where citizens of this state of North Dakota do their utmost to repeat the heinous crime on the body of Peter Weber that was inflicted upon poor Tabert. North Dakota protests when one of her boys is murdered by a law officer in Florida. Is there no voice of protest in North Dakota against this crime practiced on Weber at Fargo?

Ruling class force and violence failed at Fargo to kill working class organization. The workers continued in their drive with renewed vigor. This is the answer of A. W. I. U. No. 110 to those who seek to hold in miserable slavery a mute class of farm workers denied the creature comforts given to domestic animals, denied hope, aspiration; in a word, denied the power of attaining the stature of men standing erect and making an organized drive for economic freedom. Our organization exists to give this class articulation, hope, power, well-being and industrial freedom.

While these events were taking place in the States an important movement was going forward in Canada. Realizing that with the increasing acreage under cultivation in Canada the field for organization of farm workers grows apace, our Canadian fellow workers, with very little help of a financial nature from headquarters, opened four halls. These are in Moosejaw, Saskatoon, Calgary and Winnipeg. Speakers have toured the country and propaganda has been issued. Those in charge have been competent members of long standing and wide experience, Sam Scarlett carrying on lectures, and J. A. MacDonald acting as chairman of the organization force. They laid the plans and made all ready for the drive.

In the states the threshing season ended earlier than usual, due partly to natural conditions and partly to the changed method of doing the work. In other years prior to 1917 threshing machines were fewer and the work was done by migratory workers. The season used to be from 50 to 80 days. Now the runs are being cut down because groups of farmers buy the machines and assist each other in the threshing. This throws more workers out of employment.

In view of this early termination of the drive in the States, many American delegates went into Canada to carry on the campaign for membership. Canada is a country where organization work must be done directly on the job. There are very few "jungels" where workers gather, and this presents a handicap. When the delegates reached Canada recently, they found that snow and rain had held back the field work two or three weeks. Nothing could be done except to continue the educational meetings which are conducted in all the halls, and in theatres in towns having no halls. Thus the message of the I. W. W. and of A. W. I. U. No. 110 is being promulgated throughout the Dominion of Canada as these lines are being written.

Organization work can be done until December 1st, and our delegates are waiting to make a whirlwind finish in the time left for the work. The suitcase boys lured by government promises of high wages from the big cities and Nova Scotia have been unable to stand the hardships and have gone to the homes they should never have left. The migratory workers are inured to these hardships and the membership of I. U. 110 now holds the Canadian field, hoping in the short period before them to complete their 1925 job in organization. At least half of the Canadian drive is still before us.

Some of our delegates, having finished the thresh-

ing season, have entered the corn and potato harvests, both of which offer better conditions than usually prevail in the grain harvest. And to the corn and potato harvests goes the message of economic solidarity among those who work for wages.

Considering all the disadvantgaes that towered before us—the Emergency Program threat of disruption, the unemployment crisis, employing class organization, crop failure in Oklahoma and Kansas, auto tramps, community threshing outfits, and natural forces—the organization drive has been a success. Financialy the industrial union is in a better position than in previous years, and the morale of our membership has again been strengthened.

The Emergency Program exponents, who were going to enter the harvest entered and were quickly ejected. Many of those who had been deceived by them tore up the E. P. cards when they learned the facts of the controversy and took out I. W. W. cards. The E. P. gang made not the slightest impression in the harvest and were utterly powerless to overcome the solidarity of A. W. I. U. No. 110.

Whatever success has been achieved by our organization this year is the result of preparations carefully mapped out and a tireless energy by our delegates and active members in carrying these plans into action. We emerge from the drive with increased strength and richer not only in finances but in experience. Disruption has been choked to death, the spirit of the membership revived, solidarity shown at Fargo and throughout the whole campaign, and a fine beginning made in Canada upon which we intend building a powerful unionism.

As our delegates end their work in the agricultural industries and move on to other pursuits they are prepared to transfer their credentials and supplies to the industrial unions of the respective industries they enter. Thus they look forward to a continuation of organizational effort wherever they go. This spirit is the impulse of a practice which is sure to be of much value to our entire organization.

In concluding this review it is pertinent to mention that while the I. W. W. is weighted by great burdens, there is a wholesome expression of harmony among all the industrial unions. On this harmony, on the intelligence of our membership, and on the class struggle whose form distinguishes our method as scientific and in which our organization has its being we base our hope for a greater future for the I. W. W. Fortified by this hope let us unite to bring about such a future pregnant with more happiness for our class and finally reaching the goal of an emancipated working class and a redeemed humanity.

**We Didn't Make the Rules; We Don't Like the Game, But We Have to Play, and We Sure Can Win.**

# WOBBLES

### NOT SO BAD . . . .

**A lazy youth, tiring of life in an office, decided to go to sea. He managed to get a job as a stoker on an Atlantic liner. Having signed on, he went aboard and was ordered below. Three days later in mid-ocean he was found conversing, in resplendent garb, with a young lady on the promenade deck. In answer to the irate officer's remarks, he replied pleasantly, "Oh, haven't you heard? I've left."**

### REAL ESTATE

"If you have a farm, hang on to it; if you have not, buy one."

Hm. How in the devil am I going to buy one if he hangs on to it, tell me.

Solomon had a great press agent.

"Hear my words, Kid," he used to say (cocksure that his words were tuneful).—Just like we speak to our horses: **gee** this and **haw** that—whoa!

If the farms are so durn delectable, why doesn't the Real Estate Shark hang on to 'em?

The deFense is down.—T-b. S.

### WHY, IT'S SCISSOR BILL!

**"The tendency of newspapers is to confuse a moron with a sexual pervert. That is an error. The truth is that morons do and always have done a very large part of the world's necessary work. They do it because they are satisfied to do it. They are the contented serfs."—DR. KROHN.**

JIM THOMPSON: "Engines may not have eyes, but they do have ears. Don't you ever hear of engin-eers? And, as I was saying . . . . . "

China is fast learning how to use rifles, airplanes, bombs and poison gas.

Now just watch how soon she will be recognized as Highly Civilized.

—wIw—

Evolution still evolves to Revolution or Devolution. And it will continue so to do despite all the bulls of the priests, preachers and politicians.

—wIw—

### STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC., REQUIRED BY THE ACT OF CONGRESS OF AUGUST 24, 1912,

**Of The Industrial Pioneer, published once a month at Chicago, Ill., for October 1st, 1925.**

State of Illinois )
County of Cook )

ss.

Before me, a Notary Public in and for the State and county aforesaid, personally appeared **Arthur Coleman**, who having been duly sworn according to law deposes and says that he is the **Business Manager** of the **Industrial Pioneer**, and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management, etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, to wit:

1. That the names and addresses of the publisher, editor, managing editor, and business manager are:

Name of Publisher: **Industrial Workers of the World, 3333 Belmont Ave., Chicago, Ill**

Name of Editor: **Vern Smith, 3333 Belmont Ave., Chicago, Illinois.**

Managing Editor: **Vern Smith, 3333 Belmont Ave., Chicago, Illinois.**

Business Manager: **Arthur Coleman, 3333 Belmont Ave., Chicago, Illinois.**

2. That the owners are: **Industrial Workers of the World, 3333 Belmont Ave., Chicago, Ill.; Arthur Coleman, Sec.-Treas., 3333 Belmont Ave., Chicago, Ill.**

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages, or other securities are: None.

4. That the two paragraphs next above, giving the names of the owners, stockholders, and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company but also, in cases where the stockholder security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stock, bonds or other securities than as so stated by him.

**ARTHUR COLEMAN,**
Business Manager.

Sworn to and subscribed before me this 1st day of October, 1925.

**EDITH MONBLATT, Notary Public.**

[SEAL] (My commission expires Sept. 20, 1928.)

# Why this issue is smaller

IT has become imperatively necessary to decrease the expense incidental to publishing The Industrial Pioneer. Therefore the General Executive Board has decided to reduce the magazine's size to 32 pages, and to have Fellow Worker Vern Smith edit it along with Industrial Solidarity. For a long period the magazine has sustained a monthly deficit approximating four hundred dollars, which has been met by the General Organization treasury.—Industrial Solidarity also runs about the same amount behind and is subsidized in like manner. But the General Organization is no longer able to bear this burden, and it has been estimated that the plan now being put into effect with the magazine will bring down the costs to a point where receipts will cover them.

This change is to be regretted, but it is better than to suspend the magazine, and we regard the new arrangement as one of temporary nature called into being to meet an emergency created by financial stringency. When there is sufficient improvement in the organization to warrant a return to the former system it is to be put into effect.

I have often heard it expressed that editors usually leave their posts with a sense of relief because there is almost invariably so much advertise criticism directed at their work. Happily this is not my present experience, for since coming to edit The Industrail Pioneer last November I have had but two complaints, and a great deal of felicitation on the publication of each issue since that time. Naturally this has caused me to feel very kindly toward our readers and membership. It amounts to a vote of confidence from you and I am deeply grateful.

So much exceptional talent has been willingly contributed to these pages that I regard the magazine's merit due in major part to this generosity expressed in a fine, intelligent, stirring spirit of class consciousness. To all who have assisted me in this way I gladly acknowledge my earnest thanks, and ask you to continue to give my successor your continued cooperation.

We are experiencing a period of great stress in the organization and have been so situated for many months past. Under such conditions those charged with responsibility for our industrial union, publication and general organization affairs might easily have given way to irritability and allowed discords to enter in, further complicating matters. But this has not been the case, patience and harmony prevailing between all departments. Such an attitude makes its legitimate call on your increased support, and though the prospect immediately before us is not bright we can win through, surviving with added strength if we persevere with fortitude. Witnessing so intimately this internal concord has been of the greatest encouragement to me.

Again I say to all who have helped me in my duties here either by literary or artistic contributions, by good will and by aiding in the sale of our magazine that my appreciation is very sincere and my gratitude is gladly expressed.

—JOHN A. GAHAN.

# Don't Let Them Hang Richard Ford!

## He Organized The Workers

### *That Is His Only Crime*

Richard Ford was sentenced to life imprisonment after being convicted of murder in 1914. He helped to organize the strike of the Wheatland hop-fields pickers on the Durst Bros. ranch at Wheatland, Cal., in 1913. The hop-pickers' meeting was shot up by the sheriff and district attorney and their gunmen, at the request of the Durst brothers. The strikers defended themselves, and the district attorney and a deputy sheriff were killed.

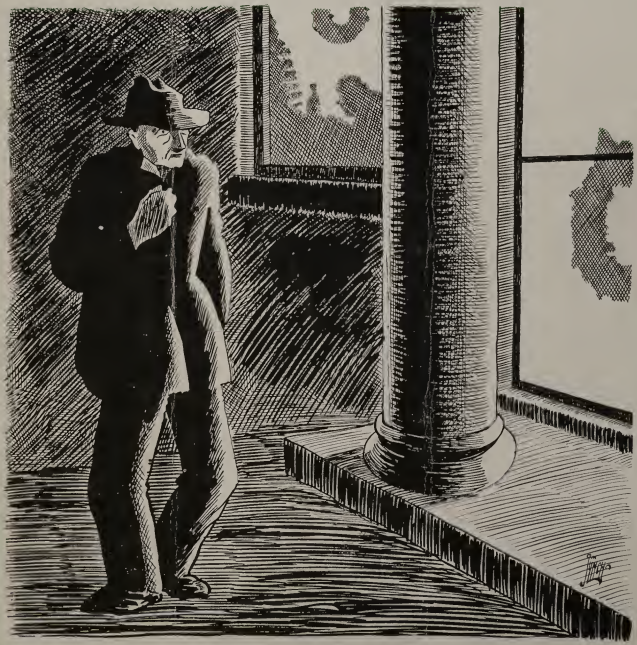
Ford was not armed, and was in no way to be blamed for the fight. But he helped to start the strike; he organized workers to prevent their exploitation, and the hop-pickers are determined to have his blood.

After being imprisoned eleven years, for conviction of murdering the district attorney, he is now paroled and will stand trial for murder, for killing the deputy sheriff. They mean to hang him this time!

As he defended workers, so you, workers, defend him. Send donations for the Ford Defense to General Defense Committee, 3333 Belmont Ave., Chicago, or to California Branch of the General Defense, P. O. Box 574, San Francisco, California.

William R. Langdon, American consul at Antung, China, makes a report to the United States Department of Commerce: "The enterprise of Pacific Coast lumber manufacturers and cheap water transportation across the Pacific have closed all the 23 sawmills in Antung."

American workers in the woods of Washington and Oregon and California are cheaper to the boss than Asiatics and more profit is made by exploting them!



Think of that, you slaves of the machine.—Get busy and organize in the I. W. W., and take for yourself some of these profits!

*An Illustrated Labor Magazine*

Good Cheer and Xmas Jollity

## Preamble of the Industrial Workers of the World

The working class and the employing class have nothing in common. There can be no peace so long as hunger and want are found among millions of working people and the few, who make up the employing class, have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system.

We find that the centering of the management of industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers.

These conditions can be changed and the interest of the working class upheld only by an organization formed in such a way that all the members in any one industry, or in all industries if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all. Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."

It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalism, but also to carry on production when capitalism shall have been overthrown. By organizing industrially we are forming the structure of the new society within the shell of the old.

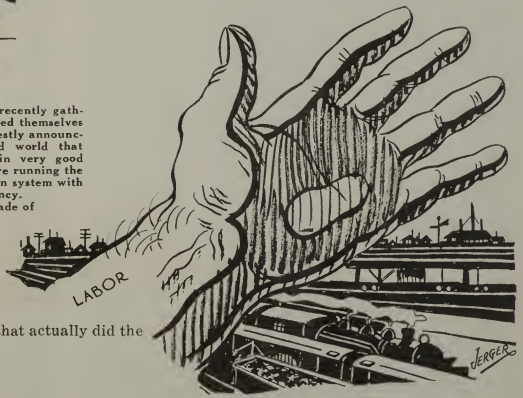
**CALIFORNIA ADOPTS PEONAGE.**—Signs of a new drift in the United States, away from wage slavery and back to chattel slavery are multiplying. We have often discussed the peonage system of the South, where the negro is kept at work not by the payment of any fixed wage, but by grants of food and clothing from the land-owner's store, and by constant threats of a vagrancy law. The vagrancy law is so worded that anybody not actually employed is guilty. Only negroes and "foreigners" (traveling workers from the North or West) are ever arrested under this law. When arrested they are put to work for the state, relieving the land-owner of some of his necessity to pay taxes, or they are sold to lumber companies, or even to plantation owners, for the term of their sentence. Either actually as a convict under guard, or through fear of becoming one, the resident negro worker and the migratory white worker are kept on the job, without getting wages for what they do, and without being at liberty to quit when they like.

It has been definitely established that the system has spread to California. At present it meets with a certain amount of opposition. To this fact we owe the knowledge of its presence, probably. Various individuals, including the attorney for the State Labor Commission in the southern part of the state, are complaining about the combination effected between the justice of the peace at Independence, Inyo County, Cal., with the district attorney of the county, and of these two with the managers and owners of the big borax mines of that district. The combination, or understanding, whatever it can be called (some people would probably want to call it graft, but we think it is nothing but a natural development of big capitalism), results in Mexican laborers of the borax mining company being arrested when they try to quit their jobs in the mines, and sentenced to jail, ostensibly because they have not paid their board bill.

The frame-up becomes more apparent when the contract under which the workers labor is examined, and it is there pointed out that the board is to be deducted from the wages. It is evident that they were not getting any wages.

In addition to this the Mexican laborers put up as a defence that the work is killing them. That, of course, is one of the reasons for a peonage system, and is one of the advantages of chattel slavery, in the opinion of the capitalist You can work the slave to death quickly, and he has nothing to say.

**NOW THAT'S TALKING!**—On this page you see a picture of the first locomotive that pulled the first train out of Brisbane, Queensland, Australia, on the day the strike of 18,000 railroad workers came to an end. Written in great big letters all over the tender of the locomotive, for the world to see, is the slogan, "Workers of the World, Unite!" and another beside it, "Keep the Red Flag Flying!"



Can you imagine such things on the tenders of American locomotives? Not yet. But then, how long has it been since American railroad men actually won a real strike? How long has it been since they were willing to keep on striking when "our government," in the course of its continual and loyal support of the bosses, ordered them to stop?

This is what the railroad workers of

Railway executives recently gathered at Chicago, patted themselves on the back and modestly announced to the cock-eyed world that the railroads were in very good hands and THEY were running the nation's transportation system with extraordinary efficiency.

No mention was made of the HAND that actually did the work!

In Australia the workers on the railroads have their employers so well tamed that they can hold regular meetings on the job, and on the employer's time. In England railroad workers are so strongly organized that their threat to strike in conjunction with the miners caused the government to pay fifty million dollars for a truce.

Queensland did. Their government, which by the way calls itself a "labor government," ordered them to go before an arbitration court, and the arbitration court reduced their wages five percent. It also reduced wages of other lines of work.

The workers in Australia, and elsewhere, though not in America, have an institution known as the "Stop Work Meeting." This means holding union meetings on the boss's time, and frequently for the purpose of making demands on the boss, or of adopting resolutions of protest against something he has done.

So they began to hold these stop work meetings, and ask for their five percent again, and the railroad officials, backed by the government, locked them out. It was intended as a lesson for them, but they knew something about that sort of thing already, and when the company was ready to start work again, it found that instead of a lockout it had a 100 percent strike on its hands. Out of 18,000 railroad workers, there were only nine who stayed at work, and these were high departmental heads They were not even called out. No one expected them to come.

The workers won all their demands within a week, and in addition to that, they demanded and won a five per cent pay increase for all other workers who had been cut by the arbitration court. That's solidarity!

**THEY WIN AT ABERDEEN.** — Another proof of the efficacy of strike action has just come out of the sawmill town of Aberdeen, Washington. The workers there, as mentioned in these columns last month, went on strike for "some increase in pay," as the song has it. They got most of what they demanded---they did not ask for much. This was an unorganized strike, and the workers were afraid of organizing. This is sure proof that only grim necessity drove them to use their economic power, and that they were distrustful of it, and timid in the presence of their masters. But the first step has to be taken some time, and it was indeed high time to begin stepping out in the sawmill country. The workers have been slaves there long enough. Let them take confidence in themselves, as a result of this first victory, and begin to plan another—something more worth while, this time. They have obtained a $3.75 minimum wage, whereas before, many of them were working for $3.25 per day. But the boss still makes more off of them than he can make even from the sweated "coolie" labor of China, as is proved by the fact that while the sawmills of Washington state are putting on an extra shift, those of Antung, China, have been closed down by American competition. Certainly the workers of Washington ought to get as large a share of the value produced in the industry as the Chinese "coolie"! The first thing to do is to organize!

**THE TRUTH FOR THE WORKERS.**—This is the story of two Chicago newspapers. One of them is the Workers' Paper. One is not. One is Industrial Solidarity, official organ of the I. W. W., and one is the Chicago Daily News, something like an official organ of the capitalist plunderbund. You would naturally expect the daily, with its enormous organization, its hundreds of highly-paid officials and correspondents, and its thousands of common ordinary wage slaves, would have the news first.

Certainly you would expect it to put out important news which is available to all, at least as quickly as Industrial Solidarity can get it out, for Sol is a weekly, with a staff of two, each of whom is able to devote only a part of his time to the work of the Industrial Solidarity, on account of other duties.

However, it makes a difference what kind of news you are looking for. If you want the latest bunk from the eternal battle line between rival gangs of bootleggers out on the West Side in Chicago, then you can read the Daily News. If you want to hear about the man who robbed a jewelry store, again the News is best. But if you are listening in for information about the class war, just as eternal, and of far more real interest to you if you only know it, you won't find much of it in the News. If you want to find out about who robbed **you**, well, then, we know one case where Industrial Solidarity and the Chicago Daily News agreed—only in this case Industrial Solidarity had the news a whole two weeks before the Chicago Daily News got it.

We refer the reader to the issue of Industrial Solidarity of October 28, 1925, on the third page of which there appeared a Federated Press News Service article by Leland Olds, telling how 1,000 corporations in the United States got half of the total income of all corporations, as proved by the income tax returns. The article continues to point out how less than one-twentieth of one percent of all the corporations took 28 percent of the total income of all corporations, and how one half of one percent of all the corporations get 57 percent of all the profits. That shows who is robbing you. That shows, as the I. W. W. preamble says, there is a "centering of the management of industries into fewer and fewer hands"—for industry runs for profit, and won't function otherwise, under capitalism.

Then in its issue of November 10, 1925, the Chicago Daily News comes along with the same figures, in a front-page article, written by one William P. Helm, Jr.

MORAL: Read the I. W. W. papers and get the best first.

**DOES CRIME PAY?**—Napoleon said he had to have the Catholic Church as a "spiritual gendarmery" to keep the people in order. The Rotarians and Babbitts who do all the retail governing of the people in this

country do not believe in Papal Bulls, but they have a great confidence in "bull" in general—which is to say, in the power of advertising.

The big plunderers of the country have to have a corrupt police force in order to frame up radicals, slug the waitresses and ladies' garment workers when they strike, etc., and these cops naturally take with both hands. Or in order words, they are too much pickpockets and sluggers themselves, to stop the professional pickpockets, bootleggers and burglars. So crime flourishes, and the little cockroaches suffer.

But there is always advertising! So they put up car cards, pictures built around the assertion that "Crime Does Not Pay!" Gone are the days when the criminal was threatened with Hell. The soul of Babbitt knows no greater disaster than to lose the profit—if it doesn't pay, it's damned in all the good Rotarian circles, anyway.

So we have the car cards. One of them shows a man in jail, and outside are his wife, in rags, and four children, the youngest a babe in arms. Babbitt never stops to think, evidently, that perhaps this condition, this family, hungry at the table of an unemployed man, might send him out on the road to crime, without any hope of profit at all, but merely as the lesser alternative to starvation!

But when Babbitt's artist depicts a policeman, standing with his arms folded, looking at a crowd of crooks, and then they spring the same old catch-phrase at you, "Crime Does Not Pay," you have to laugh. You think of Police Captain Westbrook to whom it paid $16,000. And though Westbrook was caught, you think of the hundreds and hundreds who are not caught. You know that almost any policeman will let anybody sell liquor on his beat for a standard price of $5—if he should charge more, the bootlegger would feel that he had a right to go to the sergeant and complain. You think of the open, undisguised chasing of "bucks" (petty graft) in every station house where professional bondsmen operate. And you look at that cynical-faced cop on the poster, with his hands resting on the "bucks" in his vest pocket, and you have to laugh. Crime does not pay! Haw! Haw!

Crime paid Morgan and it paid Rockefeller, when the one sold rotten guns to the government, and the other handed out rebates, and when both committed murder on the bodies of their unfortunate slaves. Crime paid Armour when he sold the condemned beef to the boys in blue in the Spanish-American war, and when he saved up all that was not too much used in that war to sell again in the World War. It pays Townsend and Diamond to commit perjury in California, and it pays the Chicago police—many, many "bucks." Crime does not pay!

The I. W. W. works to establish conditions where it will not pay, but the time is not yet.

DOES CRIME PAY?

They All go SOUTH For The Winter.

# Shivering Santa Clauses

By CARD No. 794514

"MA-MA, you said that Santa Claus had a warm heart!"

"Yes, my dear, he has."

"Well, then Ma-ma, why does he shiver so?"

Kids do see things, and that's what they say when they pass a poor woe-begone migratory worker, trying to make a miserable nickel or two by togging himself out like a clown in cheap cotton furs, filthy from last year's wearer, and ringing a little bell at the street corner during the Christmas rush.

For Santa Claus is commercialized in America. He acts as a "come-on" for the Salvation Army, and for the big department stores. The department stores pay a little less for good long-legged West Madison Street Santa Clauses, but they dress them a little warmer. The department stores have some pride. Your Salvation Army is thrifty about these things, and however warm a woolen shirt your "captain" or "commander" may have under his blue and red uniform, the shivering Santa Clauses that they hire for a dollar and a half a day, have to stuff their shirts with newspapers if they are going to get through a day of bell ringing without freezing their ribs.

"Say, Mister Scab Herder, did you run Santa Claus out of town too?"

THE FAMILY GOES A-MARKETING TO BUY SOME CHRISTMAS CHEER

Once the city street cleaning, or snow shoveling, warmed the bones of the "stiffs" trying to get through this winter on memories of the hopes they had last summer for a "winter's stake." Every big snowstorm used to be heralded by cries of delight from the cheap "flop houses" and the "missions." Now there would be work for all for a few days! Get in line for a city job, shoveling snow!

But that is no more. There is not a big city left in the United States where there is much work shoveling snow. Oh yes, "Jake" up in the sky there sends down the snow, same as always, but the **machines** clean it up. There is a plow that runs along the side of the curb, and piles the stuff out of the gutter; there is another kind of a plow that clears it from the streetcar tracks—these are run by gas engines or by electric motors. They take only one man apiece, and they move right along, do a lot of work in a day, more than a hundred men could do with shovels.

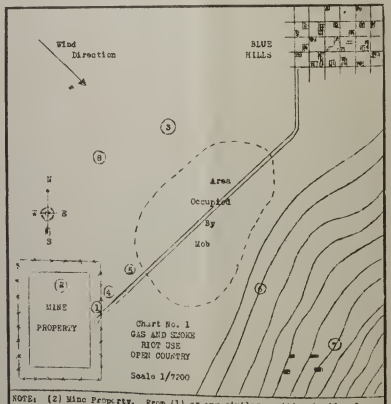
Neither are men needed in any considerable numbers any longer to load the snowballs. For the last three years huge loading machines have been used, and are steadily being perfected. "Perfection" means that they will be completely automatic, and require none at all of the hungry "bums" from the "skid road." The summer was very slow. Talk about "prosperity" left out of account altogether the soft coal miners, thousands of whom eked out an existence on the lettuce they grew in their back yards, and what little food they could buy with their two or three days' work a week, and the textile workers who hung around hoping that when the boss had worked to death those who got the first chance to run thirty looms, the first to be fired would get a chance, and the plate mill steel workers who are discharged when the new doubling machines went in, and even the cranberry sprayers, who won't work this year, because the holiday cranberries are now sprayed from aeroplanes! There has been plenty of unemployment all through the summer, though not enough to start a revolution or anything of that sort.

And fortunately for them, perhaps just because of the slow summer, and the rapid installation of labor-saving machinery, and partly because of the greed of the employment sharks there were really more odd jobs, short-time jobs, mostly construction jobs, than usual, this Fall.

I have included the greed of the employment shark. Probably everybody knows the function of this worthy in multiplying, not the amount of the work, but the number of jobs. The employment agent charges from two and a half to three-fifty for the job, and the boss who does the hiring gets his fifty cents out of it, works the stiff for a few days, so that the law is evaded, and fires him. Another man means another fee, and another four bits for the construction job boss. It's a good game, whenever there are a lot of unemployed men, it makes it look as though there were lots of jobs, keeps the shiverers always shivering in happy anticipation and really does distribute the work a little, and give everyone a chance. A very wasteful procedure, though.

Even these sorts of jobs are about ended by Christmas time though, and then begins the Santa Claus "fakin'" and the mission soup graft. Many men panhandle on the streets, and quite a few are picked up dead, frozen stiff, after every big blizzard. In Chicago the city has a special wagon to go around and pick them up, like cord wood—and just as stiff.

Yes, Christmas is great in a big city these years. Who knows it better than Santa Claus—shivering on the street corner and trying to eat his beard from hunger!



# "Poison the Women Gently"- Army's New Code of Chivalry

MAJOR GENERAL AMOS A. FRIES, the U. S. army's official poisoner, or as he is more politely entitled by those who believe in poisoning strikers and radicals, "Chief of the Chemical Warfare Service," writes to the public press of New York City to say, "If possible, consideration should be given to women and children (when gassing them with poison gas) so as to cause them no undue injury. Isn't that sensible, humane, and even gallant? Would you teach a policeman to use the same vicious blow with a club on the head of a child or a woman as he would on a desperate armed man? Again, we think there is but one answer to the question."

General Fries was defending himself against a certain amount of rather shocked criticism, evoked among a certain section of the bourgeois press, because of statements in his book of instructions to subordinate poisoners, officers and gentlemen of the U. S. Army, as to the best way to protect the profits of coal mine owners, factory owners, etc., by dispersing with clouds of deadly (or perhaps merely injurious) gasses, any mass picketing, or by the same means breaking up meetings held in rooms on the third stories of buildings, which previous information might have led the officer in charge of the protection of profits in that locality to believe were for the purpose of calling strikes, etc.

Some naive liberals someway got the idea that it was barbarous and inhumane to gas crowds of women and children, especially miners' wives, and offspring, most probably, with the sort of poison clouds that rotted out the lungs of the soldiers in France.

They quoted from the general's text book on "Provisional Instructions for the Control of Mobs by Chemical Warfare," that statement about, **if possible,** not inflicting **undue** injury on women and children. They commented adversely upon it, and the general came right back at them; the general declares absolutely that it is "sensible, humane, and even gallant" to shoot the kids full of poison gas, just as sensible, humane and gallant as it is for a cop to **slightly** fracture their skulls, instead of trying to "tear their damn cans off," as is the custom when subduing male strikers—and, of course, nothing could be more gallant in the treatment of women and children than **that.**

NOTE: (2) Mine Property. From (1) or any similar position inside of barbed wire area; 4" Stokes Mortars can fire gas or smoke on any points within a radius of 1,000 yards; (3) (5) (7) are given as typical Stokes mortar targets; Hand grenades can be thrown 30 yards and be placed outside of barbed wire area on locations such as (4); rifle grenades can be fired up to 250 yards and can be placed on points such as (5). Aviation Gas and Aviation Smoke Bombs can be used on such points as (5) (6) (7). From (6) Candles or Cylinders can be used to establish a gas cloud of gas which will drift into the mob. Sprinkling of persistent gases previous to the attack will effectively deny areas and approaches, places.

A PAGE FROM THE U. S. ARMY'S BOOK ON GIVING POISON GAS TO STRIKERS

THE STRIKE
For This The U. S. Army Suggests Poison Gas

In this article to the public, General Fries tells how:

"An officer of the Chemical Warfare Service, with tear gases, was sent to the Mingo mine fields some four years ago. It is to the credit of the War Department that he was sent there. Had any force been necessary, tear gases would have been used and any dangerous situations arising from excited, armed men would have been avoided without bloodshed or destruction of property. How can the words "barbarous" and "uncivilized" be applied to such materials? If preserving law and order by the mildest means ever known to man is to be considered barbarous, then how can civilization endure?

Ah, how indeed? Remember Engels' conclusion, based on long study of various ruling class utterances, that every ruling class, throughout history, has identified its interests with those of the whole world, has considered itself synonymous with culture, civilization, learning, and all things desirable. Each of them was certain that if it passed, the torch of progress, or of civilization or whatever they considered desirable, would be extinguished. It is a natural sort of a feeling, however false history has proved to be—in the case of General Fries, the official poisoner for American capitalism, we can understand how he, regarding as he does the proper development of the gentle art of gassing men for profit, should look with grave distrust on any group of men or any proposition, which proposes to stop him. Indeed at the close of his newspaper article he tells in the plainest of words what he regards as progress:

"I am quoting facts, not fancies. I am giving the truth and not propaganda. Our records are open to any man who will examine them. If he be honest he cannot but decide with us that **the world needs gas more than any other one thing** to preserve law and order with the least damage possible to human beings or to property."

Probably his underlings are in substantial accord with him, and none of them, despite an occasional reference to "defending our beloved country from foreign aggression" have any doubt at all about whom they are going to gas. Another hearty believer in poison for women and children one Henry Fry, a major in the Chemical Warfare Reserves, rushes into print, with a letter to a newspaper in New York, in which he says eactly what poison gas is good for. Remember in reading his explanation, that the bourgeoisie do not distinguish one sort of radical from another, and when he says "Communist" he is as likely as not to mean "I. W. W." Here are the concluding remarks fom his little speech:

"With Communism seeking a foothold in America, both by its direct agencies and through the use of various side-line activities, the American people would be foolish to discard a weapon that may be badly needed against the Red menace.

"In instructing his officers how to use war gas for riot duty, General Fries is merely carrying out a routine detail of his office as Chief of the Chemical Warfare Service. Criticism of his instructions because he happens to be a gas officer are misleading. Every department has its own riot tactics, including the Regular Army, National Guard and, here at home, the New York Police Department. The New York police force has its gas section, which is instructed in the use of gas as a riot weapon.

"The Bolshevist, the Communist and the radicals generally—ranging from light crimson down to delicate pink—would like to see chemical warfare eliminated, but it is here to stay and the day may

come when it will prove to be the salvation of the United States."

Then when we turn to the book itself, the instructions for proper and efficient gassing, which started the stench, we see that though the word "mob" is used throughout, the obvious implication is that except in the case of armed mobs, practically revolutionary armies, the word "mob" means any aggregation of working men, mass picketing, or gathered in a meeting near the company property for the purpose of hearing speakers, perhaps, or maybe assembled in a hall, in a building—for provision is made for throwing gas through third story windows.

Chemical Warfare Service officers are taught in the poison gas book, on page 6, that there are three types of "mobs":

"(a) A more or less well-disciplined organization of men in numbers from 500 up to a few thousand, fairly well armed and having some semblance of discipline.

"(b) Small organizations of men with a few arms, poorly organized and with very little discipline."

The women and children come in the next "mob":

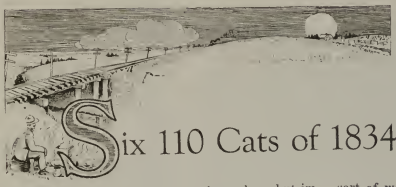
"(c) Mobs that will be composed not only of men, but of women, boys and sometimes small children, unorganized but excited and irresponsible."

"The gas cloud," runs the book, under the heading "Mob Psychology in Gas," "being heavier than air, will generally cling near the surface of the ground, ordinarily rising not over 30 feet. It will fill cellars, hallways, mine shafts and extend in every direction in which a breeze is blowing.

"A mob understands that the fire of machine guns or rifles cannot reach around the corners of a building or through a street barricade, but with gas the mob understands that when a cloud is turned loose this cloud will cover all areas. . . .

"The first appearance of the faint white smoke of a gas cloud will cause a stampede even in the most determined mob. . . . If possible, consideration should be given to women and children, so as to cause them no undue injury."

"Ordinarily," says the book, "the members of a mob will not run into the cloud, but will run with the cloud in an endeavor to escape being encircled. Members who attempt to enter houses, cellars, side alleyways, will only find that the gas has preceded them."



"Probably the quickest way to appreciate the power which the presence of gas has upon a body of men is to picture the fear which a human being has of having his breathing interfered with by smothering or choking and the instinctive dread this same human being has of losing his vision. A sneezing or vomiting **war** gas will interfere with breathing and a tear gas will practically close the eyes of a man. . . . The cloud is invisible, and though it usually can be detected by its odor this detection often comes too late to prevent the gas taking effect."

"Their efforts to escape," so the book tells officers, "will exceed those made by a mob to escape from the flow of machine-gun bullets. Instead of stopping when corners are turned, the members of the mob will continue to run, carrying with them on their skin and in their clothing sufficient gas to make them believe they are still within the atmosphere of gas or that the cloud may overtake them again at any time.

"Barricaded groups of men in buildings may not be frightened by a gas cloud until the actual odor and effect are on them. A cloud caused by a grenade shot into a third-story window will slowly enter the halls, roll down the stairs and gas the lower two floors. In case of special drafts the grenades shot into the windows of the lower two floors will prevent any room escaping the gas itself. Under such circumstances the occupants will abandon the house by the nearest available exit. Certain individuals will complain of the effects of a tear-gas cloud. It is impossible to injure seriously anyone with tear gas in **field concentrations.**"

It is impossible to permanently blind or kill anyone with tear gas used in **field concentrations**—that is, such concentrations as would prevail from a few bombs thrown in the open—but throwing grenades into a closed building is different, and young officers are especially informed during the course of their instruction that they can kill all the men they want with tear gas, to say nothing of the more powerful Lewisite or mustard gas, if they increase the concentration, by using it in greater quantity, or by using it in a confined space. Besides the tear gas, phosphorus may be employed to create a thick white suffocating smoke, and to stick to the hide of any unlucky one who happens to be spattered with it, and there burn to the bone. One gas, "bromobenzylcyanide," can be turned loose in a street, and will make that street impassable for a solid week, or will make any valley or plain in the open country impassible for three days. Gas can be sprinkled on the crowd, it can be shot at the crowd in rifle grenades or from Stokes mortars, it can be taken out to windward of the crowd and turned loose out of cylinders, to form a cloud and drift down on them, it may be burned out of "candles," and it may be poured out of airplanes.

It is used always, all the time for the preservation of profits, and to make effective picketing difficult. It has already been used against the I. W. W., and without doubt it will be used again. It behooves us to seriously think of possibilities for circumventing this new weapon of the capitalist class. Meanwhile, we will tell the world, in the very words of the poison gas experts, that the army, and their branch of it especially, exists for the purpose of crushing strikes, breaking up meetings of workers, and maintaining the system of slavery which they call "civilization."

# Six 110 Cats of 1834

TWO incidents, slight in themselves, but important in their historical significance, have taken place in Chicago, recently. One was the death of Henry James Brine, and the other was the visit of the old British Convict Ship, the "Success."

The skipper of the "Success" is a business man who hired an able press agent, and then seems to have sold part of the ship to the Hearst syndicate of newspapers, if one can judge by the amount of advertising space he got in the news columns. The "Success," be it remembered, is now a museum, serving capitalism in the person of its owner, who gets the stiff admission fee charged sightseers, even as she once served the capitalism of all England by carrying labor agitators "away to Botany Bay, to work their lives away," as the old rhyme has it.

The owner of the "Success" exploited all this early cruelty, showed off the monstrous instruments of torture on board, and then when all that palled, began to exploit red-haired girls, and get publicity by hiring them to spend the night in the ship's dungeon (sure, she had one, she was an unusual ship) or to climb up and paint the figurehead red. The figurehead was a statute of Queen Victoria, who reigned over England at the time the "Success" was functioning as a floating prison.

But all the time the "'Success" was flaunting her ancient shame and adding some modern refinements to it, by way of making news, Henry James Brine, the descendant of a family of British workers, who gave the "Success" in her day more fame or infamy than she ever got through any number of red-headed girls, was slowly dying, in Chicago.

James Brine was his uncle, and James Brine was one of the Tolpuddle martyrs, one of the "Six Men of Dorset," the conviction of whom made almost as great a commotion in their day as the Criminal Syndicalism law makes in our time. Their story shows the similarity of the methods used in 1834 in England, with those used in 1925 in California, and the thing they were fighting for was the same. There is much freshness and ignorance about the way in which these men tried to organize the agricultural workers of Dorchester, but they were fairly successful at that, and the statement of the judge who sentenced them to seven years' transportation to Australia might almost have issued from the lips of Judge Busick: **"Not for anything you have done but for an example for others I consider it my duty to sentence you to seven years penal servitude."**

The late twenties and the early thirties of the nineteenth century had been years of disappointment, despair, and struggle for the workers of England. The new capitalism, the factory system, had just got firmly entrenched. It was a period of ruthless exploitation, of child labor, of merciless suppression of the workers by the power of the state, of newer and still newer laws against any sort of working class action.

There was unemployment for a decade or so after the Napoleonic wars, partly due to the speeding up of industry during the war, the more rapid capitalization of the country, and the sudden cessation of the war market, and partly due to the release from military duty of great armies of young men, who had to find somehow a way back into peace-time pursuits.

But this period passed, and as 1830 came around, industry absorbed more men, there was a basis for labor organization, and for the first time under capitalism, labor organization sprang up on a large scale. The parallel between that period and the period following the great world war (1914-1918) is surprisingly accurate, and if it continues to hold good, we should be due for a great unionization of labor during the next few years.

But back there in 1830, they did not know anything about unions, they were making them for the first time—inventing them. The first of these were of course local bodies, and because of the primitively religious character of most of the workers, and because of the semi-secret nature of the unions to escape the harsh laws, and because of the influence of Continental European secret societies, the unions had a good deal of mummery and ceremony attached. Workers were sworn in to membership on a stack of bibles, before painted figures of death, angels, or demons, and the whole procedure was something like initiation into a Babbitt Society of the present period.

This necessity which the workers felt for taking oaths was one of the points at which they were to be attacked. A set of laws known as "The Six Acts of 1819" prohibited unauthorized persons from administering oaths. These laws were directed against dynastic rebels, plotters to change the king, and were never intended to be used on workers. But capitalism uses its biggest weapons against its most dan-

HENRY JAMES BRINE

gerous enemies, and capitalism, for the first time in history, found itself confronting a union campaign. The unions continued to develop, spontaneously, everywhere, and it was not long, after they were once started, before the idea occurred to some one to federate them, and have a national organization. Robert Owen, the Utopian Socialist, had a good deal to do with this new idea of a national union. The union was started; it was called "The Grand National Consolidated Trades Union," and it spread. Perhaps nothing in the nature of a labor organization ever spread so fast before or since. It was organized in January, 1834, and in a month or so had a foothold in nearly all the trades. The "benevolent societies" and the "workers' aid" associations flocked into it, and it created in addition to these a great many new locals, sending delegates about the country in pairs to organize in all sorts of places, though first of all in the north of England.

The moderately liberal Webbs, in their book, "The History of Trade Unionism," say: "Nothing in the annals of unionism in this country at all approached the rapidity of the growth which ensued. Within a few weeks the union appears to have been joined by at least half a million members, including tens of thousands of farm laborers and women . . . numerous missionary **delegates**, duly equipped with all the paraphernalia required for the mystic initiation rites perambulated the country, and a positive mania for trade unionism set in."

Needless to say, the British state, at this time representing a compromise between the land owning aristocracy and "squirearchy," and the rising bourgeoisie, was alarmed. If the unions had been confined to the trades and crafts of the towns, probably the Tory politicians might have been tolerant, at least. In later years, the representatives of the landlords attempted to win the support of the proletariat of the cities by passing factory legislation and other "liberal" measures. But the new unionism swore in **agricultural** laborers! And the land owning interests were as bitter against it as the real estate gamblers and hop field owners of California are against the I. W. W.

There was an alliance between landlord and capitalist right away, to suppress it. Lord Melbourne, the Whig (capitalist) home secretary who was just taking office in 1830 (before the organization of the Grand National Consolidated), at once got into consultation with his predecessor in office, his political enemy, Sir Robert Peel, and in his own words, the results of their conversation were a complete agreement. "'The unions of trades in the north of England and in the southern parts of the country for the purpose of raising wages, etc., and the general union for the same purpose, were pointed out to me by Sir Robert Peel in a conversation I had with him upon the then state of the country, as the most formidable difficulty and danger with which we had to contend, and it struck me as well as the rest of His Majesty's servants in the same light."

Just as they do now, the capitalists of those days first called in their dopesters, their first line of defense, the bourgeois intellectuals. There was a professional economist, Nassau Senior, working for the University of Oxford. He was put to work to "investigate" the situation, and he set the example for many such "investigations" to come. Without taking any notice of the workers' side at all, or hearing any evidence in their behalf, he and his assistants got together a bulky report, a bitter indictment of unionism, and recommended terrible penalties for the organizers and members of unions, such penalties to be made still more terrible if any unions inrulged in striking, and even still worse if the offense were aggravated by picketing. The investigating committee seriously proposed that for the purposes of arresting any of his own workers, every employer should be regarded as a police officer, and should have power something like that of a feudal baron to keep discipline among his serfs of the machine or of the plowed fields.

Melbourne did not dare to go as far as Senior advised, but in August, 1833, when the Yorkshire manufacturers presented a memorial on 'The Trades Unions," he had one of his underlings answer for him that, "His Lordship considered it unnecessary to repeat the strong opinions entertained by His Majesty's ministers of the criminal character and the evil effects of the unions described in the memorial, and that, "No doubt can be entertained that combinations for the purposes enumerated (to raise wages) are illegal conspiracies, and liable to be prosecuted as such at common law."

This laid the background for the Tolpuddle martyrdom, and it was not long in following. Any other place in England would have done as well, it merely happened that the union of agricultural laborers organized at Tolpuddle, an insignificant town in Dorsetshire, met up with a new judge, anxious to show his masters his zeal in their interests, and that he got started before the rest of the judges could move.

In the vicinity of Tolpuddle the agricultural workers had made some time before an agreement, witnessed by the village parson ,that wages should be ten shillings a week. There was at this time no formal organization. The employers, like the Durst Brothers of California, had no conception of the sacredness of a promise, and used the time gained by an apparent yielding to plot the workers' injury. By one trick or another, they contrived to reduce the going wage until they had it down to seven shillings.

Then John and George Loveless, brothers, proceeded to organize a local union, "The Friendly Society of Agricultural Workers." They were visited by delegates of the Grand National Consolidated and were planning to get their local to affiliate with it. As part of their regular process of initiation, and following the custom of the time, they administered an oath to the new members, swearing them to

# The Confessions of a Cockroach

By JOHN H. DEQUER

**This confession made and signed by A. Cockroach while under the influence of Tia Juana Spirit, November 9, 1925. Mr. Cockroach deposes as follows:**

I AM an honest man. I have to be lest the Great Roaches up above me on the financial ladder cut off my credit. I must pay my bills or do without goods which I need to scheme and juggle my way through the world. I must be on the square with those who trust me or I will lose the respect of my fellow cock and hen roaches. I simply must manage to keep up my dignity as a merchant.

Not only I, but cockroaches as a class are honest men. I have to make this strong so that you dear reader will not lose sight of it as I proceed with this confession, for I feel in my bones that those of you who make your way in the sweat of your brow may not entirely agree with the definition of honesty as commonly accepted in Rotary and Kiwanis circles. With us honesty means the successful acquisition of enough money with which to pay one's bills when due. It is a limited sort of honesty operating in periods of thirty,sixty and ninety days. How we get the money is never asked. All that is needed is that we get it and a little more. This makes us Successes and gives us entree to the commercial club, and trusteeships in the little church around the corner. It makes us pillars of Society.

On the other hand, if we should fail to get the money within the time limit, we would fall into the hands of the Receiver and would be adjudged failures and condemned to honest labor for an indefinite period.

Naturally we all want to be successes. None of us like to work under specific orders from a muscular gentleman who generally speaks with a foreign accent or a brogue. We would rather be hard pressed cockroaches than horny handed sons of toil. Cockroaches do not make their living by running trains, digging ditches, picking fruit, harvesting grain and other vulgar and unelete forms of activity.

The truth is we have lived so long by sheer mendacity that we have come to believe our own lies when we tell them. Our stereotyped phrase, "Labor is honorable," is an example of this kind. None of us are in the market for that kind of honor. When we mouth this phrase we are in vulgar parlance, "throwing the bull."

This brings me to the matter of **Phrases.** Phrases are very useful commodities when dealing with the public. In point of fact they are really powerful. Don't you remember such terms, "he kept us out of war," and "make the world safe for democracy," and "a full dinner pail:" I tell you if it were not for the power of phrases we, the Cockroach Clan, could not exist. As it is we are a pack of vampires who fan our victims asleep with pretty words, while we and the Great Roaches above us eat them out of house and home.

Speaking of the Great Roaches above us, those mighty ones whom we envy and fear with a psychophancy that beggars description! They, too, have degenerated. They, too, like us, have lost what little of real honesty they once had. They, too, have become a pack of hypocrites. Some years ago there yet were men who dared to say right out in meeting, "Charge all the traffic will bear." That was honest. That is what we all are after. None of us are in business for our health. We are after the dough. And there were those who said plainly and fearlessly, "the public be damned." That, too, is honest. It is the way any one who has to do with the public in an overcrowded and overdone business feels.

But we cockroaches today dare not talk that way. It is not policy. Policy is one of our Gods. You know the dear people taken in mass are rather primitive. Such honest and above-board statements as those we have quoted might excite their gregarious instinct and lead to mob formation, a form of activity that is always very dangerous and extremely unrefined.

That is why the Great Roaches which we cockroaches always mimmic have gone into the business of phrase making and done away with all forms of dangerous truth telling. This is much better for us, as it keeps the producing classes quiet while we wrangle over the spoils. Probably you may have heard some of these phrases. They are quite the thing just now. You may see them in the papers, and heard them from the pulpit. "The public be served," "Safety first" (except in war time, of course), "We have interests in common," and "Patronize your neighborhood grocer." All these phrases are good as the great producing mass take them at their face value while we get by upon their backs in safety and in comfort.

Now if we were honest in the sense that Webster defines that word, we would discard all these phrases and say right out, that we are in business because we want to keep our hands off the mallet and the hoe, and keep the boss from looking directly down our collar. That, and that alone, is our excuse for membership in the Cockroach Clan.

Truly we are a stupid pack. We lack social vision. We dare not think of helping to recast the world in a better mold. We are all laboring under the delusion that the great beast **Labor** can harbor an unlimited crop of cooties. We are all trying to hold

(Continued on Page 28)

# God of Gods

(Translated and adapted from the Scandinavian)
By E. E. A.

YOU! manchild, bow you down and worship!

Cast yourself in the dust before the gods—before the big gods—before the little gods; but first and foremost before the god of all gods—GOD MAMMON!

Men are born who are proud and have freedom of mind, who challenge the gods, and who have within them the capabilities of becoming gods themselves—and there are men—individuals—who crouch in the dust kissing the footprints of the gods. These last are the many.

They are ever trailing gods; and should one of them lose sight of his god, he has no peace of mind until he finds another.

The new god he then worships in holy, unsophisticated fealty, with a slave soul's submissive give-all, until this god has also lost his halo; after which the unbound slave soul flutters about bewildered.

A Christ found millions of adherents; a Mohammed and a Gautama also; but one god have they all in common—GOD MAMMON.

What is Christ, what is Allah and what are all the holy prophets, but low caste temple servants of the one great god?

Each great and noble thought, each tender feeling and honst intent, that you possess, shall you barter and pawn forever—God Mammon returns nothing, there is no buying back.

There is but one God and his name is MAMMON; he has a son whose name is WAR, and a HOLY GHOST that resides within the belly-crawling slave souls.

# How Long Can It Last?

By E. L. CHICANOT

**THE question is how long can the United States continue its reckless increase of newsprint consumption and Canada continue to meet its voracious demands. The heedless manner in which the Republic is requisitioning this product and the frantic strivings on the Dominion's part to establish new mills and secure the profits have combined to create a situation which should be regarded seriously without delay if a halt is ever to be made. There may be no immediate apprehension of Canadian forests being overtaken by the same denudation which has occurred in the United States and no sane citizen has any quarrel with intelligent utilization, but the present situation is one of criminal and wholly unnecessary wastage and conservational action in both direction lies to a great extent within the hands of the people of the United States.**

Few Americans have any adequate appreciation of the manner in which they are slowly but inevitably denuding the Canadian forests, as they did their own, or give any heed to the primary processes of the newspapers they read. A newspaper is taken for granted; they come and go. With the greater popularity and more general adoption of colored supplements, rotogravure sections, and magazine supplements, and other features which are constantly being added to weekly newspaper editions, these have reached unwieldly and to a large extent unreadable proportions which means sheer lavish waste. For the main part these papers are merely glanced over and thoughtlessly discarded, and all the time more trees are disappearing from Canadian forests to be thrown away in the streets of American cities.

It is astonishing, no less than alarming, to discover the tremendous rate at which the consumption of newsprint in the United States has increased since the beginning of the present century. One can scarcely conclude that Americans are to any degree more assiduous or voluminous readers and it is not a matter of increased population, for whilst the number of people has grown their average consumption of newsprint has likewise increased. Today the greater population of the United States is consuming per capita nearly four times what that lesser population consumed per capita at the beginning of the century. In 1900 there were fifteen pounds of newsprint available for consumption per capita in the United States; in 1923 there were fifty pounds so available.

The reason of it is to be found in any newspaper directory, in the number of newspapers and their size. It may be a question whether Americans are the greatest readers in the world, but they are easily and beyond question the gratest consumers of newsprint, using, in fact, as great a volume as all other countries of the world combined. In 1923 there were in the United States some sixty major newspapers each of which had circulation in excess of 100,000 copies, and which throughout the year averaged 27 pages in their weekly and 101 pages in their Sunday editions, proportions never before attained. What is believed to have been a record was achieved when a New York paper put out a Sunday edition of twelve sections with a total of 192 pages, the total weight of paper for the 565,000 copies being 877 tons.

Where does this newsprint originally come from? Mainly from Canada, though small quantities are purchased in Scandinavia, Germany and Finland. Canada has a comparatively small consumption of forest products, most of her raw materials as well as manufactured products going out of the country. An analysis of these export figures reveals the fact that 92 per cent of the manufactured newsprint goes to the United States and over 77 per cent of the manufactured pulp as well as practically the entire export of pulpwood. Roughly the United States has come to depend on Canada for 95 per cent of its newsprint supply and the Republic consumes 85 per cent of the Canadian fabricated product.

The fact is that whilst United States mills, largely through the use of Canadian raw materials, have

been increasing their output at a frantic rate, it has not been adequate to meet the increasing domestic demand. Thus though United States newsprint production increased from 1,448,000 tons in 1922 to 1,485,000 in 1923, or by 37,000 tons, the increase over the entire country in consumption rose by five pounds per capita. This is the situation which in the embargo placed on the export of raw materials from certain lands has resulted in the establishment of mills in Canada and the development of the pulp and paper industry in the Dominion within the past decade to be its first industrial activity and take second place in productive revenue only to the gigantic wheat fields of the western provinces.

Canadian newsprint manufacture and export have made such phenomenal growth that at the present time it is quite impossible to predict where it is all going to end. In 1923 Canada produced 1,263,000 tons of newsprint, a volume 16 per cent greater than in 1922 and 56 per cent greater than in 1921. The total average daily capacity of Canadian newsprint machines in 1922 was 3,825 tons; in 1923 it was 4,200 tons; in 1924 it is estimated to be in the neighborhood of 4,700 tons, making a production for the year of something like 1,410,000 tons. Four more mills were producing newsprint in Canada for the United States in 1922 than in the previous year. There is apparently no end to it.

In the year 1900 Canada's entire export of paper was valued at $120. In the year 1913 Canada exported to the United States 219,602 tons of newsprint. Last year the Dominion sent across the border to the Republic 1,115,355 tons, an increase of 863 per cent for the decade. In addition the United States in 1923 took 678,077 tons of pulp out of a total Canadian production of 875,370 tons. Production of newsprint in the United States was greater than ever before with the exception of one year; Canada's newsprint production reached a new record. The Dominion's exports of newsprint and pulpwood reached figures never before attained and yet there is not the slightest indication of abatement.

What does this mean to the average citizen who is filling the city's garbage cans with Canadian trees in the shape of newspapers? Suppose American newspaper consumption is translated into terms of trees. For the purpose of rough calculation about fifteen growing trees, twenty feet long and ten feet in diameter, enter into the production of a ton of newsprint. This would mean that in manufactured newsprint from Canada sent to the United States last year the equivalent of nearly seventeen million trees. About twenty-four trees enter into the production of a ton of pulp, which would mean that in this form Canada sent to the United States last year about 21,000,000 trees. About 12,000,000 trees were exported in the form of pulpwood, which makes a grand total of fifty million trees. That one New York newspaper going out to heedless Sunday readers permanently took 1,300 trees from the Canadian forest.

Fifty million Canadian trees blotted out of existence in a single year to satisfy the extravagant newspaper readers of a country which has wasted its own forest heritance! Nothing but mute stumps over thousands of acres of Canadian woods, testimony to the beauty and economy which flourished there a short time before. But it is necessary and reasonable utilization, it may be argued. But is it? Are people securing any greater benefit from newspapers of over one hundred pages than they did from journals of one-quarter the size? And the pinnacle is nowhere in sight yet. Where is it going to end?

It is significant that the United States, which is

BEAUTIFUL YOUNG TREES
Awaiting Transformation Into Mutt and Jeff Cartoons

**CUT OVER LAND IN CANADA**
**A Forest Gone To Waste—Made Into Chicago Tribune Editorials**

now almost entirely dependent upon Canada for its pulp and paper raw material and products, was originally blessed by nature with an extent of timber land approximately equal to that in Canada. Canada's forest land amounts to about 600,000,000 acres, of which 150,000,000 acres may be classed as growing saw timber. Most of the remainder is producing pulpwood, the Dominion's supply of which is estimated at 1,033,370,000 cords, not including large supplies of poplar and jackpine, which have not yet been requisitioned. In Eastern Canada there are 305,000,000 cords of pulpwood, Quebec having 155,000,000 cords, New Brunswick 26,000,000 cords, Ontario 100,000,000 cords and Nova Scotia 25,000,000 cords. In Western Canada there are 340,000,000 cords of spruce, western hemlock and balsam, 255,00,000 cords of this being in British Columbia. The demand for newsprint and pulp across the border has caused more than one hundred mills to spring up in every part of the Dominion, and now there is not a single section of Canadian forests which is not being depleted to some extent to satisfy the voracious consumption of United States newspapers. Starting in Quebec and Ontario the industry spread to the splendid forests of the Maritime provinces and then out to the Pacific coast.

Although the figures of Canadian resources loom up tremendously vast, when they are read in the light of consumption of about 5,000,000 cords a year they play havoc with such terms as illimitable. A depletion at this rate, even though there were no such wastage as that by fire and other means, and omitting the inevitable increase in future years, definitely brings exhaustion within reach. Canada's forests are not one bit more inexhaustible than were those of the United States and American newspaper readers are consuming them at many times the rate they did their own forest resources.

It is a situation very difficult to meet and to remedy. Whilst it is the United States which is responsible for the enormous consumption and the demand which is made upon Canada, it is the Dominion which is materially benefiting. Pulp and paper products constitute more than one-half of Canada's exports to the United States. If provision is to be made for the future peoples of both countries it must be thought of now and a halt made in the extravagant lengths to which newspapers are going in length and number.

# Visions of Class War

By LAURA TANNE

## IN DEDHAM COURTHOUSE

(Where Nicola Sacco was convicted)

I cannot shut my eyes
Without the vision of the convict's wife
Coming to me.

Her wailing that beat against
The stone wall of the courthouse
Until her voice bled.
The terror in her eyes,
Crushing the brown flowers sleeping within . . .
And the passion-strength of her arms
As she tore into the bars of the cage
Which imprisoned her loved Nick . . .

And he with sad comforting hands
Smooths her tangled red hair
After he had cried out
From the despair of his soul,
"I am innocent!"

## TWO WHO RIDE FORWARD

I remember two leaders of men
Who ride on the hopes of the people.
One has a horse
With thrust-out belly and proud eyes,
And his saddle is cushioned softly.

The other one also rides,
But his horse is battle-scarred
And weary . . . an outcast . . .
Yet men speak his name gladly,
And little red sprigs of hope
Sprout from their words.

I give my hand to one.
But the other hides his glance
That he may not be slashed
By stilletos of hate.

# Gene Hapless

By E. W. M.

I'LL never forget Gene. He was a large man; square shouldered; vibrant voice and smiling blue eyes. Outwardly, he seemed to be adamant; but he was innately kind with indomitable courage.

It was on the skid-road—the slave market where lumberjacks seek work—during a "cessation" period, where I first met Gene. We were seeking the elusive job. Elusive to the thousands of aimless who daily throng the street; aimless through no fault of their own, but made so by an economic system of forcing insecurity for the masses.

On a bright September morning, as I was about to suggest a walk into a suburban town, Gene emerged from deep thought and announced that he was going to the hall.

"What hall?" I questioned.

"The I. W. W. hall," thundered Gene. "You better come along." His resonant voice could be heard for blocks.

When we got there the chairs were nearly all filled. The speaker was standing in the rostrum, scanning the audience eagerly as he sang.

Behind the piano a small choir lifted their voices, strenuously, with Fellow Worker Glade, a hook-tender, who sang bass and could read music, giving a general leadership by raising and lowering the little red song book he held with the beats of the music.

When the words, "Solidarity forever," rang out, every person in the audience seemed inspired. It brought to my mind Robert G. Ingersoll's poem, "A Vision of the Future."

Although hungry and careworn by a long siege of involuntary idleness I came from that meeting overjoyed. To me it was a promise; a promise that is to be fulfilled. A world where humanity will have its economic freedom. Here, I pondered. Why is it that all do not strive for a world where freedom rules supreme?

The loggers' and sawmill workers' living standard was at a very low ebb at this time. The long ten and eleven hours a day so exhausted the workers that they were unable to withstand the strain for any length of time.

Finally, they decided to make their demands for shorter hours and a higher wage known to their employers, and, if the companies refused to grant the demands, they would then go on a strike.

They were forced to do the latter when the companies refused to recognize their demands.

Everybody in this community knows Old Nick. He is one of the owners of one of the largest and up-to-date, electrical driven sawmills in this part of the state.

We were on watch in the picket line informing strange workers and those who were scabbing about the strike, and the necessity for an eight hour day.

Along came Old Nick. Gene was one of the first to "spot" him.

"Hello, Nick. Making lots of lumber these days? Gene inquired, rather facetiously.

"You fellows will have a damn long time to wait for that eight hours." Then, stamping one foot and the other, he defiantly assured us, by shouting "Never, in my time."

"Never?" That's a long time, Nick," Gene added, very soberly. "And WE never forget. Say, old man, what kind of meat do you eat?" quizzed Gene. Nick did not reply. He just sauntered away.

The strike lasted a few weeks. Violence was in evidence, on the part of the mill owners, and finally the most militant men were shipped out of town, in a cattle-car. The strikers were defeated. However, it had an effect on the operators. It impressed them so that the working conditions were made better.

* * *

Time passed. Six years later the eight-hour day and good working conditions were gained, by the organized lumber workers of the I. W. W.

It was not until then that I had an opportunity to become intimately acquainted with Gene.

After the eight-hour day was won the employers became very discriminating. They much preferred the 100 per cent Henry Dubb class of workers. The heralded, chimerical pro-Hun traitors, and the seditious were taboo.

This state of affairs forced many of us to change our names, and our occupation, and also to seek a change of climate.

This day I went to a sawmill seeking work. I never expected to see anybody I knew. Almost the first man I met was Gene.

"Hello, little man, looking for work? They kill off men like you here. When the boss comes 'round, I'll speak to him," Gene proffered.

I landed a job on the chain. It was no sinecure, pulling panel boards, ceiling and flooring stock.

The second day on the job Gene came over and showed me how to handle lumber. The task was much easier after that. To those who have never visited one of these speeded-up, highly productive and electrically-driven sawmills, no idea of what this sort of work is like is conceivable. We can not use sufficient space here to portray the technique.

Time passed.

Gene was growing more cynical from day to day. It was now getting difficult for Gene to get a day's work. He was considered a dangerous agitator and suspected of being disloyal to the flag "that follows the swag." He was called a disturber, and the

100 percenters said he caused unrest among the workers.

Gene was a born militant, not to be muzzled, or even bridled. His wife had tried tentative methods, to no avail.

One day he asked me if I thought life was worth living.

"I am not a damn bit better off at home, now, than when I was employed as a longshoreman making fairly good money as compared with the mill slave. It is the same old squalor in the same old way. That damn slob is never at home. She imagines she is some bologny, hobnobbing with the babbits of this town that can't support a hat cleaner. Some day I'll snuff it out. This little old ball of mud will get along fine without me." Gene related rather lugubriously.

"May I ask, what about Johnnie and Sis?" I queried.

"Oh, they'll only grow up 100 per cent scissorbills, like their mother. She has already taught them to hate me." Gene answered acrimoniously.

"Well Gene, you asked me a fair question, and I will give you my answer by asking you a question," I countered.

"It is the historic mission of the working class to do away with capitalism. It is also the historic mission of capitalism to do away with itself. Now, is life worth living?"

"Tomorrow is Sunday. Come over to the house and we will discuss the question," Gene replied.

Sunday came and I went over to Gene's place. On entering I saw that Mrs. Gene, Johnnie and Sis were getting ready to go out. I had met Mrs. Gene before. She is a fatuous, proteinaceous person, all of 250 pounds, with dog-salmon eyes. She is a member of all the lodges and orders attended by the small town upstarts, 100 percenters and other respectables. She believes in a "fair day's work," etc. In short, she is a veritable Mrs. Henry Dubb.

Johnnie and Sis, Gene's appellation for the two children are constantly under their mother's surveillance.

"I don't want Johnnie to grow up and be like his father," Mrs. Gene remarked, on one occasion.

"Hello, there. I s'pose you brought some of that Bolsheviki literature with you?" She broached me sarcastically as I entered the house.

"No, not exactly," I replied. "But, as usual, I have some literature on Industrial Unionism."

As she left the house, Gene remarked: "See. That's an everyday occurrence. That's the last I'll see of them until midnight. Some life. But some day she'll have something else to do."

* * *

Gene and I discussed the question, "Is life worth living?" pro and con, until it was wearing late into the night, so we parted with a hearty handshake and a good-night.

All of my talk, of a persuasive nature, I could see had failed to impress Gene.

* * *

Several weeks later I met Gene, at his gate. He was ringing wet with sweat. He had been "working a boat," he said. A cold sleet was falling.

"See that?" he said, pointing to the house. "Here I am, cold and hungry, coming home to a cold house and nobody at home. This kind of thing is going to end, right now. The world will get along all o. k. without me."

"Well Gene, I am in a hurry," I announced, as I sped away to fill an appointment.

* * *

One morning, several months later, making a cursory perusal of the morning Blat, I came across this caption: "LONGSHOREMAN A SUICIDE."

My heart almost stopped beating. I thought of what Gene had often told me. On my way to work I stopped at the morgue. One glance at the quiet face, and I recognized Gene, still in death, his azure eyes closed forever.

On a stand, near the blood-stained rocking-chair, at his home, he had left a note. The wording was:

"Educate, and organize the women; then, the way to economic freedom will be easy.

"There is something bothering my head, and, being only a workingman, I am unable to consult a specialist. I can't keep up the fight longer.—Goodbye, all. "Gene."

"The end of Life cancels all Bands."

—Shakespeare.

## SIX 110 CATS OF 1834

(Continued from Page 12)

loyalty, and fair dealings among themselves, and resistance to wage cuts. The magistrates heard of the affair (no real secrecy was attempted) and posted notices forbidding the workers to organize, and issued warrants against any who unlawfully administered oaths. They did organize, and three days after the notices went up, the arrests were made—the two Loveless brothers, Grime, and three others. The trial was a frame-up; the country was in an uproar, all avenues of publicity were controlled by the ruling class, Parliament interfered, but only to encourage the judge to greater speed and rigor, and thus supported, the judge "threw the book at them," gave them the limit, and the Melbourne cabinet was enabled to announce to the joy of an applauding public opinion of capitalists and country squires that the six desperate unionists were on their way to Botany Bay in the good ship "Success."

Nowadays the "Success" is a museum, the last known relative of these early 110 delegates has died, and the Grand National Consolidated itself has given way to organization less spectacular and pretentious though more effective. But it is fitting and proper that workers who ride the freights of the Middle West in America, and line up threshing crews in the great wheat belt of the United States, and spend some time in jails like the one in Fargo, should remember that they are following in the trail of the "Six Men of Dorset," and that some honor attaches to these early unionists.

**Drunkenness and Prostitution Are the Two Evil Ways in Which the Slaves of the Machine Attempt to Avoid Enforced Monotony and Enforced Celibacy.**

# From the Lower Depths

## 1. Magdalen's Defense

By COVINGTON AMI

"Wot'd I say, Judge,
To this Mrs. or Miss?
Well, I says, says I,
'Mrs. or Miss, wotever you is
I'll just let you know
You ain't the whole show!
You're flashy but lazy!
You're loony an' loco an' crazy!
In spite o' your clothes,
An' your shiny silk hose,
It's evidenced that
Youse a wampus cat!
You ain't no lady!
Your ways is too shady!
You society beats
Keep off our streets!'
'At's wot I says,
Judge, 'at's wot I says.—
I'm a lady, your honor,—
My name?—It's O'Connor,—
Miss Magdalen Mary O'Connor.
Yea, 'at's wot I says.

HE WINED HER AND DINED HER

"Then she says, Judge, she says,
'O you shet up!
Or your eyes I will pet up!'—
'At's wot she says!
An' I says,
'You old painted slut,
You ain't got the gut!'
With which she comes screeching,
For my golden locks reaching;
But I socked her a wallop
'At turned the old doll up!
I kicked her an' clawed her,
I punched her an' chawed her;
I treated her tuf
Till she hollered, 'Enuf!'
'At's wot I done her,—
I made her some runner!—
'At's wot I says.

"The Judge?—
O, he soaked me,
He fined me an' broked me;
'At's wot he done,
The son of a gun.

"The 'Lady'?—
'Innercent,' says the Judge, 'I find her.'—
An' then he took her an' dined her,
An' cooed her an' wined her, —
An' me in the Hole!—
Damn his old soul!

"Sweetie, honey
You got any money?
Thankee, Frankie."

## 2. The Mill Hand Speaks To the Mission Shark

By HENRY GEORGE WEISS

I'm drunk, plain drunk—you bet your life I am!
And what is more, me friend, don't give a damn!

(Continued on Next Page)

NOBODY EVER SAW THIS

And I'll be drunker still afore I'm through—
And what the hell, I ask, is it to you?

I drew me pay jes' 'bout an hour ago,
Two fives, a ten, a two-spot, one, and so

For thirty-six hours from slavery
I've won the right by sixty to be free.

Ten hours the day and six long days the week
I've labored like a slave, both hard and meek;

Sweated and blistered by the furnace door,
Inhaled the steamin' fumes of boilin' ore;

Reeled tired from the modern steel mills' hell,
To eat and smoke and rest me for a spell;—

To eat the plain unwholesome company fare,
To smoke the twist they sell at prices dear,

With weary limbs to sink upon a bed
Still dented with the lousy night man's head;

To wake at morning with an aching brow
And face the same distasteful mess of chow

Left over from the meal the night before—
And then dig in and work ten hours more.

You bet I'm drunk! and so would you be too
If you had toiled the hours I've toiled through.

Don't preach to me of heaven and of hell,
Of poison whiskey and the devil's spell,
Of manhood dyin' in the dives of sin,
Of missions with a lovin' God within,
Of souls you want to save for heaven bright,—
For I can't bide your cant and shams tonight.

It isn't tracts I need or platitudes,
But better housin', hours, better foods,
And better pay, so that I can afford
To wed and have a home and find the Lord
At my own fireside where children play
And happy hearts are singin' all the day.

Say! if you want the folks like me
Why don't you fight the greed and tyranny

That makes us what we are? That grinds, enslaves,
And sends us tainted to our pauper graves?

Why don't you fight the seed and not the fruit?
The system that turns out the workin' brute?

Why don't you try and stem the graft and lust
Which trails poor men and women in the dust?

(Continued on Next Page)

**BUT ALL OF US CAN SEE THIS ANY DAY**

Which turns the halls of wealth to dens of vice?
Which high and low sells women for a price?

Why don't—Ah hell! you know as well as I
The things on every side of us that lie!

You know the woes and miseries that we stand,
The graspin' hands which seize and mar the land,

The golden altars raised to Mammon grim,
And of "Thy kingdom come ON EARTH" of him,

Who preached against the things you tolerate
And praise to all as bulwarks of the state.

Don't talk to me of temperance and all
When you yourself are shirking the real call!

First go and win us Christianity—(see note)
And then you lack not followers like me!

NOTE: It must be understood that in the above lines an average disgruntled mill slave is voicing his sentiments and that the allusion to winning Christianity must in no sense be taken as an expression of the writer's views.—H. G. W.

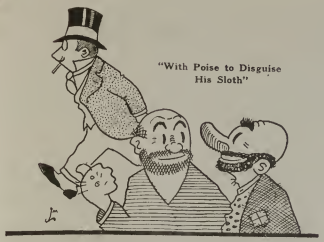
# The Rise of Bill Jones

By ROBERT GRAYSON

BILL JONES was a "no good guy." All cities have lots of the type; every town has several; no village thrives without at least one specimen. But as there are various kinds of undesirables who circulate like bad money among the impeccable or real-thing population, it is incumbent upon us to classify this particular Bill. He was a married man with a mangy brood. Bill was mangy himself, and the marriage estate fell lightly on his shoulders. His chief business was to loiter, to slouch through life at a minimum of effort either mental or physcial, and at his chief business he became markedly successful with the passage of time. Lucy Jones kept the threshold clear of wolf tracks by endless wrestling with the soiled linen of more fortunate humans. Lucy took in washings for a living. It was a slim one, at that, but Bill seemed satisfied, and the children wallowed out a ragged existence.

Young Bill reached twelve. He seemed older than that when you looked at his face, pinched and worried and with eyes that were clouded. His body was undersized. Bill Sr. had been observing the peculiarity of maturity in his boy's countenance for some time with speculation waking his dull brain. At last he thought that the time had come for Bill Jr. to go to work. Of course the boy had sold papers after school, and had done odd jobs during "vacations" for fully five years, but now the loving father believed it best that he should devote all of his time to gainful occupation.

Lucy fought against it, but she was already fatigued from her battle of the tubs, and she subsided just as limp as a sheer shirtwaist in the sudsy water. Young Bill was coached to lie about his age so that the authorities would present the needed working papers. He went to them, lied as directed, and marched home armed with the necessary credentia. Bill Jones smiled, settled himself in an armchair by the fire, and smoked. Lucy let a few tears drop into the suds, and their little world went on.



But when Bill tried to put Joseph, aged eleven, to work, the neighbors complained to the officials. The result was that Bill was hailed before them and quizzed. Presently he was required to account for his own habitual indolence. Now, Bill was not any kind of genius, but fear of the workhouse lent fluency to his peech. He asked for a chance to redeem his past. So well did he appeal that it was granted. Thenceforth Bill Jones proceeded to follow the paths of respectability. More than this even: he chose the select course of all honored members of society.

Withal he did not intend to change habits that were as much a part of him as the marrow of his bones. Bill decided to become a boss. He raised enough capital to buy a dozen wash tubs and their corrugated affinities. Placing these ancient instruments for cleanliness at the cost of feminine torture in a shop along with soaps, washing powders and the stove whereon water was to be heated, he was ready to hire help.

"Fatigued From Her Battle With The Tubs"

An advertisement brought, in a day or two, the working force. Other advertisements brought in the wash, and the suds began to fly. Lucy was allowed to quit her tub at home. Profits came in from the laundry and Bill Jr. returned to school. In a month the Jones family moved into a better

"With Poise to Disguise His Sloth"

house. Later new furniture was purchased. The Jones brood got rid of the mange, young Bill lost his worried air and grew stouter.

All this caused the town to sit up and take notice. "What a wonderful change" had come over that man. Bill Jones of old, slouching, unkempt, now became Mr. William Jones, erect, well-dressed, with poise to disguise his sloth.

In a year he joined the local Chamber of Commerce, and became a Rotarian. Another year rolled around on the golden pivot and he was attending their convention. On the whole he was prospering splendidly, and the world was satisfied with the manner in which he had honored the pledge made to the authorities in the days of his shiftlessness. Indeed, not that the world about him often made the direct comparison any longer. William Jones was accepted as a success,, and in our parvenu civilization the past is soon forgotten.

So Lucy Jones drew a veil of forgetfulness over the time of the tubs. She considered herself designed for another social set and took her place therein as the wife of a prominent business man. By the time she was considered as "belonging", Bill had learned how to wear evening clothes and to make after-dinner speeches.

The shop had been modernized and speeded up. Instead of a dozen workers he now employed a hundred. He had redeemed himself with a will. His fellow citizens were very proud of him. They looked eagerly for his greeting, and listened to his wise counsel. Seldom speaking, for the very good reason that he knew so little, he was regarded as very sagacious, and when he did speak his natural sluggishness made the words come forth with a ponderous, measured effect that passed universally for wisdom.

Now this yarn is getting to look like the happy ending of one of our screen stories. The resemblance is not consonant with our purpose and we must now set about drawing a moral that is sure to spoil a promising scenario that might well have been entitled, "The Reward of Ambition," or "The Rise of Bill Jones," either of which, with the proper movie wind-up, would send the crowd home all "pepped up" with ambition and resolutions to "get ahead."

Bill Jones as a loafer was not good to look upon. His conduct was reprehensible. He lived on the labor of one washerwoman, his wife. Then he added another breadwinner in the person of his boy. And when he tried to initiate a still younger son in the mysteries of wage slavery through the factory maw, it was with righteous indignation that the neighbors reported his conduct and had him summoned before the town fathers.

Bill Jones risen to Mr. William Jones, with twelve tubs going to capacity, enslaved twelve women and thereby extracted profits, surplus value, from their sweat. He abolished the home tub, rehabilitated his Lucy, brought the boy back to school. In the process he undoubtedly caused many other boys to quit school and go to work before the age specified by law.

If our estimate of the man is to be based on an arithmetical computation Jones still doing no useful work and living on the labor not only of two others but of many, becomes a number of times more guilty after his feet have taken the path of the solid citizen. But this view, seemingly patent, is still too obscure for the ordinary citizenry to compass. Instead of considering that the lesser culprit had become a greater parasite, he was honored and emulated. He became a community model, a person to boast about knowing and about having as a resident of the place. And in direct ratio to his success in business, which meant keeping wages down and profits up, the washerwomen suffered. But they suffered in the dim background, on a back street, while Lucy was in full view, emancipated, up on Main Street.

Jones escaped the taskmaster. We all want to escape. There is, however, a certain amount of work that must be performed. There can be no social justice that is not based on an equality of effort and a corresponding equality in the apportioning of the social products.

Whatever tends to bring such a state of industry into the world works for human welfare. It is the only real success worth talking about, organizing to attain, and fighting for. Whether in rubbing, scrubbing, playing or consuming, society must be revolutionized to include ALL.

# The "Rain" of Colton and Randolph
## At the Harrison Theatre, Chicago

**SECOND ARTICLE IN THE "WORKERS' PLAY" SERIES**

By ROSA A. KNUUTI

THE unexpected sometimes happens, even in the realm of the theatre. Here I've been nursing a chronic peeve about the maudlin piffle that is passed out to one ordinarily in the name of good drama. My grief has received a temporary setback, however—at least the wail has been taken out of the lamentation that there is nothing worth seeing at the theatres.

What with O'Neil's "Desire Under the Elms" prospering at the Schubert Princess, and Colton & Randolph's "Rain" pouring and pattering for large audiences at the Harris Theatre—it really seems as though the public is getting a chance at intelligent drama. The fact that plays of this caliber are prospering evinces that the average public after all is not incorrigibly stupid but is improving and can become reconciled to plays usually catalogued as "radical," and therefore unpopular.

Sommerset Moughns' story "Miss Thompson," cleverly dramatized by Messrs. Colton and Randolph, belongs in this category. However, it cannot be said that "Rain" is not unpopular in the literary sense, for it has had a three-year successive run in New York City. But it is not for the Victorian, the sunday school mind; that is sure.

"Rain" is a good specimen of modern drama. The trend of the times with ever changing standards of the recognized human morals, demands art in keeping with the times. This is true about "Rain". Several years ago it would have been almost treason to display such a work of art before the public.

### "Rain" Not Highbrow

The play is not a highbrow theme dealing with abstractions or far-fetched ideas, for its story is most ordinary and commonplace, and incidentally believable to the multitudes.

It belongs to no particular country or race; to no particular climate, although its action takes place in a South Sea Island port where tropical rains menace the well being of its inhabitants and in the case of the story, the whites mostly. Circumstances granted, it could have taken place almost anywhere: in a western prairie town, or again in a New England fishing village for all of that—since we have underpaid women slaves and religious fanatics and reformers in all corners of the earth.

Which is what "Rain" is concerned with.

### Story of Play

Sadie Thompson, a gone-to-the-dogs waitress from Kansas and San Francisco, a fugitive from California justice by the way—drifts into the Port of Pago Pago. She is on her way to Sydney, Australia, and a possible chance to go straight, but the boat is quarantined at Pago Pago and throws her under the same roof with a Reverend Davidson, a missionary at the islands, and his wife.

The story tells of the hidden desires of this missionary who makes his religious ravings the only outlet for his suppressed emotions. (Please page Freud.) Sadie with her scarlet soul is a fitting object for his soul-saving aspirations. Indeed, he is consumed with a passion for soul salvation—particularly Sadie's. He goes after the girl with all the vengeance his holiness can muster, and he would have almost succeeded in rescuing her from old Nick if it hadn't been that the odds were against him from the start.

He hadn't figured that mother nature has a way of retribution for the violation of her laws, not any more than he had figured that putting "civilized" clothes on the bodies of the natives of Pago Pago would not put the fear of a Christian god into their pagan hearts. He cajoled and coerced them into "white" ways—godly ways—his ways. Gone were the wind gods, the tree gods, nature gods of the natives out of the path of the relentless and holy Reverend Davidson.

Yes, he was spiritual, this missionary, and so was his sex-starved wife, so much so, that they were spiritually wed, neither thereby having a decent incentive for a normal or natural life. Small wonder they put the lid on the native dances and festivals. Small wonder they in turn gained the hatred of everyone around them. Even jolly old Joe Horn, the white innkeeper with a native wife and an epicurian outlook on life hated these uplifters. Had not he lived on the island with the blacks for a decade without trying to "civilize" them through the mission-work route? Instead he read Nietzsche to them, think of it—! Yes, he understood the conjugal feasts and dances of these savages so well that I had a sneaking suspicion he devoured a volume of Morgan's Ancient Society. Indeed, he might have repeated Marx's "Das Kapital" from memory, so rational and learned were his utterances.

But the missionary, I'll go back to him since the play concerns him most. Truly he was typical. Looked and acted like any member of the reverend tribe I had encountered in my day. Thanks to whoever was responsible for drawing the character.

Eyes popping out in the most demented manner and shaking his touseled mane as he blubbered incoherent platitudes on sin, punctuating each of his holy utterances with a peculiar lick of the tongue—he made a terrible picture. Even the monotonous cadance of his voice rising and falling with his gestures gave me the creeps. Uncanny, but typical. A veritable madman, fit only for a madhouse—such is the minister of "Rain."

He uses all the tricks of the trade to mesmerize the little prostitute. He spellbinds her into a perfect symphony of frenzy. He not only frightens her into confession and apparent repentance, but makes her like the idea of going back to California and the can. He also acts as stoolpigeon, tattles on Sadie to the governor of the islands, and arranges for her deportation to the States.

In the meantime, however, the holy spirit of the missionary has gone awry; it turns to very material flesh and blood, this spirit, and lusts for the body of the salvaged Sadie. This makes her come to. She realizes that her salvation is the bunk, which in turn drives the old hypocrite to wander out into the night and a tropical swamp and cut his throat. (Let them all do likewise). Which leaves Sadie again free to go to Sydney and "straight" or wherever she chooses.

Not a pretty tale this "Rain." Rather strong and raw. But, luckily, it was not written to delight the audience but to interpret truthfully a very possible and commonplace happening in life.

Which is what we want. Don't we?

# Candidly Criticizing Candida

By ROBERT GRAYSON

Eminence in letters, like proverbial charity, serves to cover a multitude of sins. When distinction has been won even the weirdest errors in literary workmanship and the most crooked psychological constructions pass the critical perception unscathed. The successful writer nears an untouchable estate. Under protection of this tabu some queer liberties are indulged. It is said that once the literary artist is accepted and his place is secure he can dig up much rubbish and find a clamoring market eager for the inferior wares. Struggling in his novitiate a writer enjoys none of these advantages. He is obliged to start from the scratch, as it were, and to compete under closest scrutiny. Let him hold up the unreal, the improbable, as life's mirror in an age so exacting that it tends to reduce all possible to a quantitative basis for analysis, and straightway censure falls on his head. All of which is good for his training, preventing carelessness. But why not keep critical eyes centered also on those who have achieved greatness? For them even more meticulous assaying should be reserved. They set the literary standards and make the classics of tomorrow.

Which prefacing brings me around to G. Bernard Shaw. Unquestionably this canny Irish writer has enriched contemporary literature. He has by dramatic genius won his spurs. Whenever he writes the world of readers pays attention, for we have come to expect something worth while whenever he breaks silence. This habit has grown on us, and we have not considered his gradual approach to dotage. The latest of his plays, "Back to Methuselah" and "'Saint Joan" bear this out. They are full of mystical poppycock, and the less we say about them now the better. Incidentally, the latter was reviewed in this magazine last March. It is not these works which stir my ire, for senility may be forgiven much. An earlier production, "Candida," enjoys a perennial success. Seeing it played some years ago I found nothing in it. The universal chorus of encomiums the drama aroused caused me to read the text several times and to attend another of its performances. What seemed nourishing, palpable, to the audiences left me unsatisfied. Then I made a decision: "Candida" failed to nourish me because it had no meat. It is sweet, no doubt, but a sugar-teat has the same quality and will not appease an adult appetite.

This declaration is to the Shavian what "To hell with the pope" is to the Catholic, and having committed the heresy I must advance my case against "Candida," a production by Shaw neither in his maturation nor dotage.

The modern demand of the novel or drama makes probability a first esential. Situations must develop with an inevitability as peculiar to realism as it was negligible in romanticism. It has been truly said that a chain is no stronger than its weakest link. Let one link in the chain of events composing the drama be weakened by the unreal, the improbable, and the requisite inevitability is gone. The chain is sundered.

Wit, humor and poetry, however sparkling, penetrating or fairly imaged can not rescue a drama from failure—at least as a work of art a true representation of a page or pages from life as it is—with this inevitability lacking. "Candida" reveals this deficiency. It is a discord of no minor degree, but occurs in the major theme. Indeed its presence carries the play along for several acts to a finale almost lurid. We do not dissent when the eighteen-year-old poet learns to love Candida who is thirty. Freudian sophistication and the Oedipus complex carry that part to credulity. For her part, Candida was simply warming her heart in the sunlight of the young poet's passion. She was playing. Thus far perfectly natural.

But the husband. He is a clergyman, forty years

old, practical and pugnacious. A forward-looking man who reads Karl Marx and should have better sense than he displays in this affair. He is a solid person, more likely to protect a wife and provide for her wants than to be demonstrative in affection. So the poet's praise and adoration were a lark and sweetmeats for Candida. Early in the play the poet confesses to the parson that he loves his wife. The boy is effeminate, impractical, penniless and homeless. He has quit his home because of family friction and is the minister's guest. Yet this aggressive minister, manly, rugged, worldly-wise, with a "living," takes the boy with utmost seriousness.

When he trembles through the rest of the play lest Candida lose her heart to the boy, the play totters. Credulity is being pushed too far. But when finally he very dramatically orders her to make a choice between them, the "rival" being present, the drama falls down flat. In life the poet would have been assisted, more or less decorously, to the sidewalk as soon as he blurted out his feelings to the husky husband. Thereafter life within would have gone on as though there had never been this interlude of a poet's pretty phrases humming in a wife's ears.

The play was recently revived in New York and still more recently in Chicago. As usual the critics discussed the art of the actors and not that of the playwright. Even so astute a dramatic critic as George Jean Nathan in his review had nothing to say of this absurd business I have been analyzing. In justice to Shaw, however, it must be said that Candida is quite sensible in her choice. She dismisses the adolescent worshipper and turns to the keeper of the altars, for he is a Good Provider and Candida, being a healthy goddess and a woman, must have material gifts. She eats and wears clothing, she must have proper shelter and entertainment. All these cost money. Life is safe with her so long as she has the minister. Hence the poet, so rich in words and so poor in pocket, never really had a chance, and the parson should have known it. Still where would the play be had he acted with common sense?

The defects I have indicated must be apparent to many others and often their failure to name them can be traced to timidity. They are not quite sure. Shaw is admittedly great. Something must be wrong with them and not with the dramatist. Then, too, he has a way of saying things that is excellent. Still, I contend that "'Candida" is psychologically false, and lacking the inevitability which distinguishes the best in modern drama from the fanciful of other eras, no amount of interpretative talent can compensate for this want.

# Confessions of a Cockroach

(Continued From Page 13)

on to him some way. We do not want to become absorbed in him. He is so unrefined.

We are a mendacious pack. We talk glibly about the awfulness of waste. Yet on the street where I live there are eleven drug stores in seven blocks. They are open early and late. They are tenanted by about ten times as many of my fellow cock and hen roaches as are really needed to hand out a few pills and powdrs to the people. Do you think for a moment that we would sell patent medicines and kindred junk to the dear people if we had any idea that we were trying to live a life of honesty and truth? Certainly not. We say many things, not because they are true but only because they are expedient.

But the druggist domain of the Cockroach Clan must not be considered as being worse than the grocery, shoe or clothing domains. In every branch of distributive activity there are at least ten of us cockroaches trying to do the work of one. Stores, stores, stores, all manned and womaned by us who love the working class, as gulls love fish and wolves love sheep. We hang on to the back of labor like poisonous vines on a tree for no other purpose than to escape the stigma of honest work.

For all that we are an unhappy brood. The future has no great prospect for us. We feel that our children will not be able to follow in our footsteps, because the big roaches higher up continually kick our feet from under us. We therefore try to chase our boys into the professions. This degenerates these more intellectual aspects of human activity into mere adjuncts of the marts of trade. Our influence has changed the healing profession into an operation trust, and the legal profession into an Ananias Club. Our influence upon art and religion is that of a miasmic plague. We actually try to give our stupidity a scientific aspect. We establish schools of salesmanship where we teach the black art of persuading people to buy what they do not want, never use and cannot afford.

Production is strictly against our religion as cockroaches. Our creed may be summed up in these words:

**We love our country,**
**Respect its flag,**
**Talk about service**
**And grab the swag.**

In short, a cockroach is a microbe which thrives in the sores on the social body. This ought to be prefaced with an apology to the microbe. The microbe is no blood relative to its host. In a word, as a cockroach I am below the microbe in character, in that I have the effrontery to call my victims "brothers." But when these boasted brothers seek to better their conditions by striking for a little more of their product, then of course I at once come out in my true character, and fight on the side of those whom I envy, but must obey.

# Liberals Criticizing Capitalism

(Book Review)

"Hear No Evil, Speak No Evil, See No Evil"

The J. B. Lippincott Company publishes a trilogy in their series in sociology. Dr. Edward Cary Hayes, the editor of the series, explains how it works; he tells us "the plan of action." First there is the book by Professor Seba Eldridge on "Political Action," which proves that merely voting good laws and electing good men to office cannot cure many of the admittedly bad spots in present society. Then comes Professor Pitrim Sorokin, one of Kerensky's followers, a Menshevik, professional hanger on of the petty bourgeois, as the author of "The Sociology of Revolution," in which he tells how all revolutionists must be crazy, because of the way they act. It is incidentally let out that the said Sorokin was thrown out on his ear, so to speak, when the Kerensky government collapsed. Hayes says this book of Sorokin's will "make those who are ready to turn toward revolution as the only hope of fundamental progress revolt with horror from the thought and regard stagnation mitigated by revolution as a formula no more acceptable than the ancient "tyranny mitigated by assassination."

**Pluralism Views The Nations**

The third person in this Trinity is Professor Herbert Adolphus Miller with a book called "Races, Nations and Classes," and he, of course, in the opinion of Lippincott's editor, "comes forward with the thesis that force is as impotent to establish order among heterogeneous groups as it is to secure progress, and that order as well as progress must be based upon agreements, upon states of mind, upon established opinions ,sentiments aims, that operate, if not in unison, at least in harmony. . . . And progress need not resort to the destructive expedient of revolution. Social changes resemble the transformation of the winter landscape in spring, not the action of blasting dynamite. . . ."

We don't want to call any editor of Lippincott's a liar, so we will just assume that Hayes hasn't read the book that Miller wrote. For "Races, Nations and Classes" certainly doesn't defend any such thesis. It hardly touches at all on social changes, the shift from one form of society to another. There are a few scattered references to the class war, which is entangled with the suppression of the Jews and the Negroes, and a bare passing mention or two of trade unions, the I. W. W., and the Bolsheviki (none of which he can possibly know much about, as we shall prove). There is one short chapter on "The Class Conflict," which states that the suppression of labor consists largely in its having to do uninteresting work, and that the proper thing to have instead is "Industrial Democracy." That is fine, as far as it goes, only Miller neither defines "Industrial Democracy," nor tells how it is to be achieved. He does not even tell us about "the transformation of the winter landscape in the spring." He merely leaves it an empty phrase.

It is just as well that Miller does leave the labor problem pretty much alone, for his opinion of the class war is that it all springs from no deeper a source, no more fundamental an interest, than the injured egotism of a group which feels itself despised and suppressed, bossed and ordered around, and made to run machinery. He seems to have no conception of a real and material injury, nor of the fact that the workers produce the wealth and do not get it. When he discusses particular phases and groupings of the labor movement, he quickly betrays the shallowness of his research in that field, and likewise the fact that he does not know it is shallow. Thus, in the same sentence in which he makes a sweeping and dogmatic assertion about the Bolsheviki (page 164) he states, "Their name is derived from the fact that they aimed directly at the maximum demands of their program, rather than at the gradual attainment of such goals as seemed practicable. . . ." Leaving the matter of the Bolshevik theory entirely aside, it is evident from Miller's own words that he has certainly not even a slight acquaintance with the history of the party, or he would know that the name "Bolshevik" refers to an incident at a party congress a few years ago, and has no reference to the "fact" he states. But this does not keep him from sweeping judgments about the Bolsheviks, as we said before, and it certainly does not keep us from becoming instantly suspicious of Mr. Miller's method in general.

In the case of the I. W. W., Miller repeats, uncritically, and obviously without real investigation, Carlton Parker's statement that the I. W. W. is psychopathic. He considers that something to our credit, because if we are not a little crazy, then in

his opinion we must be very wicked. To quote Miller, ". . . before Carlton Parker, the I. W. W. were considered perverse instead of phychopathic" (page 34). And again: "Carlton Parker showed that the extrme radical who belonged to the I. W. W. was the product of psychologically abnormal conditions. They were, he said, homeless, loveless, and voteless . . . and found a substitute in the social radicalism of the I. W. W."

Perhaps we should not be too harsh on Carlton Parker; he began to investigate the I. W. W. at a time when psychology was not nearly so far advanced as at present, and he made a sort of primitive psycho analysis of several wanderers belonging to our unions, at least a few of whom were government stool pigeons of the Townsend variety, and he judged the I. W. W. as a whole, from them. But it is very unscientific for Miller to go on repeating this decision of Parker's as though it were one of the laws of nature.

Well, if Miller's book is not after all a solution of the problem of classes, what is it? It is a collection of observations, neither new nor very startling, but conveniently compiled, in a single handy volume, on the problem of national patriotisms, imperialism, and the results of national suppressions.

Miller points out very well the schemes used by imperialist powers to divide and split up subject nations, and to eliminate their culture and language, and religion, if they have any. He does not excuse the American imperialists either, and shows how Americanization is applied in the United States, in exactly the same spirit that Russification was applied in Finland and the Ukraine by the Russian monarch, or in the same way that the Japanese have tried to Japanify Korea. And in just the same way, in each case the young nationalism, whether of American immigrants or of subject countries, rallies around something; the Catholic Church was the point of resistance of the Irish; infidelity and skepticism and the Sokol were the point of resistance of the Czechs (with whom the author seems to have an especial sympathy); language was the chief point on which the Hungarians based their resistance of Austria, and the first thing they tried to suppress among some of their own subject nations.

It is this wealth of illustration, and succinct description of similar practices all over the world, among imperialists and the similar attempts of the subject people to rally around some particular outstanding fortress of prejudice in every empire, that gives the book its value.

As soon as Miller leaves the familiar ground of objective description, and begins to theorize, the trouble starts again, and he is betrayed by his professional class optimism into such pious misapprehensions as this: "The example of England's finally yielding something to Ireland is a precedent for herself in other relations which will affect India and China" (page 183). England's brutal slaughter of the Chinese strikers in Shanghai ought to be sufficient answer. England (the British capitalist government) yields to force, and to nothing else. The Irish revolution and the Irish agitation in the United States were getting to be too destructive and expensive for England—and that was how the Irish question was settled.

Hardly more need be said about Miller's hope (same page) that "In fact, the recent Washington conference witnessed the acceptance in principle of a new world attitude towards China. It is being demonstrated that the domination of empire can be yielded." Well, it is being demonstrated in China, as well as in Syria and Morocco, that if you bump off your masters, you can go free—but that was known before the Washington conference, which last was only an unsuccessful attempt among the imperialists to divide the swag with less fuss and fury.

Nationalism, according to the author, is the strongest of all loyalties among men, and religion, and language, and distinctive culture are very much subsidiary, and are seldom allowed to interfere with it. The main thesis of the book seems to be an attempt to propound a solution for the problem of nationalist hatreds, and the solution proposed is much vaguer than the analysis of the problem, and resembles the "solution" in the case of class war.

It consists, so far as I can see, in advocating a policy of "live and let live." One culture is not proved worse than another, by either intelligence tests (which are useless until much improved), or any other kind of test, and most of them at least, are needed in the world to give richness and variety to human experience. So one nation **ought not** to oppress another. And that is all.

It is something like saying there ought to be industrial democracy. It is a statement that will not challenge much opposition, but the question arises—how? Just as the meanst of trusts, when it thinks it can get away with it, promulgates company unions and announces that the dawn of industrial democracy is at hand, so your Hundred Percent American will agree heartily with this part of Miller's book, and tell you how he helps the inferior races, instead of hindering them. Miller, of course, may mean real democracy—but if he does he fails to say just what will make Gary turn the mills over to the workers, or just how the Syrians will get the French to leave, any other way than by revolution.

Miller would not agree with what I am about to say, but I think it can be proved: the good doctor's refusal (stated in the introduction to his book) to accept the materialistic conception of history is itself one of the best bits of evidence possible of the general confusion of Miller's method and conclusions. He rejects it on grounds that show he does not understand it, and announces himself a Pragmatist, instead. Now Pragmatism is a very dangerous philosophy for a superficial investigator to hold, for it rationalizes a tendency to set down the facts

without digesting them. It holds a suspicion of all explanations in general terms of fundamental bases, and at the same time—since man **must** generalize in order to think at all, it allows him to generalize from the surface phenomena, to offer pluralistic explanations, uncritically, and with generalizations that fit the whole circumstance only partially. And after this has been done, it allows him to defend these partially inapplicable generalizations against charges of inconsistency with certain facts by saying that science is very diverse, and we must be pluralistic in our outlook, etc., meaning that no generalization can fit anyway, and that one is as good as another. This is skepticism with a mask on; this is Nihilism—and the result is no science at all, but a mass of facts and alleged facts which may be useful and may not be useful, but certainly are not explained.

A perfect short example of this pragmatic error is contained in another of Miller's works (Science, Pseudo-Science and Race—"The World Tomorrow," November, 1925—reprinted in part from "The Crisis"), in which he says, "Economics is one of the worst scientific offenders in its particularism. Economic determinism and the economic interpretation of history assume that the economic urge is the only one."

As far as the statement about the economic (materiastic?) interpretation of history is concerned, it is almost too silly to answer. Those who have forgotten will find the classical statement of the theory in the preface to Karl Marx's "Critique of Political Economy," and will see there that the argument, in essence, is that social systems, governments, and to a lesser degree and indirectly, attitudes toward and expressions of art, religion, philosophy, etc., are based on the way in which the people make their living, and that when this basis changes, the attitudes and systems change too. If Miller had considered his facts about workers, nationalities, etc., in the light of this theory, he would have found it illuminating, and would not have made the peculiar blunders which we have mentioned above. He would then have ceased to naively expect that it would do any good for him to tell people that they ought not to be so chauvinistic. He sees all right that the press and mediums of propaganda are in the hands of the wealthy, he would then see that the wealthy of one nation, finding themselves in a life and death struggle with capitalist groups of other nations, **must** drum up continual war, or perish. He sees that the capitalists stir up national passions against workers of other nationalities and against radicals, while practicing internationalism themselves; if he studied the material basis, the source of life of the bourgeois class, he would see that this same hypocrisy has been inherent in them from the beginning, and is as natural to them as water to a duck. He sees that countries long suppressed like Ireland and Bohemia are suddenly developing a tremendous pitch of national consciousness and breaking away from their imperial masters, and that other nations like Italy and Germany have recently coalesced, and he flounders around hunting for reasons for this phenomenon; a study such as would be suggested by the economic interpretation of history would have shown him that the nations are products of capitalism; the budding merchandising aspect of it produced dynastic monarchies, the full blown capitalism created the "democratic" state, and imperialism of capital brings political empire in modern times. At all times capitalism remodels the state boundaries to suit its needs. When struggling for existence, it makes an ideal of nationality because of the need for communication and the emphasis on it, which means a national language. After that, imperialism is the keynote, and capital seeks subject countries, where markets can be monopolized by tariff walls, etc., and where raw materials of industry can be extracted. This is the peculiar basis of nationalistic imperialism, as distinct from dynastic, or from feudal imperialism. But it builds up capitalism in the subject countries, and finally **they** start in the cycle again, with independence movements. The anger, the rage, the "pathology," as Miller calls it, of these independence movements is not to be exorcised by some kind of Freudian psycho-analysis of the situation that does not take into account that capitalist groups will perpetuate and must perpetuate nationalistic clashes, and must extort profit from the wage slaves, if they are to survive.

Of course ,if you do take this deduction into account, you are forced to admit that the only cure is revolution, and that would demoralize Lippincott's trilogy.

# WOBBLES

MAKE HIM "COUGH UP!"

### ECCLESIASTES TEACHES UNIONISM

"Two are better than one, because they have a good reward for their labor. For if they fall, the one will lift up his fellow, but woe to him who is alone when he falleth, for he hath not another to help him up, and if one prevail against him, two shall withstand him, and a threefold cord is not quickly broken."

* * *

### THIS ONE FROM CARL DEGNER

"I happened to get within just a few feet of the President of the of the U. S. A. and Mrs. Coolidge when they were in my town. Some woman next to me, whom I had never seen, was evidently so excited at being so near the President that she turned to me and said, "Oh, is my hat on straight?"

* * *

During the war when the "work or fight" law was on the books, a contractor was running wild, looking for men to work. He spied a comfortable, unhurried sort of an individual walking along the railroad track, and rushed up to him, demanding, "What are you doing idle? Can't you do anything with a shovel?"

"Sure can," said the man. "I can fry ham on it." —C. D.

### MORE RELATIVITY

State Patrol: "Have ye yer permit on ye for dhriven' the cyar?"

Motorist: "I have that. Are ye wantin' to see ut?"

State Patrol: "What for would I be wantin' to see ut if ye have ut? It's if ye had ut not that I'd want a look at ut."

Fanny, the little daughter of a clergyman, pranced into her father's study one evening while the reverend gentleman was preparing a lengthy sermon for the following Sunday. She looked curiously at the manuscript for a moment, and then turned to her father. "Papa, does God tell you what to write?"

"Certainly, dearie," replied the clergyman.

"Then why do you scratch so much of it out?"

### SIGN OF LUNACY

A visitor to an insane asylum saw a guard in charge of about a hundred inmates who were out for exercise. The visitor inquired of the guard if he was not afraid of being attacked by one of the lunatics.

"No; I can lick any of them," the guard answered.

"Yes, but suppose they all attacked you?"

"No chance of that," said the guard. "Crazy people never organize."

### CAUSE AND EFFECT

At a conservative estimate about ten thousand Wobs have made the can in the last ten years. And Thomas Mott Osborne, most noted of authorities on prisons and prison life, has said: "Generally speaking, prisoners are on a higher plane than the general run of the public."

"Foreign Devils"—that's what 100 per cent Chinamen call 'em.

"Damn Foreigners"—that's what 100 per cent Americans call 'em.

Ain't it nice to think oneself so much better than everybody else on earth?

# I.W.W. PREAMBLE

The working class and the employing class have nothing in common. There can be no peace so long as hunger and want are found among millions of working people and the few, who make up the employing class, have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system.

We find that the centering of the management of industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers.

These conditions can be changed and the interest of the working class upheld only by an organization formed in such a way that all its members in any one industry, or in all industries if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system".

It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown. By organizing industrially we are forming the structure of the new society within the shell of the old.

**JANUARY 1, 1926**—Over most of the world, according to the final decision of an old discussion in which several popes and a handful of emperors have taken part, this is the beginning of a new year.

Of course this is only a conventional arrangement, since it is necessary for people to start counting time from some fixed point, and since the above-mentioned notables have in their day had influence enough to get the point fixed on this particular day. It seems reasonable to suppose that they picked out the heart of winter as the auspicious date from a sense of pessimism and that the populations of the earth accepted such a decision in their hopelessness.

For thousands of years the common people of the civilized world have been told "Go, and they go; come, and they come," by other people no better than they in any case, and most often much worse. They have likewise, and as a part of the process, been exploited mercilessly, first under one system and then under another. They have been fooled by priests, betrayed by false friends, killed by generals, and robbed by a vast and bewildering assortment of legalized robbers.

But we look to see the time when all these years, of which the present is just one more, hardly long enough to be counted in the sum of all the years of slavery that have passed, will end in a year that sees the overthrow of capitalism—after which we shall probably fittingly celebrate by counting the first of May as New Year's Day. Happy New Year!

**THE IWW CONVENTION**—The delegates to the IWW general convention have done their work and departed for the time being. This convention was marked by several innovations, proving that the IWW itself is a growing and possibly a changing institution, and not a dead-weight cast-iron mold. The membership of the organization are live workers, with eyes and ears, which they use, and capable of learning from experience, and their organization is and should be a sensitive instrument, readily answering to their direction.

The convention scrapped an experiment or two, most important of them being the venture into "universalism" (equal dues and initiation fees for all the unions). Whether they reflected the spirit and the decision of the rest of the membership in so doing will be seen when the referendum ballot is counted, during this January.

It is up to the rank and file to decide, and everybody is hoping that a big majority of it will make an effort to secure ballots and vote—a definite decision one way or the other by a large portion of the membership is what is needed, and will do more to make everybody satisfied than anything else. The men on the jobs must go a little out of their road to get and use these referendum ballots now in the field. It is not fair to the incoming officials to ask them to enforce decisions of the membership which it is possible to argue were not really decided by the membership, because only a few thousand voted out of the many thousands who should have voted.

**DON'T WORRY—ORGANIZE.**—In recent issues of Industrial Solidarity, the I. W. W. weekly newspaper, there is a good deal of information about the Diesel engine being used in larger and larger ships, throwing out of employment three quarters of the "black gang" wherever installed.

In issue before last, we printed a description of a coal-loading machine which is being instituted rapidly in the nonunion fields,

**WHEN ALL THE MINERS ARE IN ONE BIG UNION.**

and is throwing men out of employment by the thousands. Recent news of this machine and its continued spread indicates that it is being proposed to the union misleaders of the unionized fields, especially in Illinois, and that it will probably be impossible to prevent its use here, as the Farrington-Lewis bureaucracy has very little stomach for a battle with the employers, and spends its time only in trying to preserve enough union to keep the treasury full, and handy to Farrington and Lewis.

There is a continual spread of labor-saving machinery in building construction. In longshore work, some branches such as the loading of ore and wheat on the Great Lakes where both are handled in bulk, have ceased to be longshore work at all, and instead become something rather more like steamshovel engineering, or cranemen's jobs—only a few men taking the place of hundreds.

These are only a few industries—the same story applies to practically all of them. In spite of the well authenticated fact, proven again by the suit of Prof. Fessender against the eight great electrical goods manufacturing companies of Amer-

ica, that invention proceeds faster than the capitalists are willing to make use of it, they do make use of enough of the labor-saving inventions to keep labor continually hunting for the "job that ain't."

We do not propose fighting these new inventions. We propose taking possession of them, and using them for the benefit of the workers as a class. It is only when we are selling ourselves as a commodity—selling our labor power to the boss at so much per day—that we have to dread the labor-saving machine. While we are selling labor power on the market, anything which restricts that market by reducing the number of jobs is an injury to us, but on the day when we become free men, through the ownership of our own products, on that day do we cease to be injured by inventions, and begin to be aided by them. Every man who can then produce a labor-saving device will be hailed as a friend of leisure, the best friend of man—the prerequisite for all culture, all recreation; all sane thinking and almost all pleasure.

THE DOVE OF LOCARNO.—There was no peace decided upon at Locarno, where the representatives of the leaders in the League of Nations met with the envoys of their old enemy, Germany, and signed a treaty involving the withdrawal of troops from over the Rhine, and the recognition of a world court. It was not a peace treaty—it was a bandit-bund, a compact of solidarity among robbers who have never, under any circumstances, shown any of the "honor among thieves".

Consider the situation. Over all, the brooding shadow of Shylock—Uncle Sam, the international pawnbroker, with half the industries of Europe in his hock shop. Here is France (French capitalism) with a bankrupt government, a peasantry that has never been taxed, and doesn't intend to be, a working class growing rapidly more rebellious. Here is England (English capitalism) losing her foreign trade to the U. S. A., unemployment growing, balance of trade against her. Here is Germany (German capitalism) sweating under the Dawes plan. Here is Italy (Italian capitalism) only saved from revolution by the Fascist militia, with a government only saved from bankruptcy by the Morgan loans, and the generosity of the U. S. Oligarchy; certain to undergo an explosion sooner or later.

Besides the workers' revolution, brewing in each of these countries, each is faced with a peasant uprising. It is not only France with her home peasantry. France and England and Italy are great industrialized countries, true, but just to the extent that a country is industrialized, in these modern times, just to that extent also does it become a peasant country. It is rather strange on the whole, to hear people, radicals especially, discussing the Russian revolution and saying that one of the differences between Russia and other "more industrialized" countries of Europe and America is that Russia is a peasant country, "eighty-five percent peasant". Whatever the differences, that is certainly not one of them. Take Britain for instance. People usually think of her as a highly industrialized country—yet the British Empire has only twenty million middle class, and an insignificant number of big capitalists and nobility, and twenty million industrial workers, most of them in England. On the other hand, she has over four hundred million peasants—a proportion of more than ninety percent peasants. England's peasant are in India—two hundred and fifty million of them, and the rest are in South Africa, Egypt, Canada, Australia, the Soudan, British East Africa and the islands of the British Empire. Probably we should count in this list the populations of Latvia, Portugal,

NOT EXACTLY THE DOVE OF PEACE

Palestine, the Yang-tse valley and various other places where England has either a League of Nations "mandate" or has riveted down the chains of her financial empire so firmly that she controls the product of the land. In that case, of course, the percentage of peasants would be greater. Among all these peasants, just as much a part of the British social structure as the farmers of Devonshire, those farthest away from London are closer in the actual time and expense of transporting their products than the peasants of Kamchatka are to the industrial region around Moscow, so good a highway has the sea became.

The other countries under discussion here, Italy with her African empire, France with her African and Asiatic empire, and Germany promised African colonies at Locarno, are in the same situation. All of them have far more peasants than they have of any other class, and these peasants are absolutely necessary as markets and as providers of raw material, without which each of these capitalistic empires would sink to the status of Spain, or lower.

Now, bear these facts in mind, remember the peasant uprisings raging in Africa, in Eastern Asia, in the Near East, and the tendency of Canada and Australia to look for money and support to the United States capitalists rather than to the English, and you will see why the robbers draw together at Locarno.

Under the circumstances is was to be expected that the League Council would refuse to hear the case of the Druses, or to receive their delegates, for these wished to protest against the way General Serrail had carried out "the sacred mandate of the League of Nations, to uplift the peoples given into the control of France, and to keep the peace, and minister to their material and moral comfort." It is to be expected that the League world court would refuse to grant the Turks a fair trial in their claims against England for their own oil lands of Mosul. (The Turks are an agricultural people).

But there is another side. The robbers have not enough booty to go around, and yet they have taken all they are likely to get. Some of it even, may slip from their sacks, due to the above mentioned uprisings of peasant peoples. But each of these countries must get more empire, or collapse. So they must rob each other. Even at the moment they kiss each other on the cheek at Locarno, they reach around each other's backs to feel out the proper place for the point of the stiletto. The French catch England conducting an elaborate espionage system among French airplane officers; the Italian papers expose England's scheme to fence Italy out of the Eastern Mediterranean with a network of coaling and naval stations, obtained from Greece, while Mussolini loudly declaims, "Italy may be in a permanent state of war in five or ten years"; the French defiantly refuse to decrease the number of their submarines, in spite of English admirals storming and bluster against them as "devil's weapons, which have taken all the chivalry out of war at sea". France can blockade England with those subs ,and she thinks she may need them.

So the Locarno pact is one more step toward war—one more temporary alliance among robbers, against their creditors in the U. S. A., and against their revolting slaves, but doomed to be only temporary, and certain to give way sooner or later to the bloodiest quarrel history has ever known. Nothing but an organized working class can stop it.

# The Shipping Octopus

By R. FRANCEZON

THE WORKING CLASS AND THE EMPLOYING CLASS HAVE NOTHING IN COMMON. Thus starts the Preamble of the Industrial Workers of the World and never was a truer statement presented before the descendants of the early proles and medieval serfs. The seafarers know better than any other workers the veracity of those words.

Since the rising of capitalism, seamen have been subject to the most outrageous form of slavery. When applied to the realm of the sea, the capitalistic laws are of the most stringent character. Right now, in the twentieth century, in this age praised by the apologists of the present system as the greatest in the history of civilized mankind, the seamen are no better than the serfs kept in thraldom by the feudal laws of the middle age. Taking advantage of our precarious economic conditions, the industrial pirates known as shipping magnates, force the men in need of a job, to sign their liberty away for a chance to toil in their rotten, floating coffins.

As soon as the human beings known as seamen, are out on the open sea, they forfeit all the few privileges (miscalled "rights") that their fellow workers in the other industries are allowed to enjoy. They become part of the floating machinery, and have to produce wealth for their parasitical exploiters, for an indeterminate period ranging from six to eighteen months.

During that time they have to submit to the whim of the petty narrow minded type of morons, that represent the shipowners aboard the ship, namely Captains, Mates, etc., and if the seaman feels that he is manhandled and should have the right to leave that floating hell, where he happens to be, he will forfeit his wages and in many instances, be arrested as a deserter and sent back to the ship, where he will have to work, many a time with a lose of wages, taken from his pay in form of fines and what is termed in the marine jargon, "logging".

The shipping trust becomes rich, beyond the most sanguine dreams of avarice, through such forms of marine slavery; like a big octopus, the shipping trust spreads out its tentacles to the four corner of the earth, to grab more markets and cheaper human labor. Its wealth is the product of human misery, political tyranny, hypocritical education and religious fanaticism.

The marine workers, inadequately organized, often misled by renegade labor fakirs, mostly confused by the many theories and "isms" put forth by unscrupulous politicians, who are gravitating around the gilded capitalistic **Orb,** are nevertheless fighting for more of the good things of life.

It is a constant, titanic battle between the exploited and the exploiters, the workers and the shirkers, therefore proving the truthfulness of that first line of the preamble of the Industrial Workers of the World: "The working class and the employing class have nothing in common".

It doesn't matter which part of this planet we are looking at, the shipping interest aggressively drives the seafaring men into the fight. At the most strategic position of the earth's waterways, where the ocean lanes converge together, forming the world's largest entrepots, we see the marine slaves in desperate struggle for existence against their ruthless exploiters. No matter how cruel the repression may be, no matter how many sons of the working class will be slaughtered in sacrifice to that new Moloch, The Maritime Mammon, the tyrannical abuses of the greedy shipowners force the marine workers to rebel against these intolerable conditions.

# The Workers Look to Montevideo

By ADOLFO GARCIA
(Editor "Solidaridad," I. W. W. Spanish-Language Newspaper)

THE First International Conference of Marine Transport Workers of the Western Hemisphere decided to have the Second Conference in Havana, Cuba, on January 15, 1925. But due to the persecution by the Cuban governmental authorities, representing their capitalists and other capitalists, most of the revolutionary organizations and unions of Havana have been smashed. And because of the fact that the Cuban authorities are nothing but willing tools of the American sugar trust, shipping trust, bankers, etc., it is not certain that there would be security there for an international conference of workers, and that insecurity forces the unions to seriously doubt the safety of their delegates, and might prevent some of them from sending delegates at all. Furthermore the Main Office of the Marine Transport Workers' Industrial Union No. 510 of the I. W. W. has tried to communicate with the different bodies of organized workers in Havana, and cannot get any answer. So the former program to make arrangements for a big conference there must be dropped. The plan is changed, and the city of Montevideo, Uruguay, has by common consent been selected as the best place still remaining for the purpose.

The change in the place of meeting and the disruption of the previous arrangements makes it advisable to delay the conference two months more, and the new date is March 15, 1926.

From our point of view, when we are looking just at our immediate problems as members in the Marine Transport Workers' Industrial Union of the I. W. W. (of

the United States), the originally selected city, Havana, would have been better. The reason is that the M. T. W. members from the United States come into most direct contact with the Caribbean trade, with Mexico, Central America, Cuba, and islands near by.

But if we consider the vast future for a general, Western Hemisphere organization or cooperation of marine transport workers' unions then it is just as true that Montevideo is a good deal the best place that could be found. The biggest unions of South America are in Chile, Argentine Republic, and Brazil. These workers do not take much part in the Caribbean trade, or Gulf of Mexico trade, and perhaps would not pay much attention to a conference which is held too far north.

Still another reason making Montevideo the best place for the meeting is that a lot of propaganda has been conducted in the Spanish language press, accusing the I. W .W. of being imperialistic, and of trying to dictate the policies of the Latin-American unions. If we were to meet in Havana where, perhaps only the small countries would be represented, just those small Central American and island countries which are most directly under the influence of American Dollar Diplomacy, and are really part of the American financial empire, it might be possible for someone to argue that the charge of imperialism levelled against us has some basis in fact.

But if American delegates go to a place where it is a certainty that they will be in a minority and that too, just in the place which has been the center in which the worst of these criticisms and rumors took form, it will be proof that there is nothing of reality in this talk of our "imperialism," and a better feeling is certain to prevail.

Probably the Brazilian unions will be strongly represented at the Montevideo Conference. The Brazilian unions have a fine organization, and have kept wages up in good style. During the years 1910 and later the government recognized the union job control on the big main line of Brazilian ships, Lloyd Braziliero. Wages were better than on any other ships of the American continent. They were ten to twenty dollars higher than on U. S. ships. The steamer line was owned by a government corporation, something like the U. S. Shipping Board, and the capital was much increased by Brazil's entry into the World War, which enabled that country's government to seize as prizes of war all German ships in her harbors.

In the beginning the unions were nothing but tools of the government, organized on a craft basis. But lately there have been some sections which have developed strong revolutionary tendencies, and have not hesitated to fight their governmental employers.

The longshoremen of Brazil are not so very well organized except in certain harbors, Santos, Rio de Janeiro, Pernambuco, and a few others. There is some organization in all harbors, but no national federation of all longshore workers, or anything of the sort.

In Argentina the longshoremen are, most of them, unorganized; and there are no harbors in which there is at present a hundred percent organization. Most of the time most of the longshoremen's groups have been with the Federacion Obrera Regional Argentina, the body which puts out "La Protesta," the anarchist daily. The seamen's unions have been organized in the federated body, the Union Sindical Argentina, which is syndicalist rather than anarchist. There has been a continual struggle between these two, much to the detriment of the labor movement there, and this is one of the reasons for the present state of disorganization.

The seamen of Argentina had for years a strong organization called Federacion Obrera Maritima. For six years it had healthy branches in all the seaports and the river ports of the Platte. They had a pact of solidarity with the ship's officers' unions by which all on board were forced to be union men. If the captain was not a member of the officers' union, he could not get a crew; and if the owners asked a union captain to ship a nonunion crew, he refused. This gave complete job control.

The F. O. M. was able to sustain a strike for fourteen months tying up a whole half of the Argentine fleet, all the ships of the Mihanovich line, and forcing them to surrender. This was in 1918 and 1919. After that they had some other strikes, for the right to boycott, and won them. Just after that they had a general strike for better wages and conditions, and after this was won, they continued the boycott against certain flour mills. All the shipowners came together and declared a lockout, only three or four days after the union had won the general strike. The government seized the whole merchant fleet, operated it, and recognized the right of boycott by the crew. Afterwards the ships were turned back to their owners.

This history shows that these unionists have a revolutionary spirit, and are capable of real solidarity with all workers.

The pact of solidarity between the seamen and the officers was a thing that the shipowners had tried time after time to break, and failed. Finally, however, they succeeded through juggling with a pension law, in dividing the interests of the captains and crews. When the general body, the Union Sindical Argentina, declared a general strike all over the country, the captains and officers, who were in favor of the pension law, took out scab crews.

Even after this strike there was harmony between the officers and crews, but eventually the latter had to go on strike against one of the three unions of officers, that of the deep water captains, which broke away from the pact, and there has been hard feeling ever since. There had to be a general strike and finally, through desertion of the other officers' unions (of coastwise captains, and of pilots) the strike was lost, and there is today no job control by the F. O. M. There is also a split between the syndicalists and those of socialist tendencies

who are for the pension law (presented to parliament by the Socialist Party). The union has lost heavily in membership, and now these socialists have started a movement to reorganize under the influence of the Socialist Party, which if they are successful, will probably result in the union being ultra-reformistic and conservative, as the Argentine Socialist Party believes in class collaboration, etc., and gets help from the government in its efforts to create a yellow union.

There used to be a strong Federacion Obrera Maritima in Uruguay and another in Paraguay, modelled along the same lines as that of Argentina, and closely cooperating with it. However, the union in Paraguay is now small and though the workers have shown good solidarity, the leaders are governmental politicians, and have used the union to defeat revolutions by boycotting them, etc. The longshoremen and seamen are together in the same organization.

In Uruguay, the Federacion Obrera Maritima is affiliated with the Union Sindical Uruguaya which is a federated body with the same principles and form of organization as the Union Sindical Argentina.

The longshoremen in Montevideo are divided. Some of them are in unions affiliated with the U. S. U., and some are in unions affiliated with the anarchist national body, Federacion Obrera Regional Uruguaya, precisely similar in its outlook to the Federacion Obrera Regional Argentina. There is no job control, partly because of the friction between these two groups. There is even violence committed in this fratricidal conflict.

In Chile, the seamen have as their only organized power the Marine Transport Workers' Industrial

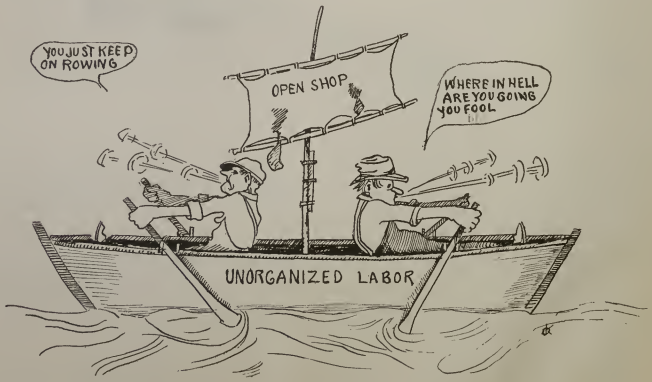
Union of the I. W. W. of Chile. The captains and officers have two different organizations. One has been formed not long ago and keeps good relations of solidarity with the M. T. W. They have already struggled side by side against the shipowners and won, sometimes with the crews helping the officers and at other times with the officers helping the crews.

The longshoremen of Chile are divided between the M. T. W. and the Confederacion Obrera de Chile, which is influenced by the Communist Party and is affiliated with the Red International. In none of the harbors do any of the longshoremen's unions have absolute control. There are craft divisions, disguised as sections, such as boatmen, etc.

Peru and Equador have little shipping, most of it local with the exception of a line running up to Colon, which has seven or eight ships. There is only one real union in Peru, among marine transport workers, and that is in Callao, where the longshoremen are organized independently.

In Columbia there is little shipping as yet, though there will be sometime, as there are good harbors, with oilfields and great plantations lying back of them, and mines as yet undeveloped, fruit, and lumber, coffee and cocoa.

There is very little organization in Central America. Panama has a kind of fictitious fleet, because some of the U. S. ships adopted Panamanian registry in order to carry booze. But they have their regular U. S. captains and crews.



I think the workers organized in the maritime unions of Brazil will amount to about 18,000. In Argentina, at the present time, there are from 5,000 to 8,000 in all the different bodies. In Uruguay there may be about 4,000 altogether. In Paraguay the numbers count for more, because of the degree of job control, and they have from 3,000 to 5,000 organized marine transport workers. In Chile the M. T. W. has about 4,000 to 5,000 organized.

The workers really employed in the marine industries of these South American countries will amount to over a million, and the task of organizing them is an important one.

In economic strength of actually organized workers, Cuba is more important than the countries of the continent, because nearly all of her ports are organized, and there exists some job control in all of them, and a good deal in some of them. Up to last year they were independent of each other altogether, but this year, after the national conference in Camaguey, they formed a Federacion Obrera Maritima, similar in organization to those bodies of the same name in South America. Before the governmental persecution started there were undoubtedly 25,000 or more marine transport workers organized in Cuba. It is hard to tell how many there are at present.

In Mexico nearly all the steamers are owned and operated by the government. The unions have job control. In 1921 and 1922 when U. S. seamen were getting as low as $35 per month, the Mexican seamen were getting $85 a month, and had the three-watch system (eight-hour day). The longshoremen are also well organized, and have a stevedoring cooperative in Tampico worth $500,000. In this port there are no stevedores or contractors at all, and the union itself takes the contracts to load or unload ships.

There must be, perhaps 25,000 to 30,000 members of marine transport unions in Mexico. They are not all in one union. The Tampico cooperative is

NOT LIKE THIS!

independent. In Vera Cruz there is a national body for longshoremen, with different branches scattered around, some outside of the state of Vera Cruz. They are not adherents of any other national body, or any international. The seamen have a national organization, which sent a delegate to the New Orleans Conference. It is called Union de Fogoneros y Marineros. It has control of all steamers. It has a pact of solidarity with the officers and they have assisted each other against the big companies. (The big oil companies have tug boats and other small craft, and La Aguila Oil Company has oil tankers under the Mexican flag). The British officers of these company boats were finally chased off and now the crews from the captain down are unionists.

What shall the I. W. W. do at Montevideo?

We ought to support a motion to recognize the delegates of all the unions who send representation. We do not have to pay any attention to the little quarrels and stigmas which the individual unions fasten upon each other.

Bear in mind that the first clause of our Preamble, "The capitalist class and the working class have nothing in common," prevents us from having dealings with the organizations which admit, as a principle, the collaboration of classes.

The New Orleans conference had as its main purpose the arrangement of a big international strike. This is no longer the main issue, and on the contrary, the next congress, the Montevideo conference, will probably be faced as its main problem, with the task of forming some permanent organization.

In my opinion the best way to approach this is for the I. W. W. to propose to the others that all the members of any organization which enters into a pact of solidarity at Montevideo, shall have the same rights of membership in all other unions. Thus a member of the F. O. M. visiting in New York, will be regarded while here as a member of I. U. 510 of the I. W. W., and vice versa, and the same with all.

It seems to me we should propose that in the ports of greatest importance, such as Buenos Aires, Rio de Janeiro, Montevideo, etc., there shall be international delegates placed, carrying international credentials and supplies. Each delegate's duty will be to visit all the ships, bearing the flag of any country in the Western Hemisphere, with the exception of the country in whose port he is. He could visit European and other ships, which have regular service to American ports (North or South America).

These international delegates should have the right to organize all the workers who are not already organized, to collect dues from all members of any union in the pact, and give all the help and protection that any of the unions are capable of giving. In general, each delegate is to be a true representative of all the foreign seamen in any circumstances where they need the representation of the union.

The delegate's wages should be equal to the current wage scale of seamen in the country where he is stationed, and should come out of the initiations and dues that are collected. If he collects more than wages and expenses, the rest should go half to the local union of the harbor where he is, and half to the union of the members from whom he collects. New members should belong to the local union where the delegate works; a copy of the reports of each international delegate should go to the main office of the union to which the member belongs.

The international delegates should have books and stamps printed for that purpose which can be paid for pro-rata by all the unions in the pact of solidarity.

With this system there will not be anybody who can sustain the charge that the I. W. W. is trying to invade or subjugate the other organizations of seamen, but on the contrary, it will be clear that this plan will permit representatives of unions of South America to come on American ships; if they organize these ships which are as yet unorganized, there will be no grievance; we will have a really organized working class as far as the marine transport workers are concerned.

In case we are really trying to form a pact of solidarity, it will be necessary to create an office of "secretary of relations," which will have no power whatever, over any of the organizations who become part of the pact of solidarity. Its functions should be just to translate the correspondence and send it to the different organizations interested. The legislative and resolutive power ought to be in the hands of the different organizations and all the alterations or reforms in the pact of solidarity should be made in international conferences.

These, I think, are some of the points that Montevideo conference should consider if we are really trying to live in reality and give up illusions.

# To Labor

(By HENRY GEORGE WEISS)

You are the heart that pumps the blood
Of commerce through this modern world,
You are the hand that curbs the flood
Which from the mountain heights are hurled:

You are the feet that walk the earth,
You are the sweat that tills the soil,
You are the brawn, you are the girth,
You are the ribs of them that toil.

You are the eyes that see afar,
You are the ears of all that hear,
You are the voice that rings the star
Of Progress in its mad career.

Heart, hand and feet, sweat, brawn and girth,
Stout ribs, and eyes, and ears and voice,
Oh, what can tell thee of thy worth,
Rise up, thou king, rejoice, rejoice!

**There is only one way to better conditions in the fishing industry, and that is through organization.**

**Fishermen's Industrial Union No. 130 of the I. W. W. is the One Big Union of the fishing industry. It embraces all who work in the industry, barring none who work for wages. If you work in the fishing industry, join F. I. U. 130, and help to better conditions. For further information write to F. I. U. 130, 3333 Belmont Ave., Chicago, Ill.**

# Slavery In Alaska

By WALTER BACON

CANNERY DOCK AT CORDOVA

HAVING wintered in Seattle and hearing that the clam-canneries of Alaska were going to ship men to Alaska to dig clams, I decided I might as well be in Alaska as in Seattle looking for a master. So along in the latter part of February I applied for a job, and after answering many questions I was signed on to dig clams at Cordova for the season of 1925, the wages being three cents per pound, and a bonus of one-half a cent if I stayed the season. In other words, they bet me one-half a cent on each pound that I dug; conditions were so bad that I couldn't stay.

On the twenty-sixth of March I received a letter telling me to call on the day following at the office of the company in Seattle for my ticket (which they were advancing) as we were to leave Seattle at 9 a. m. March 29th, on the S. S. "Yukon."

The trip north was all that a slave could expect —being obliged to pay our own fare, and not being wise to the game nor conditions to be found on the clam beach at Cordova. We went as steerage passengers, and the accommodations were anything but the best. The steerage passengers must furnish their own blankets. The bunks were four high and placed down below the water line, so the ventilation was very poor. The "chow" furnished was mostly stew and boiled liver, badly cooked; the pastry was good, but we received plain cake and no pie. Considering that we only had to pay $37 for our passage and a chance to supply the world with clams, I suppose we shouldn't complain. The trip was favored with good weather all the way, which is unusual for that time of the year, and the scenery along this trip is fine at any time of the year.

We arrived at Cordova on April 2nd at 2 p. m., and proceeded to inquire for the cannery which had loaned us the privilege to dig clams. After locating the office we were outfitted, and by 6 p. m. we boarded a cannery tender bound for the camping grounds, nine miles away.

Just before casting off, a tax collector came on the deck with a list of our names, which she had secured from the office of the company, and had us give our age, so that they could collect $5 from each of us.

As to the camp and conditions we found there, I will say this: According to our agreement, we were to be furnished a cabin for each two men, the said cabin to be equipped with a stove, dishes, bed, and mattress. When we arrived at this camp we found that there were only about half enough cabins to go around and, being broke, we had to crowd into these small quarters and make the best of it. These cabins had not been occupied for eight months and were exposed to the snow and rain, so that they were water-soaked. The stoves furnished were small sheet-iron camp stoves (the variety with no grates) and our fuel was to be one hundred pounds of coal per week.

After a week or so we were furnished lumber and a tent which we had to put up ourselves. Groceries were advanced us—to be paid for out of the first money earned, along with the fare and any other expenses. At these camps there were no facilities for bathing or washing one's clothing. Our supplies were brought out to us two days after ordering them.

Our groceries came from the company commissary

BOAT OF JOHN OBERG—"INDEPENDENT FISHERMAN"

It will be understood that a considerable sum of money must be accumulated by the worker before he can buy a power boat like this with nets and other equipment necessary for him to operate as an "independent fisherman".

and though they seemed to have a different price for everybody, they charged everybody enough.

At these clam camps there was no medical attention, not even a first-aid kit furnished. If one had an accident or was sick he just got to town the best way he could.

### What the Work Is Like

Clam digging, unlike most work, can only be done at extreme low tide. There is an average of fifteen tides a month which are low enough to dig clams on. The digging time on these tides is about two hours. The clam beds are from one to six miles from camp, each two men are furnished with a skiff (row-boat) and a gas boat for each two skiffs.

During April the weather is still cold and rainy with many days of sleet and snow, and good stiff wind blowing.

After waiting nearly two weeks for a tide that we could work in, the great day came when we could commence producing clams. We arose at 4 o'clock and after an hour of traveling we came to one of the many bars where clams were supposed to abound, but our troubles had just begun as it was still so cold that few clams were showing, and our hands grew so cold and numb that it was next to impossible to hold on to a clam.

I don't want anyone to draw the conclusion that the conditions in all the camps are the same as in this one, as I learned later that in some they were worse. In one camp they had no power boats and the diggers were obliged to row to the bars, which took several hours of strenuous work.

One camp was on an island which was not much more than a bar and at times at high tide the water covered the island. One fellow worker who was working at this camp told me that one night he awoke and got up to see that everything was all right as the wind was blowing hard, he jumped out of his bunk into ice cold water which came above his knees. His kindling had floated away and so there was nothing to do but go back to bed and wait for the tide to go down. The water at this camp was hauled in by a cannery tender and sometimes this boat was late or did not bring enough water to go around.

Clam digging is somewhat of a trade, and the majority of us had never dug clams before; the main reason for so many green diggers is because the bars are getting dug out and the companies, in order to get clams enough to run their canneries, must put on more diggers each year. In 1924 there were 200 diggers; in 1925 there were nearly 500.

Alaska has a law which makes it a crime, punishable by fine or imprisonment, or both, for having in one's possession clams under four inches long. A number of slaves were arrested and fined $25 each. But owing to the fact that they were broke the company paid the fine for them, and I suppose they still owe it.

### The Strike

After working eight tides during April, I had dug 560 pounds at $0.03 per pound, and I owed the company $80 for fare and groceries. Now I was only one of seventy-five men in this one camp in the same fix. There were six camps, so we began to compare notes as it were, and on May the 7th we went on strike for $0.04 flat, and no agreement.

There were men from many walks of life to be found on the clam beach, ranging from a corn doctor from Los Angeles to a logger from Duluth. It is a well known fact that unorganized men do not go

on strike unless conditions drive them to it, as a last resort. This strike was no exception in that respect. However, we were confronted with a different situation than the majority of us ever had to deal with.

On May 8th 300 men came into Cordova. Three hundred strikers who had come off the beach to try and improve their conditions were broke to the man. I don't believe there was $50 in the crowd, and the first thing to do was to find a place to eat and sleep.

The hotels and restaurants gave us credit, but some of us thought it would be better not to go too far in debt, so we established a strike kitchen and secured credit for the strike.

It lasted two weeks and was lost. Most of the men went to work at other work, leaving the company holding the sack.

### The Canneries Bad Too

Not only did I find conditions bad on the beach but also in the canneries where these same clams are canned.

Girls are hired to clean clams and get 35 and 40 cents per hundred pounds of cleaned clams. During April these girls made $5 each. At one cannery one of the girls told me that the most made by any of them at that cannery for the two months of May and June, was $18. Even at that they were better off in some ways than the men who had done the digging, as they have free fare up and back, and get their board free.

By the 16th of May I decided not to go back to the beach, so I hired out as engineer on a cannery tender for which I received $135 per month.

### Fishing Not Good Sport

I was still to see many bad working conditions. Salmon fishing is anything but pleasant. The fishing here was done on what is known as the Copper River Flats.

These flats are cut with channels leading from the sloughs at the mouth of the river and even the small fishing boats can only navigate while the tide is in. Stake nets were not allowed on the flats in the season of 1925, so the fishing was all done with drift nets during May and June.

The boats used for gill net fishing are small, with scarcely enough room to accommodate two men, so in some cases one man fishes alone. Two hundred and fifty fathoms of net are used, and the drifting is done at slack tide. The fishermen get 75 cents each for King Salmon and fifteen cents each for Sockeyes. Each fisherman is allowed $45 worth of groceries for his board, and if more are used he must pay for them.

The independent fishermen (those owning their own outfits, and selling to whom they please) get $1.25 to $1.50 each for Kings and 30 cents for Reds. These fishermen leave Cordova the first of May for the flats which are thirty miles away. They are obliged to lie out there on those flats in those small boats in all kinds of weather for two months, and they must work night and day during a run of fish. Their supplies are brought out to them by the cannery tenders which make daily trips. Water and coal are also brought them daily. Most of these men are shipped from Seattle with no guarantee of anything; it all depends on the number of fish. Some years fishermen make good money, while in others they scarcely make anything. The season of 1925 averaged them less than $200 each. This is not much even for two months' work; but when one considers the time wasted, that they leave Seattle the first part of April and get back there the last of August, it is decidedly small pay.

During July and the first part of August the fish are caught in traps which require less men. A few fishermen take pink salmon with purse seins but the canneries pay only two and a half cents each for these.

Wages paid in the canneries are also low. Most of the labor in the canneries is done by Orientals who get $280 for the season, while the rest of the crew get $80 per month and board. The season at these canneries lasts five months.

### Ten-Hour Day—Or More

Ten hours is the length of a workday throughout the fishing industry of Alaska. The cannery help is all shipped up from Seattle where they sign an agreement drawn up to give the company all the advantage over the worker.

In this agreement the worker promises to work for the company in Alaska for the season, for so much a month and board, fare from Seattle and return to be paid by the company if said employe stays the entire season; but if he or she quits or is discharged for any reason, the company shall hold out of his or her pay the fare advanced, and any other expenses caused by said employe.

### Worth His Salt

On July 9th, having made the last trip to the flats, we were laid off, and I took passage on the S. S. Alaska for La Touche, to look for a master. I arrived there the 10th, and hired out on a floating saltry as a gibber.

Bad conditions were still the order of the day. Low wages, long hours, no facilities for bathing, no place for clothes, lack of fresh water, and no place of recreation are a few things I found to complain about.

Like the clam and salmon canneries, the herring saltries hire the bulk of their help in Seattle, and their agreements are similar: eight dollars per month and board for the monthly men, with fifty cents per hour for overtime. The gibbers signed up to work for 40 cents per bbl. and were to have a bonus of 20 cents per bbl. if they stayed the season.

Piece-work has had the same affect on the slaves in the herring saltries as in other industries. For a few years gibbers were paid $1 a barrel; only men were hired, and they used good judgment and packed no more than ten barrels a day. But during the

# Proletarian Preludes

By I. WILL REBEL

To call an American craft unionist a "proletarian" is like sprinkling a polecat with attar of roses and then dubbing him an American Beauty; but it doesn't change anything, and it's about time the dubbs learned it.

## I Wanter be a Miner

**I wanter be a Miner and with the Miners roam,**
**A gunman for my guardian and a bullpen for my home;**
**I wanter be a member of that free, untrammeled band,**
**A lamp upon my forehead and a pickaxe in my hand.**

**I wanter be a Miner-man and hear the pollies sing**
**The praise of "honest labor" while the big bluewhistlers ring;**
**To cheer for Uncle Trusty till my empty insides bust,**
**And follow Johnny Lewis till my ragged form is dust.**

LIKE HELLANMARIA I DO.

**Whenever I hear a Craft Union bureaucrat denouncing scabbery, I always feel like I am listening to Beelzebub casting out devils, to a creator damning his own creation.**

* * *

Craft union organization of mass production industries will get the workers therein exactly what "our soldier boys" were promised when they got back home, and no more". Nothing will be too good for you when you get back home, boys!" sobbed the Law and the Profits, and—**nothing** it was.

* * *

**Workingmen of the World, unite! WE have nothing but our LIVES to lose, and they are not worth a DAMN, anyhow!**

# The Simple Epic of the Underground Miners - Written Down by One of Them

(By G. L. NEUMANN)

Up the street
In the early morn,
Goin' to work
Sure's you're born.

Reaches the dry,
Flops on a bench
Or gulps some water
His thirst to quench.

Diggin' clothes down,
Now on the floor.
Come on in, Mutt,
Shut that door!

Out of the suit
He wears on the streets
Into the one
Which always reeks

Of powder and gas
Dirt and sweat.
May need washin'
But not quite yet!

Then checks in,
Fills his lamp,
Shivers like a dog
His clothes are damp

Walks to the beadframe
And waits in the sun
Weary as if
His day's work was done.

The shift boss calls
Loud and gruff,
This day's order's
The same old stuff.

"Three more men
On the bottom deck;
Get the lead out
There, you, Speck."

On the cage and
Six bells down,
Then all start cussin'
Old Man Brown.

The bottom deck lands,
The cable slacks,
Then all unload
And shake their backs.

Fool with lamps,
They finally light,
Another day
And nothing's right.

In Crosscut A
Carbon dioxide air,
To make some guy
A millionaire.

His ax is dull,
His saw is worse,
(Some day he'll be
At the toolroom first).

The machine is clogged,
The steel won't fit,
Still he must
Do his bit.

The air hose leaks,
No water now.
Dust in the eyes,
Sweat on the brow.

Machine set up
And all is well.
Yes it is
Like the very heck!

A little oil,
A twist of the wrist,
The Leyner starts
And makes its grist.

Time for rest,
Time for lunch,
Let's walk up here
And find the bunch.

Grab a laggin'
Or a plank,
Lay yourself out—
Lean and lank.

A slab of punk,
A hunk of meat,
Holy Caeser!
Let us eat.

A piece of cheese,
A pickle, too,
Onions or garlic,
That will do.

Pail empty,
Forbidden to smoke;
Chew or nap
Or play a joke.

Big boss coming,
That's his light. . . .

The pictures on these two pages represent a silhoutte of miners going to work, a mining scene where they still use draft stock to haul the cars, a machine miner at work, and a mining town. The poem refers to the metal mines, and some of the pictures show coal mining scenes. However, the life is equally hard, the rewards for labor equally small, and the need for organization equally great in both.

We'd better be getting
Out of sight.

Holes finally in,
Fair enough,
Now let's take
A dip of snuff.

Hunt boss around
For powder slip.
(Try not to find him,
Though, you Dip).

56 and 14—
Make 'er out?
Get the powder
And walk about.

The round's all in
But cannot spit
Now, just where
Can we sit?

A level boss,
Big as an ox:
"Come on, boys,
Rock in the box."

Up the crosscut
And down the drift
Just awaitin'
To go off shift.

Climb a ladder
Then crawl back
To get a bar
Or a double jack.

Jackhammer, Stoper,
Where can you be?
Oh, here you are
And hoses three.

Quarter of,
Let's go back,
Spit our holes,
Cousin Jack.

The holes spit,
We're on our way
Out to the shaft
And light of day.

March along the drift,
Stand in line
For bosses' pleasure,
And for whistle pine.

But break the line
(A snarling throat)
Then you get
The yellow note.

We pile on deck
And up we go
Out of the deep,
Dark hole below.

Into the dry
Then a bath
With maybe a wrestling
Aftermath.

First to town
To get the mail;
Hey there, Mike,
Here's your pail.

Then to dinner
Hungry now,
Wonder what
We'll have for chow.

Rotten grub,
Rotten cook,
Then a ten-cent
Movie book.

Crawl in bunk,
Fancy dreams,
Struck it rich—
See how it gleams.

Dogs bark,
Disturb dreams,
Turned to iron pyrites
Those yellow seams.

The miner alone
Can never win;
The O. B. U.
Is the thing for him.

Wake Up—Get Wise,
For Dreams—they fade,
Join the I. W. W.
And make the grade!

# The Mighty Gods

By SOPHIE SJOMAN.

For none shall move the most high gods
Who are most cruel—being high.
* * * * * * * * * * *
Cry out! Thou shalt learn what prayers are worth,
Thou dust and earth.

—Swinburne.

They will not hear us, though we call
From early dawn till set of sun,
And midnight spreads her sable pall
To hide the deeds that men have done.

They will not answer though we bow
Our heads in meekness to their will—
The mighty gods—they care not how
Our voices echo good or ill.

One thing shall move them—only one—
A power as mighty as their own:
Pray not to them, "Thy will be done!"
But act with deeds of might alone.

Pray, and the heavens mock thy prayer;
Strike, and the gods of earth shall hear;
Thy prayers are made of empty air,
But deeds are golden everywhere.

Too long beneath the masters' whip
The slaves have bent with suppliant knee;
With servile voice and trembling lip
Praying to gods that could not see;

To gods that could not see nor hear
The palsying hand—the tearful cry;
But now the hosts of might shall bear
A mightier summons to the sky.

With hearts aflame and muscle taut,
United in one iron band,
The hosts that long have freedom sought
Are rallying in every land.

And power, not prayer, their rallying call
Henceforth and evermore shall be
Till every tyrant power shall fall—
Industrial Solidarity!

**This article, by a student in the I. W. W. Work People's College, at Duluth, Minn., shows what members in that institution are capable of producing. It is a timely and thoughtful piece of work, based on a knowledge of statistics unknown to most people and interpreted by a correct theory.—EDITOR IND. PIONEER.**

# Woman in the Post War Period

By LEMPI KAHRA

THE tragedy of woman is written deeply across the pages of the war period and the succeeding years of dilatory reconstruction. Through it all she has been the martyr of human greed even more than man. It is her mission under capitalism to be a breeder of soldiers both of war and industry and then, when capitalist accumulation has stimulated the birth rate abnormally, to enter the field of industry and compete her breadwinner into the depths of unemployment and vagabondage.

In capitalist society woman plays a double role. First, as a competitive worker in industry, and second as the medium through which expanding capital produces the phenomenon of redundant working class population, with increased competition and resultant hunger and misery. In the first role she displaces man in industry by introducing a cheaper form of labor power. In the second role she becomes temporarily a dependent of the male worker as wife and mother, and thereby breeds the human material for the industrial reserve army of unemployed labor. Then, when the cycle of capitalist accumulation again gluts its coffers with the exploited products of her breadwinner's toil; when intensified competition in the struggle for markets between capitalists forces a reduction in wages and costs of production, she responds again to the competitive demand for cheaper labor power and, leaving her love dreams to the gods of chance and the day nurseries, she enters industry to take her husband's place.

What becomes of her husband, we workers know. Every court of domestic relations knows, too. Cast upon the street in a period of industrial depression, the husband succumbs to the deteriorating influence of long periods of idleness, and abandons the futile struggle to maintain a family. To be sure, he does not succumb without a struggle. There are many stages in the descent. First, heroic effort, then discouragement, apathy, despair, drink, petty crime, or vagrancy follow, and finally a wanderlust that calls him to leave his scene of defeat and migrate over the ways of the earth known to the itinerant and the hobo. But the woman remains with the children. In them she has given hostages to fortune and she cannot escape. There is left to her, her mother love and the factory or shop, and the rearing of the children the cruel "god" of capitalism has forced upon her.

In the census decade of 1910-20, marked by the World War, the total number of women over ten years of age in industry increased to a total of 8,549,511, a gain of about 500,00 over the preceding decade. Yet, in spite of this, the population increased faster still, so that there was a relative decrease in the total number of women industrially employed from 23.4% in 1910 to 21.1% in 1920. This relative decrease might at first seem encouraging, but the application of a little Marxian analysis reveals the operation of the Marxian law of capitalist accumulation with its co-relative of an increase in the surplus population.

The war expansion of capital, by temporarily increasing wages increased the number of marriages. Woman withdrew from industry to take up her natural duties of wife and mother. At least, these duties would be natural under a sane system of social production and distribution of wealth. But the after-war reaction came. The frenzied expansion of wartime was over. Wages were reduced. Living costs advanced. The illusion of permanent prosperity based upon war inflation and destruction vanished.. The cold awakening in the dawn of reality came. The returned soldiers joined the anxious throngs on the "skid roads," competing for jobs. The working women who had dared fate by indulging a daydream of romance, love and home, found their husbands out of work or reduced to the wages of "normalcy." With babies clinging to their skirts, they bravely took up the burden and again entered industry to eke out their husbands' earnings with their own, or worse, to support their children alone, deserted. Benevolent capitalism gave them day nurseries as substitutes for homes at the same time that it drove their male breadwinners into the streets to join the army of the unemployed.

The Malthusian conception that war decreases the total population is thus shown to be an error. The redundant birth rate established by these war marriages more than replaced the millions slain. The old theory of positive checks to population in the forms of war, pestilence and famine were again exposed as fallacies. War and pestilence and famine, the triple scourges of the human race, descended

together upon the earth like the locusts that fell on Pharaoh's kingdom. But no "Golden Age of Labor" followed. The children of the proletariat still swarm in increasing numbers in our slums and the homeless, starving poor huddle in barracks or join the increasing throngs of the hunger-driven protestants called criminals. Vice flourishes like a green bay tree. All the phenomena of a disordered birth rate appear. Child labor increases and gains national sanction by Supreme Court decision.

The government's statistics of 1920 show approximately 2,000,000 married women engaged in industry and the United States Women's Bureau emphasizes the fact in its 1924 bulletins that "marriage does not necessarily mean a release of women from breadwinning activities, but frequently greater economic responsibilities." The American Labor Year Book for 1925 says:

"Of nearly 40,000 women and girls studied in four communities, 55% were or had been married. Nearly two-thirds of these married women had wage-earning husbands. More than half of them were mothers. Two-fifths of the mothers had children less than five years old."

These children are the offspring of the war expansion and false optimism that caused the normally single workers to undertake the responsibilities of families under the influence of high wages and war prosperity. The United States Children's Bureau's Twelfth Annual Report, 1924, states that "of 34 cities furnishing the bureau with statistics, 30 reported an increase in the number of 14 and 15-year-old children employed during the calendar year 1923, in comparison with 1922. This resulted from the annulment of the Federal Child Labor law in 1922." Since that time children have taken the place of men in sugar, fruit and vegetable canning, textile, and other industries.

What is woman going to do about it? Her tenderest and noblest aspirations, her love impulses, her maternal instincts are capitalized. If she brings children into the world it is to see them torn from the cradle and the home of which she dreamed, to stock the slave market with their tender bodies. If she practices Malthusian abstinance the purlieus of vice testify to the result. Even this latter is more merciful than the home-destroying influence of capitalist industry. One lesson, at least, might be learned from Margaret Sanger—to refrain from slave breeding, to check that "reproductive ability of the working class which gluts the channels of progress with the helpless and weak, and stimulates the tyrants of the earth in their oppression of mankind."

And last but not least, there is organization and education in preparation for that day when capitalism shall be no more. From the brothel, the slum, the jungle and the slave barracks, the voice of judgment cries out. Let the women of industry lend their voice and action to the agencies of emancipation. Industrial unionism will lead through orderly processes to that deliverance which otherwise women must acclaim as the coming of the

"——Fiery, red-winged angel of the devil
To give her back her soul and womanhood."

# The Next Step In Conscription

"Dollar a year" patriot, member of Valorous Citiziens League for the Enforcement of the Law for Compulsory Pregnancy, (threateningly), "Mrs. Newlywed, it has come to our attention that you have been married four months and no report has been made regarding your physical condition.

In view of the fact that your examining physician's report certifies that both you and your husband are capable, legal procedure will be taken to enforce the law,—unless— a **favorable** report is made within the next few days!"

# Crime Salesmanship and Such Things

By SAM MURRAY

THERE is one point upon which nearly all people will agree no matter how much they may differ as to the cause or remedy and that is that crime is increasing in this country at an alarming rate. We are constantly meeting with reference to it. In our daily and weekly press, in our large magazines, and from both the pulpit and bench we are being showered with what almost amounts to a wail of despair over the uncontrolable flood of crime that is raging through the land and which threatens to engulf our whole population in an orgy of lawlessness and transform us into a race of crooks.

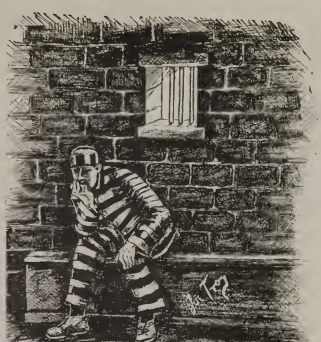
Lately the Saturday Evening Post has been publishing a series of articles by Richard Washburn Child on the subject under the title of "Our Great National Scandal". Child is a fairly good writer and unearths some interesting facts but in the end he seems to fall down miserably in the matter of getting at the root of the problem.

### Crime A Well Organized Industry!

In his first article he discovers that crime has become a well organized and important industry. For example: If you are an unemployed but competent burglar and wish to engage in your regular vocation you do just as, say, a plumber would under similar circumstances. He goes, not to the house of someone whose plumbing may need looking after but to the office of a firm engaged in the business of installing and repairing plumbing and if needed he is furnished with the necessary information and plans and sent to the place where his services are required and when finished the firm collects for the work and pays him a part in wages.

The burglar is engaged in an office of the organized crime ring which is probably masquerading as a real estate or investment office. Here he is given plans and specifications of a house to be burglarized, a master planner having thought out all the details and accumulated all the facts that might be of use to the skilled operative. Also, the matter of disposing of the loot and furnishing the burglar with plans for the getaway or defense and alibi in case of a pinch is carefully attended to.

After reading this first article in the long series, which one would naturally expect to be the foundation of what is to follow, you look for further information about the crime ring and suggestions as to how society is to cope with it. However we find absolutely no reference to it and the situation is dealt with as though no such a thing as a crime organization existed and the whole problem was a matter of dealing with the individual criminal. Why is this? You wonder what has happened during the few weeks that intervened between the appearance of the first and second article of the series. Has the crime octopus became so powerful and well organized that it can forestall publicity just as the other great combines do? It looks that way and if so how is the future to cope with the problem? If



PRISON—ACCORDING TO THE POST

the ring is in a position to command hands off and the only criminal who is in danger of aprehension is the one who attempts to get it alone, which condition is largely true of the bootlegging industry, then capitalism has gotten itself into a sorry mess. Be that as it may be, we learn no more from Child about the crime organization as he leads us through a mass of words and repetitions that takes up ten lengthy articles in which he joins in the popular clamor that has been so noticable of late that the "pampering" of criminals shall cease and cries for a greater vengeance to be wrecked on the victims of the system. Well at any rate this cannot interfere seriously with a well organized crime ring for even if an occosional member is sent up his pull will protect him from the rough stuff that is being handed out to the obscure and friendless criminal. It is just what one might expect, not from reformers but from a ring of grafters upon whose usurped domain some individual has dared to trespass.

### Startling Facts Disclosed!

However whether the real facts are as suggested or not the analysis of some of his findings are interesting and instructive in showing the inability of the present civilization to protect itself from the facts of its own practices and teachings.

Here are a few of the discoveries he makes: Not one killer in a hundred suffers the death penalty, in fifteen years the average age of the inmates of our penal institutions shrank ten years, or in other words if the average was thirty-six it would now be twenty-six and if the same shrinkage occured the

PRISON—AS THE WOBBLIES FIND IT

next fifteen years we could expect our prisons by 1940 to be filled with youths of sixteen years. He also notes that there is an increasing number of criminals among the well-to-do but misses the significance of the fact that nearly all crimes are committed by the idle and pampered well-to-do and the degraded poor.

A few of the causes he suggests are: Downfall of religion, wrong kinds of moving pictures, "Drunk on thrills," breaking up the American home, pampering of criminals and making of American prisons such desirable places that criminals have no dread of them, breakdown of the law and that we are "becoming a nation of nomads".

### The Usual Bourgeois Claptrap.

There is nothing new in the above. One runs across about the same stuff wherever crime is discussed. While some of the causes given are genuine, to the member of the I. W. W. who has been in the clutches of the law, this stuff about pampering of criminals and the attractive charter of our prisons will seem like a joke.

He claims that not one killer in a hundred suffers the death penalty but says nothing about the fact that of the members of the I. W. W. arrested for Criminal Syndicalism in California about fifty per cent are convicted although none of them have ever been proven guilty of an overt act. Tom Connors is given five years for a crime of which he is innocent while in an adjoining county a man proven guilty of the same offense is given five days—not much breakdown of the law where an I. W. W. is concerned. It is far safer to be a safe blower, murderer or malefactor of any stripe than a worker with the spirit to refuse to be a snitch and to have the courage to stand up for his rights and try to induce his fellow workers to do so.

In repeating the old platitudes to account for the great increase of crime he fails to note that the causes—so-called—are merely the effect of the economic system. The downfall of the religion of the last century supposed by a conventional fiction to be the religion that one Jesus Christ taught two thousand years ago, and the breaking up of the "American home" upon which that religion was largely based is purely the result of the high development obtained by capitalism in this country and if any simp thinks that he can revive the "Good Old Days" he is away off.

There may be some of the features of the old system that are good particularly when viewed in light of old prejudices and measured on the scale of old beliefs and standards but the old is dead and the new is alive. People who are shocked at the criminal tendencies of the present may look with regret upon the passing of the time when the family instead of the factory or salesroom was the unit of society but modern civilization, the expression of modern production and exchange, will continue and so will its good and evil features until it has worked out its destiny and been superceded by something else.

In the "Good Old Days" the family, on the farm, the shop or the manor house, was the social unit, and ideas and customs developed accordingly. The young girl worked under the watchful care of her mother, the one person most concerned in her welfare. The boy generally grew up on his father's farm or learned his trade in his father's shop and was taught to take pride in his work and the consequent development of the sense of workmanship reflected itself in his character. Instead of the dull monotony of the modern factory where the professional nutscrewer swelters away his irksome hours the son of the village blacksmith sang to the accompaniment of his hammer which fashioned article after article while each scintillating spark as it flashed from the face of his anvil radiated the joy of creative work. There are two classes of people who never sing at their work but toil in sullen silence—they are the convicts in our prisons and the industrial slaves of our modern factories.

### Crime Flood Economic.

We take the stand that the criminal tendencies of the present are either due to economic stress or criminal influence incidental to the present economic order. Now if it is true, as everybody seem to admit, that America is the most criminal country then it is also true that the cause of this circumstance is to be found in some of the peculiar factors of our economic life.

I have been offered the opportunity within the last year of renewing my acquantance with that part of the country that is the most distinctly American —particularly in the sense of the post-war one hundred per cent variety—the Central States. It is

here that you meet up with the opulent moronism, the mediocre respectability that has been immortalized by such writers as Sinclair Lewis and Sherwood Anderson and I could not help but note some interesting developments. With them salesmenship is the true measure of mature manhood and productive labor is in disrepute. One can understand how Los Angeles has come by her peculiar psychological atmosphere when he remembers that her population is largely made up out of the successful dollar chasers of the Middle States. (Of the many geniuses produced in California since '49 not one has come from south of the Tehatchepi Pass.) One also notes the development of the real estate game, particularly in Ohio and Michigan. It is surprising the amount of land in this fertile agricultural region that has been withdrawn from cultivation and set out in lots. Strange to say, the same class of people are buying who are selling: an exchange of property between property worshipers for speculative purposes.

There are as many colleges as there are bull rings in Spain and each is under the control of one of the many Protestant sects. College graduates are as plentiful as fleas in a Frisco two-bits lodging house and most of them are engaged in some branch of the selling game and all are devoutly Protestant. the "Klan" flourishes like the proverbial green bay tree. A double halo of glory awaits anyone who can discover evidence that Jesus Christ was a real estate salesman instead of a carpenter. Bryan and his Fundamentalism are at a discount and the Bible stories don't seem to be taken very seriously, yet you are expected to accept a religion that has no foundation outside the Bible under penalty of losing caste. Conversations when not running to real estate or religion are usually on disease or death and subjects of general interest are seldom dealt with.

### Sowing the Winds of Salesmanship and Thrills and Reaping a Whirlwind of Crime

Besides the worship of salesmanship the most pronounced feature of the American character is the thirst for thrills, or as foreigners often put it, "Americans crave excitement". This attribute has an historical background that will be obvious to any intelligent student of American history. Our movies and popular fiction abound in thrills yet there is no more reason why the normal person should crave thrills than that he should have a desire for whiskey or narcotics until the habit has been fostered. Of the three I am convinced that the former is by far the most potent in promoting crime yet the most conventional of American homes encourage this trait.

Some time ago I observed a book in the living room of a middle-class family with growing children. It was written by a mediocre author whose name I have forgotten and entitled, "His Father's Son" and was a story of that immaginary West that never had any existence outside of the movies and low-class fiction. Every page contained a thrill but the whole book contained not a single fact that would add to the readers intelligence or inspire him with a thirst for knowledge or a desire for truth. The book ended in true melodramatic style; the hero got the girl and the villain got the can. It also contained nothing disturbing to last century's ideas and prejudices, so in the eyes of respectability it contained a sufficient moral and was a safe and desirable publication. And this in general is the class of literature endorsed in this country. However the patron of thrilling novels and moving pictures is not generally affected by the moral. He, no doubt, would prefer to imitate the hero if he had the character and courage to do so but it is far easier to get drunk on moonshine, steal an automobile or murder a fouteen year old child.

### Salesmanship and Crime.

The importance of the spirit of salesmanship as a factor in developing the character of America is always overlooked by investigators and for obvious reasons, yet it is self-evident. The salesman must always overrate the article he sells whether it is an automobile or a pair of socks. He makes his gain not by creating something but by getting it away from the other fellow so that his vocation developes the predatory at the expense of the creative instinct. No matter whether he exaggerates ten per cent beyond the facts or perpetrates an absolute fraud by selling a worthless article at a fabulous price there is always present that element of fraud and the predatory impulse. This is why the present American generation is habitually criminal.

Sydney A. Reeve claims that during the period 1870-1910 the people engaged in producing food and clothing increased 35 per cent, commercial pursuits 240 per cent and salesmanship 456 per cent. Is it any wonder that crime is increasing; that in a late survey in New York the criminals were found to be above the average in intelligence? They were educated for criminal careers and in organizing they are merely following the lead of other lines of business. This will also explain why it is becoming more respectable to be a criminal than a useful worker and a greater crime to organize a union than to rob a house.

### Faulty Statistics.

Still, statistics based on the investigation of inmates of prisons are unreliable and of little worth as they take no account of the fact that probably not one criminal in twenty is apprehended and furthermore they take no account of the frame-up, which is an established and highly developed art in American court and police circles. With the typical judge or district attorney the matter of finding the guilty party is secondary to that of securing a "subject" against whom they can frame up a conviction even though they have to use the perjured testimony of the denizens of the underworld who may have been brow-beaten into testifying because

the police have something on them. All they want is a "record" with no comma's misplaced and no technical error on the part of the court. It is safe to say that fully fifty per cent of the convicts are victims of a frame-up, the guilty party having escaped.

People who have learned the inside facts about the Mooney case generally regard it as an exception. However Tom Mooney and Warren K. Billings were regularly framed in accordance with the best traditions of American court procedure.

In the face of the above facts it is plain that any set of statistics taken from the inmates of prisons perporting to show the percentage of criminals among foreigners, negroes or migratory workers (Nomads) is questionable. The guilty native or "homeguard" will often escape and the friendless stranger be victimized in his place. I know of the case of a Russian who was serving a four year term for forgery, who could not speak English and could not read or write Russian, the only language he knew. The above mentioned class of persons make good "subjects" for the frameup and therefore they loom up big among the five per cent that are caught.

### Foreigners and Crime.

It may be true that some foreigners have peculiar traits that lead them into a certain class of crimes but why is it that there are not more crimes in their own countries? An American city with less than a hundred thousand of these foreigners will produce more crime than millions of the same people at home. I feel certain that the foreign criminal is more often the so-called "Americanized" foreigner. If they live their simple lives and observe their modest customs they seldom get into mischief but they are often unsophisticated peasants who have read thrilling stories of wild life in America so that they fall easy prey for the allurements of American underworld life especially after a few years of the degenerating influence and the slavery of our factory system.

It is also claimed by some investigators that the children of foreigners are often more criminal than either their parents or the native Americans of a farther remove. This is no more than natural. Raised in a bad environment and looked down upon more or less by both sides they have learned too much about America for the patient submission that has characterized their parents.

The young Americanized foreigner often tries to outdo the native in his vain display of wealth. I know a case of a mechanic who spent $500 for an engagement ring for his fiancee. They will sometimes spend the results of years of saving on a wedding and then retire to a couple of rooms in a back alley and proceed to litter the town up with half starved kids. This is bound to lead to trouble—yet moron respectability encourages this very thing and constantly warns the "ignorant foreigner" against the saner advice of the revolutionary agitator. It is a noticeable fact that there is little crime among the revolutionists either foreign or domestic, except the common "cirme" of opposing a crime breeding system.

### The Remedy.

If our premise is correct that crime (in the general sense) is economic, than the remedy must be economic and the doling out of more severe punishment will be of little consequence, as will also be any kind of prison reform. Some of Child's proposals in his ten breezy articles are well fitted for the joke column. He claims that the murder of an old women for a few dollars in Chicago was due to the failure to hang Loeb and Leopold. According to his idea they were afraid of hanging but were willing to do life for the privilege of securing a few dollars. The claim that punishment is a deterrent to crime may be true in some cases but to suppose that the average criminal stops to consider whether he will hang or get life or as to just how long he will serve is ridiculous. The gambling spirit developed by our sport columns and the spirit of salesmanship will always induce him to take a chance.

Child's pet remedy is to organize civil committees whose purpose will be to jack up the police and courts and in a general way deal with the crime problem. To all of this we can only give the laugh. The history of all these uprisings of the "respectable" element is that it only works until some other fad gains their attention and then it "peters out". As a crime doctor he is the bunk.

In fact, there is no remedy for the crime problem that will be reasonably effective so long as the condition that promotes it prevails. When the rank individualism which prevails at present has been superceded by the spirit of helpfulness that every experienced worker knows follows in the wake of industrial unionism and when the mind of the worker is turned from the frivolous matters that now gain his attention to the purposes of the union, this, with the better conditions consequently prevailing on the jobs, will tend to create in him good habits of workmanship and a remolding of character far beyond anything that has prevailed in the past.

Respect for the law as we know it under the rotten system of court procedure will only aggravate the evil. Instead we must agitate incessantly for the complete overthrow of the institution of law based on technical jurisprudence. A system born of an age of small scale production has now become a merc tool in the hands of professional politicians who know nothing and care less about our needs under the system, never having themselves done anything useful under it, and whose only purpose is to shake down bootleggers, sell favors to corporations and oppress union men.

It may be argued that this is all well in theory but since the world is not run by theories but by economic law then if saesmanship and crime are increasing will they not continue to do so? Very

well, but we must also remember that all law is subject to the universal law of change.

In the early days when war was carried on more cheaply and the cost was less than the value of the loot, war was a legitimate enterprise, but now that it (as a general proposition) no longer pays, there is a great cry going up to outlaw war. Things did not remain as they were and will not remain as they are. Sydney A. Reeve shows that out of every dollar that the consumer pays for a commodity more than fifty cents goes to salemanship and similar non-productive activities. Will a system like this continue to prevail against a saner system of production for use?

The age of salesmanship is but a passing phase in the development of capitalism. Already we see signs of its nemesis. Chain stores, mail order houses, and other institutions of the larger development of capitalism all tend toward the elimination of useless expenditure so that the indication is that sooner or later distribution will be reduced to the same degree of efficiency now reached in the most advanced productive industries, that the fininshed product will reach the ultimate consumer without any useless outlay.

Also, in respect to the law: Great industries no longer look to the government for aid and defy when they do not command it. Intelligent workingman are also learning the lesson. Only mediocre respectability and its dupes are "law abiding and patriotic," and all signs seem to indicate that the time is near at hand when both technical law and parliamentary methods of government will be in the discard. Humanity emancipated from the illusions of the past will be in a position to face the cold facts of the present, unhampered by political and religious superstitions and to prepare for a future where labor will come into its own, where merit will be the measure of reward and where there will be no place for crime except that negligible quantity classed by Professor Ferri as "non-economic crimes" and as these are mostly pathological they can be dealt with accordingly by the most advanced scientific methods that an improved age can afford.

You can talk as you will about the "Good Old Times" and crab all you like about the wicked and criminal character of the present, there are brighter stars beyond the futures portal than have ever shone before.

## *And They Want To Hang Richard Ford!*

"Not one killer in a hundred suffers the death penalty," says Child, but Capitalism, which won't hurt you much if you kill a picket or sell poison booze, will hang you for merely organizing a strike. That's all Ford did, and he served eleven years for it, and next month will be tried again. Send funds for his defense to Sec'y. Cal. Branch of the General Defense, Box 574, San Francisco, Cal.

# Slavery in Alaska

(Continued from Page 14)

war women were hired, and they were anxious to get rich quickly, and packed as high as twenty barrels. The usual cut in wages followed. And now they must pack seventeen barrels to receive as much as they formerly received for ten.

The fishermen are hired in two different ways: first (or the old way) they get $50 a month and board, and seven cents a barrel, this to be based on the amount of fish packed; secondly, (or the new way), they pay the fishing crew $1 per barrel, to be divided among five men. This new way is becoming very popular with the companies, for if there is no fish, the men receive no pay.

After working aboard this saltry for a month, we found out that other floating saltries were paying 75 cents for gibbing, but owing to the bonus system most of the crew were afraid to demand an increase. After nearly another month they did get up courage enough to meekly ask for 75 cents per barrel, but were told that they could work for sixty or be paid off at forty. And as that would mean a loss of about $120 each, they decided to work. As for me, I was hired in Alaska, and at a flat scale, so I called for my walking papers. On September 3 I boarded the S. S. Redondo at Blue Fox Bay (where the Floating Saltry was anchored) and on Sunday, September 6, arrived at Seldovia.

### The Whims of Poor Fish

Now I heard that the saltries there would run until the first of the year, so I expected to get work and complete my winter stake, but on arriving there I found that there were no herring running at that time.

I got a room at the only hotel and proceeded to wait for the herring to decide to come, and incidently I began to spend my winter stake, as it cost me from three to five dollars to live in Seldovia.

To make a long story short, I waited until the first of October for that elusive job to show up. Then I was lucky enough to get signed onto a four-masted schooner bound for Seattle.

Leaving Seldovia October 4 we battled with tides and head winds for nine days and lost nearly all the sails and dropped anchor at Seldovia; we never got more than thirty miles out, and the wind would drive us back. As I never was a sailor, and had never been to sea, I will not say anything about conditions on this schooner as I suppose they were the same as on all other sailing vessels. On the 16th of October we were paid off and the next boat was due the 6th of November.

Good-bye my winter stake.

**The third article in "The Workers' Play" series has been unavoidable omitted from this issue. We hope to resume the series next month.—EDITOR.**

HENDRICK VAN LOON

# Book Reviews

**A Bible For A Classless World**

In red letters on the jacket of the latest book by Hendrick Willem Van Loon attention is called to the fact that this man is the author of "The Story of Mankind". That, presumably, is the reason for his writing, "Tolerance". Probably it is also the reason he wrote, "The Story of the Bible". For in "The Story of Mankind," Van Loon, attempting to make history easy for children, charmed millions of adults with his simple, rather quaint, straightforward, homely Dutch style, and became a "best seller." Naturally he has tried to do it again, and I am of the opinion he has not succeeded.

For "The History of Mankind" was really a history, inaccurate in spots, but primarily a setting down of fact in a rather pleasing way. "Tolerance" is too little a history of free speech (as it purports to be) and too much a sort of rambling Liberal lecture on the evils of revolution, for Van Loon is horrified to find that all the revolutions thus far, have involved a period of bitter struggle, in which the revolutionists forgot to be gentlemen and ladies, and showed a tendency to stuff the mouths of their traducers with grave dust, or choke their words short with nooses.

There is no place in Van Loon's philosophy for a class war to the very death of an oppressing class, and unfortunately, all class wars known to history have been of this type. Indeed, once the actual final battle is on, I do not see how it is to be avoided that there will be a period during which "tolerance" of the enemy, especially of the recently defeated former ruling class, will be the most suicidal folly, resulting in groups to which history has signaled, "exit" rushing once more onto the stage of human affairs, and turning mere drama into tragedy. When the workers get control of the industries, Van Loon will immediately demand the greatest and widest tolerance for the former owners of the industries, and all their friends and agents, agents provocateurs included, and counter revolution will immediately raise its head if his words are heeded.

The reason for Van Loon's attitude on this point, which he shows in his discussion of the Reformation, the Cromwellian Revolt, the Great French Revolution, and the present proletarian revolution, is that he like most of the educated Liberals, does not want any revolution. Liberals are publicists, and authors, and college professors, and doctors and lawyers. They live busy (but not too busy) comfortable (but not luxurious) lives, and they find themselves perfectly safe and happy as long as they deal with pure science, philosophy, and similar studies. Revolution has little to offer them, and would temporarily interfere with their work. Their work is of such a nature that strife plays no part in it, and free discussion a great part. Naturally this intermediate group of literateurs and pedagogs sees no real need for the workers to get the industries, and is in no hurry about it, when it does in isolated cases, see the need of a change in the social system. Van Loon expresses its attitude perfectly when he says:

"The human race is possessed of almost incredible vitality.

"It has survived theology.

"In due time it will survive industrialism.

"It has lived through cholera and plague, high heels and blue laws.

"It will also learn how to overcome the many spiritual ills which beset the present generation.

"History, chary of revealing her secrets, has thus far taught us one great lesson.

"What the hand of man has done, the hand of man can also undo.

"It is a question of courage, and next to courage, of education." (p. 395.)

This is the true voice of the Liberal. It is the voice of a group of people who are proving up to the hilt the Marxian theory that people's thoughts and most of all their thoughts on social movements and structures usually depend on the way they make their living. On pages 352, 353 of "Tolerance" we have the same thing in other words. Van Loon says there are three types of statesmanship. One is the type which despises the common herd and deliberately starts out to rule them for their own good, and this type establishes "emperors, sultans, sachems,* sheiks and archbishops and they rarely regard labor unions as an essential part of civilization."

---

* NOTE.—Van Loon is wrong about sachems—see Morgans, "Ancient Society".

The second type is the group of oligarchs, dictators, first consuls, and Lord protectors, who think mankind is all right in the main, but that executive business is best handled through the trusted friends of the people.

Then the third group is the Liberals—hear Van Loon on his own class: "They contemplate man with the sober eye of science and accept him as he is. they appreciate his good qualities, they understand his limitations. They are convinced from a long observation of past events that the average citizen, when not under the influence of passion or self-interest, tries, really very hard to do what is right. But they make themselves no false illusions. They know that the natural process of growth is exceedingly slow, that it would be as futile to try and hasten the tides or the seasons as the growth of human intelligence. They are rarely invited to assume the government of a state, but whenever they have a chance to put their ideas into action, they build roads, improve the jails and spend the rest of the available funds upon schools and universities. For they are such incorrigible optimists that they believe that education of the right sort will gradually rid this world of most of its ancient evils and is therefore a thing that ought to be encouraged at all costs."

There is much more of this sort of thing scattered through the book, or perhaps it would be better to say, there is a certain amount of history and biography scattered through a book on this sort of a philosophy. If we add to the above two quotations the statement that Van Loon believes that intolerance comes from fear, and that sometime, in ten thousand years or a hundred thousand years, when education shall have conquered fear, there will also be perfect tolerance, we have a fair summary of his theory.

In a sense we can agree with him. It is fear of losing its fat and having to go to work that makes the present ruling class pass Criminal Syndicalism laws, as another ruling class established an Inquisition. But unfortunately for us, the working class, which is afraid all the time of losing jobs, or losing its heavenly home, or its well mortgaged bungalows in the suburbs, and its individual reputations for being good slaves, is also tolerant—too damn tolerant of bad conditions, and low pay, and millionaires, and preachers, and international wars for the House of Morgan, and unemployment. I think it is too tolerant of the whole outfit of middle-class Liberals who tell it to be more tolerant.

The workers need the industries. When they get the industries and have managed to establish a classless society, then "Tolerance" will be good advice. When there are no vested selfish interests either ruling the world in defiance of the masses of the people and exploiting those masses, or organizing counter revolutions to take back what has just been taken from them, then will fear disappear, at least the fear of losing your wealth and the fear of being fired, and then we can all be calm, cold, collected scientists—but not until then.

Meanwhile, workers who are not as much interested in petty bourgeois theory as they are in the story of the fight which each successive revolutionary group has had to wage for the privilege of putting out its propaganda, will do well to avoid Van Loon and possess themselves of a somewhat older book, Bury's "History of the Freedom of Thought" (Home University Library) where in a third as many words, with considerably more accuracy of detail, at one fifth the price, they will find the facts they want. The philosophy is hardly better, but there is much less of it, and that is an advantage over Van Loon.

CARD 794514.

**TOLERANCE, by Hendrick Willem Van Loon, Boni and Liveright, New York. Price, $3.**

**It Happened On Armistice Day**

The gifted author of "Poor White," "Marching Men," "Winesburg, Ohio" and other stories, has again created a tale that is easy to read in "Dark Laughter". Sherwood Anderson's latest novel is variously described by literary critics as "a better thing than his superb 'Winesburg, Ohio'; "Some of the most marvelous writing Mr. Anderson has ever done"; "a bid for immortality," and so on.

The story is about a newspaper reporter whose wife is a feature writer and also engages much of her time in writing a fanciful novel which calls forth the amusement of her husband. But this is silent. He merely smiles, maddening her. Their interests seem very different, and his smile is as cruel to her as is her oft-expressed thought that her husband is unreliable, flighty.

However, the latter estimate seems correct. One evening after having driven her from their apartment with that quiet smile of superiority, he starts out without even leaving a note and goes down the Ohio and Mississippi in a boat, something after the fashion of Huckleberry Finn—just drifting along in no hurry. He stays for months in New Orleans. Then northward he turns again to Old Harbor, Ohio, where he spent his boyhood. He has changed his name.

In Old Harbor he secures work at varnishing automobile wheels. Here he labors beside Sponge Martin, a distinctive character who goes, in good weather, on fishing parties with his "Old Woman". They take along some moonshine stimulant and while the fire smoulders low in the mild night air, and the lines are out in the stream these two, beneath the magical potency of the booze, drop off their years and she "acts like a kid". Reality grows hazy, they do not see each other's wrinkles nor the other blighting marks of adding years. Their youth is renewed; love knows a renaissance; the factory is forgotten; the night both soothes and stirs, and they are happy.

These two are figures to be remembered, more I think than the central character and his women. Oh, yes, there are women connected with this Bruce

Dudley, the runaway reporter. In Old Harbor he excites the interest of his employer's wife, who frequently drives down from the hill where she lives to the factory to take her husband home. Sponge notes her regard and joshes Bruce about it. Bruce takes "the bull by the horns" and applies at her residence for a job as gardener. He gets it. She is pleased while her husband is irritated. Perhaps he scents disaster.

In time Bruce seduces the willing wife while her husband is parading down town on Armistice Day. Soon after that she tells him that she is to have a child. Bruce has quit and gone out of the scene. But he comes back and persuades the woman to go away with him. She tells her husband her intention and that the child to be born is not his. They leave in the night. The negresses who are servants in the household come home with their beaux, and the disconsolate husband, the town's leading citizen, young and rich, hears them laughing shrilly as one says: "I knowed it all the time".

But the husband attempts to console himself by thinking of the indigent lover trying to take care of his pampered wife whose shoes are made to order at thirty dollars a pair, and of the twenty pairs she is used to having at all times.

And that's about all the story. Dudley makes a weak figure, strong only in a sort of sadism, a maliciousness which prompts his quiet smile of derision and causes him to take a woman, in whom he is not greatly concerned, from her husband. They are two drifters meeting on a muddy stream, this erstwhile reporter and the manufacturer's wife. But that the latter should go away from luxury with a penniless man is seldom supported by the actualities of life, and the act has something about it, if not desperate, then certainly heroic. It is passion overruling reason, raising a wall between the future and clear vision.

The story, as are all of Anderson's, is simply told, so simply, with such ordinary language that it seems an excess in this direction. His technique is almost patently studied, and verges on tautology in many places. Still there is much beauty of description, and keen penetration of the ways in which minds work. The psychological concern of this author, and his Sponge Martin make the book worth reading while the praises raised upon its publication appear exaggerations. Perhaps they were sounded partly because of Anderson's courage in dealing with a subject just a fraction as frankly as Europe's best writers limn it. There is in the psychological novel, in the novel of life as it really moves, no successful evasion of sex possible. Puritanical England and America hypocritically brand candid mention of sex pornography. If that be true think of the great works of literature that fall under this reprobation. "Madame Bovary," "The Red Lily," "Growth of the Soil"; even much of "Les Miserables" and "Germinal"! Just a few, to illustrate. Here is an Index Expurgatorius by the killjoys which would fling into oblivion much of the world's greatest literature.

For daring, even so mildly, and with employment of suggestions and subterfuges, to defy this Sumnerizing Anderson is to be congratulated.

ROBERT GRAYSON.

**Dark Laughter, by Sherwood Anderson. Boni and Liveright, New York. Price, $2.50.**

**Should Babel Be Blasted?**

Considerable interest is attached to the various attempts that have been made to introduce into common use an international auxiliary language. It seems, however, that most of the literature published on the subject deals with the merits or demerits of the different projects proposed rather than with the feasibility and soundnes of the idea. The book called, "Ido (Problem of an International Auxiliary Language)" by Luther H. Dyer, tells of the latest plan and gives arguments in favor of its general adoption.

The language barrier to the dissemination of ideas is generally overestimated and there is no evidence to prove that if all the great nations of the world would adopt a common language that there would be any noticable abatement in prevailing jealousies and animosities.

We do not have wars because nations misunderstand each other's motives, the reverse comes nearer being the truth. There is no reason to believe that had the delegates who concocted the Versailles treaty had the use of a common language that the terms of the treaty would have been different in any respect. It is conceding a great deal to admit that the proceedings might have been simplified to a noticable degree.

It requires years of practice to acquire facility in the use of a language and it cannot be denied that even a simplified scientific language must present some difficulties to the learner which can be overcome only through hard study and continuous practice. A large delegation of persons who have not made languages their special study would probably find itself in a position where each individual is forced to employ a foreign language to express his thoughts if Ido, Esperanto or some similar artificial language were officially adopted for international conferences.

As an aid to the promotion of better understanding among the workers of different nationalities the idea of the usefulness of such a language may be discarded at once. We find within each industrial country a considerable number of more or less antagonistic movements offering solutions to the problems of the working class. If the possession of a common language is to create greater harmony in the labor movement; then within present linguistic boundaries there should be little or no divergence in opinion as to how best to solve working class problems. As a matter of fact there is now very little difference between the most advanced labor

organizations of the various nations of the world, while at the same time each nation has organizations ranging from the extreme conservative to progressive radical.

Clearly then, it is not the difficulties of communication that have caused the development of factions, cults and parties within economic classes. Neither do these difficulties interpose any barrier to the spreading of ideas where economic interests demand their acceptance. We find generally where interests and conditions are the same that ideas are the same or similar, and any important difference in beliefs or structure of organization is traceable to differences in physical surroundings. This without regard to nationality or language.

It is interesting to note how tenaciously immigrants to the United States cling to their native language. Is it to be supposed that they, or the native workers either, would take kindly to another language which they would be required to use only occasionally?

If one is convinced that an auxiliary language is really a practical possibility, the one known as "Ido" may without doubt be accepted as the best so far offered.—**C. K.**

# The Beggar on Wheels

NO MORE they say, "If wishes were horses, then beggars might ride," for the beggar may go in an auto now, and just because he is in a second hand Ford, is no proof that he is not a beggar yet. Here you see the happy (?) home of the "Fruit Tramps" of California.

California is noted for its many schemes of graft, and the "auto park" is one of the latest, and best. As always, it is the worker who is beggared in the course of the graft.

The "Fruit Tramp" is making his appearance in the orange belt towns and his car must have, not a garage, indeed, but standing room while its owner seeks a job with which to buy it gasoline and other provender.

An adaptable capitalism arranges such matters—for a price. Yes, for cash. It costs from twenty-five to fifty cents a night, or by the week about a dollar and a half, in most places, to provide lodgings for Lizzie in an "auto park".

The fruit rancher seeks the victims of his exploitation most readily in the "auto park" for he knows that the proletarian in a jit, the migratory by gas, has to work all the time to manage it, and therefore has to work at whatever wages are offered. If he does not, the owner of the "auto park" will take all his money and push him out, without mercy and without "joy juice," absolutely stationary by the side of the road, until the first motorcycle policeman comes along and arrests him for parking where the law sayeth there shall be no parking.

Men, whether ordinary migratory workers or ruined small farmers, become "Auto tramps" in the hope of gathering some of the gold of the "Golden West," some of the golden oranges, some of the pale yellow lemons and glorious apricots, and the luscious Santa Clara valley prune and (Have you had your breakfast, er, that is to say, have you had your iron today?) some of the raisin grapes of Fresno. Not for themselves of course—ambition does not rise so high. If they owned the oranges, or if they could pay the several dollars a box they are worth to people who own them—they would not be "Auto Tramps". No, the "Auto Tramp" is a meek soul, and if he can get about ten cents a box for picking the precious "Sun Kist" fruit of California, he will be quite happy.

In order to have any chance at all, he rushes up and down the state, from oranges to nectarines, and to prunes and to grapes, going farther north to the apples of Oregon and the Wenatchee valley, and coming back for late crops in California. Weather means nothing to him—for the job is just ahead, always, beckoning him on—and Lizzie creeks, and groans, demanding new springs and piston rings, and the sand of California's countless dust storms gets into his food as he eats it in the lee of her grimy, battered flanks. It is a hell of a life, and one filled with worries and cares.

**A Bad Forecastle**

Double deck bunks have no place in modern shipping, but the employers will continue to use them as long as the workers are divided and unable to effectively demand anything better.

# The Shipping Octopus

(Continued From Page 6)

We see our brown and yellow fellow workers fighting the most desperate battle against the world's greatest imerialistic nations, and in Shanghaii, Canton, Hongkong,

we see the vested interests of Lord Inchcape, Great Britain's largest maritime concern, the American-Scotch concern represented by Capt. Robert Dollar, the Japanese shipowners and these Great Christian French companies (mostly controlled by the society of Jesus) united together against their striking seamen.

In Australia, we see Melbourne, Sydney, Freemantle, the center of a perfect strike, as realizing their situation, every marine worker, whether a seaman or a longshoreman or anything else connected with sea transportation, strikes and shows the most wonderful spirit of Solidarity, a thing unknown in this paradise for scabs and stool pigeons called the Uniter States.

In the United States the American interest allies itself to the foreign shipping trusts, (one more proof of capitalistic solidarity) and drives the seamen and longshoremen into the most abject state of servitude. Due to the distrust spread amongst the seafaring peoples by the rotten tactics of labor fakirs in conspiracy with the shipowners, it is clear sailing for the ship slave owners of America.

In Europe, we see the sons of the proud Vikings, our yellow haired fellow workers, the men who pioneered the sea a few centuries ago, as freemen—the Norwegian seamen, in another words—now trying to do away with the horrible conditions imposed upon them by the same vampires, the shipping octopus.

Whether we are under the direct ownership of Morgan, Rockefeller, Dollar in America, Inchcape, Ellerman, Pirries in England, or the Jesuitic interests who own the French **Messagerie Maritime** or **La Compagnie General Transatlantique,** we must realize that the day we fight one of them we must be prepared to fight all the other concerns as well. Their solidarity is perfect, and educational meetings on the subject are no longer required. They ally themselves into a solid united front against the poor deluded and chloroformed marine slaves.

### Much Divided Marine Slaves.

Over 900,000 ship workers and 1,100,000 dockers, longshoremen and similar workers, are spread over all parts of the world, sailing the seven seas, loading and unloading ships of the same master. Yet **they** are divided by petty warring creeds and racial prejudices, all subtlely accentuated by their exploiters. Pitted against each other, often estranged by

insurmontable barriers, such as languages and atavistic racial incompatibility, which has so far prevented their coming to a common understanding, with geographical boundaries, capitalistic propaganda, cunningly disseminated so as to create nationalistic tendencies with their natural Xenophobia, the cards are stacked against these men who are the source of wealth and are suffering the same evil exploitation at the hand of the same culprit.

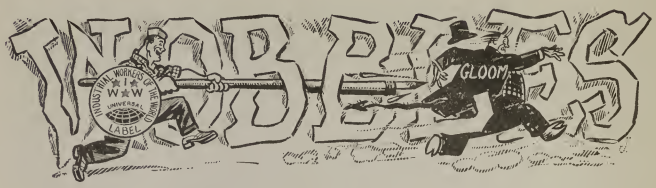
**Greed Forcing Unification.**

However the capitalist system is carrying within itself the seed of its own destruction. Grinding its slaves, in order to increase its profit, the shipping octopus steadily drives the suffering human herd into open rebellion, and during the year 1925 we witness the result of the cruel policy of Imperialistic expansion of the shipping magnates. A frontal attack is being made by the British and American shipowners ( the most aggresive among the International combine) against the marine workers the world over—reduction and drastic cuts of wages, lengthening the working hours—in their arrogance they forget all prudence, and all their past tactics in trying to sugar-coat their proposition, it is the last resort of a desperate attempt at breaking the remaining unions that are left to the marine workers.

However the ruthless actions of the shipping trust awake the slaves to the fact that internationalism is required, in order to prevent any further encroachment and in order to protect the common interests of the toilers of the sea, of men that have been in contact for years and at last recognize their mutual suffering, and are finally convinced that the pangs of hunger are felt by the white Britisher as well as by the yellow coolie. 1925 witnesses the dark deeds of a corrupt society on the brink of collapse, trying to hold its own, by the bloody outrage of a drunken dictatorship over the subjected colored races of Africa and China as well as over the white seamen of Australia and America. Great Britain shocked by the resistance of the British seamen, sees the entire Empire paralyzed by a general strike of marine workers encircling the Globe. The United States themselves answer the call and the Marine Transport Workers of the I. W. W. shows its detestation towards the exploiters of the working class, by a wonderful gesture of solidarity, considering the unfavorable economic conditions existing at that time.

These struggles prove beyond the shadow of the doubt, that the seafarers are realizing, that the time has come for international action. It is forced upon them by the imperious necessity for protection. We all realize that nationalistic prejudices still exist to a very great extent, but we also rejoice at the recent awakening of all races to cooperate and their clamoring for international understanding among the workers of all colors and all creeds. We are paving the way toward One Big Union of Marine Workers, who will lead the way to a cooperative commonwealth of all workers.

The need of an international understanding, among the marine workers, is felt so keenly, that regardless of the various obstacles found in the way the Marine Transport Workers I. U. 510 of the I. W. W. insists on going ahead with their original plan of bringing together, the various elements that compose the Marine Industry in the Western Hemisphere.



Seamen sailing out of New York, New Orleans, Frisco, Montevideo, Buenos Aires, Valparaiso, Vera Cruz or Tampico and a few other ports of minor importance, are considered by the so-called **better class landlubbers**, as the riff-raff, the floatsam and jetsam of the human race. Yet these same men are the very ones to whom are entrusted international transportation, without which the parasitical gang of shipping manipulators and stock exchange brokers of Wall St. could not raise five cents to buy an ink pad, let alone the waste of a fortune on night parties, uptown on Broadway.

The greatest problem that confronts the seamen in their struggle against the shipowners, is the lack of cooperation and sometimes the complete disinterest of seamen's organizations in other localities not directly affected by the strike. In many instances strikes have been broken, sometimes unconsciously, by transporting cargoes on foreign bottoms, while a nation happened to have a national general strike of seamen. Yet the seamen who were helping the shipowners to defeat another group of seafaringmen, were considered perfectly good union men. While the M. T. W. I. U. 510 had a strike in the United States, the N. S. & F. U. of Great Britain or the Syndicat des Marins in France or unions in South America, considered themselves perfectly justified to stay on the job under their respective flags and carry the cargoes which would have been carried by the struck ships in normal time.

However, progressive seamen the world over have lately realized the folly of such a mode of action, and decided to find ways and means of coming to some kind of an understanding between the various unions of marine workers.

At Montevideo, where the Second International Conference of Marine Workers of the Western Hemisphere will meet, lie the hopes of all revolutionary marine workers. **Sectarianism will have to be banned and only discussion on economic questions regarding the betterment of the marine slaves and the way to protect the seafaring class and kindred workers will have to be in order and nothing else**—thus avoiding side tracking the most important issues and losing very valuable time on minor theoretical "isms".

The outcome of this conference cannot be prophesied, though if the workers who man the ships are ready to forget their petty divisions and racial prejudices, and come together on common grounds, they will certainly bring many changes in the marine industry. At this conference the marine workers will have the opportunity of forging weapon, and will become able to attack the combined forces of the shipping trust.

**MAGICIAN IN PERFORMANCE: "So you see I merely dip him in the magic liquid, and behold; how fat he gets right before your eyes".**

**SKEPTIC IN AUDIENCE: "That's nothing, he's probably getting fat from profit."**

# Preamble of the Industrial Workers of the World

THE working class and the employing class have nothing in common. There can be no peace so long as hunger and want are found among millions of working people and the few who make up the employing class have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production and abolish the wage system.

We find that the centering of the management of industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers.

The conditions can be changed and the interest of the working class upheld only by an organization formed in such a way that all its members in any one industry, or in all industries if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."

It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown. By organizing industrially we are forming the structure of the new society within the shell of the old.

# EDITORIALS

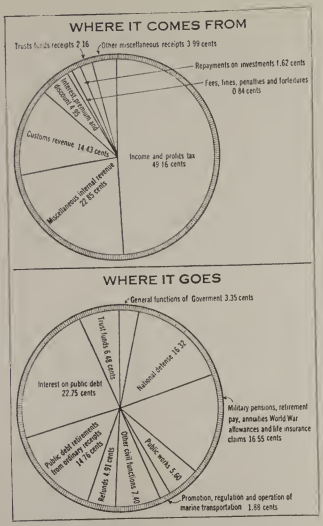
**EXCITEMENT IN THE WOODS.**—The eight-hour day means eight hours work from camp to camp. Ever so often the job pictured below has to be done over again, and when the time comes, there is always a big fuss started. The logger who, like Scissor Bill, "Always will be satisfied, until he's dead, with coffee and doughnut, and a lousy old bed," had better quit now and go into town. He will feel out of place pretty soon, for real men are weary of conditions as they are.

**TRAMP, TRAMP.**—Still they blame the Wobblies for being migratory! And just last month the City of Oakland, California, raided the one warm spot in the misty, chilly, Bay Region, outside of a certain abandoned cemetery on the peninsula, where unemployed workers congregate. This was the California Pottery Plant. There some sixty men, unable to get casual jobs enough to keep out of the streets at night, slept around the warm lime kilns, huddled together like sheep around a haystack. Judges W. J. Hennesy and Edwin J. Tyrrell, in a display of that unusual legal perspicacity which has always distinguished California jurists, decided that it was illegal for workers to be without a home, so they should be chased out of Oakland, and put on the tramp. This was done. And the editors of capitalist journals around the Bay region wrote editorials about the evils of tramp life, and blamed these would be workers, these unwanted workers, for being tramps! There is no limit to the stupidity of capitalist police and capitalist editors.

**RATTLE, RATTLE.**—Stanley S. Ringer, General Electric employee, calling himself a toolmaker, supposed to have been employed at this trade by the G. E. in their West Lynn plant went up to talk to the young master class students of the Massachusetts Institute of Technology the other day.

He described to them what he ingeniously calls the "suggestion system" in force in the G. E. shops, by which a mixed board receives suggestions from the slaves for stunts that will displace labor, or throw sops to the workers, and keep them quiet. The students wanted to know whether the unions objected to this board, and Ringer stated that they did. The students wanted to know whether this sort of activity prevented the unions from growing, and Ringer was pleased to state that it did. The students wanted to know whether there was anything at all for a union to do where such a system prevailed, and Ringer said:

"Yes, in my opinion. A Labor Union can use its organization for social activities. If the employes are met by a decision by the final arbiter, the manager, which dissatisfies them, then the union organization could function in the regular way. It could finance a strike, and use its economic power to get justice. I will say that we have not yet found anything serious enough to question the manager's decision."



When you hear a workingman talking like this, always listen very carefully—the keen ear will detect a faint metallic rattle, the slight chinking noise of the thirty pieces of silver in his pocket.

**THE TRADE CONFLICT.**—The alignment of Europe against the United States grows clearer to certain of the more far sighted servants of American capitalism, and they react by making the first careful moves in the chess-game of international war. They prepare for the inevitable conflict first of all by pointing out how the United States is being attacked, and by insinuating a threat of war against "our" assailants, a threatening gesture carefully disguised as a longing for peace, because that is part of the game. The words of Secretary of the Treasury Mellon are like those of the fond parent who gets a sadistic pleasure out of beating up his children, "This hurts me, my son, more than it does you." Mellon says in his last official report on the Treasury Department:

"It is of interest to point out the pro

An Army Is Also Useful For Killing Strikers

**SOURCE AND DISTRIBUTION OF U. S. GOVERNMENT INCOME**

**Of Course The Worker Provides It In The First Place**

portion of government expenditures which are due to war. While it is not possible to segregate entirely all expenditures which might fall in this category . . . the expenditures which are directly or indirectly attributable to war and the national defense compose over 80 per cent. of total Federal expenditures. The amounts spent by this Government in aid of agriculture and business, for science, education, better roads, and other constructive efforts are insignificant when compared with outlays due to war and national defense. This will be the inevitable situation as long as war is the method of settling international disputes. These facts should be faced squarely by those who clamor for reduced government expenditures and at the same time oppose the world's efforts to devise rational methods for dealing with international questions."

Mellon knows, as well as anybody, that there will be no "rational methods" devised, that his auditors, the business and financial magnates of Wall Street, would be the last in the world to give up their plans for world-wide financial hegemony (extension of the Dawes Plan, etc.) and therefore this is simply a statement to the common people who are expected to fight the battles of the next war that they can do so with a clear conscience, for we are not the aggressors; this is a call to the rich for a continuation of their financial expenditures, and their probable increase, —a rallying cry to the bourgeoisie of America—a note of persuasion and an argument for them to make ready.

Hoover is even plainer. He points to the specific issue, the thing for which the armaments are needed. He has complained in a recent speech before the Chamber of Commerce in Erie, Pa., that the debtor nations in Europe are not acting right. They have control of some of the sources of raw material that is needed by the industrial oligarchy in America, and are daring to "hold us up".

One of the financial editors of the Chicago Tribune, reporting on this situation says: "Secretary Hoover appealed to the other nations to abandon these wars upon us and other consuming nations, basing that appeal on the **interest of the world as a whole (!)** (our emphasis, Editor). The Tribune also says: "Is the world on the brink of a great international trade war precipitated by the monopolization of impartant products through the governmental action of various powers?

"It is known that British government legislation established the system of restricting the output of rubber in the British possessions in the far east as a result of which American consumers in 1926 will pay $600,000,000 more than what is considered a fair price. The British are boasting that at this rate they will collect from

Americans in a few years enough to discharge the British war debt to the United States.

"It is known that the Brazilian government has enabled the Brazilian coffee planters to double and treble the price of that berry by manipulation of exportation and that similar expedients in Yucatan have boosted the price of sisal from which the farmers' binding twine is made".

And from the same inspired article we learn that Congress is discussing, on the quiet, various forms of reprisal.

Hoover, however, though from the same inspired source (the Trib's feature article) we learn that he denounces the British and other monopolies as "swindles," does not come directly out with a threat of "reprisals". That sounds too brutal, and the common people must learn to think that we are long suffering, patient, and most forgiving. He proposes that we accomplish the same thing in another way. We shall just ruin these monopolies; we shall 1) find substitutes for their products, and 2) "stimulate production in countries which are not in the control of these monopolies".

This last means that we shall compete in the race for colonies, since all the products monopolized are tropical goods. We have made a beginning in Liberia, and we are on our way to empire, in Africa, South America, and the sea islands, and Asia. That's all. Of course, there couldn't be any objection to that! Only about a thousand wars have been fought over colonies, and there are only four colonial rebellion going on at the present time, on account of the European colonial policy!

# The Lumber Industry

## Will Its Workers Waken?

By J. J. DUNNING.

(Secretary-Treasurer of the Lumber Workers' Industrial Union No. 120 of the I. W. W.)

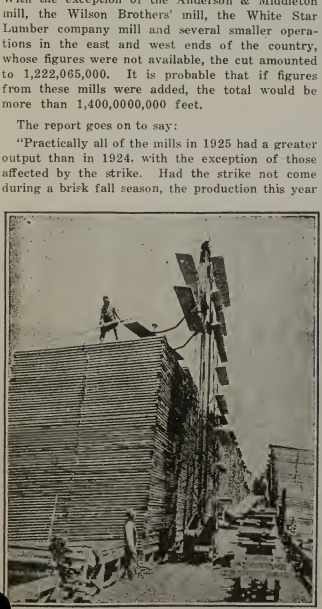
THERE is nothing wrong with the lumber industry of the Pacific Northwest, but there seems to be a lot that is wrong with its workers. The industry is doing very well indeed. It is all right for the Acme Swenson Employment Office in Portland to say that times are hard in the woods, in order to justify its cynical advice to the workers, "LIVE, HORSE, 'TILL THE GRASS COMES". (They actually posted this notice last week on their black-board, which was void of job offers).

But the lumber industry is running along alright. It is not in what could be called a "boom" period, but the constant demand for timber has resulted in a constant and normal activity in the woods.

Figures recently received from the Grays Harbor district show that this typical territory is turning out practically its full quantity of product—as much as it ever cuts. Official (state) figures compiled for 1925 show that Grays Harbor lumber production for 1925 reached the enormous total of 1,400,000,000 feet. This figure exceeds by almost 200,000,000 feet the production of 1923, but falls approximately 100,000,000 below the estimated production of 1924, based on the shipments by rail and water that year. The drop in the annual cut is accounted for by the mill strike during the fall months, which substantially reduced the figures of five of the larger mills.

The Grays Harbor Lumber company, Hoquiam, had the largest individual cut of any mill, the production there totaling 146,000,000 feet. Of this cut, approximately

two-thirds was shipped by water, 54,775,000 feet being consigned to domestic markets and 48,600,000 to foreign ports.



The Eureka mill, cutting hemlock, had the second highest individual figure, 133,000,000 feet, of which practically all was shipped to the East Coast by water. The Grays Harbor Commercial company was a close third, the figures from that mill being 132,414,000 feet, of which about 80 per cent was shipped by water.

The Donovan Lumber company, operating two plants, had the largest cut of any company, the total for both mills being 160,373,000 feet. The Schafer Brothers' Lumber company, with three plants, had a total cut estimated at 150,000,000 feet.

Figures of the lumber cut for 1925 were compiled from a survey of the production of all mills. With the exception of the Anderson & Middleton mill, the Wilson Brothers' mill, the White Star Lumber company mill and several smaller operations in the east and west ends of the country, whose figures were not available, the cut amounted to 1,222,065,000. It is probable that if figures from these mills were added, the total would be more than 1,400,0000,000 feet.

The report goes on to say:

"Practically all of the mills in 1925 had a greater output than in 1924. with the exception of those affected by the strike. Had the strike not come during a brisk fall season, the production this year would have reached a total of 1,600,000,000 feet, it is believed."

THE FINISHED PRODUCT
Sawed Lumber Being Piled By Machinery

The strike, it will be remembered, was an unorganized walkout during the first week in October, last year, which resulted in a raise of fifty cents per day for most of the workers in the Aberdeen saw mills. It was a means of deflecting a part of the enormous profit of the lumber barons into the pockets of the slaves who make those profits possible, and it was good as far as it went. The figures show that it made only an insignificent dent in those profits, and that there is plenty more where that four bits raise came from—the workers have only to reach out and take it. They have only to organize and strike. Unorganized, they have probably won all they can get.

These figures refer only to sawmill production, but as the mill is at the end of the process, and the master class has so far never, during strikes or otherwise, found any way to make the mills function without the activity of the workers in the logging camps, it seems reasonable to suppose that the loggers are fairly busy during this period also, and that their masters are being made fairly prosperous.

And the workers in these logging camps? What are their conditions, their wages, and hours?

Well, they are getting their $3.50 low, on the average, with a dollar or a dollar and a quarter deducted for board. The board is steadily getting worse, just as the bosses are steadily getting richer —wonder if there isn't some little connection here? And the camps, here and there, are sneaking back to the old nine hour day, top bunks, charging for bedding, bad conditions, etc.

Perhaps to explain this we had better have a little glance at history. In the old days, all over the Northwest, there were fairly standardized, bad conditions. Wages ran about $3 low, the hours were ten in Seattle, and eleven in Grays Harbor country, pack your own bed from camp to camp, sleep two high, wash up, if at all, in a John D. oil can.

Then we had the big strike of 1917, and a miraculous change took place. During 1919 and 1920, on to 1921, wages were double what they had been, wash-houses were provided, the double deck bunks were abolished, bedding and laundry service was supplied by the employer, and the eight hour day became universal. A strong, well organized, militant unionism pervaded the whole district. The boss still made money, but he had to suffer the pangs of a tortured acquisitiveness at the sight of the good food and the nice wages being wasted on a lot of lowly unpatriotic. radical industrial unionists, all belonging to Lumber Workers' Industrial Union No. 120 of the I. W. W.

The problem before the boss was: how to wreck this union, how to break down solidarity, how to get the workers to go it alone, as individuals, each man competing against his fellow, as in the good old low wage days. He knew low wages would return if he could.

The boss tried a bitter, slashing persecution—both legal and illegal. It did some good, it scared some of the faint hearted out of the union.

Then he tried a cunning scheme. The forest east of Spokane, through Washington and up into the states of Montana and Idaho is called the "short log" country. Trees are smaller there, they do not require so much effort to handle, not so much nor as large machinery. It is frequently possible for teams to take the place of yarders. Acting under the excuse that some of the timber had been burned over, and partly destroyed, and also using various other pretexts, the lumber lords began to encourage the policy of piece work ("bushel work," "cutting by the inch," "cutting by the mile"). They also encouraged the practise of subcontracting ("gypoing") by men of little means, former lumberjacks, who sometimes themselves hired other labor, by the foot or the day, to work on their contracted plots. The amounts to be made were greater for a good hard day's work than the lumberjack could possibly make at regular day work. That was the trap. And right here the workers made their grand and fatal mistake. They fell into the trap. Instead of taking this higher piece work wage as proof that the boss could afford to pay more than he was paying for day work, and immediately striking and putting up the wages so far that only a fool would work by the piece, one after another they went "gypo".

IN THE LONG LOG COUNTRY

Logs Lying on Cars on a Logging Railroad. Loading Donkey In Background. Hard Timber For the "Gyppo" to Handle

At first a healthy sentiment existed against "gypoing". It went so far that at one time, during 1920, and 1921, it was proposed to expel from the I. W. W. any person who worked by the piece or contracted. But the sound feeling of the more class conscious workers could not stop the insidious practise, and more and more men left the union of their class, and followed after the gods of the petty bourgeois—each hoping to chop his way through the "gypoed" forests to a home, or a little busines of his own, or a farm, or whatever it is he hankered after.

There was also division within Lumber Workers Industrial Union No. 120 of the I. W. W. The piece workers did not all leave the organization, and they, and their friends, and a number of sincere unionists who thought the right way to work was to throw down the bars and agitate against "gypoing" but organize the "gypoes," turned the tide, in 1923, and since then, a piece worker has been as good a union man as any other.

The bad results of this were partly to blame for the slump in union membership during those years, but that condition in the union has now worked itself out, perhaps, because of the very apparent bad results on the job of the piece work system itself. The solidarity of the workers being smashed in this way, there resulted a falling of the piece rates, and a tightening up all around on the poor "gypo". Piece work always lowers the wage, anywhere. At present the piece work system in Eastern Washington is not so much thought of by the individual worker, for even an expert man hardly makes more than his regular $3.50 or a little more—about what he could make at day work—**and about what he could have made in 1916, before the strike!**

The union is smashed in Eastern Washington, in the short log country generally, what is the use to deny that,—but it is evident that there is here a good ground now, to actually organize the lowly paid, hard working loggers—they are all discontented, wage workers and piece workers alike.

The union was weakened by the piece work business; and by the persecution, and by the very better conditions themselves in some places, workers feeling that they had made improvement enough.

But the piece work system never got going go in the "long straw" country of the West Coas

(Continued on Page 20)

# They Rot Before They Die

By CARD No. 794514

WITHIN historical times two world orders, two great systems of society, two great social organisms, if you will, have perished. The third is perishing, and if this fact is remembered, much of the phenomena of modern social life, otherwise so puzzling, becomes understandable.

A week or so ago, a rather prominent preacher, the Rev. Dr. C. Copeland Smith, addressed the congregation of the Grace Methodist Episcopal Church, Chicago, and unburdened himself of a few fairly accurate observations. He pointed out that society has retrogressed to such an alarming extent within the last ten years that it is fast approaching decay and race suicide.

Within that time, Dr. Smith said, dances have become but semblances of the most riotous of savage orgies, while the music appropriate to their accompaniment is as much "the syncopated hiccup of an inebriated cannibal" as anything else; legitimate art has given place to the wildest ravings of "crazy geometricians" who, instead of confining "their ravings to the padded room flaunt them before the eyes of a distracted public."

"If you believe there is no cause for trepidation and alarm cast your mind back to 1916 and see the rapid progress we have made along the path of race suicide and decay.

LOUIS XV FURNITURE
Now a Symbol of Decadence—If You Think This Is Curious, Read Further

Even then our dances still preserved some semblance of decency. Our music still contained some remnants of harmony and dignity. Our art was even then intelligible to the ordinary mind, as all true art should be.

"But in ten short years we have so far retrogressed that, in addition to dances and music, the legitimate drama is rapidly approaching the moment of its decline and only holds what remaining popularity it possesses by an increasing sex appeal and an increasingly maudlin method of dealing with the problems of our times.

"The silent drama ever goes to further lengths in portraying before breathless thousands facial expressions that rightly belong to the last and secret stages of sexual bestiality. The legitimate actor is fighting for his existence in an age that refuses to think after the great dramatists of history.

"As to legitimate art, Beethoven is as dead as Queen Anne, and even Wagner is fast losing his public. These are things that all men may see and also the fact that the appalling decadence of our day has all been brought about within one decade.

"In the world of morals there is naturally an accompanying decline. Cardinal Mundelein, in his New Year letter, says that we have exaggerated our own wickedness.

"I wonder if the cardinal has ever sat—as I did recently for one whole morning—in our Morals court. In just one morning, from just one district of our city, the weary judge dealt with sixty-four defendants, all accused with crimes against elementary public decency. The

corridors to the Court of Domestic Relations were impassable, or nearly so.

"That is to say that practically all the divorces are from among the younger section of the married portion of the community."*

This is merely the most recent expression by the spokesmen of the social conservatives, of a general theme, which has been growing stronger and stronger in their utterances, for a considerable time. Even in the declining days of last century, certain far sighted bourgeois publicists, Max Nordau, for instance, began to sound the danger note, and to point to the decay of manners, morals, principles, and tastes. Nordau's big book, **Degeneration,** contains an abundance of proof of a neurotic, decadent, unhealthy tendency in social affairs, and in art and literature (those two valuable indications of the mentality of a society) most of all. Nordau himself, by the way, soon gave up the unequal struggle against such an evolution, or perhaps better called "devolution," and retired from the world, so to speak—devoted all his energies to the romantic ideal of Zionism. And that alone, as we shall see, is one indication of the fatal disease of a great world order.

When a ruling class is rising, is revolutionary, is gaining in strength—when the individuals that compose that class find opportunity for progress and advancement—the avenues of expression controlled by that class, the artists and the literateurs, the architects and the moralists, are triumphant, vigorous, vivid, courageous, and optimistic.

If the fight is easy, and the conquest certain—there is great license, of a healthy, happy sort. The victory of the bourgeoisie in the Italian City states gave rise to the Renaissance of art and letters, expressed itself in the jocund vulgarity of the Decameron, showed itself in the fearless grasping after new things by explorers and in the recklessness of the condottieri.

If the fight is hard; if the rising class cannot spare any strength for dissipation, Cromwell crowds out Boccaccio; we have puritanism, but a vigorous, crusading, militant puritanism, giving way, as soon as security comes, to a restoration of enjoyment and luxury.

But these two forms of class expression are the attributes of the winning class. In old, dying social systems there are times when the old, dying class holds the means of expression in its own hands, and sets the tune. The individuals in this class are filled with vague forbodings, and have a sense of their own incompetency. They know that all is not right with their world, even though they may not be wise enough to point it out directly. They usually have a number of idealistic clashes—and what some psychologists call suppressed desires. They have usually a culture that tends to over-refinement; many of them are out of touch with reality; many others are being steadily denied opportunities that their fathers had to make money or to control affairs, and on the other hand Mendel's law has put many a non-entity, many a weakling, in the position of power, of control of vast fortune, or high political position, which he is unable to properly fill, and which he fain would abandon. Many are weak from their father's dissipations. Many know too much for their father's simple, predatory faith to help them.

MIXED LOUIS XV AND LOUIS XVI FURNITURE
In Their Longing For Old Things, the Bourgeois Hardly Pretend to Understand Them

In this uncomfortable position, the individuals of the ruling class react in two different ways. One group says, "Eat, drink, and be merry, for tomorrow we die," as the epicures of the ancient world said, or it says, as the gentlemen of King Louis' court said, "After us, the Deluge." The other group becomes even more strictly moral, shrinks from the world, commits suicide, or if without that much courage, retires into monasteries, or into the dream world (Spiritualism, Theosophy, Christian Science etc.).

Anybody who wishes a good description of the

*NOTE.—Smith's sermon, as reported in Chicago Daily News, Jan. 4, 1926.

debauchery with which the rulers of ancient Rome, the rulers of the slave society, solaced themselves will find it in the pages of Tacitus, Suetonius, Livy, Dio, and other contemporaries. It involved extravagent waste, depraved appetities, a constant search for new means of intoxication (drinks, drugs, etc.) and a weariness of ordinary sexual overindulgence, and a substitution for it of various perversions, and especially of cruelty, sadism, and masochism.*

As for the period of the death of feudal society, it was at this time that the progress of the tendencies of sadism and masochism became so well recognized as to break into literature and soon afterwards they received their present names; after popular authors; it was at this time that the formal organization for the deflowering of young virgins was founded, with a whole ritual and set of regulations; it was at this time that the king's mistresses openly

"THE LAST TOKEN"

From A Famous Painting, Showing A Girl Of The Lower Classes About To Be Eaten By Wild Animals To Make A Roman Holiday

ruled France; it was at this time that the Black Mass gained many adherents; it was at this time that opium and hashesh began to be common in upper class Europe.

*NOTE.—It is the custom of modern historians to express doubt of the acuracy of the history of the Roman biographers. It is possible that these worthies maligned the character of Nero and others of his sort, in individual cases, but it is improbable that they could have invented out of whole cloth all of the abominations they describe. These practices were undoubtedly familiar to many of their period, whether they were properly ascribed to exactly the persons who had incurred the ancient chroniclers' malice, or not.

The debaucheries of these two periods accord well in nature and style with the corruption of the present time; with its murder for fun, committed by university students (Loeb and Leopold case) with its rape accompanied by sadistic violence (the killing of a young girl by the Grand Dragon of the

"THE ORGY"

Is It A Feast In Babylon, Or A Fancy Dress Ball In Chicago?

Ku Klux Klan, realm of Michigan). If the ancients had their gladiatorial combats, we burn negroes at the stake, often with superfine variations, as in a notorious recent case in Arkansas, where the victim was not allowed to die quickly from inhaling flames, but was laid out horizontally, and had his legs burned off scientifically, a few inches at a time, with gasoline and kerosene. There are also the fearful excesses of the White Terror in many countries. True, most of the victims of the modern degenerate are those who may be considered in some way, or suspected to be, rebels against existing society. But in healthier times such rebels would be hanged or shot, not tortured to death. There is an element of vicious cruelty, creeping into the class war, such as you find only at those preceding stages where the ruling class was decadent. Even the gladiator was usually a rebellious slave, a captive in war, or a debtor.

These perversions are world wide, like the accompanying dissipation and the generally hectic life of the bourgeoisie wherever capitalism has penetrated. The insane cruelty, and the raping of native women by imperialists in all of the colonies, the blowing of whole cities to bits, the inhuman tor-

tures inflicted on dark skinned workers, the glorifying of machine gun work on dense crowds of unarmed Chinese, which capitalism in general gives evidence of in Asia, Africa, and the Indian islands, is part of it. The succession of scandals, tripping on each other's heels, detailing the buying of military titles in the British Empire through the sale of pretty wives by their husbands, is only an exposure of a practice that has been going on for some time. Just now the war-time head of Scotland Yard has been fined $25 for what the newspapers, refusing details, "call "a revolting offense against public decency." This great man, Sir Basil Thompson, the idol of his class, so far lost his sense of responsibility that an ordinary park policeman was able to catch him in the very act, and to get a statement from his girl victim.

Continental Europe recognizes that high social circles are hotbeds of nameless vices, and shrugs its shoulders; such things are described only by the novelists and the psycho-pathologists. The last Kaiser of Germany did clean out several officers' clubs and "break" a few highly placed perverts, but that did little good.

When the factory system is imported into a country which did not know it before; it comes over entire, bringing all its most advanced "superstructure" with it, of capitalist society, labor unions, and psychological reflexes. Just as they import the most modern forms of trustified production into Japan, right along with them they import the idea of the petting party and the flapper, as the Tokyo **Jiji** has observed.

On the other hand, the other sort of rotting ruler, the ascetic or the suicide, the kind that flees in one way or another from a world grown distasteful and disgusting to him, is about the same in each of the great historical catastrophes. Many of the Roman sages committed suicide. Practically all of them advocated it, and urged their friends to open their veins in a bath of hot water. Says one of the noblest of them all, Seneca, in a letter to his noble friend Lucilius:

"What is there that can tempt you away from death? You have tasted all the enjoyments that might make you hesitate; none of them are strange to you; you have had your fill of all. You know the taste of wine and honey; is it not a matter of indifference to you whether one hundred or one thousand bottles of them pass down your throat? Also, you have tasted oysters and crabs, Thanks to your splendid living, nothing remains untasted for you in the years that are to come. And can you not separate yourself from these things? What is it you may still have to regret? Friends? Home? Do you really value them so highly that you would sacrifice yourself for them to the extent of postponing your supper-hour? Oh, had it been in your power, you would have extinguished the sun itself, for you have accomplished nothing worthy of the light. Confess it: you are hesitating to die, not because you will be sorry to leave the Curia, the

THE JAPANESE FLAPPER
A Cartoon From The Tokio Jiji, Showing Old Japan's Opinion Of Her

Forum, or the beauties of nature. You are merely sorry to leave the flesh-market and yet you have already tasted all its supplies."

Contrast this with any of the suicide notes left so frequently nowadays on the park benches, on the piers that jut out into the lake, and especially in hotel rooms where men and women shoot themselves. They are all the same. A single note of woe pervades them all. "We are incompetent; we are not happy; we don't think life is worth the struggle;" and watch, over and over again you catch that significant phrase, "the body of a well-dressed young man (or woman)" in the newspaper announcements.

The capitalist scribe takes it for granted that the harrassed, diseased, hopeless poor will kill themselves, everybody knows they have nothing to live for, but he takes note, with a slight surprise, of the fact that an increasing number of men and women of the middle and uppper classes are finding the world too dirty a place for their unstable nervous systems. In the declining period of feudalism, of course, the superstitious Roman Catholicism of the times, with its prescription of hell-fire for the self-murdered, prevented such crimes, to some extent. In those days they went into monasteries. There was little difference in their fate, and none at all in their motives.

On first thought, if one recollects the incessant jangling, boisterous emphasis on optimism displayed by the capitalist press, the plethora of cartoons

showing "Father Knickerbocker" or "Father Dearborn" or "Uncle Sam" or the "Joys" kicking the "Calamity Howler" down stairs; and if one takes into consideration the yapping enthusiasm of the "boosters" at Kiwanis, Rotary, and fraternal order functions, and the wild applause for prosperity at business men's stag dinners, he might think our modern rulers felt themselves secure. But a second thought should convince him that where there is so much denial, there must be something to deny. The real situation is that every business man has a little blue devil riding him, and he tries to exorcise the imp with printers' ink and the potent strains of "Howdy Sal."

We have plenty of defeated individuals of the perishing middle and upper classes in America and Europe who flee to magic and occultism for some stimulant that will give them a little more hope in a really hopeless situation. The bookshops are full of astrological and Rosi-crucian literature; there are thousands of Christian Science churches, surrounded every Wednesday night and Sunday by swarms of automobiles; "New Thought" has many adherents, and the Theosophists are about to consummate their long planned scheme of foisting Christ upon us again, not this time in the shape of Nazarene Blondie, the Holy Kid, the boomer carpenter, for such a pesron would not be welcomed nowadays by the slaves; this time he appears as a hyper-cultured aristocratic Hindu of the highest caste. He will have his following—among the upper castes of America and Europe.

The cramped and disgusted remnants of the perishing middle class, especially, become freakish, and with a tremendous amount of heat and energy espouse various fads; the "sunshine worshipers," the "cult of the naked," psycho-analysis, perhaps even "Free-Masonry" and the K. K. K. Some of these movements might have something of value in them, but their devotees hail them as panaceas, for a while and then lose interest in them.

Naturally, not all learning, not all mental ability, not all power of resistance is equally weak in a decaying ruling class. Those individuals with the keenest insight recognize the collapse of their world and all that they hold dear, and sometimes describe it with great power and vividness, hoping to find, guessing at, various explanations, and searching vainly for a cure. The Rev. Smith thinks that if the preachers would stick closer to the Bible, "we" (his fellow exploiters) could be reborn, forget our jazz and petting parties, take an interest in culture again ,and lay off of the moonshine. In Europe, where the deterioration has gone further, and where there is more real brains among the learned anyway, because of an older culture, they have the same illusions or stranger ones. The gloomy bishop, Dean Inge of London, freely perdicts the ultimate destruction of the entire social order. That most moody and pessimistic of would-be humorists, G. K. Chesterton, flays modern morals, prohibition, as well, and advocates a flight back to the land, a return

G. K. CHESTERTON'S UTOPIA

to a simpler form of social system, less mnaufacturing, the reassertion of the rights of man as head of an indissoluble family, the end of divorce, state religion, etc. "Back to the Seventeenth Century!" is his prescription. Hillare Belloc, the English Catholic, and various guild-socialists, too, would like to return to an even older social order, the thirteenth century would about suit them.

Bergson, the French philosopher, abandons thought, and teaches a new mysticism, the value of the intuitions. The German philosopher Ernst calls on all the tired Westerners to look to stagnant China for hope and an example. Says he: "We must attain clarity on the point that the foundations for the sufferings of men do not lie in institutions but in the attitude crcating institutions. . . . The Chinese loves and honors agricultural work, and has always succeeded in obtaining the little parcel of land that he needs, and can produce on it what is required for his simple tastes. . . . **We want no reforms or revolutions**, but an introspective return to true morality."*

Another German philosopher and scientist, Oswald Spengler, predicts that the civilization of the White Race will soon be impotent, on account of its internal weakness, to resist the "Yellow Peril," and will perish as did that of Rome, in the onslaught of the barbarian. Spengler thinks he has found the key of human history in the notion that society, like an organism, has a period of growth, decay, and death. Each great world order, Greece, Rome, and

*NOTE.—THE COLLAPSE OF GERMAN IDEALISM, by Paul Ernst, 1918.

so on, was started, accomplished certain things, lost its vigor, and entered into decline. The world order of western Europe and America has now passed its prime, Fate (Spengler believes in a kind of divine spirit which ordains the life history of races) has plunged civilization into the time of weakness and imbecility; society as we know it is collapsing, and we have only to sadly chronicle its death struggles; nothing can be done to stop them. All of which is quite pessimistic, and reflects the spirit of the ruling class of Europe, which is harder hit than that of America.*

A greater philosopher than either of these, Bertrand Russell, has recently been given to many such sad reflections. In his book, **Icarus**, he prophesies that civilization will soon be overthrown by the inherent contradiction in psychology, which is that man has progressed in ability faster than he has progressed morally, that he cannot properly use the terrific powers his inventive genius has released on the world, and that he will poison gas, drug, and bomb himself out of existence, even as he wrecks his health with food substitutes, and his social organization with propaganda. And Russell, too, hankers after the calm, peaceful, practically unconscious life of the Chinese peasant. In Seneca's time he would hang himself, in the middle ages he would become a monk, and today he is a college professor.

So far I have contented myself with pointing out that what the Rev. Smith is so worried about, and the philosophers are so sad about, is nothing new in world history. It is a phenomenon exactly like in its significance those spectacular scenes that accompanied the death rattle of the feudal nobility rotting at the monarch's court, and the ebbing life blood of the master class of Greece and Rome.

That seems nothing for us to fret over, but it occasionally occurs to some of us that there is perhaps a danger, after all. The decaying feudal order scarcely infected the hardy common people of its time with any of its contagious anaemia. The population of France, just before the Great Revolution, might be hungry, but it was neither weakened by dissipation, nor was it corrupted by world-weariness rationalized into a philosophical system or a religion. To be sure, the **Proles** of Rome, in Spartacus's time, were like the slum proletariat of more modern cities; they were sufficiently spoiled, lived a parasitic life, were fed by the state, were as eager for the circus as for bread, and asked for wine with the bread. But they were only a small section of the general population, and Spartacus got his followers somewhere else. Suppose the whole population had been corrupt? As indeed the Roman slaves became corrupt, in another way, later?

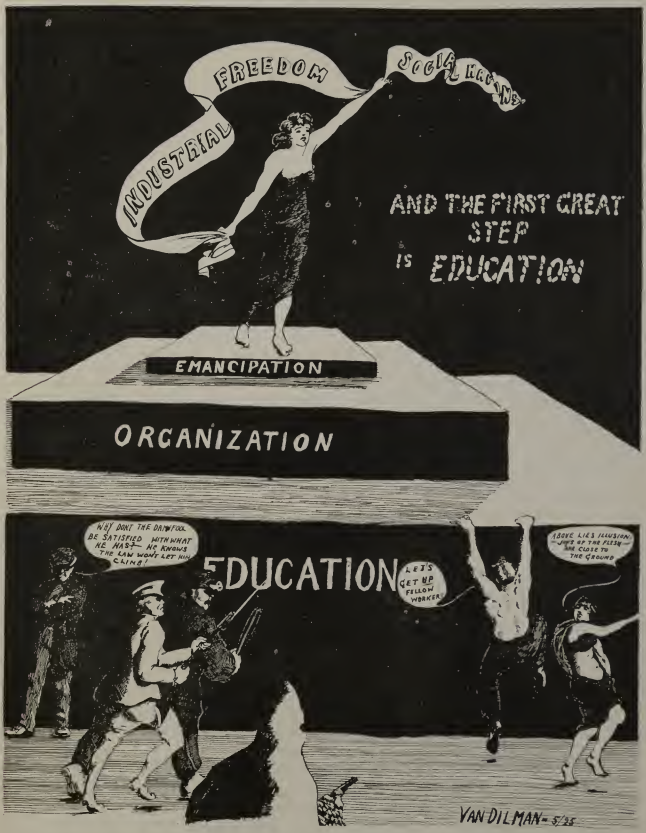
Now today the movies, the bootlegger, necking parties, and jazz are almost as prevalent among the working masses as among the rich. Nothing differs but the quality. The Gold Coast drunkard pays perhaps twenty dollars a pint for imported Scotch (which may be faked), and the West Madison street day laborer pays perhaps two dollars a pint for what hardly pretends to be anything else than re-distilled denatured alcohol flavored with juniper juice. The proletarian may not have an automobile in which to take out his jazz-baby, but he finds a chance, anyhow, though perhaps not quite as comfortable nor quite as safe a chance. The movies he attends are not as costly as those indulged in by the bourgeoisie, but they are hardly to be called better. Etc.

It may be that there is a real danger here to the revolution and to civilization; possibly those pessimistic bourgeois philosophers are right, when they disregard the class struggle as insignificant compared with the general, universal decadence and corruption, impotence and sterility.

Certainly one **can** find instances in past history where classes which should have been revolutionary lost their morale, and did not fight. The Roman slaves, who came within a hair's breadth of overthrowing ancient society during the times of Spartacus and Eunius, a very short time later fled from the practical struggle into the mysticism of early Christianity, and there was no large scale revolution for fourteen hundred years, and even then, not a slave revolution.

Likewise, considerable numbers of the terribly persecuted peasantry and petty bourgeoisie of Russia, in the sixteenth and seventeenth centuries, went in for burning themselves alive **en masse**, and other indulged in orgiastic religions.*

The modern working class is not particularly pessimistic in its outlook, but for the first time in history it is possible perhaps for large sections of the working class to accomplish through dissipation that helplessness which other slaves have attained through ceasing to struggle in the world, ceasing to care what happened to them, physically, and instead turning their attention either to death, or after-death.



A moment's reflection, however, should convince one that this is probably not so. Let us take some of the vices usually considered most destructive and most prevalent now.

One of the chief, one of the spreading, one of the most tenacious, and altogether the most dangerous forms of vice is the practice of drug taking. The pursuit of more potent means of intoxication and narcosis, mentioned by the ancient historians, still continues today with considerable success. The traffic in morphine, cocain and heroin is something remarkable. Caches worth hundreds of thousands of dollars are occasionally discovered and seized by revenue officers; the undiscovered supplies must amount to millions of dollars. But "Mary, Katy and Harry" move in the most exclusive circles, in the upper crust of society, and in the underworld. Factory workers do not know them, their acquaint-

(Continued on Page 30)

*THE OVERTHROW OF THE OCCIDENT, by Oswald Spengler, 1920. The idea is not a new one. Flinders Petrie, the Egyptologist, believes there is a biological reason for the rise and fall of civilizations.

*NOTE.—A wonderful impressionistic description, perhaps not accurate in detail, of these events may be found in Merezhkovsky's novel, PETER AND ALEXIUS.

**Living in the midst of the disgusting debaucheries of the capitalistic hogs who wallow in the products of modern industry, and continually menaced by the persecutions of their filthy gunmen, thugs, and murderers, the working class is still, on the whole, untainted and uncowed. It continually strives towards the three things the I. W. W. takes as its motto: Education, Organization, Emancipation. It not only tries in individual cases to mount this staircase towards the stars, but it is socially minded, and each member calls on his fellow to rise along with him.**

# A Wobbly – Why Not?

By H. J. HOLMES

HIS name really does not matter, but for the sake of the story let us call him Willie Minter. Meeting him on the street in the Big Town aroused old memories.

My thoughts went back to the time when we were school boys, both attending the same country school.

My father had died earlier in the year, leaving four children to be scattered to the different parts of the globe. I was farmed out to a middle-aged couple living in the backwoods of northern Minnesota, but when school started they in turn sent me to relatives of theirs, who, living closer to a school, could offer me the advantages of a little education.

In my first days at school I did not notice him, for he was shy by nature and did not join in our games as readily as the others. He was about ten years old, tall for one of his age, big boned and awkward.

He was not good looking, but his appealing, wistful eyes drew one to him, so I tried to make friends with him and succeeded to the extent that he was soon my pal and confident. He was bright in his studies, especially so with figures. I recall an incident that occurred about two months after school had opened, or rather close to Thanksgiving.

The schoolma'am, who had been living in a shack set apart from the others, right across the tracks from the railroad station, had been forced to move as a fire had partially burned the shack, and now she was living at the grocer's (the only one there). This grocer's son, Andrew, and Willie were in the same class, and this day each of them had ten problems set out for them on the blackboard. In doing his, Willie had made a trifling mistake, to which the teacher had at once called his attention, lecturing him rather severely, and giving him a mark of only seventy-five out of a possible hundred.

Now came Andrew's turn, and out of the ten problems given him he had made mistakes in four of them. (I had reason to observe all this, as I was the star pupil in school, and being long ago through with my own lessons, I was idly watching what went on at the blackboards.) The schoolma'am, merely glancing at his answers, gave Andrew a mark of **eighty-five** out of a possible one hundred. We'll forgive her, for wasn't she living at his home?

Quickly I raised my hand and snapped my fingers and when she asked what was wanted, I called her attention to this partiality. "It's none of your business," she flashed, and grabbed a rod that she used as a pointer, and—I can still remember the whaling I got. This incident made closer friends than ever out of us, as in his eyes I was a sort of a hero and being two years older and from the city, more sophisticated also.

I found out more about his home life. The family was large, seven children, six of whom were staying at home, and the oldest, a daughter, was an inhabitant of the red light district in the city. Her loss had broken down the mother, had driven her to an early grave, leaving the burden of six children to be fed, clothed and sheltered, on the father. He was a big, heavy set man, with an awful temper, which I thought accounted for the frightened timidity in the eyes of the children and the wistful appealing expression in Willie's eyes.

As the winter months wore away ,the task of feeding so many mouths began to tell on this man. His ugly temper was now running out of bounds. The children were often seen crying and their eyes began to pop out with an expression of dread and fear in them.

What could the father do? The farm was not self-supporting, there was no outside work and he could not leave these children to look for work elsewhere. The winter was terrible.

Next spring it culminated. The old man was found dead in his bed, with a rifle on the floor. He was found wanting, as our best writers are so fond of saying. The problem had been too big for him, so he had taken the easiest way out.

Shortly after this the family scattered, the young ones being sent to children's homes, Willie among them.

I heard no more of them until, last fall, I met Willie face to face on Fifth avenue in the Big Town. With him were another young man and a young lady. We met in front of the Tarmo Club; he was on his way there for supper.

I hardly recognized him at first, so great was the change time had wrought. Gone was that hurt expression in his eyes that had so pained you to look into, and gone was the meekness and shyness of his bearing.

Now you looked into two gray eyes that seemed to pierce through yours and his posture was that of a man defying the world to harm him. A determined looking man indeed.

We did not have much time to talk as his companions were waiting, so he shortly excused himself.

I could not help but wonder at the change in him, I had never pictured him so, for even yet I remember the shy, unresponsive boy that he was.

I could come to only one conclusion and that one was later verified. Capitalism had fashioned for itself another nemesis through its inability to care for its victims.

And he smiled as he turned to go, leaving me thinking over his last words.

"Yes, I'm a Wobbly. Why not?"

Yes indeed—Why not?

# Twelve Years After Ludlow

## Capitalism in Colorado -- the History of a Crime

By JOHN GAHAN

"WHAT BEAUTIFUL PEAKS!"

We were trudging along a road on the edge of Walsenburg. Our way ran past the Walsen Mine, one of Rockefeller's industrial shambles, under dominion of the infamous Colorado Fuel and Iron Company. My companion was a miner, of the race having numerical ascendency in the district, a keen-witted son of old Mexico—by birth. By choice he was counted among that fellowship of a greater race, the militant workers of the world, too big for national cagings and patriotic poppycock.

"Yes," said Manuel, lifting his dark eyes to the craggy grandeur that had inspired me to exclaim, "They are beautiful, and they have a history."

A history? Very likely. Which of all the mountains and hills around us had not played a sanguinary part in the record of the coal monster?

As though divining my thoughts he went on:

"Their interesting history is older than that of King Coal."

So we rested on a stone bridge that spanned a tumbling creek, black from the inflow of mine pumping, and while the western skies caught the glory of late afternoon sunlight, Manuel told me the story of the two commanding summits whose snow-crests absorbed roseate hues of a setting sun.

He reminded me of the tale of conquest by intrepid Cortez, who, with a few hundred soldiers, faced westward in Mexico after burning behind him not proverbial bridges, but his ships, the galleons that rode between the hostile New World and friendly Spain. And how this desperate invader compelled the allegiance of so many of Montezuma's foes that when the Aztec capital was reached—where now stands Mexico City—60,000 troops hailed him their chief.

"And what, Manuel, has this to do with the mountains above us?"

Then he related how Cortez demanded gold. Well, foemen fallen into Aztec captivity had described to Montezuma two peaks where gold was abundant. They led the Aztec runners to the mountains that rise west of sprawling Walsenburg. Sure enough, the gold was there. Thus, when the Conquistador called for yellow precious metal there was much to give.

Subsequently that bright, weighty metal which Aztec runners carried over valley, desert and mountain range to the feet of their mighty emperor was loaded on the galleons of Hispaniola to fall in turn to England's protected pirates, Drake, Hawkins and their kind.

In the annals of the Aztec people was written of these Colorado peaks: "They rise from a valley like the breasts of a maiden." More, thought I, like the breasts of a generous mother with a gift of life to all. That a few stole the treasure meant for many is a mark of society divided into classes. Indeed, this is its chief characteristic, its mainspring.

No longer are these "Spanish Peaks" burdened with gold, but necessity and ingenuity, blood and toil and pain have wrung from the hearts of Colorado's picturesque hills that black treasure of capitalism on which has been builded a bourgeois civilization. That factory wheels may whirr, that ships and railroads may operate, that heat and light and life itself be maintained, coal must be mined. And in the country around Walsenburg in every direction for many miles there is no valley without its coal camp, no hill without its tipple, and when shifts are changed roads and paths are filled with black-faced diggers who must reach home ere they free their bodies from the grime of their toil.

Here is one of the minor grievances present not only in Colorado coal mines, but also in many in Wyoming. Wash-houses are not provided at the mines. At South Superior a petition for them by miners, as provided by law, was signed, but because the workers were not ready to take organized, eco-

nomic action no wash-houses were built, law provision notwithstanding.

Colorado's history of laws for betterment of miners is well to consider. I remember sitting in New York's Carnegie Hall twelve years ago at a mass meeting of protest against the massacre at Ludlow. A monument is there now to commemorate the incident, and when monuments are raised it is timely to chronicle anew the fearful story.

It should be recalled that for seventeen years prior to 1913 Colorado provided for many alleviations of the harsh conditions to which miners were subject, and for a variety of protective measures of economic and physical natures.

Ludlow, away off in the hills, was unknown to the world until the miners, their wives and children rose in rebellion against vicious industrial serfdom. They expressed economic determination to gain what the dead laws "guaranteed" for so long. Camp after camp struck, and into tents went the strikers as they left the huts owned by operators.

At Ludlow uniformed thugs, employed by the Colorado Fuel and Iron, saturated the tents with John D.'s kerosene oil and set fire to them. Escaping from the tents the men, women and children were met by a rain of leaden death poured from rifle and machine gun fire. Into a timbred dugout, used for confinement cases, a number of women and children crowded. Here two of the women and eleven of the children were roasted and smothered to death. In Walsenburg at one of our meetings I met a miner who told me that his wife and two children had died in that tragerdy, and that his father had been shot dead.

At the Industrial Relations Commission hearings in 1914 held in NewYork's City Hall, witnesses of this massacre were examined. Rockefeller, Jr., was also quizzed. It developed that he commanded his lackey, Welborn, to crush the strike by any means. Welborn was then, I believe, a mine or district superintendent. He obeyed with such gusto that the world was startled and horrified.

That was about twelve years ago. The other day I was handed a magazine issued by the Colorado Fuel and Iron Company. Therein I noticed that this murderer, Welborn, has been rewarded well by the sanctimonious Baptists of Cleveland and Tarrytown. Welborn is now at the head of the C. F. and I.

Letters to think about—C. F. and I. You know all about Rockefeller's "Plan," company unionism, and the rest of the flapdoodle to bless mine slavery. The magazine says the company's initials are also spelled out "Cooperation, Friendship and Industry." How nice! We might almost forget the dreadful odor of roasting flesh, and fail longer to remember the blood-drenched hills in the Pollyannaism of this edifying company journal.

But there is more than the **past** to consider. We exist in the **present**. Today and now are of quickening interest to us. "Wealth has its responsibilities," we are often told. Millions upon millions of dollars have been spent by the Rockefeller interests to shape a social destiny favorable to the "interests." A pretension is made that the welfare of the miners is safeguarded by C. F. and I. Examination of the company's sweet solicitude in this respect is quite touching.

Twelve years after Ludlow, what is the social status of the coal miner in Colorado and under norms set by C. F. and I.? Let me see the homes of workers and their social position is revealed. Not in phrases of a company magazine is the truth to be found. "We have had no accidents in ——— days," runs the lie. I saw C. F. and I. employes almost daily injured while at work.

But it was of miners' homes we were speaking. On a road from Walsenburg I saw a number of nondescript hovels, which I thought were for storage purposes, for chickens or pigs. Coming nearer I saw a hog come from one of these huts—and a woman from another shack adjoining no different in structure except for a smokestack piercing its roof.

In another of these C. F. and I. "homes" of miners I inventoried the household effects. There was a table, several boxes in lieu of chairs, a stove, some dishes and culinary utensils, while on the floor were two mattresses. The walls were entirely bare and very rough. This "case" was a bit extreme.

"Is this all the furniture you can afford?" I questioned.

The miner's wife then told me that her husband favored unionism, labor, not company, and he had been discharged and blacklisted so much that they were almost nomadic in their frequent moves from camp to camp.

C. F. and I. wants no labor unionism because this strikes at profits, at the super-exploitation oppressing its slaves. The company union is "safe." It will boost profits while sustaining its hungry helots on platitudes and giving them wishbones to suck.

"Super-exploitation?" You may raise quizzical brows.

Exactly! Some capitalists have a code of ethics. They will cheat within a definite sphere. For example, if you are to do a certain task for a dollar the dollar is forthcoming when the task is done. But not with this hallowed Colorado Fuel and Iron Company. I should say not!

Check-weighmen are unknown in Colorado. Now a check-weighman is a man hired by the workers to weigh the coal they mine. The company has its weighman and he is employed to take care of the company's interest. He does so with a vengeance in Colorado, where the miners have no one to check up on the weighing.

Many miners told me that they had estimated that for every three tons of coal they load they are paid for one! I am convinced that this is not exaggerated.

How the C. F. and I. raises the "morale" of its employes may be gathered from the following:

I observed a group of miners before the office of

A COLORADO MINING CAMP IN THE OLD GOLD MINING DAYS
(Many of The Metal Mining Camps Grew Up To Be Coal Centers)

a superintendent. They had been summoned to appear there. It was a cold day and they shivered on the steps in front of the sacred precinct. But more than cold caused them to shiver. Presently a glowering giant emerged and "dog-eyed" these slaves. Then he charged them with loading rock for coal, and threatened them with discharge if they repeated the offense.

Load three tons in low holes on the knees. Wet mines. And then get paid for one ton! Then threatened with discharge for loading a little rock. Co-operation!

The miners seemed cowed. They slunk away. The big officious driver spat vigorously and returned to his swivel-chair.

I have mentioned C. F. and I. because this company dominates the situation and its example is followed by other companies. But under all, conditions are quite alike. Recently C. F. and I. forced employes to sign a petition praying for a wage reduction from $7.75 to $5.25.

Their prayer was granted, and I'm afraid that the woman on the hill will not have to live with a pig next year. Indeed she'll probably have no pig at all.

Those houses. I can't forget them. How the wind blew through the cracks in walls, floors and ceilings! C. F. and I. apparently interested in conserving proper ventilation. And what mangy broods to mature in this degradation.

Mexicans, Greeks, Italians, Slavs—these races are in the majority. So-called "white men" are bosses and gunmen and Kluxers, for the greater part. Over it all is the invisible power of espionage. One mentions unionism to the miners and they look around to see who is near. They have a job complex. But their jobs are good if they last four days to the week.

Organizing there is a trying labor. Yet it must be done or the miners are sure to sink steadily to a more outraged condition. And though we find the companies triumphant today, arrogant in their unchallenged autocracy, we should not be without strong hope for the success of the I. W. W. among them if one great concept can be roused among the miners.

This is to feel in themselves a power making for their own deliverance. While speaking there I urged them to look to no others for salvation, but to build up their forces without ever being dependent on leaders from without and within. We have not an inconsiderable membership in Colorado, but it must train itself to carry on organization work itself. Until this competency is developed progress will be slow.

The United Mine Workers of America have practically no membership in Colorado, and sentiment is so strong against that organization on the part of the miners that it is almost certain that it can never be revived. On the other hand the miners have a good sentiment for the I. W. W., though it is difficult to get much expression on account of prevailing surveilance, the blacklist and other gentle gestures of the paternalistic C. F. and I. self-appointed and God-anointed exponent of "Cooperation, Friendship and Industry."

We often speak of Ludlow's massacre. I have mentioned the monument. Yet it is more wholesome to look for other memorials of the class warfare in Colorado. Martyrdom is an incident of our

struggle; it is not its object, as some pacifistic brethren among us seem to think. Therefore I looked for other marks than those raised to a massacre of women and babies of my class.

Because these exist there in numbers to gladden any rebel heart it seems to me we can approach the future conflict more optimistically. All fight has not been crushed out of the Colorado miners. In common with workers throughout the land they have slumped into an apathy that has been disastrous. But from our meetings there we know that a reawakening is near. We succeeded in getting about a hundred miners to each meeting, with weather conditions very much against us. The U. M. W. of A. organizers, who became visible only when they feared the I. W. W., would sweep the district, held a meeting in Walsenburg, which was attended by five persons. Out in the hills, at Skinner, they had another "meeting," which found an audience of two. A few years ago when one of our speakers was in Walsenburg the U. M. W. of A. officials succeeded in bringing the sheriff to the meeting which he promptly stopped.

I was at Rocky Mountain, a camp where company gunmen instituted a reign of terror in 1913. There is a row of company houses which were torn to pieces by the strikers in this battle. The mine tipple is a charred ruin, and not far away is a circular barricade on the highest butte from which the thugs of King Coal learned that the miners could fight.

One of the company officials at that time declared that the coal diggers were "yellow," and he urged a group of plug-uglies to join him for the purpose of smashing a picket line. Well, they made the attack. Their leader fell first and seven of the valiant heroes who

"With whiskey in their bellies
And vengeance in their souls
Prayed that God would help them
Shoot the miners full of holes"

died with him.

Such are the deeds of my class of which I am proud to speak. The need for organization in Colorado is very great. In past struggles the miners have shown their mettle. Armed with the spirit of solidarity, that is the gift of the I. W. W., we may look forward to a time when our organization there will be powerful and the condition of the workers correspondingly improved.

Of this the miners are sure—that company unionism—"Cooperation, Friendship and Industry"—means pay for one ton where three have been loaded; wages reduced from $7.75 to $5.25. They know, too, that C. F. and I., and all other companies, means spies, lack of mine safety, the blacklist. And where company stores exist they know that to those stores they are perennially indebted.

The company gush is distributed in magazine form, and on the entrance of each mine is a notice forbidding miners to take into the mines literature of the Industrial Workers of the World.

Thus are exhibited C. F. and I. prejudices, holding a significance which will slowly dawn upon the miners' brains. They will learn that if the I. W. W. is the bitter enemy of C. F. and I. it is by the same token the staunch friend of the working class in which it has its being and its almighty destiny.

When they learn this fact, and learn to revive that splendid militancy which challenged industrial serfdom in 1913 and which met violence not with a turned cheek, but blow for blow and shot for shot, then only will their status change for the better. Then only will their wages rise and their abodes become fit for human habitation. Then only will they dare to stand erect as men, free to hold opinions and to express them. Then only will company despotism be ground into those eternally beautiful hills by the mighty tread of a really united army of coal diggers and mine workers.

# The Lumber Industry - Will Its Workers Waken?

(Continued from Page 8)

where the extremely large trees grow. Still, with a weakened union on his hands, the boss had hopes, and began to gradually make hours longer and conditions worse.

The first blow came from the side of the workers. In two strikes in 1923, they retrieved part of the conditions that were being lost. They won the right to free bedding in Grays Harbor district, where it had never been entirely secured, and was being taken away wherever it was previously won.

These strikes were under the organization and general leadership of the I. W. W. The boss promptly struck back at the I. W. W. Realizing that the unorganized man would not fight for the I. W. W. as such, as long as nothing else bothered him, the employers, banded together in the West Coast Lumbermen's Association, and in other organizations, jammed through, in a few month's time, during 1923, the so-called "clearing house system".

They had a bad habit of the loggers to work on, here, just as they did in the short log country. Or to put it in other words, the loggers were not sufficiently educated, and they let the boss get in the entering wedge of his program. The bad habit of the West Coast was that of patronizing Employment Sharks. Militant workers had fought the

whole employment office system from the beginning, and demanded hiring from the union halls, but the masses of the loggers had continued to go to the big agencies on the "skid roads" when they needed work, and "buy their jobs".

It was only necessary to **organize** these employment sharks for the bosses' use, as they had been working **individually** for the bosses' use even before this, and the trick was done. Now you go to the employment shark, and pay your dollar for the job, and you don't get it back as you did once. Then you have to take your job ticket and go to the "clearing house" established in the lumber towns, and be inspected. You "run the gauntlet" of inquisition, and they look up your record to see if you are lying. In extreme cases they have your picture. Even finger prints have been heard of. Anyway, if you have ever fought for decent living conditions, if you have ever organized a union or a strike, you don't go on the job.

They drove the most militant workers from the jobs, and then they made the jobs bad for the workers and good for the boss. Wages and hours and conditions are right back where they were in 1916, or very near there. They began subtlely enough, not to throw the bedding out at first, but just to make the worker pay for his laundry. Then a bunk charge, and then a deposit required for blankets, and so on, higher and higher charges, untill many of them go back to the "balloon" to escape these extra charges. **The worker is encouraged to himself throw out the bedding,** and become a "bindle stiff". The only merit in the whole thing is that it is gradually undoing the work of the blacklist. A new crop of discontented loggers is growing up and there is great agitation now, still sterile of results, but promising for the future.

The I. W. W. immediately reflects and accepts this new situation, the rising dissatisfaction of the workers of the lumber industry. Three big conferences have just been held, on Dec. 28, in Spokane, Seattle, and Portland. These conferences had before them the following set of demands put out by Aberdeen Branch of the Lumber Workers' Industrial Union of the I. W. W.

**For Logging Camps**

"A minimum scale of wages of sixty cents per hour with all board, bed, hospital and first aid charges abolished.

"Standard single beds to be provided in camps, with mattresses of pure cotton (not shoddy), at least six and a half feet long, three feet wide, and four inches thick. Quilts and blankets to be as long as the mattresses and two feet wider; sheets to be two feet longer and two feet wider than mattresses. No top bunks.

**For Sawmill Workers**

"A minimum scale of wages of seventy-five cents per hour.

"Where sawmill companies furnish board and room it shall be free (also hospital and first aid) and minimum scale shall be sixty cents per hour.

**Joint Demands for Logging Camps and Sawmills**

"All piecework where done to be increased by fifty percent above present rates.

"All men hired from union hall.

"Delegates and organizers to have free right to organize on any job.

"No censorship or interference with mails coming into companies' offices.

"A forty-four hour week; Saturday afternoon to be a holiday. Time and a half for overtime.

"Release of all political prisoners now held in Walla Walla and no more persecution of union members for their union activities."

It will be noticed that it is recognized that the piece work evil is here, and that we have to make the best of it, and establish a minimum rate for it. Personally I would be in favor of continuing to fight the spread of this most evil system. But where it has already established itself, through the ignorance and the lack of spirit of the workers, we have to make the best of it.

It will also be observed that the black list system is done away with if these demands can be fought for and won.

Everybody in the I. W. W. agrees on fighting the blacklist. The main argument is whether we shall make it the only demand (of course we always include a demand for the freedom of class war prisoners) or whether we shall make it only one of a series of demands about hours, wages and conditions. Those who argue for the Aberdeen scale of demands point out that the unorganized worker is not affected much by the blacklist, and and will not strike to abolish it alone; he will fight only for pork-chops. And unless he strikes too, we can't overturn the black-list. The others, (including the majority at the Seattle Conference) believe that we should concentrate on just the release of class war prisoners and the abolition of the black list. This question will be threshed out, throughout the branches.

There will be a another big conference sometime this spring, in Portland, after the workers have a chance to talk all the matters over to their heart's content, and that conference will be an extremely important one— if they want to make it so. It may be the turning point in the whole industrial history of the Northwest putting into the shade anything that happened in 1917.

Will the workers waken? Will they rise and be strong—through organization and through action?

# Knocking the 'ell Out of "Glory"

## At the Studebaker Theatre, Chicago

**THIRD ARTICLE IN THE "WORKERS' PLAY" SERIES**

By ROSA ALEXANDRA KNUUTI

**"For it's true**
**They paid the price**
**Of having served too well,**
**A poor cause and a lost."—Anonymous.**

"War is hell," it has been said, and I came much nearer realizing the worth of this classic statement as I listened to a bunch of weary and war-sick soldiers curse their way through three acts of Stallings' and Anderson's war play, "What Price Glory".

I had my misgivings though, as I found my way to view this play of war. I'd been fooled before. So rather like a sulky youngster I slid into my seat ready for the worse.

Memory called up the times I had gone to the movies or the theater showing a play with a war theme and full of hope in a dumbfool way expecting something from the working class angle I would see some monstrosity that amounted to nothing more nor less than the justification or glorification of wholesale slaughter.

Would this be different, I mused? Would they inject a few truths into the thing? Would they really do without the old hokum, the flagwaving, the "heroics" and cheap sentiment about fighting for "democracy," etc.?

Well, as a certain Roman once had occasion to say "veni, vidi, vici," I, too, came and saw and remained to pretty darn near burn incense at the shrine of this "What Price Glory." It seemed too good to be true, and I pinched myself, so to speak, to see if I was all there, or had part of me meandered off into a volume of Kirkpatrick's "War, What For?"

### Takes Tang Out of Glory of Slaughter

But sure enough, it was, if anything, an indictment against war . No band playing—no flagwaving. What a relief! Only a play of a dirty, filthy, bitter, unjust war it was . A story boldly told of American soldiers in the hellholes of France, fighting and swearing and cursing their way through three acts. Gosh, I never heard so much blasphemeing in all my life. Surely, they broke all the world's records for plain and fancy swearing in their effort to express their sentiments about the "hellofamess" they were thrown into—not a word about doing their noble duty, nor doing their bit for the dear old sod. No siree. They just cursed all over the place. They cursed their "brainy" superiors who remained back of the lines; they cursed the corned willy, the Y. M. C. A. tobacco profiteers—and themselves for being born.

I was hoping it would keep up until they had cussed the party really responsible for their dilemna. But that was expecting too much. I was glad enough to see that the boys weren't kidding themselves about the illusive something known as "glory," about that vague something called "democracy." It had no place in the minds of the doughboys who tramped through mud and rain in tattered uniforms; tired and heartsick subsisting on corned willy—fighting to make the world safe for the master class, which reminded me:

**"Not though the soldier knew**
**Someone had blundered.**
**Their's not to make reply,**
**Their's not to reason why,**
**Their's but to do and die," and etc.**

And I wondered for how long?

Albeit, "What Price Glory" is primarily a story of war, it has a simple romance interwoven through it. But, then, what's a play without it?

There's the captain and sergeant both laying siege to the same girl, "Cognac Pete's" daughter. The captain, played by Louis Wolfheim, of "Hairy Ape" fame, isn't so sure whether she is his or the sergeant's meat, until he has occasion to leave on an errand for a day or two. The usual thing happens. The sergeant vamps the lady in the meantime or vice versa, whichever way such things happen, and thereby gets himself into a fine fix. Not only is the captain good and peeved on his return, but old "Cognac Pete" himself isn't so sure that the American soldiers haven't taken advantage of his Charmaine, particularly the sergeant. Pete seeks retribution for these liberties. It'll cost the sergeant a pretty franc for holding Charmaine on his knee and "parley vouing" if the captain has anything to say about it. But this is war, and an order to the front is the sergeant's salvation. He does, however, sign away his monthly allowance to the girl.

The second act takes you into the cellar of a disputed town and holds one in a vise of interest. It reveals the life of the soldier in the stress of actual fighting. Here they kill and are killed and don't know why. Tired. sick of war, they cry when things seem to go badly with them, like so many homesick children. A wounded German moans and cries "kamerad" throughout the fearful night and drives the idealist, Lipinsky, out of his mind. Here

you see as much of war as you ever want to see. Here you see the price that is paid for glory.

A live bit of actual propaganda against war, which makes me wonder how it will react on the militarist element. I conjecture it will seriously upset their mental balance, and I'm a little afraid for "What Price Glory." There's the Daughters of the A. Revolution, the American Legion and other murderously inclined outfits to reckon with. Goodness knows, they may annihilate it for a row of flagpoles. Either that, or tone it down to suit their martial tastes.

I hope it keeps intact though, for we need this kind of theater and more of it—and ere long the "glory of war" will have become a "beautiful" myth taking its place in due time along with the rest of the fossilized piffle that has deluded man's mind this many a day.

So I want to go on record as voting this commonsense play of the war as pretty darn good. And I don't mean maybe. I'd go and see it again.

# Book Reviews

Seba Eldridge, Assoc. Prof. of Sociology, University of Kansas, has written a book called **Political Action** which is very easy to read and very hard to adequately review. If you are to do more than give a summary of the argument, if you are to properly check-up and either correct or judge to be correct all of the keen, startling, snappy statements in this production, you will have to have a good reading knowledge of all the old and recent philosophers (including the pragmatists, especially), all the sociologists, all the old and especially the very latest psychologists, all history, all political theory, the principles at least of biology, something of religion, a considerable amount of economics, a little statistics, and most everything that has been written on the materialistic conception of history.

**Psychological Basis Of Direct Action**

What I am going to do in this review is to give a brief abstract of Eldridge's argument and conclusions, point to one or two outstanding errors, and emphasize by quotations a few of the things which it seems to me he has sufficiently proved. Perhaps some intellectual athlete will be stimulated to undertake a serious consideration of the subjects opened for discussion.

First, one of Eldridge's mistakes, made in a field in which most of the readers of the Industrial Pioneer are more at home than Eldridge is. The author implies (p. 60) that the main reason for the radicalism of the I. W. W. is that its members, made up of the the migratory lumber workers of the Northwest, are suffering from suppressed sex instincts—are without homes, families, and wives. He does not, as does another of Lippincott's authors, writing in the same sociological series with Eldridge, also imply that there is nothing else wrong, and that therefore the Wobblies are merely poor, helpless freaks, in a bad situation and without hope of escape except through assistance from the outside. On the contrary, he recognizes that there are many other forms of oppression from which members of the migratory industries suffer, in common with other workers, and that the I. W. W. is no mean force; he says, "It should not be too easily assumed that the organization of men such as these can play but a feeble role in the labor movement. Similar elements played a very mportant role in the French revolution and the events which followed . . ."

This whole idea that industrial unionism is a psychopathic symptom is the fault of Carlton Parker. Ever since Parker attempted to psychoanalyse the migratory workers, back in 1914-15 following the Wheatland affair) sociologists and psychologists and every sort of educated bourgeois writer has accepted his findings, and repeated his conclusions without any attempt, apparently, to find out whether they were right or not. And they are not. Parker investigated few of the workers of the camps and the sea; he gathered his material from the **skid-roads** of lumber towns and from the extremely migratory fruit harvest workers of California. These most transient workers are all right, too, most of them, but the sensible ones have learned to be very cautious about talking to people who ask questions; the frame-up and dragnet proceedings that followed the Ford and Suhr trial and other earlier cases taught wariness to any who would otherwise be too free with the story of their lives. So these gave no information to Parker. Those who supplied him with data (?) were the egomaniacs, such as later started the "E. P.", and the stool-pigeons of the Townsend and Coutts variety, who told Parker what they thought their paymasters wanted him to hear. Parker's decision that the Wobbly is red largely because he is homeless,

hopeless, voteless, wifeless, and peevish has become one of those enthroned errors that cast their shadows down across all subsequent thought—the sort of a thing that old Sir Francis Bacon called an "idol of the mind".

The migratory worker becomes radical quicker than the homeguard because he has less to lose if he loses a strike (his job is never permanent) and because he not only sees but works in modern society and the industrial system over a wider scope—he travels, meets more different kinds of people, has a better chance to investigate, is forced to study the situation in order to make a living more than the man following one groove in a two-by-four town. Many unskilled factory workers are just as wifeless as the migratory; the lower ranks of the army and navy are just as sex-starved, and even more repressed (military discipline) but none of these are as radical as the "stiff" because they do not get his comprehensive view of modern industry.

We would not say for a moment that the migratory worker is not repressed, as other workers are, nor that he does not resent it, nor that he does not have some special difficultics of his own, uncertainty of employment and bad treatment by the authorities. But on the other hand he escapes some of the restraints the stationary worker suffers from, and has more freedom of movement. His special difficulties are largely directly economical, and he readily adopts an economic organization to get rid of them.

The first half of the book and the last chapter are largely psychological. Eldridge sets forth certain "instincts": hunger, fear, repulsion, pugnacity, sex, parental instinct, acquisitiveness, gregariousness, and play. In one chapter on each, he discusses the effects on each of them of the modern social system, and how they cause men to react in that system.

Hunger produces much of our activity. Famine causes governmental changes, rebellions, peace and war sometimes.

Fear, especially of losing the job, prevents labor from organizing, frustrates gregarous impulses, makes the individual worker meek, and "we must say, on the bass of this analysis that fear largely dominates the behavior of the modern workingman . . ." (. 35).

As for repulsion: "No reiteration is too vehement to express the hopeless feeling of loathing for the machine and the monotony that it forces upon the workers—the constant drilling of an unchanging motion, a never-ending repetition that destroys all interest and kills all creative effort. This feeling of hatred is doubly strong because it is constant and for the worker is infinite and without escape." (Quoted on Page 44. from Tannenbaum, New Republic, July 7, 1920.)

Pugnacity has been made a group matter, which means that "personal conflict is now organized, for the most part, and has reference to the group divisions in society". Workers are not as pugnacious as their masters, "but holding a job . . . entails all the repressions we have indicated," and the worker must work, one place or another, so: "The laborer, in short, is cornered. And he will react as all men react when cornered. He will fight." This fighting impulse is partisan, without thought for the good of the opponent, and cannot be effectually "sublimated" under conditions as they are.

Thwarted sex impulses are the basis for much misery among the working class; and fear of not being able to provide for a family continually thwarts them. It is here that the discussion of the I. W. W. comes in. The paternal instinct is similar in its effects, smilarly thwarted by the conditions of the modern laborer's life. Both make the worker less confident when facing the boss, because the worker with wife and child is more afraid of losing his job than the single man.

Acquisitiveness is stronger among capitalists than among workers. It is the most dominant impulse in the dominant class in society. It is strong in the workers too, where it may lead to either strikes or treason to the cause of labor, but it is the ruling passion of the capitalist class. "Any machinery devised by society for regulating the struggle over product and power will eventually be repudiated by any party to the struggle whose interests are consistently defeated thereby, and who would eventually conclude that this machinery was set up, or at least functioned in the interest of an opposing party. Just these considerations explain in large part the growing distrust of existing political and economic institutions, despite their traditionary sanctions, and the growing strength of movements for their modification or abolition." (p. 72).

Self assertion is subdued among workers, on account of submissiveness and fear, but it rankles them to be so subdued. It would be wise of the masters, from their own point of view, to be very tactful in their rule, and when they are, they have little rebellion. But this is too much to ask of human nature, and self-assertion frequently runs rampant among the upper classes, is bitterly resented by the lower, and leads to outbreaks.

Curiously enough, yet a well known fact to agitators, some large sections of the slave class like to be bossed around. Submissiveness of a part is one of the things that keeps the whole lower class in slavery. Any change will have to take place without the submissive ones, unless at the critical moment they can be dominated into going with the revolution.

Curiosity is the basis of intellectual action, of planning and of reasoned judgement based on investigation. It functions well in only a very few people; through science and invention it has a very large indirect influence, but very little direct influence. People act according to habit.

Constructiveness is a real urge. If suppressed among workers they feel resentment. Many schemes to keep the workers quiet and satisfied on low wages

have been evolved by clever managers, most of them encouraging the worker to think he helps to run the business.

The gregarious impulses, or the "herd instincts," work best in the herd appearing to represent historically dominant traditions, in the numerically larger herd, and the one with the best means of intercommunication between its members. Workers feel class interest, but the capitalist class erects a larger herd, not nearly so real, called the "nation," and by control of practically all the means of intercommunication, persuades workers to a loyalty to their country and their country's master class all of it a direct injury to their loyalty to the working class. "The idea or opinion which is reiterated oftenest will be associated with the herd, and is therefore accepted by the members of the herd. Those in a position to put the greatest volume of reiteration behind their views will have those views prevail. They will be opposed by smaller herds who have become dissatisfied to some degree with the larger herd, through a realization that the machinery of communication itself creates this larger herd, and that it functions in the interest of the class which controls the machinery of communication". (p. 130).

Play is considered in its relation to the industrial process, many employers believing that it is possible for well managed games and spectacles to prevent the workers' disgust for badly paid, monotonous labor. The author decides that it is not a substitute for the other "instincts" repressed, though it is of some service to a master class, and gives some enjoyment to the worker himself.

Considerable space is taken up with a defense of the practise of calling these tendencies just described "instincts". The behaviorists would deny that they were anything but response patterns. For immediate practical purposes, of analyzing modern society, it seems to me that it does not matter which they are called; they exist, and they operate as he says. The author's analysis is useful, and thought-provoking; I think it is accurate in the main. But Eldridge is trying to prove the pessimistic theory that there is no hope of any improvement, for these same instincts are "as they were in the beginning, are now, and ever shall be, world without end," revolution or not, education or not, no matter what you have—and that means perpetual social war. On the other hand, if they are not instincts, if there are no instincts, or only very simple and tractible ones, situations might easily arise in which they ceased to exist. Eldridge's attack on the behaviorists seems to me to be rather weak; most of his objections are already answered in Allport's **"Social Psychology"** (Reviewed in Industrial Pioneer, Nov.. 1924).

After his review of the "instincts" the author considers cultural factors—everything that man has learned or made, including those prevalent ideas that he learned under one set of circumstances and which are no longer useful or correct. Thus the principles of liberty and equality sprang from the necessity for freedom of contract and private property, but, "Freedom of contract and private property have fostered a political and economic development which clearly violates the principle of liberty and equality, while (a positive) freedom of contract and private property themselves have become the prerogative of a comparatively small class. The accumulation and concentration of capital have clearly given a large measure of political control to a small class, and this violates the principles of liberty (or self goversment), while the grossly unequal distribution of wealth, and of opportunity, violates the principle of equality. And in the course of this development a class (the proletariat—V. S.) arose whose conditions, tested by the so-called normal standard of living has steadily deteriorated." (p. 161).

All this leads up a discussion of the role of intelligence is social affairs, and Eldridge decides that except for a very few people, there is little thought about social or political science as a whole; most people react according to their instincts, directed by what they know and hear; people don't have time to think.

So we have a class struggle, which cannot be solved by any peaceful means. It is not possible for the various liberal groups to get their programs accepted, because every one of them involves the voluntary surrender by the capitalists of some of their power, prerogatives, and wealth, and it is quite futile to ask them to so surrender. They will yield to some superior force. and not otherwise. You cannot expect them to violate all of their instincts—or habit patterns.

Neither can any peaceful parliamentary action by a labor party or otherwise correct these evils. For with the capitalist class in control of all means of communication or nearly all (and the best ones) and with its ability to maintain the loyalty of many workers to capitalist institutions through playing on such instincts as individual acquisitiveness, parental feeling, fear, etc., it is quite impossible for a labor party to even get all the workers in it, and the workers are a minority anyway. The working class, unless it violates all of its most important urges and desires, must continue to grow more radical, less considerate of other classes, and less credulous of the present fiction of democracy. Or, in other words, it is driven to the use of direct action.

Much of Eldridge's analysis remainds one of that of the professed historical materialists. Eldridge does not realize this, or perhaps he does, and is on the defensive. At any rate he puts in a chapter on "economic determinism" a doctrine which he ascribes to Marx and Engels and against which he urges the usual objections of those who do not go to the original sources for the theory. He considers it a point in opposition that at certain times in any given society, we find whole classes acting contrary to their economic interests. The fact that

there are such vestiges of ideology as the above described notions of "liberty and equality" he thinks is an indication that the theory must be modified, "and its name changed," for economics cannot account for their presence. I would suggest that he consider the name, "Historical Materialism," which is what Marx and Engels called their theory. and consider the theory they actually worked out, and not the modification of it he is evidently familiar with. You can't get a correct idea of historical materialism from E. R. A. Seligman.

Eldridge does put up one objection, new to me at least, which is this: the emphasis on the economic factor in historical changes prevents one from giving proper attention to the retarding influences which make the superstucture lag behind the material development. , Psychology, for instance might not be properly investigated, if the world should suddenly be converted to "economic determinism." I think there might even be something to this objection by Eldridge, but the danger at present is just the opposite. The economic basis of the superstructure is denied, or obscured.

We might agree with Eldridge that John Dewey and his following, with their naive faith that education will change the basis of human nature as it is now, are all wrong, and yet not agree with Eldridge that it will not change. Those of us who have become convinced that historical materialism is a true explanation of the structure of modern society, and other societies, claim that new tools, new machinery of production, will bring new classes into a dominant position—not instantly, but as soon as the social laws invelved permit these things to work themselves out. To demand an instant reflection of the new productive force in the structure of society and the mental and "instinctive" life of society would be like demanding ripe grain from the plowed ground on the day after the sowing. Yet we have a great mass of historical evidence, much too much to repeat here, that there does result from such changes in the economic basis of society a change in its structure, its dominant class, and in the psychology and philosophy of that class—such a change as is meant by a shift in the "instinct which has a hegemony" (to quote Eldridge). This is a change in human nature. Just as the hegemony of "self-assertiveness" in the feudal master class gives way to that of "acquisitiveness" in the capitalist master class—so in a workers' commonwealth we may expect "gregarious instincts" to be greatly strengthened. Before we have any such change in human nature, we must, by intensifying the class war, sweep capitalism away and give these now suppressed "instincts" a chance to develop. The economic basis of the workers' commonwealth is already here—and the class war itself is the way in which the superstructure, including the psychology of society, is being made to conform to it.

On the whole, and if Eldridge's various errors are remembered, it is an extremely valuable book that he has written, and one I should like to quote more from. It will be a pleasure to watch for reports of further investigation by the same author. I hope that the next time he writes he will not have one of Prof. E. C. Hayes' usual asinine "editor's introductions". In the case of **Political Action** Hayes also encumbers the pages with several footnotes of extraordinary stupidity.

**POLITICAL ACTION, by Seba Eldridge, Lippincott, Philadelphia. Price, $2.**

**Professionalizing Social Poulticing**

"Social Work In the Light of History" was first in the Lippincott sociological series. The author in his preface states very clearly his purposes in writing the volume and his manner of working. He says that in preparing the pages for the press he "had several groups of readers in mind, especially college students and interested citizens who wish, without delving deeply into the subject, to have some definite notion of the significance of social work," and later, "No attempt has been made to produce an original contribution to knowledge of any subdivision of history, and there has been relatively little use of original documents". The book, true to these promises, never delves beneath the veriest surface of social problems nor contributes one whit the interest that did the volumes of research he consulted, such as those of Lallemand, Webb, Asley or Bosanquet.

The method of the book is what Professeor Queen calls "studying history backward". Rather than "starting at the beginning," he chooses to "look about and form a tentative estimate of today" before turning back into our yesterdays. Thus Part I "Present Tendencies in Social Work," treats with 1. Professionalizing Social Work, 2. Correlation of Social Agencies and 3. Preventive and Constructive Work; while Part II deals with "Nineteenth Century Humanitarianism"; Part III with "The English Poor Law," Part IV with "The Medieval Church and Philanthropy, and Part V goes back to "Mutual Aid in Medieval Communities." After taking us back as far as the 14th century, the author simply stops "studying history backward" and we have a final chapter of "Summary and Conclusion".

The advantages of this method, over the ordinary historically "right side up" picture, are not apparent. Certainly Part I: "Present Tendencies in Social Work" makes estimates that are not upheld by the later introduced historical material nor based on historical insight or perspective; we trust it is truly but a "tentative estimate". The claim is made that: "Already social science, particularly sociology, has established the fact of the relativity of moral codes and the general manner in which social institutions grow and decay. It has demonstrated the intimate relations of government, industry, religion, family—in other words,

the unity of the social process. It has shown the importance and some methods of applying functional tests to social agencies. It has made clear the possibility of controlling many of the conditions of our common life". Doctor Queen worries a great deal about the stigma that "charity," and "philanthropy" have acquired, denies at length any "assumption of social or economic superiority" implied, and pleads for the "new professional attitude," and says that the social worker, like the physician, lawyer, minister and teacher, should be recognized as "professional folks who are engaged in doing things which people need to have done and which in this era of specialization they are not able to do for themselves". Professor Queen chooses to ignore the rather obvious differences that the professional persons he names are paid by the persons they serve, they exercise no financial control as such over their clients, they are not concerned to "patch" the existing economic organism where it is rent. He says, "the social worker should not be looked upon as handing down to the inferior classes some of the surplus of the superior," and that, "Now it is a revulsion against just this sort of thing that is providing one of the most powerful impulses of the professionalizing of social work. Charity has sometimes been presented as a device for quieting unrest and avoiding important social or economic readjustments. But the scorn of the socialist, trade-unionist and often the moderate liberal for charity is being felt . . . Additional impetus is given to this transition by the gradually increasing use of social agencies by the well-to-do, sometimes with the payment of a fee for the service, and by the extension of the government participation in social work. Just as there need be no humiliation in consultation with a physician, attorney, architect or engineer, so it may be that the social worker will presently be looked to by all of us for the rendering of certain specialized services".

These kind of statements indicate a type of confused thinking, a quality of evasion, a lack of appreciation of the different types of functions that a social worker does or may serve, and on the other hand his functional purpose as a unit in the social and economic organization of society. Many persons may approve of the personal services that he can render, the type of non-financial advise in social situations that he can give—the Better Baby Clinics, the Child Behavior Problems Clinics, the Legal Aid Societies—are examples of this type of service, which while not free of the "Charity Stigma," are yet purely voluntary, not coercive and have the true germ of "social service" in the way of making public and available to all professional abilities which hitherto could be purchased individually only and at a too high, nay at a prohibitive price. But it is a very curious reasoning which, while recognizing the economic implications of these same problems and realizing that many persons, understandably and perhaps justifiably, see in charity "a device for quieting unrest and avoiding important social or economic readjustments," will yet hope to answer these same objections merely by putting social service on a professional plane. That were truly an easy answer to all our economic and social ills.

The historical material presented is interesting though not full nor new. Part IV " The Medieval Church and Philanthropy" traces the influence and effect of the Church on social conditions and the type of social amelioration that followed. "The idea that the giving of alms constituted a sacrifice in the sense of a religious ceremony seems first to have appeared in the teachings of the church fathers." (p. 217). Then, "With this continued emphasis upon the spiritual welfare of the givers, it was inevitable that the particular need of the recipients should often be overlooked. Consequently, there not only was failure to provide the things most needed, but there was encouragement of begging and idleness". Then, in turn, as to methods taken to curb these same evils: "Europe would not have resorted to whipping, branding, galleys, deportation and even slavery and death punishments for begging unless this had been a very serious evil." (p. 226). The arraignment of the Medieval Period in the History of Social Service is enlightening, and complete:

"But an even more serious effect of the philanthropy which was based on the religious merit of almsgiving was the ignoring of fundamental social problems. From the very beginning of the Christian Church, there was an acceptance of the established order. This was doubtless due to the hope for an early return of the Lord and a feeling that injustice in this world mattered little because it would so soon be rectified in the next. Therefore, the Church did not undertake to destroy the institution of human slavery. It advised the slaves instead of caring for freedom, rather to make good use of their calling as slaves. Indeed, the Church itself became in the fourth and fifth centuries the owner of a large number of slaves. From the passing of the Apostles to the end of the Crusades the expectation of an early return of the Lord was gradually given up, but the notion that the social order was subject to change did not enter men's minds for many centuries. The unequal distribution of property, the social distinctions between the rich and poor, the subjection of women, and other injustices which have by no means entirely vanished, were long accepted as a matter of course, and no efforts were put forth for their elimination". (p. 226).

When he views the great strides that have been made in "public service," the growth of "social consicence," Professor Queen finds himself much encouraged and he is very hopeful He looks to "social insurance, free compulsory education, and all those things that will go to make complete political and industrial democracy," to "break down class lines and give everyone an equal part in our common life." He says: "Charity thus means a se-

cond sort of abstraction. It implies that something is wrong with the political and industrial system". He perceives basic problems but would cure them with what appear to many earnest thinkers as poor palliatives. He acknowledges fundamental sores, sees wounds and infections that have persisted through the centuries; and he would cure them with simple remedies, professional treatment and social legislation the efficacy of which are all belied by that very history he "studied backward" so long.

—E. M.

**SOCIAL WORK IN THE LIGHT OF HISTORY, by Stuart Albert Queen, Ph. D. Published by Lippincott, Philadelphia. Price, $2.**

**Are Workers Too Bad Or Too Poor?**

Any country in which the established social system is nearing its point of maximum development is characterized by a redundancy of population. Nothing presages more clearly an impending economic readjustment than the presence of a large class of people whose standard of living is constantly being depressed because the increase in population is more rapid than increase in the available necessities of life, or because of an inequitable system of distribution of these necessities. In either case the ingenuity of the race is applied to the problem of finding a way in which to break down the barriers to further human progress.

While it may reasonably be taken for granted that the remedy will be discovered and applied in the future as it has in the past by the class that has no material wealth to lose through a revolutionary change, much valuable and interesting material is supplied by the researches of those who are interested only in a modification of the existing system and its further perfection.

I have before me such a work, Population Problems by Edward B. Reuter Ph. D. of the University of Ohio. Here we have an excellent treatise containing valuable statistical data and a discussion of various population theories, race mixtures, biological differences in races and individuals, and many other questions of human and scientific interest.

However, after having carefully read the book I cannot but feel that the most vital part of the question has received inadequate treatment at the hands of the author. There can be no objection to a thorough handling of the subject of the biologically inferior individuals and the manner in which these may be eliminated. But a real consideration of the subject requires first of all recognition of the fact that the important factor in determining the character of the population is not biological but social and that effective improvement of the individual units composing it is to be made only by sweeping economic changes that will result in the recasting of the social structure.

The author does not entirely neglect this matter. He brings in the Jukes and the Kallicaks for inspection and gives them rather better treatment than they usually receive at the hands of sociologists, admiting that the unfavorable environment in which the young of the trike were reared probably had more to do with their delinquencies in later life than any inherent mental or moral defect.

But curiously enough he places all the stress on the necessity of eliminating the congenitally defective and regrets that the government has not adopted a more sensible policy in the selection of immigrants. He thinks that this nation needs a definite conception of the type of society desired. Obviously such a national conception is quite impossible. There is no possibility of compromise between the ideal of the class that profits by the present social arrangements and the class that suffers because of it. The workers' conception of a desirable social order would scarcely meet with approval from the employing class and the prevailing discontent among the workers sufficiently attests that the system the ruling class has succeeded in imposing on humanity is by by no means satisfactory.

In fact it is no longer possible to properly consider the problems of population from a nationalistic point of view. From year to year economic pressure is being applied more uniformly on all the peoples of the earth, national and even racial inequalities and differences are gradually but surely being ironed out. The time is not far distant when the human units composing society will be disguishable from one another only by a difference in complexion. Immigration restrictons can only retard this tendency to a very limited extent. If American capital cannot import Coolie labor to compete with American workers here there is no insuperable barrier to the growth of modern industry in China, and like economic conditions will inevitably produce similar social conditions modified only in unimportant details by tradition and racial differences. Ultimately the effect of the Chinese worker employed in a factory in China is as great on the American worker similarly employed as it would be if they were working side by side under the same roof. The standard of living of the one is effected by that of the other and all the conditions effecting the quantity and quality of the population tend to become the same.

China is an extreme case, but take any number of countries already far advanced in industrial development—Japan, practically all the European countries, and the United States—in all of these we find conditions are rapidly approaching uniformity and all of them have the same population problems. The trend is decidedly toward homogeneity.

The author states that attempts to make improvements in the quality of the population by considering only the social and not the biological side of the problem have not met with success and he mentions as proof that various Utopian schemes

have uniformly failed. This contention can by no means be admitted to be correct nor can the proof be accepted as valid. The fact is that all social progress has resulted from the improvement of environment made possible by the easing of economic pressure. To be sure the Utopian schemes have contributed nothing to this work but the conscious efforts of the suppressed classes have. In our own day we have the organized labor movement acting with a considerable degree of effectiveness in developing a better type of population, not because union men and women are biologically superior to the unorganized but because they have been able to establish for themselves a more satisfactory environment.

It is well for us to know which human defects are inherited and which are the result of unfavorable environment, but if we are able to eliminate the latter the others will not constitute much of a problem, especially as it is known that the race is gradually becoming immune to many of them.

In matters that do not touch too closely on economics the book is good and well worth reading. The phenomenon of the falling birth rate, marriage and sex relationship are fairly discussed. Malthus' theory with its mixture of obvious fact and puritan dogma is very properly discarded as a historical exhibit, interesting but not useful.

—CARL KELLER.

**POPULATION PROBLEMS, by Edward H. Reuter. Published by J. B. Lippincott Co., Philadelphia. Price, $2.**

---

**The editor regrets that in the review of IDO last month, the statement of name of author and publishing house was inadvertently omitted.**

**IDO (Problem of an International Auxiliary Language), by Luther H. Dyer, Pitman & Sons, London. Distributed by International Key Bureau, Box 537, Sta. C, Los Angeles, Cal.**

---

Next month we promise you an extra good Pioneer. The cover design is a powerful drawing by Lynch. "The Coming Revolution in the Printing Industry," by a Civil Engineer is an article that shows the effect of new machinery—very interesting to many not in the printing industry. "Working Too Hard" is a scream—a burlesque of a good slave in action. Edward Lloyd is right there with a half humorous, half serious (very serious) article entitled "Stone Cross and Double Cross." These we have already. Who knows what more good things will come in before printing time? Spread the Good News. Get your friends to subscribe.—**Editor.**

# Warning!

## California!

The world is watching you;
Look to it what you do.
It is such deeds as these
Have shattered tyrannies.
Turn, turn the dungeon keys
And free the seventy-two,
The dauntless brave, the few
Who dared to beard the crew
That robbed and lynched and slew;
And free the twenty-two
In Folsom gagged and bound
Because they dared to sound
The tocsin far and wide
Of liberty denied;
Fling open every cell
And from each living hell
Let labor captives come;
Give Mooney to his wife
And Billings back to life;
Lead Ford from out the shadow of
the tomb.

## California!

The world is watching you;
Look to it what you do.
Bind not those slender hands
With your iron bands.
Immure not in a cell
One who loved too well
The outcast and the poor
That starved within your door;
One who with vision clear
Saw hunger, vice ,despair
Blot out the landscape fair;
Saw Labor crucified
And "rights of man" denied
By vested wealth and pride.

## California!

Again the bastile reels,
Again the creaking wheels
Go by, and tyrants feel
The kiss of flashing steel. . . .
**The world is watching you;**
**Look to it what you do.**

—HENRY GEORGE WEISS.

# They Rot Before They Die

(Continued from Page 14)

ance is too expensive. A real worker who does become "hooked up" has to cease to be a worker and either turn stool-pigeon or turn crook (usually both) in order to get the five to ten dollars a day required for a well-developed habit.

Not all that the preachers and the moralists lump together as signs of decadence, are really such, when divorced of the attitude which surrounds them, when the motives that impel human beings towards them are considered, and when an eye is had to the effects. Bernard Shaw, in one of his later plays, "Heartbreak House," lays down a principle that is probably true. He says that as long as the captain of a ship can manage his ship, what he drinks is of little concern, socially. But when the ship is drifting at the mercy of storm and waves, with the captain helpless in his cabin bunk, that captain is worthless, even if he has had nothing stronger to drink than weak tea. Lincoln said something like this, when various politicians tried to get General Grant demoted on the grounds that he drank whiskey; Lincoln told them, so the story goes, to find out what brand Grant used, and he would send some to the other Union generals, and maybe they could occasionally win a battle too. We have seen that under certain circumstances a winning, revolutionary class is possessed of a superabundance of vigor and "pep" and will "step out" all the time, will roister and "jazz" its way to victory, even while the losing class is doing much the same thing from opposite motives and with an opposite result, is making itself sodden to drown its sorrows, and is fleeing from an unequal battle to the compensations of wine, women and song. It is partly a question of motives, and partly a question of whether we have sufficient control to still fight while we have our fun, whether what is unquestionably mere degeneration on the part of the ruling class is degeneration for the workers too.* The workers are still able to function; the capitalists are becoming increasingly unable to conduct affairs (witness Europe).

The bourgeoisie indulge in ruinous dissipation for the same reason they become mystics, or take gas, namely, hopelessness and boredom. The working class is only bored in so far as it is not class conscious. When a worker becomes a radical, he invariably ceases to be a booze-fighter, or at least he ceases to be a slave to drunkenness. The responsible union official who gets drunk at inopportune moments, or gambles very much, will have short shrift among revolutionists, at least.

Then there is another aspect to this thing. Not all that the preachers and the moralists lump together as signs of decadence are really such when divorced of the conventional, ruling class attitude towards them. What Rev. Smith calls (after Roosevelt) "race suicide" has no terrors to the proletariat. We know that the world would be a better place to live in with fewer people in it. A superabundant population of workers is convenient for the capitalists, anxious to break down strikes with a great army of the unemployed, and useful to militarists, who need material for their armies. But for the worker, a scarcity of mouths to feed is better. There is no danger that the world will be depopulated. The danger is quite otherwise. Every sociologist of any reputation is worried about the possibility of a food famine from **overpopulation.***

Furthermore, it is undoubtedly true that the family, both among proletarians and bourgeoisie, is less stable than it was even ten years ago. It is undoubtedly true that sexual promiscuity, or perhaps, if that is too strong a word, varietism, is on the increase. To yield to such tendencies as this is a serious collapse of morale, if you are a member of the bourgeoisie, because the Christian family is one of the mainstays of the bourgeois social order. The monogamous, or pseudo-monogamous, family, with the man the head of the family, is one of those conservative forces which are at the same time stabilizers of property relations (inheritance, etc.) and also centers of conservative propaganda, points of support for a class on the defensive. The family and private property have been connected all through the history of civilization.

But it by no means follows that in a condition of wage slavery, or of the cooperative commonwealth either, a rigid monogamy will be desirable. Here we can well afford to let nature take its course, feeling sure that if we can abolish such things as poverty, discrimination on the industrial field against women, and various abnormal factors—monotony, ignorance, enforced celebacy, organized prudery, for example, everything will turn out well enough.**

At present people's lives are too nervous, even proletarians' lives are too nervous, and this nervousness reflects itself in a tendency to change mates faster than they would otherwise, but it is doubtful if mere promiscuity itself does any particular harm; the great harm is done by the original nervousness, irritation, worry, etc., of which the ultra-promiscuity is only a symptom. It is also extremely doubtful whether futuristic art, jazz music and jazz dancing are particularly injurious to the proletariat, though they are disturbing factors in a conservative society,

*NOTE.—No one is defending alcohol and drugs as fit articles for human consumption. Anybody would be better off without them. I merely argue that they have not yet reduced the working class to helplessness.

**NOTE.—For a good modern survey of this problem, see Edward M. East, MANKIND AT THE CROSSROADS.

**NOTE.—Of course the actual process by which the home of the proletarian is being broken up today is a capitalistic one, and a very painful and sordid one: women and child exploitation, unemployment of men because of competition with women and machinery, under pay, inability to support, etc. Nothing good can be said about it.

and conservative spokesmen do well from their point of view to oppose them.

Jazz, in all of its manifestations, is an indication of the nervous tension of modern society—it is a product of rushing, noisy, worried life, and in a saner social system, would lose most of its savor. Just what would be accomplished, from a proletarian point of view, by an attempt to supress the symptoms, which are relatively harmless, while permitting the cause, namely, the insecurity, the worry, the fretting, which makes such things as jazz palatable, and perhaps necessary, to the modern proletarian, I cannot see.

Of course we may find, as the fight develops, that like other revolutionary classes, we have to become puritans merely because we dare not spare time and energy for anything else than the class war. In that case, our morality will resemble that of the Ironsides, who followed Cromwell's advice, to "put some conscience into their fighting," far more than that of St. Augustin and Simeon Stylites. It will certainly not even be as religious as that of the English Puritans, for the utilitarian aspect of it will be plain for all to see and not hidden beneath Biblical phraseology, as was theirs.

At present there is no apparent need of anything of this sort; we can well let things run along as they are ;merely preventing the dissipation of the workers' money during strikes, demanding efficiency of our union officials, and letting everybody go to what dances, establish whatever domestic relations, and admire whatever forms of art or alleged art they may care to look upon. (Anyway it is a fact that good music, painting and drama have more sincere admirers among the poor than the rich.)

On the other hand, a sensible bourgeois must fight such tendencies, for they break down the cultural superiority of the rich, and the feeling of dignity and reserve strength. All change is dangerous to a ruling class. A sensible bourgeois must battle for his grand opera, even though he doesn't understand it a bit, must insist on preserving the pictures of the old masters, though he cannot appreciate them, must especially fill his houses with "period" furniture, though it is useless to him, and makes him uncomfortable. It is curious how the bourgeois of America pathetically clings to such trivialities as old furniture. It is something like Henry Ford's ludicrous attempt to revive what, for him, means oldness, stability, wholesomeness and happiness, namely the square dances of his youth. Just so do the fashionable hotels and the mansions of the **nouveaux riches** advertise, in one way or another, their "Louis XV," "Georgian," etc., rooms. The thing creeps into even pleasure resort literature. For instance, we quote a few paragraphs from the advertising circular of "The Breakers," a huge, twelve story Atlantic City paradise for the upper middle class—small town merchants in the city, and the like:

"From the Boardwalk level, we walk into the concourse; its high-vaulted marble ceiling and walls give a coolness that even on the warmest mid-summer day afford a respite from the hot sun. On either side runs a wide-stepped marble staircase, one leading into the lobby and the other takes us to the **Louis XVI Restaurant.** Three high-speed elevators whisk us to the floors above.

"Even as we enter the doors, friendly hands are ready to serve, and yet with no show of obtrusiveness. The sheer comfort of the hotel, and unlooked-for little services, the charming environment are noted immediately. No matter where we go, little luxuries spring up, pleasant, friendly, comforting luxuries that one doesn't expect but is mighty glad to meet with.

"The Louis XVI Restaurant is a revelation. Here one may sit at tables looking right on the ocean, and on those days when the temperature is moderate, swing wide the great French windows and dine out-doors. Imagine a cuisine so savory as to satiate the epicure, imagine an orchestra strumming a suite of Grieg, a Beethoven Symphony or a raggy Irving Berlin fox-trot; imagine a steak, thick and juicy, garnished with new-picked mushrooms and grilled to that nicety that shows just a tinge of carmine when you cut it; imagine a service of silver and of linen so immaculate that it fairly glistens; fresh cut flowers on the table, and you have a faint picture of dining here. . . .

"Tonight we will dine 'atop The Breakers in the **Egyptian Restaurant.** The dreamy atmosphere of the Pharaohs is carried out in its arrangement, and one feels as if here has been transplanted the Sphinx and the Pyramids of the Nile. On four sides the windows open wide on balconies w here we may stroll and view the seven long miles of Boardwalk. It is situated one hundred and sixty-five feet 'atop the hotel landing, quiet from the gaiety below. One thousand may dine here at one time. . . ."

You will see here the strong appeal made to oldness, exclusiveness, "good taste," formality—even in a building dedicated to pleasure. Also how jazz creeps in here too, just as Irving Berlin, the jazzing Jew, himself has slipped into a most conservative, Roman-Catholic, millionaire family.

The old men of the class that cannot keep its youth from carrying hip flasks, seizes a bit of flotsam from old times, and makes a virtue of that. This, I think, is one of the most perfect, and vivid, confessions of the senility of the bourgeoisie, of its decadence, its failure to separate form from content. The bourgeoisie is perishing, its civilization is collapsing, nothing is sound any more but the proletariat; capitalism cannot even properly diagnose its own disease, because of the prevailing pessimism that poisons it to the core, makes some of its members skeptical of all serious thought, and fills others with a dreary and useless joy, based on chemicals or the hypnotic sounds of saxaphones. Capitalism is dying, and like all previous ruling class systems, it is rotting before it dies. The stench is something awful, but I guess we will have to stand it, for it is our fate to bury the corpse.

# WOBBLES

**A wobble: By the way, the wobbles in our papers have a true office to perform—that of bringing the sublime and the ridiculous into a compromising proximity. . . .**

**True humor, after all, is the carefree manhandling of extremes—to extremes extreme sorrow. To illustrate:**

**A STEEL MAGNATE CRYING IS A PATHETIC FIGURE.**

**Not always!**

**A steel magnate crying and (at the same time) eating a pig's foot—is rather a pleasing spectacle.**

**That's what I mean by sublime and ridiculous. . . .**

**—T-BS.**

### THEY'RE ALWAYS THAT WAY

A much inebriated man slumped down into a seat in the lobby of the Robidoux Hotel, St. Joe, Mo., landing beside a clergyman.

"Fine (hic) day," he began.

"Yes, it is," from the clergyman.

"Thish's a fine hotel."

"Yes, I find it very comfortable."

"Won't'sh have a drink?" asked the man, encouraged by the courteous replies.

The clergyman's face hardened. "No, thank you, I do not indulge."

"Shay, whatcha givin' me? You gotcha collar on backwards now."

### THE CELESTIAL BOARD OF DIRECTORS

An educated Chinaman, visiting in the Occident heard with interest a lengthy discussion on the Christian Trinity. His host asked him what he thought of God, now that he had listened to the opinions of those present.

"Isn't it just like a bunch of Englishmen," countered the Chinaman, "to make him a committee"?

"Why aren't you working? Did you go on strike?"

"No, not me! I got laid off, if you please."

"Then the boss played with you and struck you out!"

First Harvest Hand: "What became of that auto tramp the boss hired yesterday?"

Second Ditto: "Didn't you hear? He got so used to a flivver that when the mules stopped he crawled under them to see why they wouldn't go."

## Industrial Rubiyat

**(With Profuse Apologies to Dear Old Omar)**

Ah Love, though you and I could with fate conspire,
To grasp this sorry scheme of things entire.
Could we shatter it to bits, and then
Remold it, nearer to the heart's desire?

I doubt—not only doubt, but fear,
Our desire to shatetr would come to naught, my dear.
Our puny efforts, the feeble strength of two
Is naught, but a wish, as **might** is needed here.

Ah Love, you and I can but regret,
That our power is but the dream of few as yet.
Our Power, lying dormant within the workers of this earth,
Awaiting, as unknown to them, the hour to strike is set.

**—By H. J. Holmes.**

The minister had come to Sunday dinner, which necessitated the killing of a chicken on short notice. After dinner a brood of motherless chicks kept coming up on the porch cheeping plaintively. Time and again little Jim drove them away.

Finally, exasperated, he exclaimed: "You needn't come around me cheeping. There sets the man that et your maw."

**THE INDUSTRIAL WORKER,** wobbly organ of the imminent revolution of the proletariat, has for its columnist one **T-Bone Slim,** a gentleman I strongly suspect of originating many of the newer wobbly words and phrases. In a recent number he wrote:

"A working stiff often gets it into what he thinks is his head that by merely saving what money he can spare from his $3.50 per day, and investing it in **Just Some Good, Safe Stocks,** he will some day surely become a **Ford** or a **Rockefeller.** Such a working stiff, gentlemen, should be treated at once. He is suffering from the first stages of **hydro-forbesia."**

A great Hearst publicist comes in for much razzing at the hand of Slim, and **brisbanalities** is now official in the wobbly thesaurus.—Stewart H. Holbrook, in **The American Mercury.**

# T-BONE SLIM

## *Has An Article Every Week In*

# SOLIDARITY

There is a lot more in Industrial Solidarity and Industrial Worker than T-Bone Slim's column. These two papers are the I. W. W. weekly publications, packed full of news about the labor movement; and about the workers' correct form of organization.

Industrial Solidarity is the official organ of the I. W. W., published at General Headquarters, 3333 Belmont Ave., Chicago. Sells for $2 a year; single copies five cents; bundle orders of five or more, three cents a copy.

Industrial Worker is the newspaper of the Northwest Branches of the I. W. W., same price as Industrial Solidarity, published at Seattle, Wash., Address P. O. Box 1857.

You are missing a lot if you don't get each of these papers. You can't say you know the labor movement of America unless you read the journals of its most militant section. Written by workers, and written for workers.

Wobbles -- Books -- Poems -- Cartoons

# Diffusion of Knowledge

(By ULISUJ J. LOTGISDEN)

As we contemplate the history of the past, the almost interminable vista of darkness during which the mass of men seemed to slumber is not the only one which arrests our attention. There flashed now and anon across the sombre firmament of ignorance, a genius, who like a meteor shooting through space, left a trace of radiance in his wake. There arose from among the multitudes, students and philosophers, scientists and dreamers, striving for knowledge, panting for truth. But their soaring minds dwelt mainly among the stars, or contemplated the mysteries of Fate and the blind forces of nature far more seriously than they did the physical powers, and the legitimate aspirations of man. They advanced theories, claimed principles, built systems which they deemed eternal, and which subsequent generations saw levelled to the ground and scattered to the winds. Once in a while fragments of the whole remained, and helped to increase the small store of positive knowledge; but how infinitesimal was this when compared

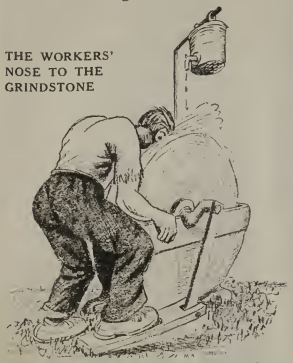
**PROFITS AND ORGANIZATION.**—Profits, overwhelming profits, are the outstanding fact in the industrial and financial reports which all corporation are making now on their activities during last year. It was a year of sub-normal employment; and of just moderate sales. It looks a little as though the markets were being flooded.

But it was the wildest orgy of profiteering ever known in America, aside from the holy years of the war.



Normally, when capitalists are getting tremendous incomes, a few crumbs from their feast fall to the share of labor. There is usually in such times a little increase in wages, even without strikes, and a great deal more employment. But not so last year. Last year there was a little less employment than usual, and wages increased only here and there, only in the well-organized industries, and only as a result of bitterly contested strikes.

This seems to indicate the course of industry, in "good times," from now on. The enormous exploitation will surely bring a period of collapse and unemployment, sooner or later, and this will be, naturally, followed by one of relative "good times" again. But if this present epoch of "prosperity" means anything, then even in times of prosperity, there are too many, very much too many, men for the jobs. The industrial reserve army of the unemployed is permanently larger than ever before. Wages will not go up without striking, and only well-organized strikes win much. Strikes are harder to win.

In this situation, what is left the workers but industrial unionism, the sort of unionism that has a chance to win? Have any craft unions won any strike during the last year? Only when, as in the building trades, they have operated in unison, in the whole locality, and then only in places where there is a building boom going on. Practically all the strikes that have been won have been in industries where the unions are semi-industrial at least; men's clothing workers, ladies' garment workers, Alberta miners, lumber workers—marine transport workers—where else? Notice that the Australian Seamen's Union (indus-

trial in form) won its strike, and the British Sailors' and Firemen's Union (more industrial than the I. S. U., but not enough so) lost its strike.

Industrial unionism is the only kind of unionism that can meet the new conditions, of capitalistic prosperity in the midst of workers' unemployment. And the I. W. W. is **the** industrial organization.

(But Maybe It Will Sharpen His Head)

**"LEFT BEHIND".**—The organ of the conservative wing of the British Labor Movement, the Daily Herald of London, in a recent issue publishes a very fair, purely objective review of Gompers official biography. The title of the review is the most significant part of it: "The Sort of Labor Leader We Have Left Behind". What will this, the **right wing** of British labor say about Green, the present A. F. L. head, who is a mile to the right of Gompers? What will the rapidly growing **left wing** in England, and other countries say about the high salaried double crossers that the A. F. L. has in power? Probably the reason they haven't said much so far is because foreign unionists, right or left, cannot believe that a bunch of workingmen would be so silly as to pay up to $25,000 per year to anybody for his services as a Judas to them. It does seem rather queer, at that. We never could understand it.

**THE KING ON INDUSTRY.**—The king of England is one of those ornaments which, however great the expense, capitalism has to maintain. His function becomes apparent from a glance at his twelve-minute speech at the opening of Parliament a short time ago. Says he, in effect: "The country is f ced with a little trouble in the coal fields. A spirit of conciliation on the part of labor will make this danger pass away, and the glory of my reign will continue, untarnished. I thank you. Let Parliament continue to talk."

We do not think that many of the English workers will be fooled by this royal message, outlined, of course, by whoever is head of the organized capitalists of Great Britain at present. The time has gone by when even a king can persuade the English worker that everything is all right —just leave it to George (the Fifth) and the windbags gathered in the capitalist parliament. They have watched that parliament cringe before the threat of a nation-wide mine and transport strike, and deliver millions of pounds to pay the wages that capital had once decided to cut. They have seen the king, shining with diamonds, address his glittering lords and his not overly brilliant commons in parliament,

and talk like the secretary of an American chamber of commerce about "capital and labor getting together"—so that the industries will run along and profit continue unabated. They will realize, we hope, that they have the whip hand, if they will only use it. If they do, workers of all lands will learn from them.

**KENTUCKY SAVES A NEGRO.**—The governor of Kentucky swore that Ed Harris, a negro, would not be lynched, so he called out the militia and jammed the town of Frankfort with troops. Tanks rumbled up and down the streets, machine guns glared from the centers of the blocks, tear-gas drifted over the curious crowds like fog. The negro, who was supposed to be in danger of lynching, was rushed to a nearby town ,regularly tried, and sentenced to death within thirteen minutes after the trial started. Going to be hanged anyway. Net cost of this big Wild West circus—about $20,000.

Now we suspect the sincerity of everybody concerned in this whole blooming business. Probably the negro confessed under duress. There seems to have been no adequate reporting on the trial—the public was absent during its course. Certainly there doesn't have to be a whole army called out to keep a southern mob from lynching a negro. Seven men and a corporal could have done that. A handful of sheriff's deputies could have done it. There has never yet been a case where a sheriff who was really determined to defend his prisoner ever had him taken away and lynched. All the lynchings take place with the sheriff a silent partner to the lynchers. A mob of southern gentlemen never, under any circumstances, faces any gunfire, unless there is a whole race war going on, and they fight out of fear.

"The Big House"—A Palace of the White Master

The Burden Bearer—The Negro Does Heavy Work

Why all this military display—tanks, tear gas, machine guns? We suspect that it might be partly hysteria. But we also suspect that it was a dress rehearsal in subduing mass picketing—that it was a little practice maneuvers to prepare the militia of Kentucky for their real work—defending profits. There are coal mines in Kentucky.

However, perhaps we are mistaken. Perhaps it was all designed to impress the "Nawthen traducahs" of the South with a deep respect for her love of law and order—to hasten the flow of capital into Southern fields, and maybe to convince all and sundry that it is really too expensive to save any negroes who ought to be lynched. Anyway we will wait and see if they go to all this trouble to legally lynch, instead of just lynch, the next negro.

**FORD IS FREE.**—The noose got snarled, Busick made a mistake, the jury was not dismissed when it should have been, and all Busick's ranting about "un-American conduct in setting free this dangerous criminal," and all his sentencing to jail for contempt of court of spectators who applauded the verdict of "not guilty" will not put Richard Ford back in the shadow of the scaffold from which he has just stepped.

And now for Suhr. If Ford is, by the verdict of his second trial in Marysville, not guilty of murder—then he should not have been confined for twelve years in a California state penitentiary. And if Ford was unjustly confined there for twelve years, where, in the name of Pontius Pilate and Bloody Judge Jeffreys, does the law in California get the right to keep Suhr, his partner in crime—or innocence—in jail for still longer?

Every class-conscious worker should tell

the world the facts about the case of Ford and Suhr. They were convicted in 1914 of conspiring to create a strike during which they could murder some officers of the law. The facts do not bear out this theory. There were abominable conditions on the Durst Bros. hop ranch, in Yuba county, California, and between two and three thousand hop pickers went on strike. Everybody, including a government investigating commission, agrees that they were amply justified in striking. Ford and Suhr were there, and they organized the workers for victory. They made speeches, urging them to hold out. They did not advise any violence.

The strike committee was tricked, threatened, and flouted by Durst, the employer. False warrants were issued for the arrest of the "ringleaders" of the strike—illegal warrants. Attempts were also made to arrest without warrants. Finally—the evidence of the second trial of Ford shows this, and the jury believed it—officers, friends of Durst, came and fired into the crowd, killing and maiming. In the confusion an unknown Porto Rican worker wrested a gun from one of the officers and killed two of them. It is for these killings in self-defense (they can not be called "murders") that Ford and Suhr were convicted; it is on this flimsy case of "conspiracy to kill" that Ford was recently retried for his life, and that Suhr is still held in prison, after twelve years. The acquittal of Ford should bring the release of Suhr —but it won't unless Labor makes its voice heard in no uncertain tones, demanding this release. The readers of this magazine are all workers, let them take this cause to heart, and line up with the I. W. W. in its efforts to free Herman Suhr.

**A RELEASE IN SIGHT?**—The courageous attitude and the manly determination to stick to their principles in the face of the most outrageous persecution, shown by the members of the I. W. W. in San Quentin Prison has done something more than to force a grudging note of admiration from some sections of the press in California. It has convinced a considerable part of the populace, including some articulate parts (possessing newspapers) that such persecution is useless. If it doesn't accomplish what it is intended to accomplish, if it doesn't break the spirit of the I. W. W.—what is the use of it? Why the expense, and the ignominy of keeping brave men in jail for a political offense? So they reason.

Here is a typical editorial statement; this one is from the Los Angeles Record.

"You can't imprison ideas. Since the dawn of man's civilization it has been tried and it has always failed. Now California is just learning the old, old lesson for itself.

"It has just been learned that of the 60 I. W. W. prisoners in San Quentin 50 are eligible to apply for parole, but have refused. A score are in solitary for having struck against alleged discrimination of the prison authorities against their fellows. All are willing to undergo further hardships rather than forswear their beliefs in industial unionism. Their leader estimates that of the 150 original wobbly convicts only 12 per cent have taken parole in place of what they are demanding—full pardon.

" 'Wrong opinions should be met only by fair discussion,' says Dr. David Starr Jordan, Stanford sage, neither a 'red' nor a 'pink'.

" 'To put them down by force or terrorism or by special legislation is a policy more dangerous than any expression of opinion can be.'

"Not only dangerous, but futile and humiliating for a land as big and impregnable as ours to jail its radical thinkers for their radical **thoughts.**

"If California is wise it will release its political prisoners and repeal its war-born, hysterical criminal syndicalism law."

The statement that "our" land is so "big and impregnable" to radical thinkers that they are harmless, is, of course, what the psychologists call "rationalizing," or what common sense calls, "making a virtue out of necessity". We don't care what excuse the bourgeoisie gives itself for giving up the criminal syndicalism persecution. The important thing is that they are realizing in California that it is ineffective.

HOP PICKERS LISTENING TO SPEAKERS ON DURST'S RANCH, Aug. 3, 1913
(The Shooting Started Shortly After This Picture Was Taken)

The crowd of strikers which was being addressed by Richard Ford at the time of the Wheatland Hop Field's massacre was most orderly and inoffensive. They were sitting and standing around on the ground, packed closely together, men, women and children of twenty-six different nationalities — not armed in any way, for Ford had requested any who had guns to leave them at home.

One of the grievances which had brought on the strike was the fact that the hop vines were trained up on high poles, and there were no special men hired to pull them down or pick the high hop vines. Women and children were not able to do this hard work, and the high wall of vines made the hop fields an inferno of heat by breaking any cool breeze that might start up.

HOP PICKERS LINED UP ALONG ROADWAY ON DURST'S RANCH
WHEATLAND

HOP PICKERS, WAITING FOR MEETING TO START, August 3, 1913

Hop pickers are migratory or semi-migratory workers, who have to make a living in the blazing central valleys of California by rushing from one district to another, following the varied crops as they ripen. For the rich ranchers they are just so much human power, to be used once a year and driven away, with no more expense than can be helped. The I. W. W. is the pickers' great hope.

"And so ends another chapter in that book, 'The Crime of a Decade'. The story of how a money-hungry hop rancher conspired to drive workers to despair; of how he attempted to enforce something even lower than peonage and in so doing caused five innocent men to be killed; of how he did not stop there, but went so far as to send two innocent men to prison with a life sentence as their due; of whom one returned after twelve years and proved to the world they were innocent. We found in the opening chapter that the story began on Sunday, August third, and now with our last page turned we learn that one man is given half freedom on Sunday, January 24th. With that thought in mind may we hope that before many more Sundays have passed into oblivion the workers who read these pages will have arisen and asserted themselves in no uncertain terms, to the end that Richard Ford and Herman Suhr will both be granted full and complete pardons by the governor of the State of California."—AUTHOR.

# Justice Triumphant

Hop Ranchers' Gun Men Guarding What Was Left of the Hop Pickers on Durst Brothers' Ranch, Aug. 4, 1913, the Day After the Shooting

## The Story of the Second Ford Trial

By A SPECTATOR

IN her own temples and with her own high priests officiating at the altars, "California Justice" has been publicly shamed. The acquittal of Richard Ford, in Marysville, on January 24th, clearly vindicated the I. W. W. and rendered a smashing rebuke to that which, for more than a decade, has masqueraded under the name of Justice in the "Golden State" whenever a class-conscious worker has been on trial.

To understand this story, you must go back to the sultry days of August, 1913. You must picture to yourself some twenty-eight hundred pickers camped in a field on the hop ranch of Durst Brothers, just outside the town of Wheatland, California. Men, women and children; Americans, Syrians, Japanese, Mexicans, and every other nationality that made up the migratory working class of the great interior valley of California, had gathered there. They had come to work, lured by advertisements scattered broadcast; but the first thing they found was that there was only work enough for half their number. They were there to

The Barren Field Where the Hop Pickers Were Camped on Durst Brothers' Ranch at Wheatland

make money; but they learned that the wages were to be lower than had been advertised and that the standards of picking were such as had never before been enforced upon a California hop ranch.

Worse still, the sanitary conditions were most inadequate and revolting. The wells which supplied water were pumped dry before the campers could all be supplied. In the hop yards themselves, there were no toilets at all for either men or women; water could be obtained only by purchasing an unpalatable dish of "stew" from a concessionary of the Durst Brothers or by purchasing "lemonade" made of citric acid from a nephew of the owners of the ranch.

The inevitable happened—the pickers met, formulated demands for higher wages and better conditions, and presented them to Ralph Durst, manager of the ranch. Durst met them with evasions; and was given additional time to consider. When, at the expiration of this time, Ford, as chairman of the hop pickers' committee, requested a definite answer, Durst struck him across the face with a heavy pair of goves; and the local constable, gun in sight, ordered him off the place and threatened to arrest him. The hop pickers decided to strike if their demands were not granted. The day was Sunday, so the strike had not actually begun.

About five o'clock in the afternoon, Ralph Durst, District Attorney Manwell, Sheriff George H. Voss and a posse of would-be gun men that had been hastily summoned from the saloons of Marysville, drove into the hop pickers' camp in two automobiles. The constable who had ordered Ford off the premises earlier in the day, possessed two warrants of doubtful legality. As they approached the great as semblage of pickers, the bench upon which Ford and others stood gave way with a loud crash. The crash was too much for the nerves of Henry Dakin, one of the impromptu deputy sheriffs. He fired a shotgun twice over the heads of the crowd.

It is safe to say that no one knows just what happened next. In less time almost than it takes to write it, the crowd scattered. Lying dead on the ground were District Attorney E. T. Manwell, Deputy Sheriff Riordan, an unknown member of the crowd, who is referred to as "The Porto Rican," and a young English boy, who had been in the act of carrying a bucket of water. In addition, Sheriff Voss, Constable Anderson and one of the strikers were badly wounded.

All of the officers were armed. Testimony later brought out in the trials proved that none of the workers were armed with the exception of the Porto Rican, who is said to have got a gun by disarming an officer after the shooting started.

Within a few days, many of the pickers were arrested; and in January, 1914, four of them, Ford, Suhr, Beck and Bagen were placed on trial for their lives, charged with the murder of District Attorney Manwell. Beck and Bagen were acquitted; Ford and Suhr were found guilty of murder in the second degree, with a recommendation for leniency. Both were sentenced to Folsom Prison for life by Judge E. P. McDaniel.

More than eleven years later, on September 11, 1925, Ford was paroled. The conditions of his parole were that he should go to Long Branch, Washington, where employment had been secured for him, and remain there, with the usual restrictions as to reporting to the California State Parole Officer.

Following the shooting of 1913, Ray Manwell, son of the deceased district attorney, was elected to the office which his father had held. His election was not brought about because of his legal ability, but out of public pity for the untimely death of his father. A call for such sympathy has been his principal stock in trade since then. However, a course of riotous living, which has become matter of public scandal, has threatened to undermine his position. He thought that if he could try Ford again he would regain the favor of the public.

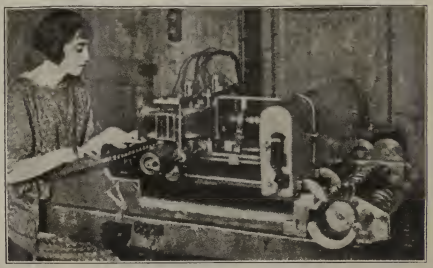
Judge E. P. McDaniels, who had presided at the trial of Ford and Suhr, still occupies the Superior bench of Yuba County. This loquacious jurist—who has a habit of discussing all cases that come before him not only with every chance visitor to his chambers, but also with the town loafers at the cigar stand—had early won political preferment in his rural community by his hearty interest in race horses. A few years ago he sold his last horses; and his mind, in search for something to dwell upon, centered on the Ford case. It became a passion with him and all who disagreed with his views were immediately classed as being unintelligent.

### Ford Released from Prison

As Ford stepped from the gates of the old gray prison, he was met by the sheriff of Yuba County with a warrant for his arrest on the charge of murdering Deputy Sheriff Riordan. He was immediately taken to the county jail at Marysville.

The grand jury, at Manwell's request, returned an indictment, charging him with the murder of Eugene Riordan on August 3, 1913. Judge McDaniel had disqualified himself, so he could not try the man. Governor Richardson appointed Judge Charles O. Busick, of Sacramento, to sit upon the case.

Judge Busick is an honest God fearing man, according to California standards. He hates not only all criminals, but all who are accused of crime. If the accused chances to be a member of a labor union, the judicial hatred is increased manyfold. If he chances to be a member of the I. W. W. the judicial wrath knows no bounds. Ten years ago, his injunction against the Motion Picture Operators' Union of Sacramento marked him out as a foe to organized labor. His anti-I. W. W. injunction, in 1923, spread his reputation to all lands where injustice is abhorred. His achievements in the case of Tom Connors, as judge, and witness for the prosecution at the same time, won for him the title of "The California Pooh Bah." It was altogether



(Continued on Page 28)

# Coming Revolution in the Printing Industry

By CIVIL ENGINEER

EVER since the discovery of movable type carved by hand out of blocks of wood, printed matter in quantities has sold for much less than manuscript copies. After this first stage, metal type was substituted for wooden and the printing press was improved as a mechanical contrivance. This was the handicraft stage of printing—moveable type and handpress.

The next steps were the linotype and monotype machines. They gave us more efficient methods of setting type, but affected the printing press only indirectly. The press still used outside motive power in a limited degree only.

THE LINOTYPER'S LATEST ENEMY
New Photo-Engraving Camera

But from then on, inventors began to look for a yet more efficient method of cheapening the cost of the operation of printing and of increasing its speed. By common agreement, most of these attempts were connected with the art of photography. The general idea was to write something on a piece of paper and then reproduce it to an unlimited number of copies by a photographic process.

The invention of typewriting gave these informal gropings a powerful impulse. A typewritten page can be more easily read than a handwritten one, so the practicability of the desired invention dwindled down to the elaboration of a process capable of printing photographic copies of a typewritten negative cheaper and faster than the printing press could do the work.

Some fifteen years ago, an American patent was issued to an inventor who claimed to have solved the problem. It did not meet with success. The truth of the matter seems to be that economic reasons interfered with the commercial success of the invention. The printing industry awakened by the threatened danger to its equipment fought hard to kill further experimental work and for a while, the matter was left in abeyance.

That it was not so much of a failure as the printing industry claimed, was proved, in 1919, when an outlaw strike of the workers in the printing trades took place in New York City and some of the country's leading magazines were unable to appear on the newstands at the usual time.

In October 1919, the Literary Digest resurrected the discarded process and used it a short time. The pages were harder to read than ordinary printed matter and the number of words per square inch was far less than that of ordinary type. The lines were not evenly spaced in length as now. These features assumed a considerable importance.

When the strike was settled, the new method was again discarded but inventors kept up their studies of the relatively simple problem of quantity production of photographic prints and recently Messrs. **J. R. C. August** and **E. K. Hunter** of Walworth, England, have announced the perfection of an improved process which, if it meets the practical tests of speed and cheapness, bids fair to reduce the marvelous linotype machine to the rank of a curiosity to be displayed in a glass case in some museum of archeology.

It is said the new machine does away with metal type by substituting therefore a sensitive film upon which the typewritten lines have been photographed. For obvious reasons, the inventors have not published the details of their discovery but the main features of the new machine are known.

The machine itself is a combination into one apparatus of a typewriter, a camera and a reproducing machine embodying certain features not unlike those of process engraving.

The operator works at a keyboard similar to that

of a typewriter. The writing acts as a master film and is projected as fast as type on a sensitized photographic film base. The projection is then rapidly photographed by an exposure of a fraction of a second. The next operation consists in the development of the photographic plate which gives the equivalent of the "set-up material" or the type-line of the composing machine. It is, in reality, a photographic film bearing an image of the subject-matter to be printed and is somewhat similar to the stage reached by the process engraver when he obtains a negative by photographing an original.

From now on, printing proper is a very simple matter and may be done in a dozen different ways, by line-block for letter-press printing, by direct litho, by photographic processes from plate or stone or by the offset photo-litho throughout.

### Technical Advantages

The main advantage of the process resides in the fact that it permits printing in an almost endless variety of type without the use of metal type for each different class of lettering desired. By adjusting the focus of the projecting lens, the original writing of the typewriter may be distorted into a bewildering variety of lettering and this operation is completely automatic.

As a matter of fact, type-metal is completely eliminated. It is claimed that one spool of film, two inches in diameter and three inches wide is equivalent to 2,700 fonts. A font is a complete set of type.

By connecting this new machine with a radio broadcasting set, the composition made at a central point can be immediately transferred automatically to any desired point by the tele-photo process already in existence.

The complexity of the many possible material advantages which can be derived from the main process may be grapsed from the fact that it took no less than seventy different patents to cover them all in one single country.

### The Cultural Incidence

Printing was one of the greatest conquests of human ingenuity. The new invention if successful, cannot fail, even under capitalistic conditions of ownership, to cheapen the cost of printing and, in the measure that it does this, it will duplicate the huge advantages which the world of thought and ideas has been able to derive from the previous invention of movable type and the printing press.

### Possible Economic Results

From the point of view of the employers, the process is bound to lead to a considerable reduction of the cost of printing. The composing rooms of the future, instead of occupying a large amount of floor space covered with costly machines, will consist of offices of a small fraction of the present size housing only the camera compositors. Millions will be saved inasmuch as the bulk of the composing plants of today will become unnecessary.

An editor, with a few notes at hand, will be able to write and print his article in a hundred different places at the same time, and at one single operation.

A terrible blow will be struck at the press associations, those systematic poisoners of public information for the new process will completely eliminate the necessity of telegraphic news transmission, the nefarious monopoly of lying enjoyed today by the ruling class at the expense of the downtrodden class of wage-slaves victimized by the present system.

From the point of view of the workers, let us rapidly figure out the quantity of labor which is either reduced or completely eliminated by the new process.

The copy-boy becomes two-thirds useless.

On the basis of the comparative speed of the typewriter and the linotype, the number of camera-typewriters will be at most one half of the present number of linotype operators.

There is no further use for stereotypers.

Typefounders, as a trade, disappear.

There may be a small increase in the number of photo-engravers and lithographers.

The manufacture of the new machine does not involve one half of the mechanical complexity of the present linotype thus entailing an elimination of part of the machinist's labor required.

### Are the Workers Ready?

As in the case of every form of technological progress, private ownership will probably, at the start, prevent the new invention from becoming general in its use, at least until the machinery in place wears out and has to be scrapped. Employers' organization in the printing trades is too well developed and too complete to permit the hope that competition alone will boost the new invention immediately into general use. The introduction of the new process will take place in such a measure as the individual owners will allow it and their will in the matter shall rule supreme because their organization is inclusive of the whole of the industry and possesses therefore a degree of efficiency which will enable it to impose its decisions upon society as a whole.

The consumer of printed matter may not share fairly in the savings of the process under a system of private ownership. He will get something, as much or as little as the private owners will choose to dole out to him. Once more it is demonstrated, in this particular instance, that the logical corollary of every form of technological progress, in the direction of complete automatism in production, is collectivism or social ownership of the machinized tools. In the absence of this social and economic necessary consequence, the new invention will mainly increase the wealth, and the power of the controlling financial oligarchy and its hirelings.

The capacity of the workers to handle a new invention, that is, to shape matters during the period of transition from the existing to the new

(Continued on Page 25)

PORT ARTHUR LABOR TEMPLE
Owned Co-operatively By the I. W. W. Members There

# Training for Freedom

By J. A. McDONALD

THE I. W. W. differs from all other radical organizations in the fact that it plans not merely for the overthrow of the capitalist system, but also intends to use the same industrial unionism, the rise of which means the downfall of capitalism, as the basis of the future industrial society. As the preamble states, by organizing industrially "we are forming the structure of the new society within the shell of the old."

But there will be more than work in the future society, in fact with the solution of the struggle for food, the brute struggle which has been the great portion of the history of the past, man will be given the opportunity to think thoughts unconnected with the stomach urges. New art, new drama, new poetry will arise when man at last is free. Relieved from the trammels of the struggle for food, which the machinery of today makes unnecessary except as the workers are refused access to those machines, man will blossom forth into countless forms of endeavor for the satisfaction of his higher nature.

Even within the shell of the old society, the I. W. W. is forming more than industrial unions, it is also forming the structure of new artistic conceptions, a new drama not of the counting house, and a morality which knows nothing of the trammels of capitalism.

Nearly a week spent in the headquarters of the I. W. W., in Port Arthur has emphasized this for me. The activities of our Finnish membership here is a lesson on building the new society right now. The big house with three floors, two halls, a director of dramatic art, a community restaurant, three different athletic clubs, one for the men, one for women, and the third for children, and countless other activities is a social center that although it is in the middle of capitalism is yet more in line with the new society than with the old.

In March of 1920, nearly three hundred Finnish workers got together and decided that they needed a center of agitation for industrial unionism, a center of social life, a revolutionary community center. They bought a hall three stories high, a big brick block costing approximately $30,000. They did not have the money to pay for it, but they were able to collect enough to handle the deal. Everyone got busy in that same way which has made possible the ownership of the daily paper **Industrialisti,** the Work People's College, and the magazines and publications now printed by the I. W. W. in the Finnish language.

One of the activities started then, was a community restaurant. At first those who were to eat there took stock. Since that time every one of

SCENE FROM "KATJA, THE DANCER"
Finnish Opera Sung By I. W. W. Workers in Their Own Theatre at Port Arthur, Canada

these stockholders have been paid off, and today I am informed that this is the only restaurant in America that is owned exclusively by those who eat there. At the present time some one hundred eat there at each meal. There is a manager elected by the patrons of the restaurant, and in the spring and summer when the men are in from the camps, there are two hundred or more eating at this restaurant regularly.

During the last year the price of meals was twenty cents. At the present this has been raised to twenty-five cents. Each meal is served for two hours, and there is in addition a long coffee table with a large variety of cakes where between the meal hours those who wish can have a lunch for fifteen cents. There is a greater variety of food served, and a far better service than one can find at almost any other boarding house. The arrangement is that when there is more than five thousand dollars in the bank to the credit of the restaurant, the prices are lowered, and then raised when the money on hand is spent. The persons eating at the restaurant have a board of directors, and these and the manager, Nick Viita, the stationary delegate of the I. W. W., are in charge of the management, subject at all times to the wishes of the rank and file.

There is a notice over the door of the kitchen. It is probably to keep out, but as I cannot read Finnish, I have been in the kitchen on numerous occasions. A sanitary inspector would enjoy the scrupulous cleanliness there unless he hated to make comparisons invidious to the average capitalistic boarding house.

The waitresses are all members of the I. W. W. The cook, or rather one of the cooks, is a woman who has served over a year in jail in Finland during that period when German cannons were drowning the aspiration of the workers at that country in blood. Some of the waitresses also took part on the side of the workers in this conflict, which is not ended and will not be until the workers everywhere are free. These waitresses are more than that. One of them is the greatest dramatic artist I have seen for many years on any stage—an opera star singing in a language that is alien to most of the people of America, singing the songs of the workers with an art with a soul.

On a table in one corner of the restaurant is to be found all the Finnish literature of the I. W. W. and the English papers and magazines of the movement.

Up stairs is the main floor of the hall. There are two cloak rooms on the left of one as he enters, and the lavatories. On the other side is the refreshment room during the many dances that are held. Immediately in front of one is the entrance to the main hall. Entering this one finds a dancing floor in perfect condition. It is hardwood like all the floors of the building and the opera chairs are piled up in rows in the corners. There is a large gallery, and a stage with all the equipments that are needed, including properties and scenery. At the Christmas dance there were over a thousand tickets sold at the booth outside the door. During the time I have been here this hall has been occupied every night, and always filled.

Two dances are held each week in this hall. Then there are concerts given by the membership for the public. The Port Arthur paper referring to these concerts said that the vocal talent of the singers here was such that local choral societies might have to look to their laurels if the Finnish people went in seriously for organized choral work. They have gone into it seriously for the love of music, not seriously for the love of money, and when one wants to hear the best in music, he comes to the concerts given here. This is merely stating a fact which practically every music lover at the head of the Great Lakes knows.

During the day some groups are doing gymnasium work in the theater portion of the hall. The organization has a director of music under way, and there is a band, two in fact, an orchestra and other practice in instrumental music is carried forward at stated periods. The children also have an orchestra.

The dramatic director, **L. Horth,** contralto singer, is an actor with long experience on the Finnish stage. His wife, also an experienced actor, adds much to the presentation of the plays which are given every few weeks—sometimes oftener.

On Saturday night the opera, "Katja, the Dancer" was given here. I did not understand one word of the entire play, but so good was the acting, that there was none of the story missed me. I had the same feeling that I had when I saw the Russian dramas given in the United States and parts of Canada a few years ago. Here was an art that did not require words to be expressive and to hold attention. **Miss H. Aaltonen,** who took the part of Katja the dancer, was delightful in the way in which she played her part, and in the rich timbre of her soprano voice. And supporting her was a cast and chorus that would be able to expose most of the players on the regular stage at the present time. The opera as it was rendered here did high credit to the director and his talented wife, and to the material he had here to develop.

The various activities here are so great, and the practicing for events, musical, dramatic, athletic or agitational so continuous that there are two meeting halls, the theater as it might best be called from its arrangement, and its complete equipment, and another hall on the third floor of the building which seats some three hundred.

The lesson of Port Arthur, the thing that has impressed me above all others here, is that if three hundred can through organization and endeavor form such a revolutionary center not only of I. W. W. organization on the job, but also of art, and thought and social life, under capitalism, what can not the workers do when they are free to give expression to all that there is within them of thought and emotion in a free society?

**Says Card No. 112357, the author of the article below, "I have never read a half true account about Leadville and have often wanted the facts compiled by the workers—so finally I attempted it myself, and found I could have written much more, if it were not for the fact that an article must not be too long for the worker's press."**

**This fellow worker has found out just what the editor of Industrial Pioneer has always been saying—that workers are perfectly capable of describing the industries in which they work, and of doing it from the working class point of view. In fact they are the only ones who can do it. The more of such articles as this that are written for Industrial Pioneer, the better satisfied everybody is.**

# A Famous Mining Camp

(By CARD No. 112357)

Invention has gone forward a step, and by means of a newly improved "floatation process," the low grade lead and zinc ore bodies of the Southwest are again regarded by many capitalists as the scene where much labor is to be profitably exploited in the near future. The territory around Leadville, Colorado, is rich in vast quantities of complex sulphide lead and zinc ores, suitable to proper floatation but so far unworked or piled in waste dumps while the historic battles between labor and capital raged over the mines of higher grade minerals, now nearly exhausted.

The possibility of awakening this industry from its present rather quiescent stage, makes it important, from the workers' point of view, to learn again here from the experiences of the past, for capital is still as ruthless and as greedy as ever, and workers as much in need.

During the onward march of progress, amid great eras, construction, the expansion of industries and the building of modern cities, attention is focused upon the phenomena of the present, while the older and once famous places and events are lost sight of and drop from memory in the minds of men.

The famous mining camp of Leadville, Colorado, with its past history and present status is not known to the present generation of men, therefore the facts in this story will be of value from the viewpoint of Labor.

Many accounts and tales of early day events have been written and published by bourgeois journalists, news writers and poets, but the present writer has never yet read the history of Leadville from the standpoint of the worker. He has lived in the camp many years, and has worked in its mines and smelters and on the railroads, therefore he is qualified to give Labor's version of its history.

The site of Leadville is picturesque in the extreme; it lies in an elevated basin (10,153 feet altitude; it is called "The Cloud City"), between the main range of the Rocky Mountains to the west and a parallel spur to the east, known as Mosquito Range. Between these two ranges and a few miles below Leadville lies a broad valley through which courses the Arkansas River, the source being 12 miles distant.

At right angles to, and running westward from Mosquito Range, are several deep gulches, and in the hills between them lie the main mineral treasure chests. This area is but 10 square miles, yet 40,000 mineral claims haave been located on it and it is known as The Leadville Mining District.

As early as 1860 emigrants in covered wagons were pushing their way up the Valley of the Arkansas; prospectors and miners were panning the stream beds of the intersecting gulches for their alluvial deposits.

Gold in abundance was struck in one of these gulches (near the present site of Leadville) and it was called "California Gulch," for it rivaled the findings in the great gold rush of California in 1849.

Thousands of pioneers and fortune seekers panned the gulches around this region and after the "diggings" seemed worked out they moved on, leaving a few prospectors in Oro City at the head of California Gulch.

In the subsequent years the hills were prospected and there followed a second strike about 1878; this time it was rich silver—lead carbonate ore found "at grass roots."

A camp was established and given the name "Leadville," or "The Carbonate Camp," and from a few hundred people in the spring of 1879 the population grew to 60,000 at the end of the year.

People from all corners of the earth came to this bonanza camp. With pick and shovel, with windlass and bucket, wagon loads of rich carbonate ore were dug and hauled by "bull team" to Colorado Springs, Colo. One such load sold for $30.000.

Fortunes were made in a few weeks—what

scenes and activities are related! Never before nor since in the history of mining camps was this period equaled.

No railroads within 150 miles and but one single telegraph wire connecting with the outside cities! Travel and transportation was by stage coach, bull teams and covered wagons. Here was a condition where for once all had equal opportunity; with but few exceptions men worked for themselves or as co-partners, and their product was **their own.**

Now, take note what followed! Financiers, brokers, **capitalists** came with a rush; syndicates were formed; companies were founded; claims were sold and resold—and stolen. Smelters were erected; mine machinery was hauled in and placed on properties, and as early as the year 1880 the camp witnessed a **great labor strike**—8,000 miners downed tools and demanded **more wages and better working conditions!**

The strike was effective; picketing prevented the importation of **strike breakers** and the miners showed a spirit of solidarity. Victory for the workers seemed near.

The mine operators and business men of the town organized what they called "A Committee of Safety"—"Vigilantes" would be a more correct name.

Arms and ammunition were brought into the camp and thousands were armed by this class in opposition to the miners who paraded the streets to show their **Union strength.** Spies and agents, provocateurs were placed among the strikers to stir up trouble, and as a last resort Leadville was put under a military siege; the militia encamped here for months. This broke the morale of most strikers and they soon returned to the mines and went back to work—defeated.

Again in 1896 the miners pitted their union strength against their masters; strike breaking followed; pitched battles ensued; trouble makers and traitors infested the ranks of the workers; conspiracy again brought the militia, the ready **tools** of capitalism, and again the miners' strike was lost.

In the years since then a few demands have been made by the workers of the district, but lack of the right kind of organization blocked their efforts, and nothing of importance was gained, so today there is no union of the miners or smeltermen here.

Since 1879 concentration of mining and smelter wealth has gone on apace. The mineral claims once owned by the prospectors and miners are now in the hands of corporate mining interests; the early day "independent" smelters have all ceased to operate. The Guggenheim Smelter Syndicate dominate the field; their plant at Leadville used to employ 3,000 workers; today owing to the mechanicalized processes, 900 tons of ore per day are put through its furnaces by a force of only 450 men, of whom 80 per cent are low-paid Mexican labor; the wages are $2.70 low and $5 high. This smelter combine had $12,000,000 earnings in 1924.

From the Leadville hills and gulches has been dug the fabulous sum of $500,000,000 worth of metal!—few mining camps have this production record.

The oxide ore at shallow depth was first mined, then sulphide ore deposits at greater depth were encountered and mined; the area of mineralization has been extended for miles and the geology of the camp has long been charted and studied.

Here are ore bodies of millions of tons; the hills are filled with mineral resources; gold, silver, lead, zinc, copper, iron, manganese, etc. The ores are complex and need separation, concentration, and smelting. The metallurgical processes have been solved and from these resources will be dug the metals for future generations, such is the extent of mineral wealth.

At present the population is not above 4,000, and Leadville is but the ghost of former years. The scenes have changed greatly; the hills once teeming with activity now seem deserted; hundreds of mine dumps and shaft houses and numerous smelter dumps stand as mute evidence of former life.

The landscape, once covered with evergreen Jack Pines and wild flowers and berries, is now almost barren. Civilization and poisonous smelter fumes killed off all nearby vegetation.

The gulches show great rock heaps from placer mining; old "Mother Earth" shows deep scars; mankind has often made desolate Nature's beauty.

Not a paved street can Leadville boast! Its single walks are wooden boards, showing the wear of years, loose and rickety.

Hundreds of structures have been wrecked the last few years and the materials shipped to other points in the state for construction purposes. Scores of houses are still vacant and in a state of decay.

Few homes are modern, a sewer system serves but a small portion of the town, and the populace still empty ashes in the streets and drain waste water into the gutters.

In former years the smelting processes gave lead poisoning to the workers; the young, brawny Italian and Austrian laborers fresh from their native homes met their fate in a short time. This industrial disease or poisoning would wreck and twist their bodies, and send them to an early grave.

Human labor was a cheap commodity due to a plentiful supply—nothing was done to conserve it—no protective measures or devices were provided. Today things are better, but still detrimental to the workers' health. The class of labor has changed with the years; Mexican labor now replaces that of Europeans.

The wage scale is as follows: Miners (machine men), $4.50 to $5 per 8 hours; muckers (helpers, etc.), $4 to $4.50 for 8 hours; pumpers, engineers, mechanics, $5 for 8 hours. This wage scale is from $1 to $2 lower per shift than in many other mining camps; conditions in these holes are generally poor and real bad in some of the mines, as there is no forced ventilation with blowers or suction fans.

Some shafts are 1,300 feet deep and the air is so poor a match will not light and carbide lamps burn dim.

The mining syndicate that owns and operates the Greenback Mine (one of the largest producers in the Leadville district) boast of a $17,000,000 reserve fund, yet will not install a ventilating system to furnish oxygen for the underground workers. There is a state mine inspector for Colorado, too; he has a nice office in Denver, but he should hang his head in shame—however, **we know** what all inspections amount to when fostered by the employer.

When all facts are compiled and the evidence given, a charge will be made against the system that wrecks men's lives, robs them of the products of their toil and sentences their wives and children to drudgery, defaces and ruins nature's beauty spots in the quest for profits!

Leadville becomes more intimate when the fact is shown that the foundation wealth of not a few great fortunes was made here. From 1880 to 1890 the Guggenheim Syndicate made wealth that built the smelter at Pueblo, Colo., and extended operations into old Mexico, then up into British Columbia and Alaska.

The estates of many Colorado families owe their wealth to Leadville's hills and workers; rich residents in many other places owe their status to the same source.

The building of the Denver and Rio Grande Railroad up the Arkansas Valley to Leadville and eventually beyond and over the Continental Divide, down the western slope of the Rockies and on to Salt Lake City was due to the rich ores from Leadville and the supplies into the camp assuring plenty of tonnage at a high rate per ton ($10 to $15).

It might be of some interest to know that the Santa Fe Railroad and the Denver and Rio Grande interests had open warfare to determine which could claim the Grand Canyon Route (the famous "Royal Gorge"). Cannons were placed on the rim of the canyon to hold the "grab." Such are the **peaceful** and **lawful** methods of Capitalism!

Leadville territory, the scenic region of the Rockies, is the water shed for the valley below. This county (Lake County) derived its name from the many lakes in its hills, some of which are large bodies of water and the meccas for campers and fishermen. Twin Lakes, a beauty spot beyond compare, is situated a few miles from Leadville. It was the annual camping grounds for the Ute Indian Tribe, who made regular pilgrimages to its shores, and Leadville hills and environs were their hunting grounds, before the white settlers came, after which, the Red Men lost out.

The automobile tourists, wishing to see the wonders of the Rocky Mountains, will soon be shunted through this country; its scenic beauty will captivate the eye, and its camping grounds will be long remembered.

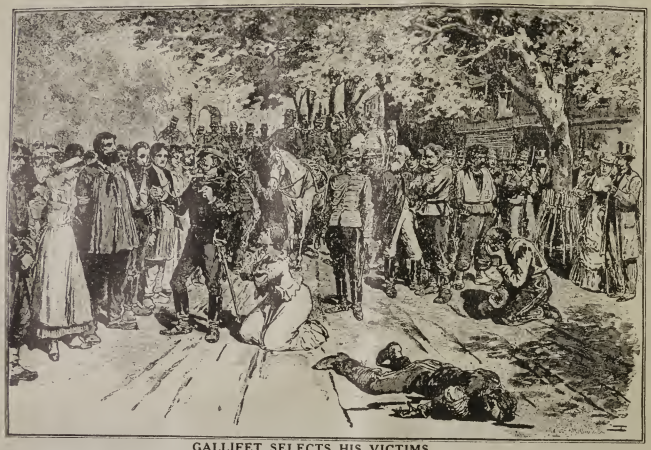
Do not for a moment think, though, that natural beauty is what we rely upon to bring Leadville back on the industrial map. The reason why the hills will soon be riddled as never before, is a human invention, the process by which certain ores, difficult to separate on "tables" (that is by the method of shaking and washing the broken rock, to catch the lead and zinc when it sinks) are now to be made use of by floating the metal (lead, too, however heavy) up away from the ordinary rock on small bubbles of oil, which is mixed with other substances, and churned around with the ground-up rock dust that contains metal. Up to recent times the floatation scheme was not perfected in a form that would work exactly well on the particuar ores around Leadville, though it was used **elsewhere**. Now this difficulty has been removed, and there will surely set in a long, continuous revival of industry in this town; not immediately, but as the new mills for grinding and floating the minerals are created.

A large new floatation mill is about completed and ready to start in a few days—its successful efforts will be followed by the building of more mills to treat the complex sulphide ores of which there is a vast tonnage. So, if delegates remember this, we will be abreast of the times and when the workers come into Colorado's mining districts—the Industrial Union propaganda will give them basic facts.

Today, however, Leadville reminds one of a man who has been robbed and stripped of his wealth, left in dire need! Of the many who gathered the riches from its hills few have left any improvements.

A late senator from this district has erected a statue of the noble "Burro"—the prospectors' pal—but this statute graces Washington, D. C., not historic Leadville!

Of the many brave hearts and spirits that once lived here, few remain—the present workers seem doped and submit to standards and wages scarcely above the level of Asiatics. Perhaps their particular brand of religion or the "white mule beverages" lull them to sleep, but whatever the reason may be —**shame on labor of this caliber**—it goes down to early graves—**unhonored and unsung**!



Come to Leadville, you rebel workers! Mexican fellow-workers have much to do here in the way of education and organization, so that these workers can demand more than $2.70 for their labor power. These Mexican men should get inspiration from the solidarity and recent gains made by their fellows down in Tampico and in Mexico throughout.

Poets have penned the grandeur of these hoary old mountains—have pictured the shady nooks.

I have mentioned the exploits of rapacious capitalism—the arch-enemy of all who toil, the stealer of wealth and the instigator of crime.

Labor has suffered ignominous defeat before this monster—but in its struggles and experiences labor is learning how to fight intelligently and is organizing its members under the plan and structure of Industrial Unionism and will some day march to victory against the class and the system that takes the products of its toil.

# All Honor to the Communards!

GALLIFET SELECTS HIS VICTIMS

"The column of prisoners halted in the Avenue Uhrich, and was drawn up, four or five deep, on the footway facing to the road. General Marquis de Gallifet and his staff dismounted and commenced an inspection from the left of the line. Walking slowly and eyeing the ranks, the general stopped here and there, tapping a man of the shoulder or beckoning him out of the rear ranks. In most cases, without further parley, the individual thus selected was marched out into the center of the road, where a small supplementary column was thus soon formed. . . . . It was evident that there was considerable room for error. A mounted officer pointed out to General Gallifet a man and woman for some particular offence. This woman, rushing out of the ranks, protested her innocence in passionate terms. The general waited for a pause, and then with most impassable face and unmoved demeanor, said, 'Madame, I have visited every theatre in Paris, your acting will have no effect on me' (ce n'est pas la peine de jouer la comedie') . . . . It was not a good thing on that day to be noticeably taller, dirtier, cleaner, older, or uglier than one's neighbors. One individual in particular struck me as probably owing his speedy release from the ills of this world to his having a broken nose. . . . . Over a hundred being thus chosen, a firing party was told off, and the column resumed its march, leaving them behind. A few minutes afterwards a dropping fire in our rear commenced, and continued for over a quarter of an hour. It was the execution of these summarily-convicted wretches."—**Paris Correspondent "Daily News," June 8, 1871.**

"The Temps, which is a careful journal, and not given to sensation, tells a dreadful story of people imperfectly shot and buried before life was extinct. A great number were buried in the Square round St. Jaques-la-Bouchiere; some of them very superficially. In the daytime the roar of the busy streets prevented any notice being taken; but in the stillness of the night the inhabitants of the houses in the neighborhood were roused by distant moans, and in the morning a clenched hand was seen protruding through the soil."—**Paris Correspondent, "Evening Standard," June 8, 1871.**

**(Above are extracts from a note printed (pp. 79-80) in "The Civil War in France" by Karl Marx. edition published by Chas. H. Kerr & Co., Chicago).**

# In March, 1871, the Workers of Paris Took Over Industry

"THE WALL OF THE FEDERALS" IN PERE LA CHAISE CEMETERY

And, whatever their mistakes, and they were admittedly many, these Communards have the honor and the fame of first trying on a large scale, to take over industry. They are honored likewise by their most unlimited courage in defending the first beginnings of workers' control of industry, and when that attempt finally failed, it was only because the capitalist class of two powerful nations, France and Germany, forgot their nationalistic differences and cooperated against the brave workers of Paris. This is one of the lessons of the Paris Commune that in spite of the fact that French and German capitalism had just emerged from the bloody Franco-Prussian war, before even the terms of peace were promulgated, the Germans released captive French regular soldiers from their prison camps for use against the Paris workers.

During the war of 1870-71 the proletariat of Paris had been given weapons. They began to demand economic concessions from the bourgeoisie. Theirs, the capitalist statesman, tried to have them disarmed. This precipitated the revolt, and the central committee of the National Guard of the commune (a French word for a local district or city) declared itself in control of the metropolis and all its industries. The National Guard was composed almost entirely of workers. That was on March 18, 1871. The central committee gave way to an elected board which immediately made a number of raids on capitalism. It remitted all rents, returned the pledges in the state pawnshop, declared that all foreigners, if they were workers, were members of the commune and eligible to office, seized all church property and prohibited the teaching of religion in schools, burned the guillotine and destroyed nationalistic and royalist monuments, and most important of all, saized all factories and workshops, and started to form cooperatives of the workers in each shop, to run industry.

After holding out for three months against overwhelming force, the Paris Commune was suppressed by General Gallifet, and the Communards massacred. In the beginning all prisoners were shot, after the reaction was secure, only selected prisoners were executed.

# Diffusion of Knowledge

(Continued from First Inside Cover Page)

with the mass of fiction, of falsehood, of superstition—piled heaven high—the accumulations of ages of ignorance!

The students, the philosophers, the scientists, the dreamers were few, while those whose minds were inert were numerous. Scarcely did these latter hear the sounds which emanated from the elevated regions of Intellect, and those who did grasped not their meaning; slaves to custom, they kept plodding on their weary way, as they had plodded for centuries past.

Thus while a small band—stimulated by hidden power, which seemed to urge them on, and after receiving as sole reward for their labors the smile of the great and the patronizing favors of those who shared in the division of the good and the fair things of life—were striving to make advances in the intellectual world, the mental, as well as the material, condition of the masses remained unaltered. Progress, however small, however slow, was made, or attempted, in every science, save in that one which concerned the general welfare of the race.

Similar to Nature's' mighty, though silent, operations, marvelous things were being prepared by unseen, unheard, human forces. The time came when phenomena, unprecedented and full of meaning, began to manifest themselves. The stagnancy of centuries was disturbed; mental activity became prevalent; expectancy beat in every pulse; hope swelled in every breast. All eyes wandered to the horizon, as though in search of something that must soon appear, and lo! a rising orb was seen to drive the shades of night from the long-darkened firmament; an unknown light spread over the face of the earth, penetrated the souls of men and gave new color to all things. A cycle was completed, and evolution made a step forward in its mysterious course. A new day was born for Humanity. An epoch was at hand wherein memorable events were to be recorded in the annals of Time; for the sun of knowledge had risen, and the reign of ignorance was measured.

In the last century the world witnessed the commencement of the period distinguished above all others; when the formerly limited sphere of learning, of investigation and enlightenment, was to be enlarged; when the barriers which excluded the mass of men from that sphere were to be removed; when the inestimable value of printing was to be finally realized; when its long deferred triumph was to be celebrated; when its empire and the momentous changes which it implied were really to begin.

Not only were great truths discovered; but great falsehoods inherited from the earliest ages were unmasked and eventually cast aside with the idols of antiquity; philosophy took new wings and soared to strange and heretofore unexplored realms; science expanded its dominion and sought fresh fields of discovery, it advanced step by step, until it burst in the increased fulness of its development, into the glorious rays which illumine our present day, and brought into deeper contrast the dimness of the past. The age of Fiction and Sentiment seemed to be vanishing; that of Reality and Utility to be approaching. The conditions of society, the relations of its members and of its institutions to each other and to the state, the prerogatives of kings, the rights of men, and other kindred subjects came to the surface and occupied the minds of all. The thoughts of the wise and of the benevolent were sent forth to the multitudes and found an echo in the remotest hamlets. The dissemination of ideas provoked discussion; discussion stimulated inquiry; inquiry sharpened intelligence, and intelligence directed a new course, began to open the eyes of the people to the fact that the unfavorable conditions to which many of them had long submitted were not the result of divine dispensations—eternal and immutable—but of human regulations, ephemeral and changeable.

And what are we called upon to relate as the foremost result of the diffusion of knowledge? A solemn, an awe-inspiring protest against the ancient state of things. Murmurs arose which, feeble at first, grew louder and more frequent. From many quarters, sounds like those of the clarion were heard, and wherever heard, men were stirred to action. The land became like a vast camp aroused from a heavy sleep. The elements of discontent gathered ominously; they increased with appalling rapidity and finally broke out into a surging storm between the conflicting sections of society. The world witnessed a revolution, more universal, more pregnant with eventual results to the race, than any convulsion of nature.

In examining the constitution of the social body, we have seen the strange spectacle of the more numerous and powerful portion of society submitting to conditions detrimental to themselves and beneficial to the smaller and weaker portion; we have become convinced from the brief and cursory survey given (and more profound and elaborate survey could but result in deepening the conviction) that this state of things could ever have obtained, had not the majority been less knowing, less intelligent, than the minority.

Ignorance, then, was the cause; the abject state was the effect. Since ignorance is vanishing, must not the conditions which spring from ignorance also vanish? The cause disappearing, can the effect remain? Will not the awakening of the human race, which led to the scientific, industrial, social, and political revolutions, lead to that one which, from a material standpoint, will prove most beneficial to the people—an economic revolution?

# The Stone Cross and the Double Cross

By EDWARD LLOYD

"Upon 1,682 white stone crosses that mark the resting places of unknown American army dead in France the American Government will chisel this legend: 'Here rests in honored glory an American soldier known but to God.' "—**Ass. Press Item.**

Sixteen hundred and eighty-two crosses, each denoting an unknown man. Each one of them one of the "privileged" humans honored(?) by being caught in the net of the "Selective Service Act" of 1917. In imagination let us visit each one of these "honored" graves, and as we stand beside that mound under which rests all that remains of one who was once full of life and activity, with the poet Markham, ask ourselves this question: "What is his breed, his genesis?"

Who is he? Was he one of the members of our so-called "best families"? Was he one of the social outcasts? Most probably he was one of the migratory workers, perhaps a lumber jack or a construction worker, perhaps he followed the harvest from Oklahoma to Canada, and perhaps he was a combination of all three.

The chances are against his being one of the "first" families, for who has heard of anybody from them "turning up missing?" But, on the other hand, take the workers like "the man with the hoe," how many of them are lying here in thte U. S. A. in unknown graves in the "Potters Field"? Does any monument mark their resting place? No; they did not die in battle for their country, they just passed on. After years of ceaseless toil, years of slavery, buffetted from pillar to post, sometimes battling the elements on land, sometimes fighting the storms on the sea, homeless, friendless, he, the worker who made everything possible, sometimes hungry, often without a roof to shelter him for the night—UNORGANIZED—became tired and lay down by the wayside.

Hands that have helped put down the mighty rails from the Atlantic to the Pacific, hands that have felled numberless trees that made printing and buildings possible; hands that have helped string thousands of miles of wire that communication may be maintained with all parts of the world, hands of MEN, REAL MEN, are now resting in unknown graves with no crosses, unhonored and unknown.

But the sentiment for war must be kept up, the glitter and glamor of war must be emphasized, and those who return must be given great ovations—for a time at least—and those who do not return, especially those known "but to God" must be made heroes of. The animal instinct in man must be fostered, that instinct to kill must be kept alive. That the lesson was well learned was manifested on November 11, 1919, during a parade of ex-soldiers in Centralia, Wash. You all know the story, how the union hall of the lumber workers was raided and Wesley Everest, himself an ex-soldier and a union lumber jack, was first unsexed while alive in an auto in which they were taking him as the star actor in a "neck-tieparty," and then hung from a bridge and his body riddled with bullets. Perhaps this is some of the "honored glory" of the living American soldier!

And who has benefited by the white crosses of the known and unknown which are dotted over nearly every country in the world? How many of us who wore the khaki or blue for two, three or more years became millionaires? "Do tell."

How many, "necessary to industry," Edsel Ford and the like, who did all the flag waving at home, how many of the lumber barons and copper kings who cheered "our" boys when they started for over there to become dirty, lousy and crummy in some funk hole in a trench; how many of this bunch made thousands of dollars, if not millions during the war? "Do tell," again.

How much of the wealth of this class was conscripted, beg pardon, I mean "selected" when you and I were—er, "selected"—I was almost going to say conscripted again—Well, Well! Let's have another "Do tell," and another "Do tell" after that.

The late ex-president Wilson stated the real cause of the war when he described it as "a war of commercialism," only he said it after the war was over, but men, some of them perhaps now in unknown graves, who had the nerve and manliness to say it when the war STARTED, spent several years behind the bars in Leavenworth Penitentiary, Kansas.

But let us get back to the reason for this, and that is: the commercialists are organized and the workers are not. But the workers are awakeninng, not the workers of any particular state, BUT THE WORKERS OF THE WORLD. The workers are caring less whether "Gott mit uns" or whether he has not got mittens; what they are commencing to care about though, is how to get a little more of life's necessities and luxuries and shorten the workday so that every one may work. Gradually the worker is starting to think for himself and we who have already done a little thinking should do our best to pass on what knowledge we have to the man who works alongside of us.

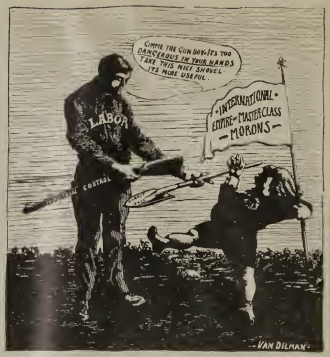
Let us not be intolerant though, remember YOU were a "scissor" and a "wick" once. Some one had to tell you, so let us each pick one worker and go for him. Learn well the principles of industrial unionism and then try to spread them.

The workers as a whole are ready, all that is needed is a little "stick-to-it-iveness," constant hammering, and a little patience.

THE WORLD MUST BE MADE SAFE FOR

THE WORKERS, and the workers must govern the world. Regardless of the fact that the so-called "holy writ" says there "shall be wars and rumors of wars, nation shall rise against nation, etc.," war must be made a thing of the past, and only the workers, organized solidly, can accomplish this. If the I. W. W. published a book advocating the violence, and containing the filth the "Holy Bible" contains, every one of them would, without a doubt, meet the same fate as Wesley Everest, yet these "honorers" of the unknown dead use it as a divine excuse for premeditated murder.

What Canadian soldier who was there will ever forget that Easter Sunday at Ypres when the "Gott" of the Germans turned loose a flock of poison gas on the defenseless Canadians, and the "God" of the allies got busy and produced a more terrible gas to turn loose on the armies of the German "Gott"?



Have YOU ever seen nay one of these men who now occupy "honored" graves die as a result of inhaling this poison gas? I have, many of them. Oh, if you only could have seen them as they gasped for breath, strangling, choking, their lungs on fire and suffering all torments of a hell on earth till Mother Nature mercifully stepped in and ended their sufferings, and even in death, unknown agony was stamped on their features, and their reward—a white cross, **or was it the "double cross"?**

And yet, knowing all this, the representatives of the "American God" turned their churches into recruiting stations and sent "our boys" over there to kill and maim the soldiers of the German "Gott," sent them with their approval and blessing.

And how can the world be made safe for the workers? England showed us how it can be done the other day. It even drew the fire of one of the Chicago dailies, which came out with a horrible wail about England needing a dictator of the Mussolini type. It cried down the policy of the British government in giving way to and bending the knee to the coal miners, and stated that if "England had a man in power with an iron hand at the helm she would never have bowed to the miners," perhaps he would have called out the "English Legion," if they have one, to scab on them.

England did not bow to the coal miners, but she did bow to organized labor when all the transport workers stood side by side and hand in hand when it was apparent that the miners could not enforce their demands by themselves. Then it was that England bent the knee, and in the words of the Chicago article, "established a dangerous precedent." Yes, very dangerous—to the master robbing class, but the workers got their "raise." How true it has proven the song found in the "Wobbly" song book:

**If the workers take a notion they can stop all speeding trains,**
**Every ship upon the ocean, they can tie with mighty chains,**

WHAT WILL HAPPEN WHEN THE WORKERS ARE ORGANIZED

**Every wheel in the creation, EVERY MINE and every mill,**
**FLEETS AND ARMIES OF THE NATIONS WILL AT THEIR COMMAND STAND STILL**

What will happen when all the workers are organized into one big union of workers? THINK.

If we had a union of all the workers in 1914 would we have had these crosses dotting the world today? I think not.

The men who made their millions during the world war are drunk with power. They had their first taste of real blood money when the contracts for the building of the cantonments were let on the "cost plus" basis, the greater the expense to build them, the greater the profits to the contractor. Wooden and concrete ships were recklessly built, and thirty-one of the wooden junk piles were burnt on the Potomac River a few weeks ago, and several more are to meet the same fate.

The virus is still in their veins, the lust for gold is rampant in them, so, as previously stated, the sentiment for war must be kept alive. They show you the glittering side of the picture, but not the reverse. What a picture it would make if only the cripples I have seen—and I have seen only a very small percentage of them—were all lined up on parade. Men with no legs, some of them with one,, armless men, blind men, bed-ridden men—men destined never to get off their backs again in life, and men from whom the light of reason has departed from their eyes—maniacs. And the mothers. Rachels weeping for their children because they are not. Picture them along with the widows and the fatherless, and tell me then, if you can, where are the glories and honors of war. Is it worth a white stone cross, and being "known only to God"?

# Maybe "They Knew What They Wanted" -- They Did Know a Wobbly Song

## At the Harris Theatre, Chicago

FOURTH ARTICLE IN "THE WORKERS' PLAY" SERIES BY ROSA ALEXANDRA KNUUTI

From the standpoint of good and bad drama it is quite a task to classify some of the recent plays that have found their way into the theatres. To a proletarian they present a strange anomaly. Like most literature, drama is usually good or it isn't; it neither represents nor misrepresents current facts and conditions. Mostly misrepresents; seldom otherwise. In such instances classification is an easy matter.

But sometimes a fair-to-middlen' play comes along. It's good and it's bad too. More or less it defies analysis. It may contain a historically correct background—very possible social situations and incidents, but be ruined by inconsistent character delineations; or again on the other hand, plays appear that apparently have a pretty decent streak of propaganda, but end before making the point. Don't you see?

Like "What Price Glory" for instance, reviewed last month, and which ran along the edge of greatness, but missed being just that, because it hesitated to make its point; that war never was and never can be anything but destructive, all the loads of capitalistic propaganda to the contrary notwithstanding.

So as I say, in face of situations like these the task of a proletarian play reviewer becomes difficult, not to say precarious.

All of which has to do with Sidney Howard's comedy "They Knew What They Wanted," at the Harris Theatre.

### Wobbly a la Howard

There's nothing particularly wrong about this play, but that it seems a revelation of facts at second hand. The characterization of the Wobbly was not typical, and that's where this play misses the point. But that's neither here nor there.

Rather, when I saw advance notices that a play with a Wobbly character in its dramatis personae had really made the grade—in other words, made Broadway and won the Pulitzer Prize for 1925 to boot—my amazement knew no bounds. Something surely was taking place in the field of dramatic literature.

I read the play in book form some time prior to seeing it, and I recall that it left me in a rather speculative frame of mind as to its dramatic qualities, as well as stage presentation. Somehow the Wobbly in the book seemed out of place—thrown in "pour le sport"—or by accident—a filler-in. But then again when one takes into account that the location is California, at once it begins to seem possible. Who indeed could write of California and not include the Wobblies, and jails and injunctions? Somehow these elements seem to have become inseparable in the last decade—one suggests the other.

On the stage, however, "They Knew What They Wanted" seems more credible. Even Howards' Wobbly takes on more possible attitudes. Indeed, a trap was laid for me at the very start. When the curtain went up in the first act and Joe the Wobbly, opening wooden boxes, sings our own song (although irrelevantly and with bad voice):

> We speak to you from jail today,
> Two hundred union men:
> We're here because the bosses' laws,
> Bring slavery again."

After that I would have pretty nearly believed anything that went on. But this is beside the story proper.

It has to do with Tony Patucci, an elderly Italian fruitgrower of Napa Valley, California, whom "prohibish" has made rich. He was a poor farmer in the pre-Volstead days when he got only $10 per ton for his grapes, which now net him $100 per ton. But, prosperous now, and tired of celibacy, Tony wants a wife and children. It seems there are plenty of women in Napa Valley, but as Tony puts it, "No good womens in the parish," for which he blames Joe, his I. W. W. farmhand. And we take it, Joe's a better ladies' man than a Wobbly.

Tony goes to Frisco in quest of a wife. There, in a spaghetti joint, he sees just the woman he wents. He gets her address, returns home, and has Joe write his letters for him and propose marriage. Photographs must be exchanged. Tony realizes he wouldn't have much of a chance were he to send the waitress a likeness of his sixty years. So he swipes a picture of the handsome young Joe and sends it to the girl.

The girl, weary of wage slavery, sees in Tony her big butter-and-egg man, her meal-ticket, and jumps at the chance. She accepts Tony's offer, and with Joe's picture in her bosom starts out for Napa Valley.

Tony prepares to meet the bride. Dolls up, drinks plenty of "vino," cranks up the flivver, and is off to the depot. But the "vino" gets the best of him, and he drives off the bridge. Tony is brought home with both legs broken, and is put to bed to stay for three months.

But the accident is mere bagatelle. It doesn't halt the wedding. The postman arrives with Amy the mail order bride, who gives Joe and the grand farm the once-over, and says, "Amy, old kid, you're in gravy," only to discover that she has been deceived and that Tony is the man she is to marry instead of Joe. But Amy is broke and can't go back to Frisco, so decides to remain, and marries the dago there and then. Of course she's very unhappy and all that. But who wouldn't be, with the groom laid up with broken legs and everything.

But there's Joe. That's some consolation. The philandering young Wob—sloppy but beautiful, as the author describes him. And he's right and ready to cheer her. Then everything moves rather fast after that. 'Ere long Amy discovers she is with child. And Joe is the father. What to do, what to do? They decide to run away and leave Tony with his broken legs. But Tony's been pretty white to both of them, so Amy confesses to Tony. That's Tony's cue to rant and rave, but finally to calm down and prevent Amy from leaving him. Along about here the three of them seem to know what they want. Reasonably enough, Amy is convinced that she stands a better chance of pork chops and gravy with Tony than with the migratory I. W. W. who has such promiscuous ways of making a living. It can be any one of the many jobs he has mentioned—orange pickin's—or the oilfields, or the railroads, or even the jail. Hadn't he told Amy that?

Then Tony too, being children- and wife-hungry, broadminded and still much in love with Amy, knows what he wants, and overlooks her little offense.

The play ends with Joe, pack on back, starting out for the great open spaces—which was what he was supposed to want. I wonder.

That's the story. It won't set the world afire. It's simple and diverting, and that's quite enough. It's good, and it isn't. And yet it has a way of getting beneath your hide. Maybe it was the Wobbly song in the start that turned the trick. Anyway, all the while you feel as if something is happening to you. You're not in the theatre. You're out in Napa Valley on Tony's fruit farm. And you begin to feel as if you know Joe the Wobbly farmhand. Yes, you have met him before—many times. You feel quite related to him—he's been in jail too. But of course this is California, and although Glen Anders clowns the Wobbly character more or less, you believe in him in spite of yourself, darn it.

Sidney Howard has been kinder to the character than would be expected from an outsider. He is slovenly, this Wobbly of his; doesn't care whether school keeps or not. But his outlook on life allows one to conclude that he is not altogether ignorant of Wobbly principles. It may be only a squirming idea, a confused thought, but it's there just the same. There are good moments. For instance when he reads his Wobbly papers to the disgust of Tony and the Holy Padre, the local sky-pilot—as he scans his paper, he says, "I read these things and they make me think. A man ought to think if he can. Oh, not tall talk. Just what he could be doin' himself. I ought to have been in on the dock strike at San Pedro, but I wasn't. I don't want to miss another big fight like that." There are numerous other lines I'd like to quote, but space won't permit.

As I say, the author was kinder in his delineation of this character than could be expected. The usual thing (and Howard isn't altogether free from it either) is to append all the existing vices to the Wobbly make-up. To bourgeois writers loose morals seem to be a special prerogative of the Wobbly. Something like Howards' Joe. But I'm not resentful. More important than the play itself, than the excellent acting of Richard Bennett as Tony, than Pauline Lord's fine performance of the little wage slave, than Glen Anders' unforgettable Joe—is that the Wobbly is being reckoned with in American literature.

They may not like him, but they can't ignore him.

---

# Book Reviews

**A Ghost Takes on Flesh**

Although Walter Lippmann seldom says anything very new, he always says it in a new way. His very pleasing little book, "The Phantom Public" does this too. It is nice reading, for Lippmann acts on his conviction that the public is powerful but dumb, and makes his stuff easy. The publishers have helped him with thick, opaque paper, beautiful large type, and reckless wide margins, which set off the author's short chapters like jewels.

Lippmann's thesis, in short, is that modern social affairs are too complex for everybody to understand. The citizen cannot spare the time to discover what is going on. The liberals and the democrats have been acting under the assumption that the more of the detail of government that the individual "average man" is allowed to take part in, the more efficient and just and useful that government will be. The initiative, the referendum and the recall, universal suffrage, popular election of presidents, judges, senators, etc., have all been considered milestones of progress because it was thought they led

to popular government, public control of law making, and of its enforcement. Lippmann says that this is a mistake, for the public does not work that way, cannot work that way, and is only made more confused and helpless and indifferent by trying to do it.

But this is only the half of his argument. He continues to hold that there is a real public, which is all of that part of the population not directly engaged in the carrying out of the dispute, or activity about which it is supposed to have an opinion. This public can only decide, because of the lack of information, between two courses of action clearly presented to it, and it only does decide when these courses are violently disputed over by two groups of interested parties. Then it comes in to settle the dispute, in a coarse, unscientific and frequently harmful way.

Lippmann himself seems to think that it wastes its time in trying to settle even these points, as separate disputes in themselves, but that its interests are best conserved if it leaves the interested parties to fight it out, but merely watches and prohibits them from breaking the laws of war, as they fight. Or, in other words, contending interests, each trying to swing society into its path of progress, are best let alone to squabble, arbitrate, and finally contract with each other, so long as they do not break the law. When the law is broken, then, and then only, is the public interested, and must decide whether the law-breaker should be punished, or the law should be changed.

This, it will be seen, is really nothing but Jeffersonian Democracy with a laboratory apron on, beneath which are thrust out to us the cowhide boots of our colonial forefathers. It is an old theory that Lippmann has dressed in up-to-date phraseology. And to a certain extent, and in a certain way, it is true. Anybody will recognize at once the truth of his statement that voting is out of fashion. For:

"The private citizen today has come to feel rather like a deaf spectator in the back row, who ought to keep his mind on the mystery off there, but cannot quite manage to keep awake. He knows he is somehow affected by what is going on. Rules and regulations continually, taxes annually and wars occasionally remind him that he is being swept along by great drifts of circumstance.

"Yet these public affairs are in no convincing way his affairs. They are for the most part invisible. They are managed, if they are managed at all, at distant centers, from behind the scenes, by unnamed powers. As a private person he does not know for certain what is going on, or who is doing it, or where he is being carried. No newspaper reports his environment so that he can grasp it; no school has taught him how to imagine it; his ideals, often, do not fit with it; listening to speeches, uttering opinions and voting do not, he finds, enable him to govern it. He lives in a world which he cannot see, does not understand and is unable to direct.

"In the cold light of experience he knows that his sovereignty is a fiction. He reigns in theory, but in fact he does not govern."

Lippmann does not discuss the future society which the I. W. W. has in mind, or any other sort of revolutionary project except state socialism, and in it, of course, he sees little hope of progress. He says:

"No serious student, I think, would dispute that socialist premise which asserts that the weight of influence on society exercised by an individual is more nearly related to the character of his property than to his abstract legal citizenship. But the socialist conclusion that economic power can be distributed by concentrating the ownership of great utilities in the state, the conclusion that the pervasion of industrial life by voting and referenda will yield competent popular decisions, seems to me again to beg the question. For what reason is there to think that subjecting so many more affairs to the method of the vote will reveal hitherto undiscovered wisdom and technical competence and reservoirs of public interest in men? The socialist scheme has at its root the mystical fallacy of democracy, that the people, all of them, are competent . . ."

All of this is certainly not new, but it must be said in Lippmann's defense that he is not denying that the individual member of the public may be himself a very efficient actor, in affairs that concern him, may be skilled in planning, and a good thinker, but still, as a member of the public when he tries to deal with other affairs, public affairs which he cannot know much about compared with what the insider knows, he merely interferes with the insider, and nothing can be gained by increasing the field of his necessary ignorance.

The argument is not entirely true, as it would apply as well to the stockholders of a corporation as to citizens—and we know the corporations work fairly efficiently. Though that may be because stockholders do, in practice, follow the advice that Lippmann gives the citizens, and hire experts, with whom they interfere only when the experts disagree, or something else goes wrong.

The I. W. W., however, does not propose any such arrangement as state socialism, but would like to see the workers in each industry manage and own that industry. This would have the effect of making smaller publics, each in its own industry, and each therefore much more cognizant of the affairs in which it is most interested than could possibly be the case in a pure state socialism.

We may admit that in general Lippmann is right when he argues that the experts, the "agents" as he calls them, are the only ones who plan, and that the multitudes, the "public," the "bystanders," are at the most able to decide between quarreling experts, or variously interested active agents. But we must remember that any "agent" or expert worth anything takes the prejudices, the theories, and the desires of the masses into consideration—or soon

fails. Moreover, every agent is affected by the general theories of the masses, he is a product of his time and circumstances, and their opinion, even their unvoiced opinion, affects him, because he is influenced as they are influenced—to some extent at least. It would be easy to exaggerate this, but so far as it goes, it is true. Moreover, debate over matters of public policy are not, as Lippmann says, merely means of identifying the combattants, clarifying the interests—debates among experts change the opinions of the experts themselves. It has often happened that all concerned in a union convention, for instance, finally decide on a course of action which is worked out by all together, to avoid objections raised at the convention, and which is quite different from what any of them intended to propose in the beginning. This is less true among capitalist politicians, however, for they are individualists, and selfish, and are seldom free agents, but have to take orders.

I have dragged the unions into this because it seems to me that Lippmann's argument is applicable to, is a contribution to the social science of, a classless society. In a society where the workers would run industry, and the central, controlling and coordinating bodies would bear the same relationship to the industrial organizations that the I. W. W. general executive board bears to the various industrial unions, the situation would be improved over what it is now, but it would still be true that experts would have to be placed at the head of things. A railroad must have a manager, just the same as a printing plant. No engineer, if he is to find out all that it is necessary for him to know about his engine, can at the same time be even a division superintendent. No one brain can hold all this knowledge. And if you are going to avoid an anarchy of production, and an appalling quantity of wasted work, train wrecks, loss of life, and the utmost confusion, there must be somebody placed at the head of things, and the more he knows, the better. He is the expert manager just as the engineer is the expert engine driver. One job may be as good as another, but the manager must make decisions that influence the way of life of all the others, and the engine driver's decisions and mistakes influence the lives of himself, or the train crew and passengers, of his own and one or two more trains at best.

And so we come right up against the same old question of the proper way to combine efficiency and democracy. The narrower you can make the field of delegated power, the more "direct action" you can include, the easier the problem becomes. But every new invention, adding to the complexity of the relationships between the factors of industry, makes management, and technical experts more necessary, and they do have power delegated to them, and the rest of the workers are a kind of public, which doesn't understand as well as the manager, but never can trust him absolutely. Lippmann's decision that these members of the public should act as a court of final resort, deciding general policies and finally selecting which of two contending groups of experts is to carry them out, holding them all responsible for results, removing those who do not get results, making them obey the law (preventing any tendency of the agricultural workers to starve out the rest, for instance) may be the best decision we can make. At least any new light that anybody can throw on this problem of democracy and efficiency is welcome. Even the most advanced labor unions have not solved it, satisfactorily, as yet.

Lippmann's book is probably a valuable addition to the literature on the future society simply because it is so worthless as a plan of action in the present society. It is useful as a possible program for a classless society, because it neglects the classes in present-day society.

As a matter of fact, at present there is no such public as Lippmann envisions. Do not be misled by the name of the book; Lippmann thinks that only the all-wise public of the democrats is a phantom, but he himself firmly believes in another spook—the unwise public. And there is not even this public. There are classes. When the coal miners go on strike, it is not true that the operators and the coal miners are the "agents" and all others are the "public" with approximately the same interests because they all use coal. How will Lippmann explain the activity of the freezing garment workers, who are contributing hundreds of thousands of dollars to the striking miners, to prolong the strike? All labor becomes, in truth, an agent—though, unfortunately, all labor does not realize it. Where is this public? The farmers? A sub-class. The corner grocers? Another sub-class. Each ready to interfere in its own interest.

Under capitalism the only time you get a semblance of public action, even of the sort that Lippmann mentions, is when the whole mass of people is artificially united, by propaganda, on a false basis, usually in favor of something that is injurious to them. That alone is enough to destroy any effective and actual public opinion—and Lippmann should know it as well as anyone, for he wrote a book on it once called, "Liberty and The News."

—VERN SMITH.

**THE PHANTOM PUBLIC, By Walter Lippmann, published by Harcourt, Brace & Co., New York. Price, $2.**

**Pearls of Correspondence**

Letters of Protest, by Kate Crane-Gartz, is a book of letters which constitute a second series: the first, "The Parlor Provacateur," published some two years ago, was so well received that Mrs. Gartz was induced to permit the publication of the present series. The volume contains letters written and received by Mrs. Gartz, to and from, clergymen, educators, authors, statesmen and judges.

Mrs. Gartz is no doctrinaire, she is primarily interested in persons, and the defense of those who

are persecuted because of their social views. Her letters breathe a fierce hatred, an artist's hatred, for the unnecessary suffering and the offensive sights that are the necessary concommittants of poverty and excess wealth as two extremes of social organization. It is undoubtedly this offending of artistic sense that has influenced her and not need or fear of possible need; her letters consequently cut through all conventioned lies exposing the evils and absurdities that too many liberals gloss over.

She has been ostracised and publicly slandered, because of her active intervention on the behalf of several persecuted groups, this however has not deterred her: she is too strong an individual to be brow-beaten once the social situation is clear to her and her course has been determined.

I have read the letters of many persons of prominence ,but none which go more surely and directly to the kernel of things. And that is why I call these letters pearls, for they, too, like pearls have been begotten by agony, not the agony of physical suffering, since their author is wealthy, but esthetic suffering since she is also sensitive.

Frank Harris has created a "Lunatic" who muses thus, "What madmen we are with Secretaries of State for War and no Secretary of State for Peace." Mrs. Gartz is one of the glorious mad ones. Her attitude on war, while her two sons were at the front, is not the attitude of a mentally calloused liberal, who in the popular hue and cry, with their own loved ones involved, became apologists for the system so parsimonious of all that is best in life.

This series of letters, like those of the first volume, must of a necessity find a permanent and welcome place in the interest of all who regret and seek to abolish the unnecessary and offensive evils of present-day society. She has not merely given dollars to the causes she espouses, which anyone possessing wealth can do and which after all is merely the employment of wealth, but has given time, thought and toil which is the employment of the soul.

—WARREN LAMSON.

**LETTERS OF PROTEST, by Kate Crane-Gartz. Edited and published by Mary Craig Sinclair, Pasadena, California.**

# Coming Revolution in the Printing Industry

(Continued from Page 10)

process, as well as to bring about, under the newer order, conditions of labor such that the standard of living is not affected by the new discovery; depends mainly upon the efficiency of their organizations.

The typographical union, which is most affected by the new process, here under consideration, has, in its past career, weathered precisely such a storm. It has smoothed the transition from typesetting by hand to the general use of the linotype.

It was one of the first unions to give up completely the traditional attitude of craft unionism which was invariably one of hostility towards mechanical progress. Before 1890, typesetting was a handicraft art and had undergone but few changes since the introduction of printing. During the nineties, machine composition began to displace hand typesetting. The typographical union was clever enough not to oppose the introduction of the linotype but, instead, claimed jurisdiction over it. Their national convention in 1888 passed a resolution ordering local unions to take speedy action looking to the operation of linotype machines by union men at a rate of wages which would secure a compensation equal to that paid to compositors by hand.

Wages have been maintained and even increased in spite of the introduction of the typesetting machine. The length of the working day has been reduced and the amount of unemployment entailed by the change was held to a minimum. A notable gain was made in the shortening of the working day and was justified by the fact that the strain upon the operator of a linotype is greater that that upon the hand compositor.

The forces which enabled the typographical union to mainain its control of the job in the face of the linotype were:

(a) The fact that the main strength of the union came from the control of the large newspaper plants. The latter understood that they were exceptionally vulnerable to the boycott.

(b) The fact that the linotype was first introduced into the newspaper plants and, from there, invaded the rest of the printing business. As its use spread from the newspapers to the smaller shops, the latter found to hand a supply of operators who had been trained in the newspaper plants.

While the strength of the union was a potent factor in the handling of the new invention, it was not the only one. The two circumstances mentioned above constituted strategical advantages of great power and helped considerably toward the result.

But, above all, the main feature of the situation was this one: the technical advance embodied in the change affected only the craft of the typesetters. The craft union formed an adequate form of economic organization to take care of a change within the craft.

This situation does no longer present itself in the case of the invention here analyzed. As a technical process, it is vastly larger than any craft included in the printing industry. It does not revolutionize one craft or several crafts; it revolutionizes the

whole of the industry and it finds the workers in that industry split up into craft unions indifferent or hostile to each other without any kind of an industrial organization, the only structural form which can effectively cope with a new method covering the whole of an industry.

Thus the inquiry: what are the chances for concerted action between the different unions in the printing trades, becomes one of the uttermost importance. Is there in existence a will or a spirit to cooperate in organized form? Are these unions guided by a conception of economic events or a social ideal which can endow their efforts with the scientific correctness and the rational enthusiasm which constitute the primary conditions of victory?

For, after all, the industrial union of the employers is functioning, it is a going concern, ready for such an emergency. A social ideal, a sound tactical policy which embodies the reversal of tactics of long standing cannot be improvised in a few minutes because and in the face of impending danger of a technical revolution.

Let us then try to answer the all-important question of preparedness for action in the light of what we know about the life and behavior of the printing unions.

The work of the compositor constitutes one of the most intellectual and educative forms of creative labor. It leads to a higher measure of culture than the monotonous repetition of the standardized motions inherent in the performance of one of the many operations included in the production of some commodities.

This condition is not without its corresponding obligations. The working class has a right to expect much from the printers in its struggle for emancipation. On the average, the printers have not lived up to those legitimate expectations. While there are a few valuable exceptions, the bulk of the membership of the typographical unions has developed very strongly marked petty bourgeois and middle class tendencies. They are generally over-insured and exhibit a tendency to live beyond their income and to go into debt. Their own national president, not so very long ago, warned them against such an attitude and pointed out that, in a considerable measure, it weakened their capacity for resistance in case the employing class attempted to get for itself higher profits by an attempt to lower the standard of living.

An outlet for the would-be bourgeois in the ranks of printing labor is the country paper. The latter is a typically American institution. All those in the printing trades who have tried it and failed are not backward in telling about the shady sides of the business. From them we may learn that the fancied independence of the printer-owner is in reality a form of genteel poverty. It is paid for with an overlong workday during which he performs half a dozen functions, from printer's devil to editor-in-chief.

The whole business is largely parasitic. It manages to exist mainly on account of the disposition of the postal laws which grants free delivery within the county limits to the backwoods papers. This free delivery service saddles the postoffice with a net loss of from six to twenty million dollars a year.

Another feature of the small country weekly and one which frequently provides it with its main sources of income is the publication of assessment notices when large stockholders are attempting to freeze out the small investors and, to that end, publish the assessment notices where those interested are sure not to look for them. In this connection, the publication of useless legal notices as part of the judiciary red tape included in all lawsuits should also be mentioned.

These two outlets have formed the aim and purpose of many a printer and have shaped the social and political attitude of a great many more. They explain largely the conservatism of their unions and their opposition to the more economic methods available for use in the printing industry such as printing mats or boiler plate (ready-made forms shipped whole), two forms of reproduction of the written word which may hurt the local craftsman but are of a distinctive advantage to society in general. The performance of socially useless labor known in economics as the "make-work" theory, has always found many staunch defenders amongst the compositors.

From the same angle, we must mention the overlooked possibilities of the printing crafts. All the lies and the untruths published by a corrupt press when labor is on strike are generally composed by men who carry union cards and know that they are perpetrating a lie. An "ad" for strikebreakers falsely stating, "No labor trouble," as well as an hypocritical editorial directed against labor are set up, stereotyped and run off the press by members of the A. F. of L. One needs only the fingers of one single hand to count the number of instances where the printing crafts have risen to manhood and refused to contribute to the propagation of tendencial news or Jesuitic editorials directed against their own class. Still, the anguished cry of the bosses, on such occasions, ought to have told them that they had found the real remedy for the evil of brass check journalism and that such action was a good deal more efficient than a half dozen press laws.

### Conclusion

Neither the compositors nor the pressmen are ready for the coming revolution in printing. Their organizations are not such as to give them a controlling influence in the course of the transition period from the old to the new technique. The future would look dark for them, indeed, if it was not for the fact that the despised I. W. W. has been, for many years, patiently and conscientiously elaborating the theory and practice of a revolutionary and scientific unionism which stands ready, even under the new conditions faced by the industry, to solve for the workers in the printing trades the pathetically imminent question: **to be or not to be**

# An Extract From a Diary

By HENRY GEORGE WEISS

WE walked, John Mow and I, down through Pepper-sauce Bottoms until we hit the Santa Fe tracks, and then turned aside to an open space by the side of the river. One could still see the damage the flood had wrought in crazy-tilted houses, small and mean. The river was a shrunken stream here, a Samson shorn of its strength by the hand of Summer. We sat on a stranded tree trunk. The sun glinted on the water and the distant foothills were hazy with the heat. Mow's crag-like face was set as he looked far out towards the mountains. "It is a great country," he said softly; "a wonderful country." And then he went on to talk and talk; and I sat there in the warm sun and listened; and the result of it all is the rhyme below.

I want to write a noble song,
Indite a patriotic rhyme,
But truth is truth, and I'm afraid
Won't lend itself to such a crime.

Oh to a vast and glorious land
My pen would lend itself with pride,
And if he wrote of mountain, plain,
Oh, who could say the writer lied?

But ah, the mountain, plain, are but
The tools which do the work of them
Who work the woe, who forge the hate
To mar the lives of toiling men.

A thousand streams go babbling on
A-down the mountain, o'er the plain,
Whose stored-up energy is used
To bind on man a mighty chain.

A thousand orchards 'neath the sun
With boughs bent 'neath a fruitful load,
Are used as spurs to urge the zeal
Of millions suffering from the goad.

A thousand mines of silver, gold,
A thousand mines of iron and coal,
Are used as burdens on the backs
To warp the frame and taint the soul.

Come see the fields of wheat stretch far,
Come watch the sheaves of wheat brought in,
Walk through the grain mills of the land
And count the bushels in the bin.

Come, fellow, follow on the plough
Where weary feet go up and down,
Come walk the streets and see the stores,
The wealth that's piled in every town.

Come where the stockyards stretch for miles,
Chicago, Denver, anywhere,
Come where the hides are stacked up high
And smoke of factories taints the air.

Our Swift's and Armour's plants, come see,
And marvel at the meats that go
Forth from them in a steady stream,
A never stopping, endless flow.

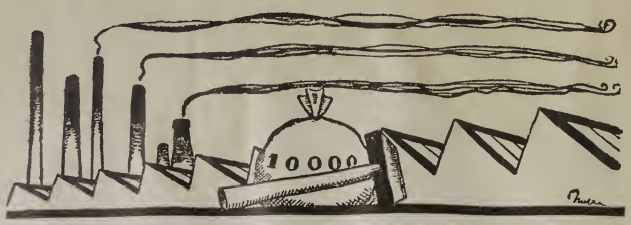
O watch the freight trains whirling by,
Each one a "million dollar" train,
Efficient, prompt, and spreading wide
The fruits of mountain, sea and plain.

O visualize the land as one,
The products of it as a whole,
The mountains, plains, the coals and grains
That pay to man no stinted toll.

Then turn to man himself a slave
To fellow-man who does enslave,
And see him toiling all his life,
And starved, fill up a pauper's grave.

His children naked, hungry, cold,
His wife dispirited and mean,
Himself a toiler for the food,
The scanty food that he can glean.

Come with me where he walks the streets
By tens of hundreds, shunned and banned,
Come with me where he begs for work
From every factory in the land.



Tread softly with me through the homes
Where sable wings of misery lie,
For here a thing of skin and bones
A little starving babe must die.

And here a gaunt-eyed mother prays
Above the cradle of her son
Who moans for bread, until his moans
Are merged in death—forever done;

While undernourished, hollow-cheeked,
A slim maid coughs her life away,
And still another walks the streets
And yields her virtue up for pay.

Tread softly with me through the homes
Of these the base, the squalid poor,
For hunger grim is treading too,
To kill the babe, shape thief and whore;

O friends, with tearful eyes look on
The shattered flesh, the human prey,
And then remember all the wealth,
The plenty in the land today!

I want to write a noble song,
Indite a patriotic theme,—
But how can I when all around
Such misery and want is seen?

Oh, to a vast and glorious land,
That plenty gives, and gives again,
I would not grudge a song of praise
If I could write it with my pen!

But oh, the land itself in chains
Unto a system based on greed
In vain may bear, in vain may give
Of all its plenty, seek to feed

The starving babes, the millions gaunt,—
Unless the starving workers rise
And seize the factory, farm and mart,
Become comptrollers of supplies!

Then! . . . Then might orators declaim,
And poets sing a mighty song;
For patriotic singing then
Might not be founded on a wrong!

# Justice Triumphant in the Ford Case

(Continued From Page 8)

fitting and proper that this minion of mockery should be elected to preside at the second trial of Ford.

On January 4, 1926, the trial began in the old court house at Marysville. At the end of counsel table nearest the jury box sat District Attorney Ray Manwell, snarling, sneering and constantly talking about "my father." Well toward the other end of the table, between his attorneys and newspapermen, sat the defendant—an earnest, small man, who celebrated his forty-third birthday by testifying in his own behalf. About his eyes were a few finely etched lines caused by deep thought; he held his head erect and one notices that hair, which was once jet black, is turning gray. By his eyes one could tell that his indomitable spirit and cheerful disposition has suffered but little from eleven and a half years of captivity. Just behind him sat his fifteen-year-old son, whom Judge Busick had ordered not to sit at his father's side. The boy could never remember seeing his father outside a prison, but his faith that his father would be acquitted never flagged.

The jury was not one which would be expected to understand a class war case. It was made up of five farmers, one farm laborer, three women—a typist, housewife and nurse—and three small business men. One hundred and seventy-two talesmen had been examined before a jury was selected.

Throughout the trial, except for a day or two during the monotonous process of selecting a jury, standing room was at a premium in the court room. Both local papers featured the trial each day of its progress. Their reports were remarkable because of their fairness and accuracy. The entire countryside was agog with interest. Among the sporting fraternity, the odds were in favor of an acquittal.

Included among the witnesses for the prosecution were members of the posse which had been at the fatal event, and also a number of residents of Wheatland who had gone out to the hop camp to take in the excitement when they heard there was likely to be trouble. Although Judge Busick had denied the motion of the defense to exclude all witnesses from the courtroom, these worthies who testified for the state not only contradicted each other, but, on material points, their testimony was widely at variance with what they had given at the former trial. They carried themselves with the swagger of conscious bold, bad men, or cringed and fidgeted while they "told the truth, the whole truth, and nothing but the truth."

The witnesses for the defendant had been gathered after fine-combing the state. Most of them were plain, humble folks who had been on the Durst ranch as hop pickers on that fatal Sunday. With the assurance of those who have nothing to fear and nothing to hide, they met the snarling, grilling

cross-examination of the district attorney and judge with simple, straight-forward, unimpeachable statements. They told how Ford had counseled the hop pickers that they must keep the peace, injure no property, and to leave any weapons which they might have in their tents. They related how he had taken up a collection and bought groceries and blankets for a destitute family. Upon one occasion, he had held up to the view of the crowd an infant, its face splotched with the fever that was rampant in the unwholesome camp and said: "It is not for ourselves, but for such as these, that we are making these demands." As to the tragedy itself, the witnesses for the defendant related how Deputy Sheriff Dakin, with trembling hands, had fired the first shots directly over the heads of the crowd; and how this same Dakin, after the shooting was over, had killed the Porto Rican as he was retreating from the crowd and had shot the arm off another man who had made no move at all.

### The Pooh Bah in Action

It would indeed be tedious to relate all of the rulings of Judge Busick, but this story would not be complete without a few examples, so that the reader may have some idea why he has been named "The Pooh Bah" and "Prejudicial Busick."

Early in the trial it was evident that he had an idea in mind that he was going to show the people of Marysville just how to railroad a worker to prison. He began his course of instruction when the defense offered a motion to exclude all witnesses from the court room. This is a motion that is always granted when made by either side in any case and especially so in murder cases. Busick, promptly denied it and stated as his reason that he thought the witnesses had a right to stay in the court room and listen to the testimony as no doubt their minds needed refreshing.

A little later in the same day he began his haranguing of defense attorneys, especially Attorney Henderson. His manner and words were insulting, and purposely so. He intended to either get the attorneys so mad that they would blunder in cross-examination or else put them in a state of mind where they would be afraid to offer an objection, thinking that they would be insulted again. Whatever his motive, he failed to either stop or aggravate counsel, but tended to put them in a better fighting mood and they were more alert at each remark.

He refused to allow the defense to show the conditions as they existed in the hop camp. In another instance, when it became apparent that a witness for the state had testified differently in the former trial as to whether the crowd was "dense" in a particular spot, His Honor ruled that the word "dense" expressed a mere conclusion of law, and not a fact, and ruled out all testimony using the word.

Throughout the entire time taken up by the taking of testimony, he continually overruled every defense objection and sustained every one made by the prosecution. At times he found it advisable, from his viewpoint, to criticise the defendant in such a way as to belittle him in the eyes of the jury. He would do this by stating that thus far the defense had not produced anything in court that could be construed as a defense.

At the time the closing arguments were being offered he went to great pains to let the jurors know his opinion. While the two attorneys for the defense were arguing, Busick continually busied himself by rustling papers, or books, or else by gazing abstractly out of a window. Came the prosecutor to make his argument and we found a new Busick. He was all attention, drinking in every word as it flowed from the oily tongue of young Manwell. When Manwell would refer to the American flag, Busick would turn around in his chair and fondly gaze at that court fixture; when he spoke of Ford as an I. W. W., Busick would turn in the defendant's direction and glower down at him. Then there was the moment in which the district attorney likened the I. W. W. to a bunch of rats that are gnawing at the foundation of a building, saying that, that is what the I. W. W. were doing; gnawing at the foundation of this government, and the Pooh Bah nodded his head in emphatic approval of the statement.

### Jurors Retire

At twelve thirty-five on Thursday afternoon, January 21st, the case was closed and the jury began their deliberations. For seventy-seven long, dreary hours they remained dead-locked, never leaving the jury room except to go to the hotel for their meals, or to come into the court room for instructions or to have some of the testimony read to them.

On one occasion, when the jury was in court to have certain instructions repeated, one juror questioned: "If a juror assumes that there was conspiracy, can the defendant be convicted?" That was a dramatic moment. It had been many years since any one in a California court had even suggested that evidence should be required to show a conspiracy in a class war case. The judge actually explained that one could not be convicted without evidence; but it did not take him long to collect himself and explain that there is such a thing as circumstantial evidence.

At noon on Saturday the jury reported that they were hopelessly dead-locked and asked to be discharged; but "His Honor" calmly advised them to deliberate further. That evening he called them in and withdrew the instruction on a manslaughter verdict. His action in that instance was without precedent and was done over strenuous objections by the defense.

Sunday at noon, Busick had apparently changed his judicial mind, for he ordered the sheriff to notify the jurors that he would discharge them if they would come into court. However, the jurors had other ideas and they refused to come in. Thereafter,

at intervals of forty-five or fifty minutes, the judge repeated his order to the sheriff, only to be met with the same reply until they finally stated they had reached a verdict..

### Assistant Prosecutor McDaniels Speaks

Throughout the entire trial, Judge McDaniel, Judge Busick, Former District Attorney Stanwood and District Attorney Manwell held frequent conferences out of court. Shortly after Judge Busick had attempted to discharge the jury, the situation proved too much for the nerves of vulnerable Judge McDaniel. He could keep himself in hand no longer. Someone had to have a piece of his mind. He and a number of court attaches and newspaper men were seated within the rail in the court room while the "rabble" sat outside the sacred bar. Editor James Cremin, of the Maarysville Appeal, uncorked the vials of judicial wrath by observing that he thought they would arrive at a verdict soon. That was too much for Judge E. P. He said, "Yes, and it should be a verdict for the people. The defense has not shown a bit of evidence for a defense of this charge." Then, warming up to his work, he addressed the editor more directly: "I am touched, Jim, by your loyalty to your dead friend E. T. Manwell, and to Sheriff Voss and to the people of the State of California. From the way your paper has reported this case, it looks as if you had sold out to the I. W. W." This, of course, called for the short, ugly word from the editor; and that, in turn, led to some statements from the jurist as to what might happen if spectacles were removed from the bridge of the editorial nose. However, before the spectacles could be neatly placed in their case the sheriff remembered that he had been sworn to keep the peace, and stepped between the irate gntlemen.

No one thought to ask the worthy jurist why he did not go to Sacramento and take Mr. McClatchey on for a few rounds without glasses, for, during the trial, Mr. McClatchey's Sacramento Bee had denounced Ford as a murderer. In California, it seems fair to assume, it is contempt of court for a newspaper not to assist the prosecution.

The smoke of this wordy battle cleared slowly from the heavy atmosphere of the tense court room and all present settled back in their seats to await a verdict.

### Verdict Reached

Came a rap at the jury room door. A hush fell over the noisy court. The hands on the wall clock turned to five forty p. m. Five minutes passed, five minutes in which every one was alert, expectant, wondering if a verdict had been reached. Court attaches took their places, followed by counsel for both sides, the defendant and the judge. Newspaper men hastily scribbled on their ever present note pads. Then came the jury. Weary and haggard, they straggled into the jury box and took their regular seats. Slowly, the verdict against the defendant on his plea of former jeopardy, which the judge had directed, was read and recorded, with a great scratching of the clerk's pen.

Then the foreman of the jury read the principal verdict, from its formal heading, to the words "not guilty." For an instant not a breath was drawn. A hush primeval seemed to have fallen on all living things—the silence as if all things had come to a stop. But, for a moment only. A woman shrieked. Then came a thunder-like burst of applause, topped by stamping of feet and surges of cheering, that fairly shook the old court house.. For a moment one had visions of one of California's favorite products being thrust upon us—an earthquaake, so distinct was the shaking of the floor under our feet. They poured out the court room, down the stairs and onto the street, still cheering. At last the people of Marysville knew that a great stain had been removed; and it rejoiced at the vindication of its honor.

Then, for a second time on that eventful Sunday, a judge's nerves snapped. Many times during the trial Judge Busick's face had flushed with judicial wrath; but all that had gone before was as moonlight to sunlight, to the great outburst of rage which was now poured on the heads of that rejoicing audience. One cannot recall his words, but there was a plentiful sprinkling of such phrases as "un-American," "Insult to the flag," and the like. The verdict in particular, he referred to as being "un-American." One culprit was singled out as an example and ordered to jail for five days. Another had been selected also, but he turned out to be a banker, so was not punished for contempt, as was the other poor fellow, who was only a destitute war veteran.

### Ford Released

Ford walked from that old court room, amid the handshakes and congratulations of the people of Marysville, and for the first time in twelve years, he walked without the eye of a keeper upon him; still he was not free. He went as a felon, a convict, one who must go where and do what the State Parole Officer says he must go and do. One who can make no contract; can drive no cars; whose civil rights are suspended, a prisoner still, but on a longer tether.

Yet, in the eyes of all men, he stands vindicated. Tried in the very town where he was once hooted and reviled—convicted by a jury then that now admits they were swayed by popular prejudice—tried on the same evidence, prosecuted by a vindictive district attorney—tried before a judge who made every effort to favor his accusers—upon that same evidence he stands acquitted and vindicated.

# WOBBLES

## CATS AND THINGS . . .

It was at a farm house. One of those stump-ranchers whose premises show little sign of crops. Still, there is a big car sitting in the yard. Ostensibly a farmer, but really following the nation-wide bourgeois moonshine industry. His main crop comes from a copper coil hid somewhere out in the woods.

I went in to get, let us say, a drink of water. A woman and a little boy about three years old were the only ones at home. Evidently mother and son. The boy was playing with the cat, the mother ironing.

At a moment when the woman was going towards the stove to change the iron for a hoter one, the little boy had gotten the cat by the tail and was laughing while the cat was pulling and meowing. The mother passing, no doubt harder than she intended, swung the iron against the little fellow's back. The blow toppled the boy over and he began to cry; the cat skedaddled.

With an involuntary look of remonstrance I glanced at the woman. She changed irons, returned to the ironing board, explained apologetically:

"Lann sakes! they's no use belongin' to a woman's club for the pertectionof animals 'les one practices what it preaches. Calvin's got to stop 'busing the cat."

## QUADRUPEDS AND BIPEDS

It is well known that often a farmer enters into a logging contract as a winter occupation for himself and his teams.

On this day the toat teamster had hauled in a load of hay, along with which he also brought a box of dynamite for blowing stumps. While unloading the hay he had set the dynamite down in the barn door. About then the farmer-logger came in from the works. Seeing the dynamite in the barn, he exclaimed:

"What do you mean by putting that dynamite in the barn? You want to blow up all my horses?"

"Well, where'll I put it?" asked the teamster.

"Put it in the men's camp."

**Bi Heck.**

---

A wobbly was asked about what was meant by workers' education, which he explained this way: "It means that you make the workers understand that they do the work instead of the president, or, for instance, a half a dozen men are building a house for a real estate man and you go up to them and tell them that they are building the house and not the real estate shark: that's workers' education. It's something they ought to know, but evidently don't.

# A Few Words From the Outgoing Business Manager

After having been acting in the capacity of business manager of Industrial Pioneer and Industrial Solidarity for the past six months, will state it was necessary for me to take this office due to the sadly depleted condition of the treasury of the publications, and also of the general organization; however, there is no doubt that if any capable person should be given full charge of the publications, so as to allow him the necessary time to try and increase the circulation throughout the various prospective fields, it would in time be the means of showing a gain rather than a deficit.

By this I do not mean that one should devote all the time to routine or clerical work, but, in other words, they should be in a position to be allowed to try and place both our publications on various news-stands, also, where possible, canvas an entire district among those who work. By this method we could obtain more subscriptions.

Of course, subscriptions alone are not the only means of revenue for the publications, as the members and especially the large branches, must co-operate with the publications in the matter of receiving as many copies in bundle orders as possible. If the publications would receive all which they have in outstanding bills, it would be the means of balancing the account and they would not be so heavily indebted to General Headquarters.

Another matter at this time is—both our publications are recognized as being the only English I. W. W. papers in the field (except the Industrial Worker, Marine Worker and I. U. bulletins). All other English language publications using the seal and label of the I. W. W. are misrepresenting the true status of affairs, as we have been, and are, the only organization which can rightfully claim to publish official organs of the Industrial Workers of the World.

Regardless of what changes are made when the incoming administration takes office, we request all fellow-workers to co-operate, and give them both moral and financial support to the fullest extent.

Thanking you for the co-operation which acting in the capacity of business manager this office has received while I have been of the publications, and with best wishes.—

**Arthur Coleman.**

# I. W. W. Preamble

The working class and the employing class have nothing in common. There can be no peace so long as hunger and want are found among millions of working people and the few, who make up the employing class, have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system.

We find that the centering of the management of industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers.

These conditions can be changed and the interests of the working class upheld only by an organization formed in such a way that all its members in any one industry, or in all industries if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."

It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown. By organizing industrially we are forming the structure of the new society within the shell of the old.

# The Battle of Passaic

By JIM DARCY

*"In our hands is placed a power greater than their hoarded gold;*
*Greater than the might of armies magnified a thousand-fold.*
*We can bring to birth the new world from the ashes of the old,*
*For the Union makes us strong."*

**ITTER class war is raging in Passaic, with the martial strains of this famous Wobbly song rising mightily from the throats of 12,000 wool and worsted mill strikers who have risen from the mire of dumb, degrading poverty and are in revolt for higher wages and other demands.**

**With heads of families regarding themselves fortunate if they were making $22.50 a week, and a large number receiving as low as $15.00, it will be seen at once that the strike is a desperate blow for elemental necessities. In spite of living costs constantly going up, wages were cut ten per cent last autumn, and the workers began to organize.**

**In the early part of February the 5,400 workers employed by the Botany Mills came out, and before another week had passed the Garfield Worsted Mill and the Passaic Spinning Company were struck. Shortly after this the Forsten-Huffman Mills spinners joined their striking fellow workers of these other plants, and one week later the Gera Mill workers walked out.**

This kind of solidarity enraged the mill owners, and at the sound of the Wobbly war songs the "bulls saw red." Followed the usual scheme invoked for such situations the bosses ordered the police to use their clubs and smash the life out of this rebellion. A large parade of strikers marched from Passaic through Clifton and Garfield where some of the mills are located. At the Ackerman bridge between the latter two towns they were met by the police who rushed the crowd of men, women and children clubbing indiscriminately.

The parade was a peaceful demonstration, in which there were even baby carriages pushed by mothers. However, the police exist to serve industrial autocracy. In this case their reprehensible service was so vigorous that even a part of the conservative press in near by cities protested editorially.

More important, though, was the electrifying effect this savagery had on the strikers. No longer would they struggle simply against the wage cut. They formulated the following demands and presented them to the mill masters:

1. Ten per cent increase over the old wage scale.
2. Return of money taken from them by wage cut.
3. Time and a half for overtime.
4. A 40-hour week.
5. Decent sanitary working conditions.
6. No discrimination against union workers.
7. Recognition of the Union.

Demonstrations of mass picketing brought new police onslaughts. This time clubs were supplemented by tear-gas bombs in an unsuccessful attempt to disperse the pickets. But when the tactics of police violence reached this disgraceful extreme the World War Veterans came to the strikers' aid, furnishing them with gas masks and steel helmets. Thus are the devices of militarism pressed into service in modern class struggle.

Not only have the police been used against the strikers, in the ways already described, but fire department equipment has been used. Water driven with terrific pressure through fire hose nozzles has been poured on the massed workers. But the flame of revolt against their evil conditions of existence has leaped too high; it is too big and strong, to be extinguished, and only grows more intense after these savage assaults.

There are a number of Wobbly strikers who are doing much to sustain the fighting morale, and to promote the solidarity so essential to victory. In the great textile strike at Lawrence in 1911-12 the I. W. W. succeeded in welding together the workers of many nationalities and putting up a battle that was of worldwide interest. But the workers later forgot the One Big Union and drifted apart, easy prey for their trustified masters.

Mill owners fear that 40,000 silk workers of

Passaic and Paterson may join the strike. Add this large number to those already striking and an industrial contest of great magnitude would be in progress. In the strike it was early seen that old trade lines must be torn down in order to obtain the requisite solidarity. Tactics that have so long been advocated by the I. W. W. were advanced and adopted. The result is that more than 12,000 strikers are making a united stand animated by class consciousness.

Would you witness the misery of the mill slaves? Then come to Passaic's filthy streets lined with decrepit tenements and derelict homes, where the workers pass their lives when not sweating in similarly vitiated factory confines. See the mill strikers parading with a banner, thousands of women and girls in line with the men. They have lifted aloft a banner inscribed with the defiance of revolt. And it is surmounted by a mill girl's shabby hat—the only one she can afford on her niggardly wage, while every millinery shop and department store flaunts its treasures in her face. But she is a worker, and this damnable regime of rich loafers provides that one bummy, old hat is enough for her. And for the rich female parasites, what? Ease, luxury, hats and shoes and

apparel galore. It was like this when the Bourbons fell and when the workers toppled the throne of the tsar.

In Passaic you will see rickety children. Why are they rickety? Why are they suffered to be mute, wasting victims of malnutrition—slow starvation? Why are the tired workers so desperately driven, so bitterly rewarded for their labors? Why are silks and wool for a class of leeches while shoddy and remnants and scraps are the portion of society's useful members?

Again the thunder of iron hoofs reverberates from the cobbles and sidewalks. The mounted police are glorying in their finkified role. The cossacks are charging to crush rebellion out of these risen helots, to drive them back to their dungeons of drudgery, and their babies back to starvation. Motorcycle cops are speeding, too; rushing into crowds, knocking down the workers, and clubbing their heads.

And the strike goes on, Wobbly battle hymns ringing louder than this cacophony of suppression. The workers are struggling for life itself. Truly they have "Nothing to lose but their chains." And though mill owners turn deaf ears to their demands the while these robbers order the violence that is daily and hourly enacted here, that mill girl's hat is on the standard and thousands of marching feet move to the inspiration of that ensign, like the red liberty caps of old that rose to mark the fall of tyrants.

Some time it will start in just this way—the revolution in America—a mill slave's worn, misshapen hat on a banner's top, and on another banner that demand for a greater, finer, happier life epitomized in the demand: "Bread and roses."

Bread! Yes, because we need it for our bellies, and roses and all the good things of life in a real civilization where human rights shall transcend property rights and where we shall be the masters of the machines instead of their slaves. And because we shall dare to challenge the plunderers, making "the thief disgorge his booty." Because in that glorious hour of revolt we shall shatter to fragments the power of capitalism to raise on the ruins of hate and oppression the new commonwealth of love and social justice.

The acts of the police so transgress all customs of human decency that they fear publicity, and they have overturned cars of cameramen, smashing their cameras. To circumvent this device airplanes are circling over Passaic taking pictures, and reporters are using armored cars.

The American Civil Liberties Unions has interested itself in this struggle and is fighting to insure freedom of speech, press and assemblage

LOOKS TIRED, DOESN'T SHE?
The Pace That Kills Is the Textile Mill Pace

for the workers, while doing other relief work. Among those prominent from this group is Elizabeth Gurley Flynn, whose experience in such struggles has extended over twenty years.

The wages cited at the outset must bring to the reader some visualization of existence pieced out on that niggardly pittance. The workers' lot must be intolerable on such coolie stantards, and it is gratifying to see the New Jersey strikers springing up from their sink of wretchedness. They are putting up a memorable fight and one that merits the heartiest support of the working class. And this support must be financial without delay if a speedy victory is going to be won.

The General Relief Committee of Textile Workers, 743 Main Avenue, Passaic, N. J., is appealing for donations to be used as strike relief, and your prompt aid should be given.

---

Since this article was received there have been thousands of workers added to the already embattled hosts. Continued police ruffianism in the towns where the struck mills are located, and where the strikers held huge demonstrations of mass picketing, stirred 5,000 dye workers to quit and join the strike.

This brings the number on strike to more than 16,000, and we have another vindication of the effectiveness of the industrial union idea. If the workers embrace it fully they can win, but if they let their solidarity be broken they are sure to return to the old conditions. Trade unions can not win industrial battles with monopolies.—THE EDITOR.

# Why the I.W.W. will Not Die

By JOHN I. TURNER
(General Secretary-Treasurer of the I. W. W.)

**IT IS easy to keep up courage when there are no troubles and the world looks bright. And if a labor union is progressing without serious opposition, enthusiasm is everywhere to be found. But it is when difficulties confront it that courage and determination are needed. And I doubt that one could suggest anything better to a disheartened member of the I. W. W. than a little study in this organization's history, and an observance of how it has weathered many a stormy period and always came through determined to continue in its good work.**

One of the favorite pastimes of many of its enemies and many of its "friends," too, has been in pronouncing it dead—or nearly dead, and then falling in line for the funeral march. Their "death sentences," however, have not been effective. Somehow the I. W. W. as an organization has escaped the fatal strangling, although a few of its members have been victims of "neck-tie parties" at the hands of the employing class hirelings.

The first serious crisis in the I. W. W. came at the second convention in Chicago in 1906. Its first and only president, a man by the name of Sherman, had been suspected by some of the delegates of not having the interests of the organization at heart. Their suspicions were well founded as the events that followed proved.

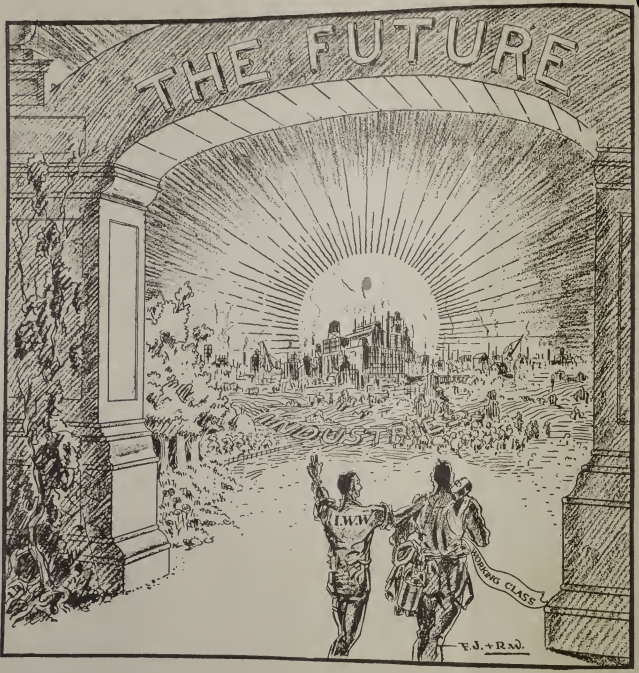
### Early Troubles of the I. W. W.

The convention voted to abolish the office of president. Sherman and his gang surrounded themselves with a bunch of Chicago police and when the newly elected General Executive Board went to the General Office of the I. W. W. they were kept out and Sherman and the police held the building by force, and refused to turn over the records of the organization or its treasury of four thousand dollars that Sherman had in the Prairie State Bank. Two of the board members were beaten, and it was quite a while before the I. W. W. got control of the General Office and the funds. But while the fight for the possession of the general office building and the treasury had been going on, more serious troubles were brewing.

The Western Federation of Miners had become a part of the I. W. W., from its beginning, practically. It took in all miners regardless of craft or trade and recognized the class strugggle. This army of courageous fighters, as many a hard-fought miners' strike bears evidence of, was a vital factor in the I. W. W. and supplied much of its fine spirit and strength in its early days.

Now Sherman and his followers had won the support of the W. F. of M. officials, many of whom never had been in sympathy with the I. W. W. but had been forced into the organization by pressure brought to bear upon them from the rank and file of the miners. The controversy with the "Shermanites" gave them an opportunity to win the support of their less enlightened membership in a move to pull away from the I. W. W. In this they succeeded. It was a hard blow to the I. W. W., despite the fact that the more radical element of the miners remained with it instead of following the officials in the secession.

After the withdrawal of the W. F. of M. the socialists deserted the I. W. W. and declared that its end had come. Probably the loss of **their** support was little to worry about; but the moral effect of losing the W. F. of M. was of no little consequence to the new organization.



It is surprising to know that in the face of such a calamity the two years that followed witnessed much strike activity on the part of the I. W. W. The days of I. W. W. job control in Goldfield, Nevada, will long be remembered by the miners of the West.

### Fierce Fights Against Bosses

With the fourth convention at Chicago in 1908 came the fight over the "political clause" in the preamble, and it resulted in the elimination of that clause. To set forth as a clear-cut labor organization without the "political wing" was suicide. So said the parliamentarians, high and low.

It seems that the greater disaster that came from this move was to the "pollys" themselves. After they had sounded the death knell of the I. W. W. and were on the eve of an awful setback for the political wing, the "overall brigade," as the parliamentarians had termed their opponents in the fourth convention were preparing for some interesting fights with the employing class.

Two struggles of the year 1909 that stand out were the free speech fight in Spokane, Washington, and the strike of the Pressed Steel Car Company at McKees Rocks, Pennsylvania. Here the I. W. W. strikers drove back the Pennsylvania State Constabulary (commonly called cossacks) after making good their threat to take the life of a cossack for every striker killed by them. This was the first time that these famous strikebreakers had ever been routed by striking workers.

Then in Lawrence, Massachusetts, in 1912, came a walkout of the textile workers of the American Woolen Mills against a decrease in wages. The strike was called a "spontaneous walkout" on the part of the formerly suppressed textile workers. The I. W. W. sent its ablest organizers there and they lined up the strikers for what probably was the greatest strike that the woolen kings of Lawrence had ever had to contend with.

Many strikers were arrested by the police who were only too willing to do the bidding of the employers. Attempts of the strikers to send their children away to friends and sympathizers who had agreed to feed them until the strike was over, were met with police reprisals. Some of the women, mothers of the children, were beaten by the police as they tried to put them on trains to send them away. Three organizers were arrested and charged with the murder of a striking girl who was most likely shot by gunmen of the employers.

Against all this persecution, the strikers, representing many nationalities and speaking many different tongues, stood solid. After about two months of brutal persecution of the strikers the woolen trust gave in and granted large wage increases.

### Trouble With Decentralizers

The year 1913 brought the trouble with the "decentralizers," when it seemed as if these fanatics with their foolish ideas would completely wreck the organization. They did not get control of the convention that year as they had planned to do, but they did much harm with their cries of "Down with autocracy" against every effort of the organization

to establish discipline. They did not believe in discipline. They had a lot of dreams about "freedom." Freedom to them meant for every fool to have the unmolested right to do as he wished to do. How any organization that accepted such ideas could exist at all is something that this element never explained. And the chief cause of their failure to gain control of the I. W. W. at that time rested in their inability to organize themselves to carry on their fight. Men of such ideas cannot organize. They cannot agree on a concerted plan of action. They may be coerced or forced into united action, but they can not enforce discipline among themselves so long as they try to put their ideas into practice. One branch of the organization at Vancouver, British Columbia, started to make their own dues stamps. Others of the same school supported them in their senseless action. And again the I. W. W. for some months had to spend the greater portion of its energy in suppressing these foolish endeavors.

Many of the less patient of the membership became discouraged and quit. The enemies of the organization were sure that they heard the final count. It was a perilous time for the I. W. W. But it did not die.

### A Very Active "Corpse"

An organization drive in the wheat belt in 1915 revealed to the "prophets" the fact that the I. W. W. had not yet become a corpse. This drive aroused new courage and determination and led to one of the greatest strikes that had ever taken place in America. (Probably not the greatest in numbers, but the greatest from the viewpoint of tactics used). That was the strike of the lumber workers of the Northwest in 1917-18.

THE I. W. W. HAS ALWAYS OPPOSED TRAGEDIES LIKE THESE; THE BOSSES MAKE THEM

Following the harvest drive a concerted effort was made to line up the lumber workers for a strike against the long hours and other bad features connected with working in the woods and sawmills.

Organizers of the I. W. W. met with brutal treatment at the hands of lumber trust thugs. The famous beatings of organization members at Beverly Park, a suburb of Everett, Washington, and the murder of five or more organizers that tried to land there off a boat from Seattle, is an example of how the timber barons welcomed the I. W. W. in its attempt to organize the workers of the woods and mills.

But these brutalities did not stop the lumber workers from organizing. The conditions under which they had to work and live were bad. They were out for something better.

A convention of delegates elected by the lumber workers of the I. W. W. met in Spokane, Washington, in March, 1917, and drew up the demands of the workers as they had been instructed to do. The camps were to be made more sanitary. Clean beds, better food and an increase in wages were demanded, and foremost of all, they demanded that the workday be reduced from ten hours to eight.

These demands were presented to the employing lumbermen. Not realizing that the I. W. W. had become so strong in the woods and sawmills, they refused to consider these demands. So the strike came in the following June, and the Northwest lumbering industry was almost completely tied up.

The usual persecutions of strikers were made worse when the public press, loyal to the employers, proclaimed to the public that the strike was called to help the Germans win the war; for this country had then engaged in the fight to "save the world for democracy." Strikers were arrested and beaten. Then came federal indictments against officials and organizers, with long terms in prison for them. And it must not be forgotten that the copper miners of the I. W. W. in Arizona and Montana were striking at the same time. Arrests of strikers and deportations from the strike zone took place in Arizona.

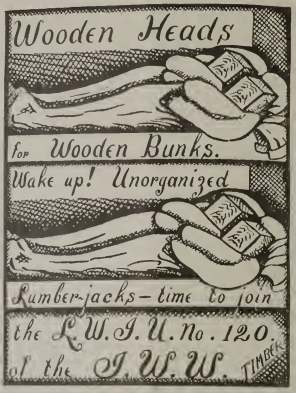
Two months the lumber workers remained out. Then they did one of the most remarkable things that has ever been done by striking workers in the history of the American labor movement. They voted to "transfer the strike to the job." The idea was to slow down production until the employers would have to grant the eight-hour workday. Many thought such tactics could not be put into practice. The boss lumbermen thought so too. But they had not realized how well this "strike on the job" idea had permeated the minds of the lumber workers and how well they had organized and

planned to carry it on. Of course without organization it could not have been a success.

"If we have to stay on the job ten hours, we'll give them much less than we would even in the eight hours that we were asking for," they said. And they made good their promise to themselves. Also, entire crews would often quit and go home, or to the camps, when the eight hours were over. Workers "fired" for so doing went to other jobs to continue the same line of action. Discharged workers could not be replaced by other than organized workers. The strike was a great success.

After a few weeks of this demonstration of united action on the job by the membership of the Lumber Workers' Industrial Union of the I. W. W., the employers gave in and announced through the press that the eight-hour workday would be universal in the Northwest woods and sawmills. The other demands were also complied with and the strike on the job was called off.

### Criminal Syndicalism Laws



But the exploiters of labor never cease to fight organization of their workers. They strike back every way they can. The famous criminal syndicalism laws were enacted as a further means of sending workers to prison. (In Idaho, however, the "C. S." law was passed shortly before the strike started, and no doubt in anticipation of it, as they saw that the lumber workers of that state were organizing into the I. W. W.)

A mob of American Legion men, aroused by the lies and misrepresentations of the I. W. W. in the press, were used by the employers as "cat's paws" to attack the lumber workers in their hall at Centralia, Washington, on Armistice Day, 1919. Naturally they had to defend their lives against this mob. In the fight four of the Legion men were killed. A few hours later one of the defenders who had been arrested and thrown in jail there was taken out under cover of darkness and hanged by the mob of lumber trust lickspittles in a most fiendish manner.

Amidst the reign of terror that followed, as the capitalist press fanned the flames of hatred against the I. W. W., and lumber workers were hunted down, jailed and beaten, the men that defended their lives against the murderous mob were railroaded to prison for life.

It seemed that the organization could not live through this continuous persecution and terroristic tactics on the part of the employers and their hirelings. Many became discouraged, and abandoned the organization. But the I. W. W. lived on.

The spring of 1923 found the timber kings compelled to face another strike of this often killed organization. The strikers demanded the release of men imprisoned for union activity. While these demands were not granted, the strike was a fine example of solidarity and many believe that the men in the penitentiary at Walla Walla, Washington, might have been later released by the I. W. W.

VERY PLAIN LESSON TAUGHT TO THE LUMBER WORKERS BY I. W. W. STICKERS

campaign in their behalf had not the solidarity of the organization been greatly weakened by the traitorous conduct of the ego-maniac James Rowan, and his dupes with their "Emergency Program."

### Internal Foes Fail at Disruption

To gratify a personal grudge he had against officials in the General Office of the I. W. W., Rowan circulated bulletins and letters among the membership in which he stated that the General Secretary-Treasurer had stolen thousands of dollars of the organization's funds and that the General Office was run by gunmen and gangsters. At the convention called to investigate the controversy all these statements were proven to be false, but the turmoil created as the result of Rowan's outrageous lies has forced the organization to spend much time and energy that but for such confusion could have been spent in the education and organization of other workers.

This gang of cut-throats that tied up by a court injunction the funds of the I. W. W., including money for the release of members in prison and for those awaiting trial, have about played themselves out. However, they are still issuing a lying sheet from Portland, Oregon, that they have the nerve to call the "Industrial Unionist." They counterfeit the seal and dues stamps of the I. W. W. and they, this bunch of would-be union wreckers that refused to recognize a convention of delegates elected by the rank and file of the membership to investigate and ascertain the cause of all the

trouble, are still trying to make workers believe they are the I. W. W. And occasionally some uninformed worker is led into their trap and joins them and pays dues to support these enemies of the working class.

Just as the I. W. W. has overcome other disruptive tactics at the hands of its enemies, it is overcoming the admittedly bad effects of the "emergency" stab in the back. The organization has made mistakes and will no doubt make others, as workers have ever done in their struggles with their oppressors. But by their mistakes they learn. And the fact that the I. W. W. has endured these twenty years of attacks from within and from without should serve as an inspiration to every workers to drive him on to greater activity and determination. The idea of industrial unionism as outlined in the preamble of the I. W. W. is an idea born of conditions that have made it inevitable. A knowledge on the part of the toilers in industry of the developments of capital creates an army of workers that forms the nucleus of an ever-growing industrial solidarity. The attempts of its enemies to disrupt and to suppress it add to the determination of the militant membership of the I. W. W. to carry on the fight until the ideals for which they have fought so hard have become a reality.

**In Fighting the Poison of Capitalist Newspaper Propaganda the I. W. W. Press Has Always Played a Leading Part, and Continues to Teach The Truth to the Working Class**

# DRIVING 'EM OUT

SWOOPING DOWN on the brood of vultures comprising the alien I. W. W.'s, the Anarchists and the Socialists, everywhere hatching discontent and misery, the great American Eagle is driving 'em out!

Hard, cruel, destructive, uncompromising and murderous, these brutes in human form are seeking to destroy industry, all that industry creates, and Christian civlization itself.

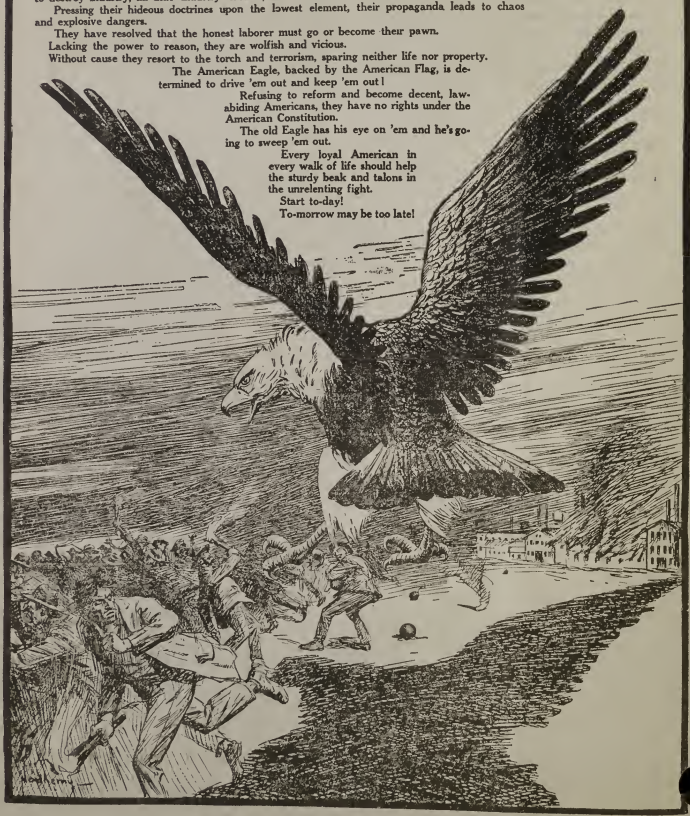
Pressing their hideous doctrines upon the lowest element, their propaganda leads to chaos and explosive dangers.

They have resolved that the honest laborer must go or become their pawn.

Lacking the power to reason, they are wolfish and vicious.

Without cause they resort to the torch and terrorism, sparing neither life nor property.

The American Eagle, backed by the American Flag, is determined to drive 'em out and keep 'em out!



Refusing to reform and become decent, law-abiding Americans, they have no rights under the American Constitution.

The old Eagle has his eye on 'em and he's going to sweep 'em out.

Every loyal American in every walk of life should help the sturdy beak and talons in the unrelenting fight.

Start to-day!

To-morrow may be too late!

# It Sticks to Your Shoes

By DANIEL TOWER

**The drawing on the opposite page is a reprint of capitalist anti-radical spleen by which we are graphically reminded of the sweet solicitude, on the part of America's owners, for preserving the free speech, press, and assemblage "guarantees" in the sacred Bill of Rights. For a while dormant, there is now a reawakening of the birds of prey, as is powerfully described in this article, the first of several to be contributed by Daniel Tower. Next month there will be another.**

**IS THERE freedom of thought in this country? There is. It gets into your hair and sticks to your shoes like fly-paper.**

**Out in Oregon there is a law which compels all aliens who conduct grocery stores and butcher shops, apartment houses, and amusement emporiums to hang out signs telling their nationality. The motive of those who passed that law, I understand from a man who lately hurried through Oregon, was that all hundred per cent patriots would boycott anybody whose sign showed he was an outlander, and that he would then be constrained to become a loyal American. And during the two years or more that it requires to obtain naturalization papers he and his family would be free to eat grass in summer and go south with the birds in winter.**

Wisconsin is another state notable for broad-minded lawmakers. It cherishes a legislative act providing for the condemnation and confiscation of history textbooks which reflect upon the founders of this republic and their motives in the struggle for independence.

### More Work for Bookleggers

Fisher's "True History of the American Revolution" is one textbook which could be brought into Wisconsin only on a dark night by a booklegger. For in relating how Samuel Adams and other rebels dealt with persons who were not in favor of the revolt against England, Fisher writes:

"Men were ridden and tossed on fence rails; were gagged and bound for days at a time; pelted with stones; fastened in rooms where there was a fire with the chimney stopped on top; advertised as public enemies, so that they would be cut off from all dealing with their neighbors. They had bullets shot into their bedrooms; money or valuable plate extorted to save them from violence. . . . Their houses and ships were burnt; they were compelled to pay the guards who watched them in their houses; and when carted about for the mob to stare at and abuse they were compelled to pay something at every town."

Porter's "History of Suffrage in the United States" is another work which is kept out of Wisconsin by law. Porter says: "Much personal property and even real estate were unceremoniously appropriated by the armed forces of the Revolution, at least under some slight color of legality, although often it was barefaced robbery."

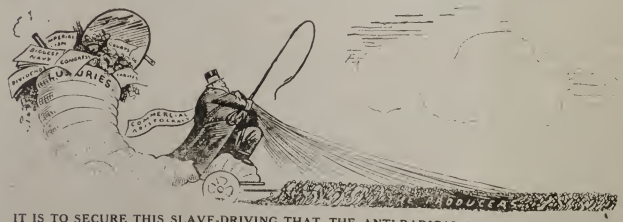
James Oneal's book "The Workers in American History" is a third volume which cannot enter the schools of the great cheese-bearing commonwealth north of Illinois. For Oneal, in recounting the development of the turning against England, says: "Nor did the 'patriots' rely on persuasion alone. The more effective arguments of tar and feathers, physical assault, the boycott and exile were employed against those who regarded the claims of the 'fathers' with suspicion or openly opposed them."

### Kansas Editors Get Excited

Kansas newspapers have started a campaign to keep school children from hearing anything derogatory to the state in which they reside. Geographies used in the schools have been attacked, on the ground that they contain information which conflicts with the slogan which Kansas has spent many thousands of dollars to spread: "Kansas Grows the Best Wheat in the World." The newspapers discovered statements in the school geographies to the effect that Rochester and Minneapolis were the great milling centers of the country, and that the finest wheat growing section was the Red River District in the north. Various editors have demanded that the state textbook commission change the present geographies for others which will speak well of Kansas as a wheat producer.

Mississippi is on the alert for any unexpurgated education which may endanger its young people. The Deer Greek *Pilot* declares editorially: "It is with a great deal of pleasure that we announce to the people of Mississippi that, at last, we have gotten out of our textbooks all matter that reflects on the South in any way and all objecionable matter in reference to the theory of evolution. We believe that we have for use in our agricultural highschools next year the only textbook on biology that does not mention the subject of evolution."

But perhaps the longest step forward in the field of law-making has been taken in the town of Kensott, Arkansas, where the city council, following an extended drought, enacted an ordinance prohibiting all persons within the municipal limits from singing, whistling, humming or otherwise uttering the song, "It Aint A Goin' To Rain No More."



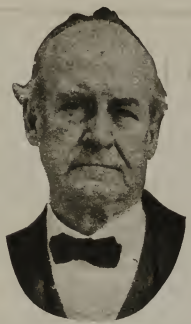
### Mr. Muzzey Believes Too Much

History purifiers have been busy in Washington State, where the Seattle chapter of the Sons of the American Revolution appointed a committee to examine the teaching of history in the public schools. This committee, headed by Harry Denton Moore, condemned Muzzey's history, and asked the school boards and textbook commissions to discontinue using it. The committee declared that Muzzey's book was "not a well balanced economic history. . . . He believes that our mining laws have robbed the people of a great heritage, not knowing that they made possible the development of our mineral resources."

"Pupils are interested in broad, powerful descriptions, vivid and colorful," the Seattle committee goes on. "They should be made acquainted with the facts which lead them to understand that liberty is a priceless jewel; that they should be proud of their country and its representative system of government.

"The field of historical criticism is no place for sixteen year old school children, and it is proper for them to accept the statement of facts made by the signers of the Declaration of Independence, who were living at the time and who pledged their lives and fortunes in its behalf, rather than to embark in a discussion of the justness and propriety of the acts of our forefathers in refusing to longer remain under the authority of the British crown. Muzzey says that the dispute involves a 'debatable question.' What is the object to be attained by impreaching the Declaration of Independence? What matters whether King George the III, or his ministers were mainly responsible for the war or not! What the pupil needs to know is this: The colonists believed themselves to be oppressed and so believing they stood ready to sacrifice all in the cause of freedom."

Concluding, the Seattle book-deodorizing squad states: "We want our children to become red-blooded American Patriots, ready to do and die for the land which gave them birth, to say with Decatur, 'My Country, may she ever be right, but right or wrong, My Country', and to preserve the principles for which our ancestors fought under the blazing sun of Bunker Hill, and left their bloody footprints in the snow at Valley Forge and Princeton."



IT IS TO SECURE THIS SLAVE-DRIVING THAT THE ANTI-RADICAL DRIVES ARE MADE

### Smoked Glasses for Iowa Kids

Officers of the American Legion In Iowa also have been concerned lest the works of Muzzey or other historians assailed by the Sons of the American Revolution get before the eyes of the school children in that state. These historians include Hart, West, McLaughlin, O'Hara, and Ward. One statement by Muzzey which irritated the Iowa Legionaires was this: "The next move of the administration (1812) was an attempt to bribe England and France to bid against each other for our trade."

McLaughlin and Van Tyne are unpopular with the Iowa Legion because in describing conditions at Valley Forge they wrote: "There his (Washington's) soldiers suffered from want, partly because Congress could not get money from the states and partly because unfit men in the Army supply department neglected their work."

West got himself disliked by the Legion because he said in his history that: "Many officers

HE LOVED FREE SPEECH SO WELL HE WOULD HAVE STRANGLED IT WITH HIS EMBRACES

(Revolutionary) were incompetent, self-seeking, and treacherous."

Everett Barnes, who wrote a "Short American History for the Grades" was in bad with the Sons of 1776 because he referred to John Hancock as a smuggler. But Barnes is in right again because he has rewritten his book and now asserts that Hancock was a "sterling patriot."

### New England Gets News Slowly

Under the United States Constitution, which went into effect on the first Wednesday in March, 1789, freedom of worship is guaranteed to the multitude. But as this is written the state of Massachusetts has not heard about the Constitution going into effect. News travels slowly in New England.

Anthony Bimba has just been tried in Brockton, the shoe-town wherein Sacco and Vanzetti were arrested in 1920. Bimba was prosecuted under a 229-year-old state law on a charge that he had denied the existence of a God. He was prevented from taking the stand in his own behalf by an old court decision barring an atheist from appearing as a witness. The fact that the defendant had not been proven an unbeliever did not worry the trial judge. Finally he was acquitted of blasphemy and convicted of sedition.

If Thomas R. Marshal had lived, this might be a religious country. I remember the thrill which I got from a news dispatch on October 11, 1921, telling of a speech at Montclair, N. J. by the eminent ex-vice-president. Mr. Marshall declared that every child in the United States should be compelled to attend church. He assailed those persons who interpreted the "freedom of worship" clause in the Constitution as meaning "that they did not have to worship God at all."

Religion is receiving judicial attention in Williamsport, Pa. One reads in an Associated Press account that: "Albert Hart, 41, has his choice of attending the Billy Sunday services every evening for two weeks or serving a jail sentence for assault and battery upon his wife. This sentence was imposed upon him by Alderman G. B. Allen." And in Greensburg, Pa., the crime-wave is flattened out in the same way: "Three youths, pleading guilty to entering a building with intent to commit a felony, were ordered by Dom, J., in the Criminal Court, to attend church and Sunday school regularly during the next two years."

Freedom for coal corporations in Alabama which get their digging done by convicts is assured by word from Birmingham that John George, 84-year-old Confederate veteran, has been put into the state-leased mine at Flat Top, to serve there a six-months' sentence for alleged moonshine operations. Flat Top is a gaseous mine, and John George will be free to breathe all the gas he likes during his stay.

Streets in Passaic, New Jersey, are now kept free form wine, women, and song. The councilmen there don't like music, and when mill striker's went about town singing about wanting more bread and butter the council passed an ordinance on the sixteenth of February prohibiting all persons from singing on the public thoroughfares. This includes "hymns and everything," the authorities have explained.

HOW WILL THIS MUTE TYPE, DENIED FREE SPEECH, REPLY IN THE HOUR OF REBELLION FOR THE SILENCE OF CENTURIES?

# CAPITAL

By HENRY GEORGE WEISS

I'm a poor and ignorant crittur,
  There's no denyin' that;
So will you please, good business men,
  Come tell me where I'm at?
This talk of economics
  Has got me all het up;
I know as much about it
  As the oneriest pup.
They say that Labor can't be used
  Without some Cap—i—tel:
But does that mean the Man or Means?
  Will some one up and tell.

Somehow it seems to me, you know,
  That Cap—i—tel is but
The things we use to produce with;
  —But then I'm such a mutt!
I sorta thot that railroads, mines,
  Looms, woolen mills, and such,
Along with hands, were Cap—i—tel
  That somehow got in "dutch."
The land, my friends, is Cap—i—tel,
  For it produces wheat,
Assisted by the kindly aid
  Of farmers' hands and feet.

The mines, it seems, are Cap—i—tel,
  For they produce the fuel,
Abetted by the laborin' man
  And also the mule.
The fact'ries too are in that class,
  Railroads and 'lectric lights,
And telephones and telegraphs—
  No wonder there is fights!
But what I'm aimin' at my friends,
  And wants to understand,
Is, if the owners went away,
  COULD WE NOT USE THE LAND?

Or if the bosses left the mine
  WOULD WE NOT HAVE THE MINE?
Or shook the railroads, phones and lights,
  WOULD THEY NOT STAY BEHIND?
It seems to me when all is said,
  That all the ginks could take
Would be the frosting, excess coin,
  While WE WOULD HAVE THE CAKE.
The carving then would merely need
  Someone to wield the knife;
Why hell! there'd be a bigger slice
  Of cake for kids and wife!

I'm asking then for god's sake why
  You cover when they say
That if you strike they'll up and take
  Their cap—i—tel away?
Their backs would have to sure be broad
  To lug off mills and trains;
And as for gold—why let that be!—
  The REAL gold still remains.
Sure Mike, we need the cap—i—tel
  For laborers and such,
But don't confuse with capitalists
  Who merely have a clutch

On Cap—i—tel, and in themselves
  Are parasites on it . . .
Why don't you have the guts to rise
  And order them to git?
I'm a poor and ignorant crittur,
  There's no denyin' that,
But I'll bet a nickel 'gainst a dime
  I've got the dope down pat;
And if with all my ignorance
  I ferret out such stuff,
Why don't you working stiffs help me
  To call their rotten bluff?

# SWAN SONG

By FRANK HAGAN

GAYLY flung as a white ribbon on a flower-printed frock of green winds the long valley road, bordered by pastures where dairy cows are grazing. It is springtime. Strong winds are blowing from the hills, big and pure and free. Nature is glorying in her best mood. This the scarlet tanager seems to know as he vies with the blue jay for honors in winged beauty. Bob white and his mate, followed by their newly-hatched covey cross the road in stately file to hide themselves under a hedgerow. Nest-building robins are calling, interrupted by a staccato drumming. The woodpecker is busy high on a pole close by. From waving meadows of tender green, daisies, violets and wild roses lift up their pretty faces and feel the wind's caress.

A little wood stands to the west, labyrinthal in leafy coolness, against the late sun's flaming glory. Seeming loath to quit this lovely scene he drops slowly behind the world's edge showering a farewell gift of gold. It sifts between boughs, blossoms and leaves enriching the earth where shadows have lengthened. This charming peace, with fragrances, murmurs and colors commingles to animate joy of life, or rather a more passive state like some mystic soothing that holds with time no account, but is destined to go on forever.

From such a spell Joe Bates roused himself with an effort, moved his head from the pack on which it had rested, and sat upright. He noticed the nearness of twilight. He must hurry on, so drinking again at the spring in the grove where he had tarried he siezed his pack and took the road. As he swung along soft breezes soughed through elms and beeches like an evening hymn. With action in his limbs day-dreams vanished. He merrily whistled improvised airs that startled the birds along the way, and a squirrel scampered off to eye the boy's figure suspiciously. Joe was happy with youth's unquestioning, undoubting happiness.

Youth! What a fine estate! Before it the vista of promising life. New joys on each horizon's rim; fresh treasures where every rainbow ends. Straight, strong bodies; minds innocent of care, cherishing a plethora of saving illusions. Frothy-sweet is life's cup at the brim, and here youth drinks. The cup is bitter only near its dregs. Age drinks this distillation of reminiscence and regret.

No marvel, then, that men nearing the dregs shrink. No wonder that they would cheat time and turn back the leaves in the book of existence. The fleshless finger beckons inexorably and our folk-lore is ever freighted with the anodyne witchery of magic pools wherein the aged may bathe to lose their burden of years and emerge virile, beautiful and young. De Leon's folly is writ on history's pages; Faust is immortal to literature because, broken by the weight of thought, ugly with the stigma of time he made his pact with Beelzebub, winning youth at the price of his soul.

Joe was eighteen, erect in posture, sanguine, full of a spirit to win to high places, to make his mark. His ears had been attuned to the words of our wise men, and his heart was light because he believed. It had opened to the inculcation of individual initiative as trustingly as the petals of a fresh jack rose for the dew's kiss. He was an American, thank God! A heritage in itself, to guard jealously, augmenting its treasures as did the good servant the lord's gift of talents. Anyone could multiply this gift in the sweet land of liberty.

Living on a farm all his life and feeling his father's house falling into poverty's decline the boy saw no inducement for his ambitious nature on the land. The farm was not paying. Each year matters grew worse. A mortgage on his father's broad acres was held by the bank in Hazlewood. Not that his father was either inefficient or lazy. No, he understood the business of farming and was tireless in his labors, but in the pit of the stock exchange gamblers were using him and thousands of his kind for pawns in grain futures. The "backbone of the middle class" was disintegrating, leaving their land by compulsion, to go cityward and join the factory hands.

Joe did not elect to remain with this failing yeomanry, sweating sixteen hours a day in the interests of bankers. If fail the farm must there was the city, an alluring chimera, whose siren call has ever gone to far fields, thrilling and irresistible to so many sturdy sons of the soil. To the city — symbol of opportunity — he was bound as we discovered him in the cool grove where he had paused to rest and to quench his thirst.

It was twenty-seven miles from his sire's mortgaged acres to the nearest city, a "metropolis" of a hundred thousand population. To Joe it seemed almost the largest place in the world on those two visits he had made in childhood. He was making the journey on foot because his father had opposed his departure and refused to advance train fare. Mothers are different. Stealthily she had pressed a few dollars into her boy's hands. But as he would need this sum getting started in Jonesboro he chose to walk to his Mecca.

Night had marshalled its velvety black forces under the trees by the time that Joe, climbing up the road to a high point, saw away below the myriad lights of this city of his dreams gleaming a welcome. The boy halted and drew a long breath. There lay the Promised Land right before his very eyes, tangible, pulsating, the hum of its life rising to him on the still air. It waited, fruitful, to present its benefactions to the "right-minded." And Joe was right-minded. He had just enough imagination and memory and faith to sustain him.

Had not the high priests and the low priests of American Success taught him, as they had taught millions of his penniless kind, that before the altar of their god one must appear with supreme confidence in the up-and-doing cult of making one's pile? Had they not urged assurances that earthly paradise must be the reward of him who practised good works? That meant first of all willingness to work hard, then determination to prosper, and finally an unfaltering faith in the happy issue of the elect.

The cult had its saints; a railsplitter and a canal boy had overcome environment and become presidents. Newsboys and bootblacks, waiters, clerks and gandy-dancers had risen to millionairedom. Let the lazy scoff, theirs was only loser's cries, the despair of unworthiness. "At the top there is always room!"

Ardently believing, his being suffused with hope, the boy descended from the clean hills, coming presently to a place where the road merged into a blackened highway, flanked by factories, the stacks on several of them still belching smoke and sparks. He crossed some railroad tracks where a switching engine was energetically at work. Then he pushed on toward the labor market of the city. That night he slept the sleep of the just, the tired and the lamblike in a cheap lodging-house bed neither so soft nor so clean as his own cot at home close to the eaves where doves nested.

Accustomed to rising early, Joe was up at five. "The early bird catches the worm," he thought as he dressed himself.

A few minutes later he was on the street. Very few workers were stirring. The hum of the city had not yet begun. On the cobblestones a milk wagon rumbled and the beats of the horse's hoofs rang out distinctly. The early sky was like lead and a light, chilling rain was falling. Had Joe known about employment agencies he might have waited a few hours and presented himself for sale on the labor mart. But being ignorant of the ministrations of job sharks he was aware of only one approach to the precious job. Straight to the factories he was going.

But he was very hungry. Into an ill-smelling restaurant he stepped, where he was served with some pancakes the like of which he had never known. They were burned outside and raw beneath. "Quick Lunch" was right! Washing the cakes down with strongly chicoried coffee he paid his bill, and felt equipped for his quest.

Trudging the rain-splashed streets, black with long-accumulated filth, he went across the city, over a bridge high above the railroad yards, and past some warehouses and factories whose doors were still closed. He had been traveling to the manufacturing district almost instinctively with no sense of discrimination between the motley industries. Then suddenly he remembered Harry Grover. Harry had gone to school with him, and he had lived on an adjoining farm. The lad had gone to Jonesboro two years before and found work in a rubber factory.

This seemed as good a clue as any. He might meet his friend. Joe did not stop to consider that there might be several plants manufacturing rubber goods in this city. He made inquiries. A sleepy-eyed night watchman, just ending his long vigil, informed him that there was a rubber factory about two miles away, straight ahead.

Hurrying on, Joe came to a low-lying marshland that stood between the main body of factories and a few scattered outfits farther on. Signs were stuck in this wasteland advertising real estate values for manufacturing sites. Beyond the

waste the land rose slightly, and as he drew nearer the boy saw a plant of several buildings the largest of which carried an inscription along its entire length: Consolidated Rubber Company.

There it was! He almost broke into a trot so eager was he to reach it. By this time workers were going toward this plant and others around it. Applicants for work at the Consolidated were lined up along a wall on a side street where the employment gate stood closed. For the most part they waited mutely, indisposed by the inclement morning and the spirit of competition from addressing one another. Those nearest the gate felt an advantage, while the others strung out in the line were envious.

Joe took his place at the line's end. Although it was not yet seven he was about Number 79 in the row. A few minutes passed and the watchman opened the gate. Immediately those nearest it began to push forward.

"Cut out that pushin'," yelled the watchman. Yuh can't git in till the boss comes."

Someone timidly asked when the hiring would begin.

" 'Bout seven the boss'll be comin' along," replied the keeper at the gate.

He had but one arm and one side of his face showed scars from a terrible burning. Indeed, the optic on that hapless side was missing. Yet he stood there like the proprietor of a landed estate in the presence of his serfs, and his remaining eye glared at the applicants.

Meanwhile, at the "Employee's Entrance" around the corner workers were swarming into the plant, and the time-clocks were being punched rapidly. Then the whistle blew.

Joe looked at the young man beside him and ventured:

"Wonder if they'll hire many?"

The one so addressed didn't know. Said that for several days he had been coming to this place looking for a job.

"Got a bum place in line this morning. It starts to form right after five."

Here was an "eye-opener" for the country youth. Urban dwelling humans were thought to be still slumbering at such an early hour.

"You ought to get on," Joe encouraged. "You've stuck to it."

"Maybe..... Anyway it's tough to be 'way down at this end today. Looks like they're going to do some hiring....."

"Don't they hire every day?" Joe wanted to know.

The other seeker thought this an odd question.

"Hell, no! Why until yesterday they've been hanging out a sign at six-thirty that no help'll be put on. There's no sign out now and it's after seven, so I figure they'll hire some."

A movement of the line, something tense in the air, halted their conversation. The foreman had appeared to decide their fate.

Contrary to general expectation he did not choose those nearest the gate. Instead he paced the length of the line slowly and then made selections. The chosen ones were told to go inside the gate. Outwardly his choice did not seem to involve much critical inspection, but he did bring his discernment into play, and the company regarded him as an expert in hiring the "right" kind of men. His eyes fell swiftly on Joe. The inventory was almost instantaneously concluded. The boy's lucky star was with him.

"Go inside the gate and wait for me."

Now, Joe did not know that he was chosen because he looked quite strong, which in truth he certainly was. Neither did he understand that his youth stood in his favor. Subsequently he was to learn about this particular factor.

At the moment he went briskly inside the gate, like one of the saved entering the portals of paradise. Faith in success surged warmly through his veins. He was starting where all the national saints of America had started..... ..... at the bottom. He would rise. He would work hard and keep the rules. Promotion would come. Had there been a strong sex urge in the lad he would probably have drifted in blissful wanderings of the mind to the happy land of soon-secured opulence and an early marriage with the boss's beautiful daughter. Tales of this pattern constitute no insignificant portion of the saccharine pabulum given to young Americans, and he errs who thinks that the stories are designed exclusively for bucolic consumption. In large cities and small cities public library shelves are lined with much-thumbed tomes of the Alger variety on whose sustenance lean sons of the tenements prepare themselves for leaner manhood, going it alone, bound to win their way on individual grit.

Joe was given an application blank by the foreman.

"Fill that out tonight and hand it in at the office in the morning," instructed the foreman.

"Yes, sir."

Then through the factory precincts to a department called the gas press room. Joe could have felt no prouder with a D.S.C. than he did at that moment with the application sheet. This questionnaire of his personal history and his opinions seemed like a commission to him. Everything was beginning so well.

Of all the processes contributing to the production of rubber articles in the Consolidated there was none so strenuous, so wearying as the work done in the gas press room. Be it further noted that there were no "snaps" in any of the departments of this neo-Taylorized industrial rapids. Everything was done at high speed and the flood of commodities

rushed swiftly on. "Speed" was the company's slogan. Speed was constantly preached to the workers. Only those conforming to its utmost requirements remained long on the payroll. Speed was exalted as a virtue; it was exacted as a business necessity. The workers were solemnly advised that their prosperity depended on speed. The department managers outdid one another in bringing "efficiency" to the nth degree. The foreman scratched out their hair trying to think up new ways to increase production. Of course the word "efficiency" was always used, but in ninety-nine cases out of a hundred when bosses talk about industrial efficiency they are thinking in terms of rushing their employees a bit faster. This pervading motive was felt throughout, and the general superintendent of the Consolidated even dreamed about speed.

Thus Joe Bates fell into this maelstrom of the speed obsession where it whirled fastest. The gas press room was fairly dizzy with speed. It was one continual round of rapid motion, with only a single break during the day. At noon a period of fifteen minutes was set apart for lunch. The plant operated on a ten-hour basis.

There were no lost motions in the gas press room. The work was so arranged that every effort counted, and to waste any movement was equivalent to getting behind in one's work, with no opportunity of again catching up.

Joe's first impression of the room in which he was fated to spend so many long hours, was that it was uncomfortably hot. Along one side were ranged a number of presses, near the windows. These presses were operated by a hydraulic system controlled by turning valves.

The first day was comparatively easy. Joe was given a box on which to sit before another larger box containing cigarette holders that had not yet been through the vulcanizing process of the presses. They were rather rough and in their heated state adhered to each other. Joe separated them into individual pieces.

"This is only for today," the foreman told him. "Tomorrow you'll go on a press, so keep your eyes open on how it's done."

"Yes, sir," he replied promptly.

Thereafter he quite mechanically broke the soft stems apart, his eyes on the nearest pressman. This worker was about twenty-five years old, very active, working, in common with all the pressmen, with the precision of a good machine, speedy, rhythmic, true.

That night Joe filled out the application sheet in the lodging house, and being a novice in the industrial scheme he had no difficulty in giving accurate answers. He did not feel, as so many workers feel, resentment at the probing character of the sheet. It even wanted to know his mother's maiden name! Joe had worked only on a farm and had never belonged to a union. He very truthfully answered the question regarding his opinion of unions that he did not believe in them. Also that he belived it his duty to report any other worker he should see acting at work in any manner injurious to the company's interest. And he meant that, too.

The next morning he handed the application to a clerk in the office, and proceeded to his work place. Here he was stationed beside a pressman and directed to assist him. As soon as Joe had mastered the operations well enough to handle the job he would be given a press.

The first operation was to smear long, wire pins with grease. Then these were run through the length of the rubber stems. The pins were quite hot so that the grease melted on them without the loss of time. Then the stems were placed in metal molds, twelve stems in each separate mold and twelve of these molds. The covers of these molds were almost exactly like the parts into which the rubber was placed. A mold ready for the press weighed forty pounds, and forty **hot** pounds. It was necessary to handle these molds with pads, but with all the care that Joe took to protect his untrained hands they were cruelly burned.

Every fifteen minutes a bell rang and that was a signal to reverse the valves. This opened the gas press. Then he would quickly remove the twelve hot molds, placing them on the metal table where he worked. As soon as the press was cleared he would throw in the other twelve molds ready for the process. A twist of the valves and the press was closed, automatically increasing the heat.

Then he was obliged to open the molds and remove the finished stems, pulling out the greased pins. This procedure was repeated over and over again, forty times a day. The temperature in the room was 120, everything he touched was hot, pins, molds, and the rubber after vulcanizing. The table on which these articles were prepared was heated by gas burning underneath.

For the first few days Joe's job seemed impossible to master. He was driven to the use of every ounce of reserve energy to stand the grind. In one ten-hour shift he was compelled to feed that press and to disgorge it of 38,400 pounds of hot metal! Over 19 tons, not to speak of the other operations, all of which were performed like "chain lightning," as one of the men put it.

At night this strong farm lad, used to hard work and willing to "hit the ball," was exhausted. He could scarcely drag his feet. His muscles ached, and he had hardly sufficient energy to eat. On the second day his wrists had begun to swell, and these he had bound. Normally interested in looking about at new scenes he now fought his way, uncaring, into the packed street cars each evening and soon enough, although it seemed an eternity, he would be prostrate on his cot, so tired that sleep came only after hours of anguished wakefulness.

After a few weeks he grew hardened to the

exactions of the treadmill. The man who had chosen him from the line as likely timber had not made a mistake. Joe was good material; he was gritty. He stuck to it. He meant to succeed. Already he had received two letters from home asking him to come back to help with the many tasks that were crowding his parents. But he had cast the die. He intended to make good where he was.

In July his stamina was pushed to the limit. The heat in the press room was terriffic. The place was an inferno at 135 degrees, but the management would not grant a lay-off. The men were forced to keep on with the usual amount of production. By this time Joe's work was considered up to the standard required, and he was paid fifty-two cents an hour.

The hot spell passed at last. September brought relief, and autumn soon enough chilled into winter. And the speeding of the gas press room went on and on. One day was like the next, working to a state of near-exhaustion, pushing almost madly to climb aboard crowded street cars. Packed into their foul-smelling confines or hanging on at the platforms and steps. Sardines are arranged into cans in order; human beings in nearly all American cities during the rush hours are jammed in the transportation "systems" without even a pretense of order, and without the creature comfort accorded the lower animals in cattle cars.

Two years of this and Joe was eager for a change. He did not intend to leave his job. No he was still hopeful; he still had a chance to win to better station. But he did want something more than the humdrum, wearying routine, and he fell a victim to marriage.

Another year went by and he was a father. The little family lived in a very small cottage on the outskirts of Jonesboro. Life had its gentler hours now for the tired factory slave. But try as he might he could not "get ahead." There was always a lurking fear of a shut-down, or a slackening of the work and the economic hardships this would bring. But the factory ran steadily enough.

Then it came like a flash from clear skies: a notice was posted to the effect that a ten per cent wage reduction was to become general in all departments the following week. There was some talk of unfairness, and some of resistance. Those so convicted, or even suspected, were promptly discharged.

Joe's wife heard the bad news with her heart beating fast. She, too, had bad news. She was pregnant again.

The pay for the following week had ten per cent sliced from it as announced. There was an additional fault in Joe's, a small shortage. He told his foreman and was directed to the office to have it rectified. In the office he stood outside a plate glass partition at the pleasure of the paymaster. This personage then called him inside. While stating his case Joe glanced through the open window at the paymaster's side.

Here was a part of the factory ground he had never seen before. It was a lovely spot. The company had gone other firms one better in providing pretty views faced by office windows. Consolidated Rubber had a lawn which sloped gently to a tiny lake. In the center of this was a little flower-grown island, and on the clear surface of the water swans were gracefully enjoying themselves. In the background rose a high wall entirely covered with ivy.

While the paymaster was figuring, Joe's thoughts went back to the years of his childhood and adolescence. He saw the fleet of white ducks on the pond at home and the sweet memory of the peaceful scene was like an unguent on the raw wound of life. The check matter adjusted, he looked again at the beautiful swans, so white and so cool on this hot June day, and then he went back to the press room.

From that time on he often thought of these swans. In the press room, the stinging sweat over his tortured body, fairly oozing from his course shoes, with the heat around 130, he would seize on the thought of the great, stately white swans so cool and so contented in their silvery lake.

On crowded street cars his mind went back to the swans. At night he began to dream of endless reaches of placid waters mirroring walls of green ivy, and swans everywhere.

Then for the first time he broke a rule of the company and went to that part of the property where he could watch the immaculate birds. He was seen and ordered back to his work and reprimanded, having missed his first "heat," as the fifteen-minute periods were called.

After the wage cut and the news of his wife's second pregnancy ambition seemed to quit his spirit, leaving him a disillusioned factory hand, just one of the millions of industrial slaves that serve the factory system without hope in their hearts, sodden, dispirited, resigned to the compulsion of their places as cogs in the scheme of things.

Day after day the monotony of his driven existence went on, and when he was hottest, weariest, he thought of the swans almost with the fierce yearning of one lost in a desert without water.

The image of that lake and its happy swans became an obsession with Joe. Overwork, marital worries, the devastation of hope's city in his heart were working curious changes in his mind. He began to be late in returning home from the plant. A habit was growing on him which he could not curb no matter how his wife scolded when he was late. Joe was sneaking on the forbidden ground after the shift was over to watch the swans.

July came and just before it sweltered into August the mercury in the gas press room marked 138. One of the men collapsed.

"He's been here too long," the foreman confided to Joe. "They are good for about eight years if they don't start too old. We never hire any over thirty."

And this was Joe's fate. A few more years and he would be too broken to keep up the pace..... He heard the bell, turned the valves, lifted out a dozen hot molds, forty pounds to each; swung up a like number and closed the press. Over and over again, more than 19 tons of hot metal handled by him every day.

The last "heat" came. The blast of the whistle ended his worst day. He punched the clock. Then across the yard to the swans. Over the lake shading maples watched their quiet images in the mirror below. Not a leaf stirred. But the swans were cool. Joe watched them.

Why was he doomed to endless labor in that stifling press room? Because he was a man. He had previously looked on the gliding birds with fondness. But now his head was hurting him. He wanted to plunge into the water, but he checked himself. Then he stood like a statute and reflected. He felt hopeless. He began to hate the swans. The emotion mounted. He began cursing at them, but they paid no heed. He looked about him on the grass for a stone. Back to the yard he ran to find some, and then, with his pockets filled and a missile in each hand he rushed back to the lakeside, hurling the stones as he ran, hurling them at the dignified swans. They glided in fright behind the little island.

Then began a race to hit them. Around and around the lake he ran, and around and around the island the birds swam.

In the office the superintendent was preparing to leave. He came near the windows on the side where the swans had their idyllic home.

"My God! What's up?" he shouted, rushing around to the door to stop this mischief.

"I'm going to kill 'em! I'm going to kill 'em," Joe was screaming, as he dashed around to get better aim at the swans.

The superintendent couldn't catch him. He called for help.

Three foremen, late with their reports, came running up. Together they managed to corner the culprit.

"Why it's Joe who works in the gas press room!" one exclaimed.

Joe was writhing to free himself.

"Are you crazy?" sternly demanded the superintendent. "What do you mean by throwing at those swans?"

"Swans, swans!" he yelled with fresh struggles to get away. "I hate those swans in their nice, cool lake. Hate 'em. Hate 'em!"

His captors realized his condition. They gripped him more firmly.

"Quiet, Joe, go easy," soothed the superintendent. "Get a hold on yourself and act like a man."

"A man!" screamed Joe, his face red and streaming sweat from his great exertions. "What the hell's the good of being a man? Huh?"

Then, resistance going out of his body, he sobbed, "I don't want to be a man. . . . Too hard, too hot. . . . I want to be a swan!"

They led him away sympathetically, and all the way to the psychopathic ward he kept muttering:

"Beautiful swans, so beautiful..... so cool, so cool..... I want to be a swan. Do you hear me? I said I want to be a swan."

**Recently the business manager has announced that the cost of publishing and mailing this magazine is 16 cents. With bundle orders selling at 12 cents a copy it can readily be seen that the loss is great. With increased circulation the cost per copy for production can be reduced, and in no other way. But while we are striving to build up the circulation the magazine must be made attractive and informative, and this costs money.**

**The will of our membership, expressed in the last General Convention, was that no paid advertising be taken by this magazine, and as nearly all periodicals depend very largely, and often almost entirely, on soliciting such advertising matter, we are at a disadvantage in this respect. The theory among us is that advertisers influence or control publication policies. However, we are not going to discuss the validity of this reasoning. It is sufficient to say that as we can not look elsewhere for the financial support required for the life and effectiveness of this magazine, we must depend squarely on our readers. And that is where we want to get support at all times.**

**No matter how much we dislike the fact it is none the less true that our magazine does not reach a larger number because most of the workers are still moron-minded, and we must build up steadily among those with intelligence to value our publications. You, who support this magazine are showing the way, breaking the trail, in truth, pioneering.**

**We urge that in your branch meetings that you consider the advisability of raising the price of bundle orders to 17 cents and singles to 25 cents a copy. Other labor magazines, that none of us think are anywhere nearly as good as the Pioneer charge 25 cents a copy. Take this matter up without delay and when you have reached your decisions write to the business manager. Let us meet our problems in a reasonable manner, and make provision for the self-sustenance of The Industrial Pioneer.**

**JAMES SULLIVAN**

# Jawbone Business

By HUBERT LANGEROCK

WE WERE on a railroad construction job on the desert. Torn tents, flies, fleas and all the rest of the insect population of an insanitary camp; long hours, alkali dust and poor water. Bathing and washing facilities were absent. On Sundays the men were too tired even to think of washing clothes and it was not long before the stock of entomological specimens in and around the camp increased in geometric ratio. Which is only a polite way of stating that the crew got lousy. Then providence appeared in the shape of a Chinese laundryman, a pioneer in his humble way. Out of some rocks and a few discarded pieces of corrugated iron, he rigged up what, for the location, was a fairly decent laundry establishment. But there was no money in camp and when the crew remained away from his place of business, he went after the trade in person.

"No money, John," came the doleful plea.

"Me savvee jawbone."

Now jawbone is western slang for credit and, on that basis, the celestial business man delivered his bundles and deferred his bills till payday. He had some system, though. He produced a little book and asked his customers to put down, themselves, their name with the amount of their indebtedness.

One practical joker wrote down: Theodore Roosevelt. Others took the hint and, pretty soon Lincoln and Jefferson and Washington and many more historical names were on the Chinaman's ledger.

When the paymaster made camp for the first time, the laundryman was there and produced his book.

"Very distinguished customers, indeed," stated the paymaster, "but how do you expect to collect?"

The Asiatic failed to understand but, with the stoicism of his race, announced:

"No mo' savvee jawbone."

Thus the camp once more became an ideal place for an expert entomologist to carry on his studies in insect lore. It was alive, it fairly moved; men refused to stay, they came and went in a steady stream. Jawbone had ruined the camp.

### Symbolical of Country's Plight

In the course of the last year, I have often thought of this true story. To me it has become almost symbolical of the plight which this country will be facing pretty soon with its huge increase of installment buying and selling.

Last year installment sales amounted to a gross total of five billion dollars, one-twelfth of the national income.

Is this credit business making ready for the working class a terrible day of reckoning? Is jawbone liable to ruin this country as it ruined our camp in the desert?

For the workers, credit buying has, in the past, assumed a character which it would be silly to overlook or forget. In the East, there were credit men selling, especially to immigrants, those "phony" luxuries which, to the newcomers, meant America. The inner truth of the whole matter was that they did not intend to sell at all. No honest attempts were ever made to collect installments, when due. The merchants stood in with the justice courts and, after a few payments, they got back their goods on a writ of replevin and tried the trick on another greenhorn.

### As Viewed By British Employers

Those were small swindlers but there also were and still are more respectable fakers. In the sale of houses on the installment plan, in the sale of industrial insurance, the bulk of the profits do not come through a completed sale but through what are called lapses which means the inability of the buyer to live up to his contract with the resulting loss of all his previous payments.

Some real estate men have sold a cottage ten times and they still have it in their possession. The friendly judge always forecloses the deal as soon as illness or unemployment or any other of the economic upheavals of a speculative age cut off the worker's income and the more the buyers lost their payments the louder the kept press kept on shrieking: "Own your home. it is just as easy to buy a home as to pay rent."

And, in spite of these lessons, during the last two or three years. installment buying assumed such a huge volume as to become a characteristic feature of American life.

A commission of the Federation of British Industries recently visited the U. S. and, in its report, it pointed out how the post-war depression had been largely overcome, on this side of the Atlantic, by trusting the people, extending liberal credit and financing installment purchases.

In the February Atlantic Monthly, Mr. Pond, whose splendid studies on the evils of standardization form such a vivid contribution to the study of the machine process, that many industrial unionists will readily remember his name and work,

warns us on sound economic grounds, of the undeniable dangers of such a course.

Installment buying has taken recently such huge proportions that it has made necessary the creation of an entirely new economic mechanism to handle this particular situation.

Open any magazine of bourgeois or middle class appeal and hundreds of opportunities to buy nearly everything under the sun, on credit, with little or nothing down, stare you in the face. The buyer promises to pay so much a month and, quite frequently, signs promissory notes to that effect. The seller cannot afford to wait until the notes become due to get his money. His profits are depending upon the number of times that he turns over his working capital. So, he offers the notes to a bank, but banks refuse to deal in long time paper. Ninety days is generally their limit.

Therefore a new middleman or intermediate concern springs up, the discounting or financial company. It buys the seller's paper and re-discounts it at the bank. For every four dollars which it borrows from the bank it uses generally one dollar of its own.

So numerous have those new concerns become in the last two or three years that they have founded a national association with a present membership of six hundred companies and many eligible corporations not joining.

Their earnings may be surmised from the 1925 figures for automobiles sold on installment credit. A total of $1,020,000,000 of cars was sold and the volume of credit extended on those sales was $1,280,000,000. The difference between the two figures represents the profit of the discounting concerns for the single item of motor cars. The rate of discount of those financing concerns is usually from 2 to 3 p. c. above the going bank rate.

So large have the profits of those new middlemen become that the usual thing has happened. The larger concerns are getting ready to kill the smaller profiteers in order to grab their winnings themselves. Negotiations are being carried on right now as a result of which, automobile manufacturing corporations will become more of a financial institution and discount their own installment notes instead of selling them to a financing company.

How and to what extent does this new economic condition affect the workers?

The success of installment buying is largely due to the false social philosophy which the A. F. of L. has inculcated into the American workers.

### Aping The Middle Class Is Wrong

The crime of the A. F. of L. is not so much its structural inefficiency nor the inner circle of professionals who use the organization to sell out the American workers like cattle in the market of the false social philosophy which it is presenting to the workers of this country, as a social ideal, the desirability of becoming a pale and flabby imitation of the middle class instead of a new and definite social type proudly rising on its own merits and with its own characteristics.

The motto of the middle class is: "We are what we appear to be." So the A. F. of L. craftsman, like the middle class neighbor whom he is aping, feels uncomfortable when the man next door begins to sport something bought on credit and, not to be outdone, he buys the same thing by the same method. Many a working girl, instead of joining a real union to improve her working conditions, tries to achieve a measure of individual success by the ownership of a suitable wardrobe that she can only afford, if at all, on the deferred payment plan.

Any time the worker who is ignorant of the teachings of class-consciousness discounts his future earnings and obligates himself to pay for questionable luxuries, he paralyzes his economic action as a worker and delivers himself into self-imposed peonage. As soon as he goes into debt, gone is also his militancy and his peace of mind and, even, the efficiency as a producer upon which he relies to hold his job.

It is a high price to pay for the questionable privilege of being taken by a few simpletons for a hundred per cent denizen of Main Street.

Elementary economics will teach one the difference between the acquisition of an improved tool on the hire-purchase plan and the buying of luxuries. The improved tool can be paid for out of its own earnings. But the largest volume of installment buying is done in goods which show a high depreciation in a short time and offer no returns whatever to their buyers.

That the resulting situation offers grave dangers for the economic and financial condition of the nation at large is admitted by the leading bankers themselves. They called a special meeting in Chicago last December and adopted certain rules to regulate the installment business, but the competition between credit concerns caused those rules to be disregarded.

The situation is becoming positively dangerous. There are many applications for delays in meeting installments and more broken agreements in which partly paid articles are replevined by the sellers. The National Retail owners and the National Hardware Association have recently become vocal to the extent of asserting that the middle class and the craftsmen who ape it are cutting down on essentials in order to be able to pay for luxuries.

The national officers of the Typographical Union admit the existence of such a condition, as far as their membership is concerned.

### Methods Productive of Panics

There exists only one logical conclusion to such a situation and it is called a panic. The deep-seated cause of a panic is the compulsory under-consumption of the workers whose wage cannot buy back the commodities which they produce, but the immediate cause of a panic is generally the over-expansion of credit created in a frantic effort

to dispose of the mass of commodities which the workers have created but cannot buy back with their wages.

Installment buying may look rather inoffensive when money is easy, but what of it when money becomes tight?

With the huge amount of outstanding debts created by installment buying, a panic would strike the middle class and the craftsmen harder than ever before.

In the past, the proletarian who was able to survive physically the sufferings of a crisis found himself, as soon as conditions began to improve, with the full and untrammeled enjoyment of all what he was able to earn in the shape of wages. Not so the middle class and the craftsmen. They had a local standing, perhaps a partly paid for home, they could get credit and it took them nearly half way in the direction of the next panic before they were able to get clear of the indebtedness contracted to outlive the previous one. That was one of the causes why, in the past, middle-class people, real and imitation, hated the hobo so cordially. If a panic strikes in the near future, craftsmen and middle class will have to settle for that average five billion of credit goods besides their subsistance debts before they will be square with the world.

If the recurring economic cycle leads to a panic in the near future, we shall once more witness the growth of a bourgeois reform party. The basis of petty bourgeois reformism is always debt. The reformer is but a would-be capitalist who wants to use political action to get rid of some of his debts. The free silver craze of 1896 was not based upon an even rudimentary undertanding of the theory of bimetallism. Free silver to most of its votaries meant a legal trick to get rid of most of the indebtedness contracted during the panic of 1893.

It needs no demonstration to prove that such a huge mass of credit, as that which is now outstanding, could not be established without a considerable relaxation of the usual credit requirements. A salesman endowed with a modicum of common sense realizes that he need not lie awake at night figuring out how to break what he calls sales resistance. It is much easier and just as safe to take a long chance. In fact, he takes a good many long chances. I am satisfied that the facility of getting goods on credit has created a small army of deliberate swindlers. Easy installment buying has been a contributing factor in the spreading increase in criminality.

Before the installment boom, bad payers, known as "skips," were estimated at 7 per cent of the total of time buyers. In three years their number has almost doubled. It reaches now nearly 14 per cent of the total of sales. Dodging the installment collector is becoming a new sport and the skips have provided the vaudeville actors with a new source of jokes.

### Clever Youth Slips Something Over

Recently, in a large city on the Pacific Coast, a clever young man got wise to the fact that the investigators for the credit houses had adopted the rule to approve all applications for credit entered by people who owned their furniture. So he bought thirteen dollars and fifteen cent's worth of second hand furniture and made application for credit to an even dozen of clothing houses. Each one provided him with a suit of clothes and an overcoat upon the statement of his landlord that he was renting an unfurnished apartment. Then he skipped but he did not leave town. He appeared before the secretary of the Retail Clothing Men's Association, introduced himself as the only genuine 100 per cent skiptracer and was employed at once. The first batch of skips that was handed to him for investigation consisted largely of his own aliases. He was paid five dollars a day to look for himself and fired for inefficiency when he failed to locate himself inside of thirty days.

Skips on automobile sales can not fail to be numerous since the machine itself provides an excellent vehicle to dodge the collector.

The conscious industrial proletarian is no reformer, he is a revolutionist. When class consciousness keeps him from the prevailing craze of installment buying, it saves him dollars and cents and, in another wider sense, endows him with a larger probability of survival generated by the rational husbanding of his energy.

From a social point of outlook, the commodities generally bartered in credit selling fail to appeal to the industrial proletarian as strongly as they do to the middle class and its imitators within the ranks of labor.

### A Word on the Artistic

The craze for flying over the country with such a speed that one has no chance to take a decent look at the landscape, the more or less artistic reproduction of music by mechanical means, the canned jazz of the radio and phonograph fail to captivate the mind of the proletarian to any great extent.

Such devices transform him too much into a passive spectator. The function of art is relaxation from the strain of the productive process in his case and, as he emerges into a definite social type through the teachings and practice of revolutionary industrial unionism, he shall establish his own formulas of art and beauty.

Art to him will become social, it will rest him by providing an outlet for those of his faculties which the machine process leaves dormant. Social art will provide a wholesome emotion in which the proletarian will become an active participant.

The class-conscious proletarian will be of a finer and higher moral type than the would-be bourgeois who likes to show his contempt for a mere pedestrian by deliberately knocking him down with a partly paid for automobile.

# The Lesson of West Virginia

By GEORGE PUTNAM

Photographs taken in Powell Creek Tent Colony, near Little Coal River in Boone County and Printed here by courtesy of the Federated Press

NOWHERE TO GO

This Little Girl's Father Struck Four Years. Strike Lost. No Food or Money Left. She is Wearing Cast-off Boy's Clothes Sent by Sympathizers

THERE is no country in which industrial development has been so swift and so spectacular as in this sweet land of liberty with reservations. For these reasons the United States offers among its many widely advertised opportunities a really matchless chance for studying class warfare concomitant with unique capitalist expansion. If you were to take an outline map of this country and mark with rings of red the locations of its fiercest industrial battles the blood-mottled relief would be startling.

Over West Virginia's coal fields you could throw a large stain to stand for a regime of company terrorism seldom equaled in the vicious annals of bourgeois bloodshed and abrogation of human rights. Industrial feudalism is not new to coal districts, but is a yoke that uniformly oppresses the miners wherever they have failed to make a united stand in their own interests, or where their fight has met with failure.

In 1921 the whole country was amazed by accounts of thousands of miners mobilizing in Marmot, Kanawha County, West Virginia for the aid of their union fellow workers desperately battling in Mingo County, 65 miles distant, against the operators' reign of terror. On the mountain roads these marching miners were opposed by an army of company gunmen, who used bombs, gas and machine guns. The union men put up a good fight, capturing both machine guns and finks in many skirmishes. Their act was an outstanding exhibition of solidarity with rare courage and military strategy to recommend it.

But even at that the miners said that one fact more than any other explained their inability to win against the bosses. The union railroaders kept hauling scab coal. Solidarity of labor has often been shown by the miners, though its natural gestures have been bound because of the Lewis machine, but solidarity of labor to the sixteen separated railroad unions is meaningless. They do not give each solidarity and they have been quite consistently at the service of their masters, no matter what the effect on miners or other groups of workers.

Last month we witnessed another disastrous retreat by the miners of West Virginia, when the U. M. W. of A. international office called off a four-year and two-year strike involving 15,000 workers and their dependents. They had been receiving a semi-monthly relief of $1.50 a person. Now they have been advised to secure what jobs they can.

The strikers have been living in tents and such ramshackle quarters as are shown in the photographs accompanying this account. The scene of the conflict is along the Little and Big Coal rivers, on the Paint and Cabin creeks, and on other tributaries of the Kanawha. The operators evicted the workers from company property long ago, and hardships beggaring description have been endured.

Although it is a fact not obscure even to fakers like John Lewis that aggressiveness is essential to working class victory, and that folded arms would not avail against the guns of company murderers who systematically launched bloody expeditions on the miners' homes and persons, the tactics formerly used in West Virginia were stopped. This weakened the miners. It prevented adequate defense and offense by which to smash the teeth of company thuggery. Kill the militant spirit of a union and its power to achieve working class good is killed. The Lewis act in this matter placed the miners at the mercy of coal company gunmen who were responsible only to law administered by the judicial hirelings of the coal operators.

With regard to the railroad workers: again they failed to come to the miners' assistance continuing throughout to haul the coal mined by scabs. And until there is effected a solidarity between these bodies of workers, miners and railroaders, whose strategic advantage is so great, the operators will have comparatively clear sailing. The lesson of England, where fear of united action by transportation workers to assist the miners caused the powerful British government to subsidize the miners, insuring the the wage level demanded, should be learned in America.

Dragging out the strike over such long periods, while giving evidence of determination, results disastrously because times of strike are times of great sacrifice and intense suffering for the workers. To subject them to such drains on energy and spirit is unwise as a method of class struggle. The employers can endure protracted conflicts much better as their lives, if not their profits, are secure. Short, powerful strikes recruiting the maximum of solidarity are more effective. Even threatened solidarity often secures demands.

West Virginia conditions steadily worsen. The workers have suffered severely, but their spirit of revolt is not dead. In time it will again blazon oppression's night that marshals under the dark wings of corporate greed, such as United States Steel.

White and Black Workers Stood Together For Their Common Cause

# Editorials

**ANTHRACITE STRIKE FAILURE.** — Examination of the provisions in the agreement accepted by the Lewis machine to end the strike of hard coal miners in Pennsylvania reveals sweeping defeat, the more galling in that it calls upon the miners after the long struggle from September until February dumbly to acquiesce in their own betrayal for a period of five years. That, practically, is what the covenant requires. The whole scheme of treachery suited the operators, and after the usual barrage of newspaper lies and villification, including the works of allied agencies of capitalist misinformation directed to the strikers' undoing, a priest blessed the settlement with encomiums for Lewis at the hand-picked Scranton convention in which the agreement was railroaded upon the workers.

At the outset, to many at any rate, prospects for victory by 158,000 workers in this basic industry seemed very bright. On the miners' side was an inspiring solidarity. The operators made no attempt to run the collieries. Yet defeat was the miners' fate. When unorganized or only partially organized workers lose strikes it is easy to understand their failure. And it is not difficult to grasp the reasons for loss of strikes involving workers untrained to protest and without union resources.

But in the anthracite strike we found an organized body of men possessed of great numerical strength, with a wealth of actual experience in contests against their employers, and backed by a large union treasury. Why then, with so many powerful factors in favor of their chances to triumph, did this host of strategically placed workers lose so completely?

The Hearst publications oracle, Brisbane, comments didactically on the inglorious termination, suggesting that the miners should have employed counsel before pursuing a strike policy. He said that no great corporation embarks on any important course without receiving the expert advice of the most astute legal minds. Let us suppose that an honest, informed, intelligent opinion could have been secured and used for the miners' guidance, what would the counsel have been?

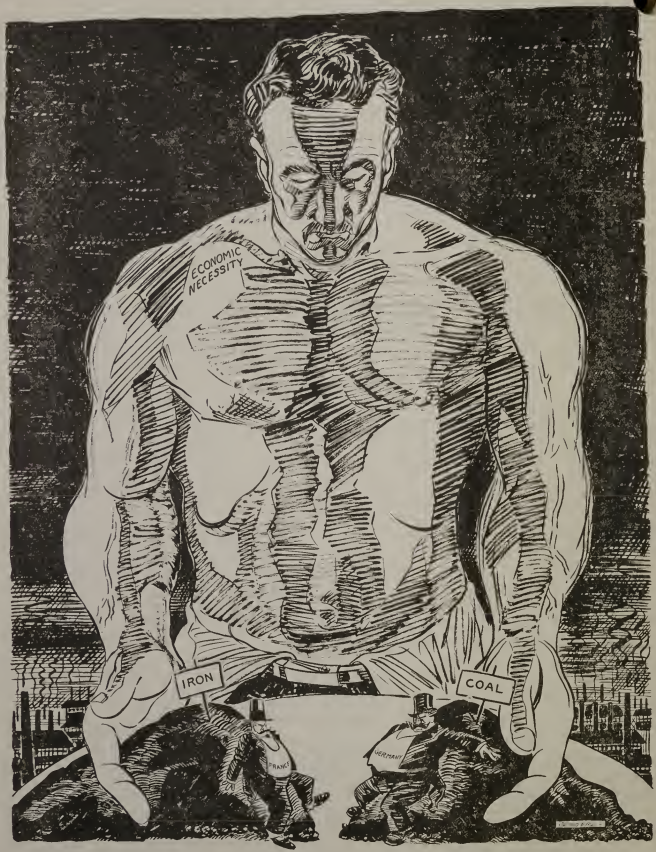
Simply that as trade unionism is obsolete as a weapon against employing class industrial concentration, so, too, district division among mine workers foredooms them to failure when opposing the hegemony of mine operators. To illustrate: when one district of miners strike, or a single branch of the industry, the operators in other districts intensify production to supply the demand for coal. This method is common to all other great industries, and in the 1919 steel strike it was recognized that all plants must be struck so that transfer of orders could not be effected. Were the mine workers grouped in autonomous bodies bounded by districts their tactics, however futile, might be consistent. But they are united in a union embracing hundreds of thousands of members in Canada and the United States with general headquarters.

Their experience has been that strike settlements by districts are disastrous, just as the prosecution of strikes in that manner precludes possibility of victory. Entering the anthracite strike they should have made is as general as their entire membership, and they should have called on transportation workers for support. Fighting in that formation how could they lose?

Instead, a part of the miners strike, the majority continue to dig coal, while transportation workers haul whatever coal is

needed to fill the bosses' orders. The result is never in doubt, and it is a crime against the fine courage of the striking miners to send them before industrially organized operators a regiment or a division at a time.

**ANOTHER DEPORTATION FRENZY.** — Purporting to be engaged in an effort for ridding this country of foreign-born gunmen and other unnaturalized persons occupied with illegal pursuits, the Immigration Office of the Labor Department has instigated a campaign to corral these "undesirables" and deport them to the lands of their birth. Newspapers in a number of cities are taking up the hue and cry, with Chicago in the lead. The paladins of good citizenship, who think that only the gunmen on company payrolls employed for intimidating labor and breaking strikes should be encouraged, are making a noisy pretense that they want to see our fair shores cleansed of gun-toting foreigners who act on their own initiative.



This propaganda is in line with other policies that have been advocated by the president and the Labor Department head, such as finger print registration of all foreign-born. Here is surveillance with a vengeance in the interests of American monopolists. It is a fact that labor organization in steel plants, packing houses, mines and other important industries rests squarely on the problem of unionizing the foreign-born workers. With finger print supervision these workers will be discouraged from organizing because they fear deportation. The press is psychologizing the Scissorbillica so that they will regard all foreign-born workers as dangerous to "the peace and dignity of the state."

All of this activity seems to be paving the way for deportations of radicals on a larger scale than ever before, and a consequent blow at labor organization. The only effective answer to this onslaught is increased industrial unionism. That is what employers fear more than anything else.

**"THEY SHALL NOT PASS."**—This was the grim-lipped oath sworn by the French at Verdun, so we were thrillingly advised during the late unpleasantness abroad. To make good this vow over a hundred thousand French wage slaves, in uniforms of course, lost their lives; to smash that Gallic resistance about four hundred thousand Teutonic wage slaves, likewise in uniform but of another color, were murdered. Half a million fatalities at this particular shambles.

Today the capitalists of both countries pass as they please and are on very fraternal terms in the slight matter of exploiting the working classes of Germany and France. This applies prominently to steel, coal, iron, coke and potash production. Referring to an understanding between German and French monopolists in the latter commodity Monsieur le Cornec, director general of the Societe Commerciale des Potasses d'Alsace reminds his colleagues that:

"One value of the pact must be emphasized. It lies in insurance against labor troubles. If the German potash workers go on strike, there will always be the

French supply to fall back on and thus there can not be a potash shortage."

Here is a plain statement of policy revealing the practicability of business combination on an international basis. It amounts to an industrial unionism of the French and German employers, and slaves that they are so thoroughly robbi

can not stop the encroachments nor win to a better level of existence unless they adopt the same tactics, industrial organization without respect to geographical cleavages and political boundaries. That must be their reply to those who so confidently expect to use them against each other in times of strikes.

**LUMBER WORKERS' CONFERENCE.** — At Portland, Oregon, on April 1st Lumber Workers' Industrial Union No. 120 goes into conference to consider the problems of organization with which the workers are confronted. It is a fact that through I. W. W. organization, conditions in the woods were made immeasurably better, especially by the 1917 strike.

But many blows have been leveled at the I. W. W. in this industry, among the worst being a vicious blacklist system and the introduction of piece work. Doubtlessly the Portland Conference will seek methods to circumvent the former, and to abolish the latter. In this connection it is opportune again to point out that William R. Langdon, American consul at Antung, China, recently made a report to the United States Commerce Department containing these words: "The enterprise of Pacific Coast lumber manufacturers and cheap water transportation across the Pacific have closed all the 23 sawmills in Antung."

We have heard a lot about coolie labor, haven't we? But here is very eloquent proof that the workers of the Pacific Coast woods are more profitable than Orientals, so much more profitable that the latter can not compete with them.

Several years ago the writer, while making a study of hours of labor in the whole lumber industry, came across complaints from Japanese lumber interests that they were having the greatest difficulty competing with American lumber companies because of the advantage the gyppo system brought to the latter.

It may also be remarked, incidentally, that my investigation of hours worked in the American lumber industry showed positively that in the states where the I. W. W. had effected greatest organization, hours, and all other aspects were better for the workers than in states where the organization had been unable to make much progress. A similar study in any industry will show the same facts: where unionism is strong wages are relatively higher, hours of labor fewer and conditions generally improved over those prevailing where organization is either weak or non-existent.

Therefore, we look hopefully to the deliberations at Portland for tactics which will bring a revival of the great fighting spirit that challenged industrial tyranny in lumbering and forced from the criminal employers so many of the requirements to a higher standard of living for lumber workers. Nothing but I. W. W. organization ever got these workers anything worth while in the years that have passed; only the lack of I. W. W. organization is responsible for bad conditions now prevailing in the camps; and the I. W. W. is the only power big enough and militant enough to bring the lumbering situation to a successful issue for the workers when they recognize the tremendous power of this industrial union weapon. More power to L. W. I. U. No. 120, and to the Portland Conference!

**TELL THEM THE TRUTH.** — Trade unionism's first appearance in the drama of American class warfare aroused the hyena howls of a judiciary groveling at the feet of its masters. Anxious to serve the rising capitalists this slimiest agency of the bourgeoisie branded exponents of the new economic associations of workers conspirators. To unite for the purpose of raising wages or effecting other changes in the conditions of their employment was criminal; the unions were illegal combines, and their members outlaws.

But economic pressure forced the outlaw unionists to persevere. A long struggle followed and defiance against the black-gowned damnation won for the workers the right to organize. However, history has many evidences of reformed outlaws

and in time a degree of respectability was attributed to the erstwhile law-breakers, which contemporary trade union leaders are so eager to preserve that they prostitute themselves in many ways for the gratification of modern employers.

Trade union officials grow hoarse repeating that the aims of their organizations are patriotic; that they are "safe and sane;" that they stand in four-square opposition to "radicalism." During the late war, with nationalistic piety they handed over many an unwelcome "red" member of their ranks to the tender mercies of the secular arm.

Having failed to understand the real meaning of a labor movement confronted by the unfolding of capitalist imperialism they remain isolated from the class conscious hosts of wage slaves throughout the world. And in conflicts against a phalanx of economically united bosses they are predestined to defeat because the use of obsolete methods in these contests is like trying to beat "Big Berthas" and machine guns with cross-bows and flintlocks.

Our business is to propagate the truth among workers, convincing them of their class position in society and of the fact that they have a class mission to accomplish, namely, their self-deliverance from wage slavery. If the labor movement is to advance it can stand for nothing less and one has a narrow vision, indeed, who can compass no more than a living wage just in front of his nose like a bag of oats on the pedlar's broken-down nag. Draft horses, oxen and other beasts of burden are given enough on which to live. The working class, capable of producing all the wealth of this world, and able to create infinitely more when rid of its parasites must surely aspire to finer heights than a modicum of animal comfort, gained only after most unremitting drudgery.

**ON THE RUBBER TRAIL.**—Newspapers of this country have given widespread publicity to complaints against Britain's practical monopoly of the world's rubber market. Eastern Asia's rubber growing area comprises about 4,000,000 acres under British control, with a valuation of approximately £700,000,000. Large automobile manufacturing concerns in the United States, heavily interested in the purchase of rubber, are responsible for the press propaganda.

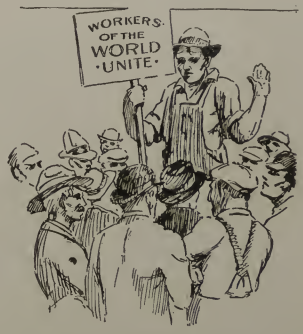
This becomes easily understandable by their latest plan through which seven lead-

ing industrialists of prominent motors corporations have formed an organization committee to gain control of lands specially suited to rubber production. They anticipate buying up all small organizations outside of British control. The firms with members composing the land-buying nucleus are General Motors, Mack Truck, Nash Motors, Dodge Brothers, Packard and Studebaker. Purchases are to be made of lands in Sumatra, the Philippines and Brazil.

Meanwhile the cost of rubber goods has taken a sharp rise, and the following should be interesting:

"There is about ten pounds of crude rubber in the average standard tire. The British rubber control has advanced the average price of that crude rubber about fifty cents a pound.

That accounts for a $5 advance in the cost of making a tire. But a thirty-three by six Goodrich balloon tire and tube, which cost $30 before the British advance now costs $54, or an increase to the American buyer of $24. We have found that the Englishman got the $5, but who got the other $19?"—Thus Representative Shallenberger, answering Secretary Hoover's charge that government protected foreign monopolies were the chief offenders in raising crude rubber prices. And he undertakes to answer his own question: "The big tire companies all show the greatest net profits for 1925 of any year in their history. The Fisk Company more than doubled their previous profits; Goodrich netted $15,000,000; Firestone earned 26 per cent." And he adds, "It seems to me that instead of investigating English rubber, we had better get after the American tire manufacturer."



Watching developments of this latest movement of Dollarica business expansion is sure to be an engrossing pastime, and Filipino nationalists should regard it as a blow to their aspirations for political independence. The sinews of industry are binding the islands more firmly to American imperialism.

**NEWSPAPERS AND PASSAIC.**—With all their scheming together the capitalists sometimes let their wires get crossed, and the Passaic situation furnishes us with the sound of jarring notes among the parasites. Mill owners and those who possess the ordinary daily liars are both employers, both beneficiaries of the profit system. As such they should harmonize when workers go on strike, and, of course they almost invariably do so. But their policemen sometimes whack the wrong heads, and then we see bourgeois papers indignant over the matter of police brutality.

The club-invested town clowns of Passaic upset an automobile in which newspaper photographers were riding, breaking their cameras and molesting some of the reporters. This excessive indulgence of the policemen's love of anarchy should have been checked by the textile exploiters. The result was that a number of papers, among them the New York WORLD, commented editorially on police inhumanity, and in the exposure were drawn into depicting what the law was doing to the strikers. By this police indiscretion a very large number of workers were made aware of what was going on in Passaic, where the mill slaves are striking for the right to exist at least as securely as other beasts of burden.

When exploiters fall out workers gain. It reminds one of the Italian censorship. American newspapers generally did not regard Mussolini's drastic methods fit subject for adverse criticism until his machine began to pinch the American newspaper men. Then the papers affected set us a loud wail. Dictatorship was represented as having very objectionable parts.

Likewise, in Passaic it was not so very wrong, in the opinion of the bourgeois rags, for the woolen companies to resort to any means, no matter how outrageous, for suppressing the strike, but the **modus operandi** suddenly assumed villainous proportions when newspaper representatives and newspaper property were attacked. The moral to draw from this is: Buy I. W. W. papers and get the truth about the working class movement all of the time.

LEARN TO SPEAK, TO AGITATE, TO ORGANIZE YOUR FELLOW WORKERS!

# Craft Form Versus The I.W.W.

By J. A. VAN DILMAN

"Bring To Me the Wealth of the World, and I'll Give You Just Enough Wages to Exist on," Says the Capitalist, and the Ignorant, Disorganized Workers Suffer and Die to Obey Him

THE I. W. W. is a revolutionary, international, working class union which avoids confusing issues by recognizing no enemy but the exploiting class; no binding interests but those of toilers united for action by industrial alignment.

Craft form of unionism once effective in enforcing demands on isolated employers is no longer fitted to cope with a master class that swayed neither by prejudice nor sentiment detrimental to its material interests proceeds with infinite care to perfect what its miseducators so assiduously sneer down among us, namely, a one big union of "its" own breed.

Craft organization is to all practical purposes so dead as to stand in need of immediate burial before its rottenness disgusts to the point of revulsion. Witness for instance the spectacle of one great railway brotherhood degenerating into a banking institution and worse; into a direct exploiter of labor so unfair in its tactics as to draw venomous fire in convention from an affiliated body whose rights it trampled in the mire as ruthlessly as any frankly capitalistic master might do.

The history of this conservative form is replete with class collaboration, policies inconsistent with labor's aims, contracts conflicting as well as useless, jurisdictional disputes and outright scabbery to qualify for job control by encouraging confidence not of its membership or of the workers as a whole but of masters whose interests it more than half consciously serves.

In spite of all this or rather "because" of reactionary conservatism, its strength is but fictitious and incapable of withstanding vigorous onslaught when the ungrateful beast it seeks to pamper, turns to rend unit by unit its various battalions. A craft strike is pitiful in that the often heroic resistance of its rank and file usually winds up in compromise detrimental to them by leaders who have much to gain from skilful manipulation of conflicting interests. Its continued existence is permitted only through the ignorance of workers who cannot conceive the existence of a "class struggle" nor their unavoidable position in it. Craft form will have proven, once the final chapter is written, harmful more than useless to Labor's progress, since it not only blinds the latter to its own potentential strength but in desperation to survive its day of usefulness strives openly to antagonize workers toward the only method able to combat capital on terms that promise eventual success. In other words it is a pretty toy still retaining in some of its phases a semblance of utility, but one which prevents its users from grasping the powerful bludgeon of revolutionary industrial unionism which bases its hope on solidarity of the workers, opposed to capitalist forces in distinctly drawn battle lines, thus preventing confusion which under craft union guidance throws us into a slavery contemptible because so unnecessary.

Even those blinded by mistaken self-interest should not fail to grasp the significance of a master class hatred vented so openly on the I. W. W. as to disclose its instinctive dread of an organization whose very principles spell doom for the oppressor, and even whose immediate demands are calculated to loosen its grip on the throat of suffering humanity.

It is up to us as workers to lay all prejudice aside that we may more clearly conceive the distinctions between antiquated craft groupings which survive by grace of downright servility and class collaboration and one basing its program on "a struggle that must go on till capitalism shall have been overthrown."

Craft unionism is an obsolete staff that proves but a broken reed in times of industrial stress and a sham which hoodwinks its members by various subterfuges till continued inconsistencies kill final faith in all organizations, good, bad and indifferent. This of course does not apply to rebels who, having clear vision, can not be thus misled; but how many such are there in conservative unions?

Broad study of subjects concerning our welfare as workers, and moral courage to act are vital, nor will cowardly attempts to evade serve other purpose than that of having trouble inevitably thrust upon us "after" we have reached the stage where resistance will be well nigh impossible.

Only full recognition of revolutionary industrial unionism's practical merit, by at least a militant minority, can clear up an issue whose import stands clear and distinct beyond all other "isms" that face a world in throes fated to bring forth freedom or slavery.

Which shall it be? It is up to us, who vainly boast of a red-blooded manhood we have as yet failed to prove, to tear a recent page from British labor history where solidarity so ably expressed its potential strength and—should we still be inclined to hold ourselves intelligent and men, let us live up in deed as well as word to our own implication.

Snap out of it! We cannot stop the tides. Let us learn to swim now for deep waters are ahead where nothing else will save; more especially not the proverbial straw of craft union form that fails utterly of its purpose.

ORGANIZE! Not tomorrow but NOW into the unions of your class.

ORGANIZE industrially along scientifically correct lines.

ORGANIZE your fellow workers and friends for numbers are necessary to power in a working class union and power alone can guarantee consideration from those whose concepts of mercy and justice are but hollow mockeries to lure us deeper into the horrors of wage slavery.

Join the I. W. W. today!

By COVINGTON AMI

The sun is but the tail-end of a monstrous firefly,
The moon is but a big glow-worm acrawlin' 'cross the sky;
The comets they ain't nothin', sir, but gasbags full o' wind,
Just iridescent hotair by the seraph statesmen spinned.

The things they call a planet, an' the things they call a star,
Ain't nothin', sir, but cat's eyes aglowin' fum afar;
The earth's a hollow bubble, just a ghost-skin 'round a hole,
An' full o' creepin' microbes what believes they is a soul.

The whole of all creation is the shadder of a dream,
The mortal conjuration, sir, of things that only seem;
An' it's a fact past doubtin', which can never be gainsaid,
We's never really livin' an' we's never really dead.

# The Political and Economic Aspects of American Agriculture

By SAM MURRAY

**In Addition to Analyzing the Breach Between Workers and Farmers, This Writer Describes the Forces at Work to Take this Broad Smile Off John Farmer's Face**

THIS will be election year. A new congress will be elected this fall. The affair will probably command less interest than a presidential election, or for that matter not as much as a similar event a few years ago, inasmuch as the passing of politics as a determining factor in the affairs of the country is being more and more recognized. Yet, we can expect to be deluged with the usual appeals, entreaties and admonitions to vote for this candidate or that measure, and assured that this is to be the most momentous campaign of history and that the destiny of the race depends on how we vote.

As usual we can expect at least three political groups whether they unite under one flag or separate under the banners of the Progressive, Socialist and Workers' parties again to come out with an appeal for the workers and farmers to come together and elect their candidates, promising all kinds of blessings to be showered from above as soon as the two great branches of the army of industry stand shoulder to shoulder on the political field.

### The I. W. W. Not Against Voting

Although the writer of this article has no present intention of casting his sacred ballot at any one or any thing the coming election he is willing to grant that privilege to the rest of the fellow workers. The I. W. W. has never denied the right of a member to vote as early and often as his conscience may dictate, so long as he feels that his interests can be served in that way. However, as an organization representing the most advanced interests and seeking the most important matter in the way of educational material for the industrial workers, we are interested in the soundness of any proposition that may at any time be put forward by a group purporting to be in the interests of these workers. If there is any common ground where the workers and farmers can get together for the benefit of both we want to know about it. Knowing just what we want ourselves, the main problem is to find out what the farmer wants, whether it is practical to get it for him, and how it will affect us in case he does get it. Also, the chance of securing his support for the things that we want will bear investigation.

### In Spite of Paternalism and Privilege the Farmer Seems to Be Always in a State of Poverty

There is no group in America that has been as much pampered as the farmers. Homestead laws, public experiment stations, free instructions through bulletins and correspondence, public irrigation projects, cheap government loans; in fact, anything and everything in the way of encouraging the individual to set himself up on a small piece of land. Yet the farmer is always being held up to us as a subject of public sympathy. In spite of all this help he seems constantly to be getting himself in deeper and deeper water and laying the foundation for more paternalism, more help and more sympathy.

J. N. Watt, master of the Sacramento County

(California) grange, gave a rather gloomy picture some time ago of the condition of the American former, which, on top of what we have been hearing from some of our prominent spokesmen the last few years, is somewhat startling. Our statesmen and writers for the capitalist press have been resenting anything in the way of comparing the "great and prosperous American farmer" with the peasants of Europe, especially of Russia, and have been leading us to believe that instead of being a poverty-stricken peasant he is a very prosperous, shrewd and intelligent business man.

However, according to the authority mentioned above, the average income of the American farmer for 1924 was $876.00—a sum considerably below the cost of a decent livelihood, while nearly a hundred thousand farms were deserted during the same year. The value of farms shrank fifteen billions in five years. The latter fact is the more serious when we remember that the shrinkage often represented all that the farmer had in his farm, the holder of the mortgage getting the balance. Thirty per cent of the population and 25 per cent of the country's capital is engaged in agriculture, and receives 18 per cent of the total income. These are the facts. As a remedy he proposes that no more land be reclaimed by government aid but wants the government to assist in the matter of marketing, and in general recommends a policy that would mean higher prices for us who have to buy.

### Nothing In Common

In fact, the only remedy that any of the farmers' "friends," from the president down to the curbstone communist, has to offer is a higher price for the farmers' product. Viewing the matter from the standpoint of a cockroach mind they never seem to suspect that there may be something wrong with the productive end of the game. They never ask themselves why it is that Henry Ford with his flivver getting better and cheaper all the time can pay nearly three times what the average farmer pays, while our loaf of bread and sack of spuds is either constantly going up or shrinking up. Then, too, Henry's bank account is increasing while John Farmer's is usually in the form of a mortgage held by the bank. If Ford were to attempt to build a flivver by the methods of production corresponding to those in vogue on the average small farm, it would cost him five thousand dollars and you would be afraid to ride in it when finished.

The claim that the farmer and wage worker have much in common has generally been accepted by most workers without question. However, these same workers will tell you that they have no desire to secure employment on a farm, and generally crab about the price of farm products. If asked to explain this apparent kink in their logic they try to tell you that the trouble is with the middleman. While it may be true that there is considerable profiteering and waste in the distribution of farm products, it is doubtful if it is any greater than in other lines. Most commodities sell for several times their necessary cost of production, and most farm products are difficult to handle and may suffer considerable loss in transmission.

Although the I. W. W. preamble states that "the working class and the employing class have nothing in common," and the farmer is a member of the employing class this circumstance does not necessarily prevent the worker from taking advantage of the differences that arise between the farmer and other sections of the employing class. Employers benefit by taking advantage of our disagreements so there can be no objection to a farmer-labor party from the standpoint of that principle. If it were true that the farmer is producing as cheaply as could reasonably be expected and that his product is being unduly inflated by the middleman, it might be possible for the farmer and city wage worker to get together and both gain something to their advantage. But the farmer is not producing cheaply and I think the facts will bear me out when I say that the history of farmers' marketing ventures proves that they have had a tendency to inflate rather than reduce the price of their products to the consumer.

### Is the Farmer a Producer?

The trouble is that the farmer-labor advocates consider the farmer only in his capacity as a producer and that without any consideration of his ability in that line. The fact is that his place in society is a complex of several functions—employer, food speculator, real estate speculator and least of all, a producer. I think it can truthfully be said that the farmer is far more concerned about raising the price of his product or inflating the value of his farm on the real estate market than in increasing the quantity of his yield or cheapening the process, except where it can be done through a reduction of wages. As a producer he is especially inefficient. Most farms are small and the process of production is carried on in a more or less primitive manner. Most farmers are grossly incompetent. In the directing of operations, in the care of the soil and the breeding and care of stock, farming is both an art and a science capable of almost unlimited development. It is safe to say that two-thirds of the farm land in this country is in the hands of persons no more competent to manage a farm than I am to operate a steamship line. Probably the worst feature of the present farm situation is that due to incompetent farming, the total output is far below what it could be made. This incompetence and inefficiency render low wages and hard conditions a necessary complement to farming on a small scale. As a food speculator he is at war with the whole of society and if successful he only encourages the planting of more crops and in the end wars on himself. As a land speculator he is hopelessly bound up with the real estate shark and whenever he enjoys a short period of prosperity the price of land is forced up so that when-

ever it changes hands it requires more money to swing the deal. This means heavier mortgages and more interest to the bank so that in the next crisis you hear a greater howl than ever about the farmer being robbed, and the same old demand for lower wages, higher prices and helpful legislation to save the "poor farmer" from bankruptcy. It is a question if the American system of individual ownership of small tracts of land that we hear so much bragging about is not inferior, from the standpoint of the farmer himself, to a tenant system similar to that prevailing in some parts of Europe. It would seem that the American farmer, owing to the complex and contradictory character of his several social functions is the victim of a vicious economic circle, so that any action to raise him up will create a reaction that will drag him down again.

I hold that this is the economic law governing the price of farm land: Land is worth that sum of money which if placed on interest would yield an amount equal to the income of the land minus the cost of labor and upkeep. I hold that the small farmer's income can not rise beyond farm laborer's wages plus interest on investment. Since a large part of the interest on investment goes to the money lender while the farmer is compelled to assume all the risk, he would be much better off if land were cheap and wages high. But the individual farmer is so completely tied up in his investment that he is forced to war on both labor's interests and the interests of the farmer class as a whole. But supposing that it were possible permanently to render the farmer prosperous, how would that affect the rest of us?

### A Copper-Riveted Reactionary

Since the farmer is essentially a "petty bourgeois," and the most reactionary type at that, a prosperous farmer class would form a bulwark of reaction that would be a serious stumbling block to all progress. It will be noted that the farmer is always the special pet of the reactionary forces that are constantly trying to narrow our visions and circumscribe them within the bounds of nationalist and provincial bigotry. Between the farmer and the more advanced capitalist interests, the industrial worker should always stand for the latter. As for the middleman: if the farmer succeeded in eliminating him and gaining control of the marketing of his product we would be more than ever at his mercy in his frantic and never ending scramble for higher prices. In fact, there is no other branch of the employing class of which it can more truthfully be said that the working class and they have nothing in common than the farmers. Insofar as the demands of progress are concerned, there is no farmer problem except that of eliminating the small farmer and industrializing the agricultural industry. We have the machinery, but owing to the fact that the land is cut up into small holdings unsuitable to large-scale production it cannot be used. The small farmer is a permanent obstacle

MACHINERY PLAYS AN EVER LARGER PART IN AGRICULTURE

to the progressive development of the industry.

We sometimes hear complaints that the government can find time to grant the railroads a rise in rates, but no time to help the farmer. They forget that the government is run in the interest of progressive industry, and further, the railroads have had their rates regulated downward and the hours of labor as well. If the government would first regulate the price of farm products to that which would render a reasonable return on the investment where agriculture is carried on by the most advanced system of machine production and then establish an eight-hour day it would be more reasonable to ask for aid in a crisis. The farmer has enjoyed absolute immunity from government interference. Child labor laws, eight hours, workmen's compensation. Nothing regulates the farmer. He enjoys special privileges granted to no one else. While workers are sent to the penitentiaries for organizing to raise wages he is aided and encouraged to organize with the deliberate purpose of gouging us with high food prices. The more immunities he enjoys the more he will regard himself as a member of a privileged class, and the less sympathy he will have for labor. About the only time he shows an inclination to be "radical" is when conditions are such that he begins to have visions of himself as a wage slave. It is plain that the workers should never allow themselves to be wheeled into supporting the farmer-labor movement. It is easy to see why craft union leaders have shown an interest in the farmer lately. Since the record of the craft unions for defeat the last few years has been practically one hundred per cent complete, the farmer-labor movement is a splendid crutch for a crippled labor leader.

### The Nemesis

Most of the land in this country was cut up into small tracts before the era of machine production and where large scale farming was sometimes practiced in isolated parts of the West the location was such as to render marketing more or less difficult and rotating and fertilizing impractical, so that it was more profitable to sell small tracts to suckers who would work their families to death to pay in-

terest on a mortgage than to continue cultivation. As the amount of land was limited the process of industrialization was difficult and capital was drawn into fields where development of machine production was hampered with fewer obstacles. However, there are signs that the time for the exploitation of the agricultural industry is near at hand. Already, ice cream, condensed milk, canned fruit and vegetable companies are securing the land for the production of their raw materials. In the California rice fields large scale production prevails. I am informed that one grower, a Chinaman, employs about three hundred men to harvest his crop. Small operators stand no show here and usually go broke the first bad year. The mills are generally controlled by the growers. Notwithstanding great obstacles that have had to be surmounted the California growers are successfully competing with the cheap oriental and southern labor and although they have been paying better wages for shorter hours than the average in the state, Chinese, Japanese, Hindu, and even Missourian rice growers are rolling in wealth as a result of their last ten or fifteen years' success in the business.

At the rate that surplus capital is increasing how long will it be until all cereal mills will be raising their own grain? This will be to the advantage of the consumer as the history of large scale production proves that it means a lower cost. When advanced, scientific production rules the farming industry it will be necessary to lower prices to stimulate consumption on account of the increased amount of production, as has been the case with other advanced industries, and as for the farm laborer's interests, the saying "Small man, small ways and small wages," a common proverb among western farm laborers, will explain it all. In fact the present small farmer would be a whole lot better off if he were driving a sixty horsepower tractor for wages on a genuine farm instead of sparring with a span of fuzz-tailed mules trying to coax a living out of fifty acres.

### Summary

To summarize: We think that the questions raised in the beginning of this article have been answered. The farmer wants the very things that the worker does not want; it would not be to our interest to help him get them if we could. However owing to the fact that the small farmer is a sort of industrial atavist trying to evolve against the current of progressive development we could not help him if we wanted to. Also, the reactionary character of the farmer renders any hopes that the worker may have of getting his aid vain. The indications are that economic law has decreed the early downfall of the small farmer and the industrialization of the farming industry, and in a struggle between economic law and political law the former will always win. To try to forestall this consummation would be a crime against progress.

There are two forces in this country which stand for a farmer-labor coalition: the reactionary middle class who want to save the backbone of their reaction and the mass revolutionists with their fantastic belief in a mass uprising to be staged about the time of the arrival of the millennium of the Holy Rollers and Seventh Day Adventists. These revolutions and millenniums, judging from past history, are very slow speed propositions and I am afraid we will have to wait a long time. Besides it was the small farmer, principally, who defeated communism in Russia and I believe that there is a sufficiently numerous class of hopelessly reactionary small farmers at the present time to defeat any mass revolution in any part of the world even if such an affair were otherwise practicable or desirable. The only way the worker can gain anything for himself in the near future is through job action. This is also the only means by which the workers can gain the education, training and power, without which a mass uprising could end only in confusion and with which a mass uprising will be unnecessary.

We do not feel that we are taking a callous view of the situation. We heartily sympathize with the small farmer and his overworked family. It is often said that he is worse off than the industrial worker; if so, then we are but serving his best interests by advocating a policy that will make it possible for him to become an employee of an industrialized agriculture and as such we will gladly welcome him into the ranks of labor. Let the capitalists take over the land and prepare the industry for socialization and in the meantime the farmer, emancipated from his serfdom to the money lender, can be educated and prepared for the new day. There are only two progressive elements in existing society. They are the ones who are trying to develop a larger capitalism and those who are preparing the workers for a still more advanced civilization — The Worker's Industrial Commonwealth.

# He Had Pride

By T-BONE SLIM

Lo, behold, all ye scoffers, a story—
A story of life's underwhirl;
And mark ye, your blood may turn gory
As its vital statistics uncurl.

It's a story of struggle and labor,
A tale of a nobleman true,
Who may be your very next neighbor—
Yes, perhaps—it may be even you.

Just an expert in system and dodging
A toiler predestined to roam—
At every new boxcar, and "lodging,"
There was no one to welcome him home.

With a mind that was lofty with learning
He drifted along with the tide
And knew of but contempt for earning
The then going wage—he had pride.

How he longed for the joys of tomorrow
And swore at the woes of today,
For "his" was an every-day sorrow
But his future—was sushine and play.

He had fought where the game went the farthest
And tried out the greatest of loads;
At times his pet grief was the harvest,
Then again 'twas the building of roads.

In the woods, for poor down-trodden workers,
His voice had repeatedly rung
And, strangely, the o'erbearing shirkers
Were afraid of his sulphuric tongue.

From the heights of a noted mechanic
He stepped down to lift up his kind—
Nor felt he the slightest of panic
As he left the smashed ladder behind.

He would quote well the great Aristotle,
The pages of Marx he had turned;
He had read, too, his shirt and his bottle—
So, you might say that he was well learned.

When it came to commanding or hating,
We'd find him quite anxious to serve;
In fact, he was too 'commodating
In all questions of honor or nerve.

Thus it was, when hard-pressed by the masters,
He shook down the ladies of shame;
Relieving the girls of their piastres
And left them financially lame.

Then the sheik of the sisters of mercy,
A bull-cook and hostler of souls,
Took after our fast-heeling Percy
Just to "plug him up" plumb full of holes.

When the war had subsided (if any)
Six bullets had punctured his hide—
His wounds though both grievous and many
Were apart from his grit and his pride.

So he rushed to a doctor and savior
And thus to the sawbones he said:
"I say, on my word and behavior—
I ran foul of a hailstorm of lead."

Lo behold, all ye scoffers, a story
A story of life very bold—
I warn you your blood may turn gory
As its vital statistics unfold.

He recovered his health, in a measure—
And lovingly gazed at reform,
And sought once again the pay-treasure
In industrial serfdom and storm.

But the pay, it was low and unnerving
The board, it was maggots and swill;
His bed was a hangout for vermin
And, shortly, he found himself ill.

Then a hospital beckoned and offered
To help him to fight the new foe—
And now, for the first time, he suffered
On a cot that was whiter than snow.

All the strife of the ages barbaric
Did parade in the nooks of his mind;
His words, therefore, grew quite tartaric—
I'm afraid he forgot to be kind.

His remarks showed a lack of good training
So sharp was his breathing and trite—
Indeed his blue words were most maiming;
Yet, he thought he was safely polite.

Yes, he staggered the 100 lb. nurses
With many an unpolished cough
And horrified, with his soft curses,
To the poorhouse they hustled him off.

I'll admit that his pride was now fractured,
And deeply he felt his disgrace—
It looked like a plot, manufactured;
An insult "too damn dirty to face."

Down the railroad he walked, tears agushing—
And hid in the weeds (as he cried)
And when the fast mail came arushing
Then he crawled on the tracks—
'Guess he died.

Yes, of course our poor tale has a moral
('Tis vital statistics you scan)
He came out of the exploiters' chloral
And expired a non-union man!

MORAL:
Oh if he and his kind had united
Their numbers, ideas and skill—
His wrongs would, no doubt, have been righted;
And the trains would have no one to kill.

He'd have followed great ideals and high codes
And would not have feasted on swill—
He would not have slept with the microbes
And, of course, he would not have been ill.

They'd have broken their unholy fetter,
Not deigning a cross word to spill—
His pay would have doubled, or better—
Thereby saving the poor ladies "till."

Oh if they had but organized strongly,
Our troubles would be o'er, or nil;
No power could hop on us wrongly—
And our dead friend would be with us still.

# WHOSE DUTY?

By COVAMI

I am the Christus—
The Truth-Speaker—
Lucifer—
The Light-Bearer—
Rebel of all times and climes—
The wisdom of—
Gods, Mortals, Devils—
Is mine—
Therefore—
Give heed unto this:—
Much, we are hearing, these days—
About—
"Our duty to the State."—
But—
WHOSE duty—
They fail to specify.—
Mine? Nay!—
What duty do I—
A Proletarian—
Owe the State?—
Answer Me, O State's Men!—
What has It ever done for Me?—
That I should—
Worship It—
Die for It—
I, a Proletarian—
We, the Propertyless?—
"Our duty to the State"?—
You must be joking!—
Give heed unto this:—
Never have I seen It—
The State—
Stretch out its mailed fist to—
Guard Our life—
To preserve Our liberty—
To increase Our happiness—
Always it comes to us—
The Proletarians—
Jailing, shooting, crucifying—
Slugging, murdering, warring—
Deporting, crushing, disinheriting—
Always acting for Property—
Never for Man—
Always for the Dollar, Pound, Franc—
Never for Men, Women, Children—
Never until forced to it.—
For the tocsin that—
Sounds the freedom of Peoples—
Tolls the deathknell of States.—
Give heed unto this:—
I heard two voices speaking—
One, the Industrial Despotism, said:—
"The State? I am the State!
I, the Plutocrat—
Ceasar of Capitalism—
I am the State!—
Woe to foes of the State!"
The other—
The Industrial Democracy—
Answering, defiant cried:—
"The State?—
To hell with the State!—
I am the Union!—
The Commonwealth!—
The Coming World!—
The Mighty Future!
Gather around Me—
O ye Toilers—
And—
The Earth shall be thine!—
To Have—
And to Hold—
Forever!"—
Godders of States—
Crucifiers of Peoples—
Give heed unto this.—
I have said—
I, Lucifer—
The Light-Bearer—
I, Christus—
The Truth-Speaker.

# "The Employers' Philosophy"

By E. W. M.

A NAME is only a name, as the proverbial saying is; however, it is the character of the one who has the name that counts.

For convenience we will call him Simon Werk. He is a large fellow, coarse featured. Let him miss a shave and he resembles the anthropoid. This is not intended for ridicule, for none can speak disparingly of Simon. He is one of the kindest, most good-hearted fellows possible to meet.

Simon worked in a sawmill until recently. When we first knew him he was working in a logging camp. The lumberjacks frequently referred to him as "Si, the line-horse."

During those days there were no haul back lines. The main lines were dragged by a horse. The horse was called the line-horse.

If a signal was given for two feet of slack line, Simon did not wait for the line-horse; he would grab the line and pull it the needed two feet. He did most of the rigging crew's work. He was not, what might appear to be, a sucker; it was just merely his way.

Simon is absolutely stolid. His understanding of the world and the people is blank. He admits that the only pleasure he gets out of life is fishing and working. He is impervious to good literature and the True Story Magazine furnishes him his reading matter.

At the pool hall which Simon frequents occasionally, his conversation usually concerns fishing. Simon can tell a good fish story. He has had many thrilling experiences on Lake Quinault, where the salmon trout is known for its gameness. When Simon enumerates, in his inimitable way, about one of those fishing exploits to the patrons, the pool hall is a scream with ecstacy over the weird tale.

It was just prior to the 1917-18 strike in the lumber industry, for a shorter workday and better living and working conditions, that a strong militant agitation pervaded the woods against the then prevailing conditions.

"I'll work as long as I damn please, and it's nobody's business," Simon was heard to utter one evening just before the gong rang for supper.

"All you want is work and nothing to show for it, you big hoosier," came the words from the other end of the bunkhouse. Someone said it was a Wobbly who spoke so promptly.

All talk of a social or economic nature, or anything pertaining to unionism is a nebula to Simon.

During the time we speak of, this line of conversation was carried on constantly. It was getting too hectic for Simon, so naturally he sought employment elsewhere.

Simon was now employed in a sawmill. He had landed the job he had so long yearned for: handling the lumber to and from the dry kiln—a la gyppo, that is, so much per thousand feet. If a worker stands this work for four years, he is going some.

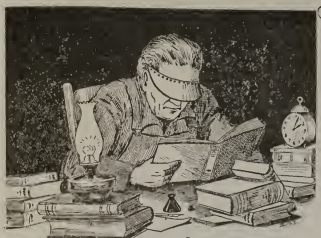
Simon was now on his sixth year at this job named in the foregoing. He had been heard telling one of his fellow workers that he had used ten dollars' worth of liniment in one month to try to keep himself fit for the job. He was "so stiffened," he said.

One afternoon, just before quitting time, something happened to a tram-car loaded with dry-kiln lumber. The car had in some way gotten away from the workers. It was headed for two large closed doors. Simon saw it coming and, quick as a flash, picked up a square timber no two ordinary men could lift, and threw it under the wheels. In some way, unknown, his hand was caught and so mangled that he was left incapacitated for manual labor. His other hand is crippled too; the accident happened years ago.

When the workers buy wood, they get the mill-run, sawdust and all. It is wet and costs four dollars a load.

Christmas day, the same week Simon was maimed, seven prominent (?) members of the Elks, each had a load of hand-picked dry wood, as a present from the company that owned the mill where Simon had been employed.

Simon, too, had had a load of wood sent to his place, while he was yet in the hospital.



On one occasion only had one of the company been to see Simon, and then only to say "Hello, Werk; how they comin'?"

Two months after his misfortune, Simon got a peremptory written dun, from the company for that load of wood he had received after he had been crippled.

Simon flew into a truculent rage. A fulmination emanated from his shark-like mouth, stigmatizing the company.

After he had calmed down, however, he was heard to say, with a quiver in his voice: "That Wobbly was right—"You big hoosier—it's nothing you wanted, and it's nothing you got. Nothing? Yes."

P. S.: "The working class and the employing class have nothing in common."

The Ruler of Tomorrow

# Book Reviews

It is an axiom among radicals that missionaries go to save the heathen from happiness, and to save money for the capitalists who finance the missions. Recent actions of the young men and women of China have abundantly confirmed us in this opinion. But it has not occurred to many that there is a field for investigation among these strange and romantic creatures, the missionaries themselves. I suspect that one would have to have been born among those who feel "called" to "push the heathen to the gate" to understand them as Raymond Weaver, the author of a new novel, "Black Valley," seems to understand his material—the missionary settlement in Kurodani, a small, probably fictitious but probably typical out-of-the-way town in Japan.

**SLIGHTLY SHOPWORN CHRISTIANS**

Very likely Weaver is really telling his story in the story of Gilson Wilberforce, Japanese born son of a huge missionary man who is a regular wild bull of Bashan for energy, and tactlessness, and a self-sacrificing missionary mother who quite cheerfully lets herself die by inches from a cancer in the breast, and conceals it, until the last stages, for fear that her pain would interfere with the happiness of her very noisy, and very literary husband, or of her clever young son.

For the son apostasizes: He gets too darned Japanese, by growing up among the little Jap kids, and by taking short cuts through the local red-light district, and bandying repartee with the ladies who call to him. He cultivates the acquaintances, also, of Buddhist priests, and Shinto fortunetellers, and it all has a very bad effect on his proper, puritanical outlook on life. Even the proprieties and conventions of New England he disregards, in order to go swimming with the natives in the river.

"For Japan had not begun to cultivate those final flowers of Christian civilization, the smirk and the innuendo; and being genuinely modest, nakedness, as such, was to his Japanese friends casual and uninteresting. This innocence is now being jeopardized however, by national vanity; for Japan is tenderly solicitous of foreign approbation. And Japan may end in being filthy out of a pious endeavor to appear respectable. Until recent years it was a universal native custom to go swimming naked in mixed company; a state of affairs that shocked both Christians and tourists. Some years ago, to preserve international confidence in native decency, there was promulgated from the throne an Edict commanding that every Celestial put on a bathing suit before taking a plunge. The Edict was most literally and wholesomely interpreted. Down to the beach came congregations of Japanese with their kimono sleeves jauntly waving in the breeze. Off came the kimonos, each bronze body stripped and shameless in the sun. They played ball on the beach, napped, gossiped and idled. But immediately before going into the water, each squirmed into a pair of trunks, touchingly obedient to the Edict from the Throne."

However, Gilson clung to the gods of his fathers until he got away from Japan. The author suggests that his unbelief was being prepared, like a photographic plate, but was not developed yet. Mrs. West seems to have developed it. She was the sixty-year-old, shrewish but kindly, and cynical and skeptical old widow he met on the steamer, on his way to America to be educated.

Some idea of the clash between Mrs. West and the missionary ladies can be gained from her conversation with one of them at the breakfast table, two weeks out in the Pacific.

"Isn't prayer wonderful!" says the little missionary lady. "Yes, prayer is very wonderful," loyally asserts Gilson. And the reason is developed under Mrs. West's questioning:

"You were one of the few not seasick last night. You are a good sailor?"

"Oh, no!" pleaded the little woman, "I am not a good sailor. It is the power of prayer. All my friends in China are praying for me, and I haven't been seasick all this trip."

"A shrewd preventive," was Mrs. West's com-

ment. "And your husband and your sister missionaries?"

"Mr. Westbrook has been just awful," the small creature woefully drawled with an earnest wag of her head.

"Weren't his friends praying for him?" Mrs. West continued with malicious curiosity.

"Oh, yes!—But Mr. Westbrook has a weak stomach!"

Gilson returns from his "education" in America, to find the cattish lady missionaries, and wives of missionaries, sitting in groups and rending to tatters the reputation of a good woman of fifty, who has suddenly fallen in love with a sea captain and has come from the field of the Lord in China to marry him in Kurodani. He finds also a pretty young converted Japanese girl, whose father stayed Buddhist, and is mightily angry at her for leaving the parental rooftree. The missionaries hide her away, and Gilson falls in love with her. But the capitalist Caucasian and all his agents are always a caste apart, in the Orient, however much they may preach of the fatherhood of god and the brotherhood of man, so Gilson is only tempted to marry her—he doesn't quite.

He finds also Alurid Wilberforce, his father, panting for him to become a servant of the Lord, and push the heathen to the gate for a while in Kurodani, leaving the old man free to finish his big book, twenty-five volumes already and still going strong, Historia Imperii Japonici. This old man seems to be the regular archtype of a missionary:

" . . . Over six feet in height, the upper reaches of his legs decently extinguished in billows of frock coat, he sent his voice rolling up from the cavernous depths of his giant figure to thunder out through the wilderness of his Assyrian beard. He was not designed for trivialities; though unredeemed Japanese urchins, it is true, had been known to dare —always at a safe distance—to jeer at him as a hairy devil. But Alurid took the flaunt with becoming dignity,, and recalling the Biblical parallel of the naughty little Jews crying 'go up, thou bald head; go up, thou bald head' to the prophet Elisha, he did as Elisha had done; 'he turned back, and looked at them, and cursed them in the name of the Lord'. When in Hebrew he recites appropriate verses from the Twenty-sixth Psalm: 'Judge me, O Lord; for I have walked in mine integrity: therefore I shall not slide.—I have hated the congregation of evildoers; and will not sit with the wicked. Lord, gather not my soul with the sinners, in whose hands is mischief. But as for me, I will walk in mine integrity'."

His opinion of the Japanese he was saving was unflattering to them: "The Japanese fancy themselves highly affronted," he wrote in the tenth chapter of the tenth book of his Historia, "by the endeavour of some who busy themselves to draw the original descent of their nation either from apes, from the lost tribe of Israel, or from the Chinese or other of their neighbours. They claim a birth much higher and nobler, and esteem themselves no less than offspring of their very heathen deities—all of which deserves no credit, and must be entirely rejected as forged and fabulous. The Japanese are, moreover, at a loss what to answer when asked how it came about that Amaterasu O-Mikami, a being endowed with so many excellent and supernatural qualities as they ascribe to her, begot so poor and miserable a race as that of the present inhabitants of Japan."

It will be seen that what with Gilson's backsliding and his matrimonial preferences, and the old lady from China and hers, the author has created a situation in which the air is charged with something more than the Holy Spirit.

When twelve days go by without the fiance of the dear old lady showing up to marry her, and when the Japanese convert begins secretly to meet her lover in the mission garden, the spiritual side gets more possibilities.

Then when the old lady goes for a walk in the garden at night, and find Gilson and the Japanese girl in what would have been a connubial embrace, had they not dispensed with one of the rites of priestcraft, the old dame has a cat-fit. The author does not really tell us whether it is because her maiden modesty is outraged at the sight, or whether she suddenly is made aware of the hopelessness of there ever being anything half so beautiful in her life as this illicit love passage of these two not-quite Christians who find more to please them in the mission garden than the mission church.

So when the captain comes with a perfectly good excuse for being late, he is dumbfounded by being howled at, raged at, accused of philandering, and driven ignominiously from her presence by the bride herself.

The captain does not know any Japanese, has never been in the town, and wanders forlornly about until two of his own Japanese sailors find him and take him straight to the red-light district. Everybody is so nice to him that he thinks he is in some perfectly proper hotel, and proceeds to drown his sorrows in drink. The more he drinks, the more respectable he feels, and when he is made aware of a woman brazenly entering his room he throws her out. After that "the heathen rage" and they and the captain just naturally get to fighting, and a mob gathers, and the missionary settlement is rudely awakened by a Japanese policeman who hammers with his sword on the door and in three or four very crude Anglo-Saxon words of one syllable states just where it is that the captain is, and that he is fighting—will the ladies come and get him out?

It takes the whole mission force to get him away —and that is about all there is to the story. The plot is rather thin, but the yarn is rich in embroidery, in clever little quips at the expense of missionaries, and delightful half-page revealing descrip-

tions of their attitude. I know of nothing better than the spectacle of the drunken captain, barred within his room, the curious crowd of disreputable characters and police watching, and Alurid Wilberforce, (Gilson's father) soundly lecturing them all on their sins. Standing on the steps of the brothel, he felt the urge to speak thuswise to them all:

"These whoremongers! — These adulterers! — These drinkers of damnations!" — Alurid burst forth, as Gilson sat on the lower entrance step, occupied in his haste to get his feet out of his shoes. "These open sepulchres, filthy with concupiscence, and fornication, and uncleanliness, and lasciviousness, and idolatry, and witchcraft, and hatred, and wrath, and strife, and sedition, and treaty-breaking, and drunkenness, and persecution, and blasphemy, and unthankfulness — — "

"Treaty-breakers," ah, that's a significant word in the mouth of a missionary. Trade follows the flag—but the cross precedes them both and prepares the way, the soldier and the missionary are the agents of capitalism, in all of its slave raids into the Orient.

The picture of the missionaries, in spite of individual cases of great heroism and devotion, is that of slave raiders, enslavers, who regard the heathen as so much raw material to be worked on, so many souls to be "saved" and so many bodies to be worked. The best that can be said is that they are just as cruel to each other as to the natives. When Gilson's mother does die (as a matter of fact Mrs. West murders her to relieve her sufferings), the ladies are rather pleased.

"Funerals are such beautiful occasions," * * * "especially the funerals of the saved. For while we're alive so many things do sometimes happen. But once they're dead, then you know they are same."

**BLACK VALLEY, By Raymond Weaver, published by The Viking Press, New York. Price, $2.**

**Business Plus The Stars And Stripes**

Scott Nearing and Joseph Freeman have collaborated to produce a study of American territorial acquisition and business expansion that for comprehensiveness and clearness has never been equalled. The following statement uttered by President Taft in his Inaugural Address, March 4, 1909, was "the first avowal of the policy which, under the Taft administration, won the title of 'Dollar Diplomacy'":

"In the international controveries that are likely to arise in the Orient growing out of the question of the open door and other issues the United States can maintain her interests intact and can secure respect for her just demands. She will not be able to do so, however, if it is understood that she never intends to back up her assertion of right and her defense of interest by anything but mere verbal protest and diplomatic note."

But while the genesis of the phrase "Dollar Diplomacy" dates from 1909, its spirit is much older and Taft was simply reasserting an avowal which governed the State Department especially from the time of the McKinley administration. It means that Big Business—predominately finance capital—in its foreign spheres of investment will be aided in every way by the Government of the United States, including the use of armed force.

The authors review the manifestations of this diplomacy in their various aspects; peaceful economic penetration prosecuted by business houses; economic penetration under government control; economic penetration with political interference—political regulation; armed intervention; acquisition without annexation; acquisition by conquest and then purchase; the evolution of American imperial diplomacy; the Dawes Plan, and so on, with appended copies of the different documents by which the leading acts of this diplomacy have been made classic examples for the technique of the American imperialists.

Here in 353 pages, including the index, is a vast amount of information set down very much to the point and with ample evidence to constitute the volume of damning, irrefutable indictment of this hypocritical government that finds no acts of oppression too inhuman to inflict and no phase of its exploitation and violence not amenable to the noblest of explanations compatible with the largess of benefaction.

Canada is cited, with numerous statistics, as an example of peaceful economic penetration, and the fact is made clear that the United States investments in the Dominion are greatly in excess of those of Great Britain which led there until the World War. Capital introduced into a country which gives it the right to operate is shown by such cases as the Argentine Government permit to Swift and Company to build a dock at La Plata, and of the Cuban Government permit to the United Fruit Company legalizing the company's docks at Sama. But greatest of all is the Bolivian loan which is secured by the Republic's bank, its revenues and the property and revenues of certain Bolivian railroads. A fiscal commission exists to administer the provision of the contract, and the whole financial system with far-reaching political checks is in the hands of Wall Street bankers. Should it become necessary for these bankers to call on the State Department of the United States for assistance in gaining the discharge of the Bolivian obligation this government, by its diplomatic creed, is pledged to use all the power it commands in aid of the financiers.

The book shows how the revolution in Panama was instigated when the Columbian Congress adjourned without giving the United States the land wanted to build the Panama Canal. Panama, under the protection of American warships, and with the direction of the American State Department, was established as a republic, and a strip of land ten

miles wide was ceded to this government. It took fifteen days to accomplish this revolution from the time the warship commander was notified to prevent Columbian troops from landing in Panama until President Roosevelt recognized the minister of the new republic that American statecraft had created.

There are accounts of the Hawaiian Revolution (American manufactured) by which the islands were annexed; of the suppression of the Philippine Republic in the interests of American business and military strategy; of the many devious maneuvers by oil and other American interests in Mexico backed by this Government to the point of military occupation and diplomatic direction of the internal affairs of a supposedly sovereign power; of the Cuban occupation; of marines in Haiti, Santo Domingo, Nicaragua; of the purchase of the Virgin Islands and the oppression endured by the inhabitants under the "free flag of the United States."

In discussing the Dawes Plan the authors explain how the German people are bound over for an indefinite time to their victors who have exacted from generations still unborn economic tribute of a magnitude never before known in history. This is a case of strong powers inflicting heavy penalties on other strong states.

There is an explanation of the Open Door diplomacy by which American capitalists forced their way into Manchuria to set up a "sphere of influence," and then secretly negotiated with other foreign powers to shut the door again on those not yet in the exploiting ring.

The story of Admiral Chester in the Near East is most absorbing. Chester got concessions in the Mosul district (rich in oil and a large number of other resources) and these were later contested by England and France. Together nationals of these governments and of the United States have formed a company to exploit the Near Eastern oil fields. This is the Turkish Petroleum Company. It is interesting, to say the least, to read this remarkable statement issued from the United States Bureau of Naval Intelligence:

"We have extensive interests in the Near East, especially in tobacco and petroleum. Early in 1919 several American destroyers were ordered to Constantinople for duty in the Near East . . . The possible development of the economic resources of this port of the world were very carefully investigated by representatives of American commercial interests. These representatives were given every assistance by the Navy, transportation furnished them to various places, and all information of commercial activities obtained by the naval officers in their frequent trips across the Black Sea given them . . . The Navy not only assists our commercial firms to obtain business, but when business opportunities present themselves, American firms are notified and given full information on the subject. . . One destroyer is kept continually at Samsun, Turkey, to look after the American tobacco interests at that port. . . The American tobacco companies represented there depend practically entirely on the moral effect of having a man-of-war in port to have their tobacco released for shipment."

It will readily be seen how intimate is the connection between American business concerns seeking bargains, loot and expansion in foreign lands, chiefly "backward countries," and the State Department when the vigilant commanders of the Navy are employed not only to act in a police capacity as at Samsun, but as ferrets to find the quarry and give American business "full information on the subject." The American worker seeking an elusive job in the hours of industrial crisis tramps or rides box cars; the American investor questing economic prizes afar receives the proffered hospitality and protection of war vessels, and "full information."

This great work of Messrs. Nearing and Freeman floods with light the machinations of the American Empire, and in this light we are enabled to understand better the cryptic utterance of Admiral Fletcher, of Tampico infamy, that: "Navies are the insurance for the wealth of leisure classes invested abroad."

The authors have shown many presidents up in their true colors, among them being McKinley, Roosevelt, Taft, Wilson, Harding and our own matchless dumbbell, Calvin. Those who still think that the late Princeton prexy was an idealist should be sure to read about his deliberate lies in the interest of American oil kings, and of his very practical switching whenever the big bosses cracked the whip. Wilson often let his love for words lead him astray but he always ended these ruminations when the hard heads of American capitalism called a halt, and by reading this book one is certain to get quite a revealing view of the spell-binder who "kept us out of war"—like hell.

It may be well to bring these remarks to a close by giving you a Hughes quotation which appears in the volume. The former Secretary of State said: "Foreign policies are not built upon abstractions. They are the result of practical conceptions of national interest." This national interest is the interest of the financial monarchs, of predatory powers growing fat and arrogant on the surplus value extracted from wage slaves in America, and they use this surplus further to enslave our fellow workers across the seas. It is our business to organize industrially and put an end forever to this exploitation by putting a summary end to the wage system.

—Robert Grayson.

**DOLLAR DIPLOMACY, Scott Nearing and Joseph Freeman, B. W. Huebsch and the Viking Press, New York. Price, $2.50.**

**Uncle Sam Hangs Out Three Balls**

This is an excellent reference book. It has 421 big pages, packed with "the dope" on the doings of American financial imperialists. There are six pages of bibliography for anybody who wants to dig deeper into the misdeeds of Wall Street. There is an index of tables and lists, another of countries and geographical areas, another of corporations and persons. These are in addition to a very full and descriptive table of contents. When you want to find anything in this book, you can find it.

The material there is worth finding, too. It seems to have been gathered in the true scientific spirit of digging up and exposing the facts to public knowledge, without much regard for public propaganda, and without any extravagant claims to omniscience. Indeed the last sentence in the book is rather charmingly modest, in view of the real value of the revelations; it says: "The information contained in this volume, while not guaranteed, has been obtained from sources which are believed to be reliable and correct."

The first two chapters tell the story, largely with figures, of Uncle Sam's change from the status of a debtor to that of a world-wide creditor. Throughout practically the entire life of the nation, up to 1914, the U. S. A. borrowed money, principally from England. It lent a little to countries still less developed, but on the whole it borrowed—for it was establishing a great industrial plant.

The plant seems to have been pretty well finished and in operation just about the time the great war broke loose in Europe. Probably America would have ceased borrowing money anyway, even without a war, but the needs of European nations, particularly the needs of the allied countries, made the change quick, easy, and spectacular. In 1914 American capitalism was about three billion dollars in debt to Europe; during the war two billions of this was bought back, and in addition, a billion and a half of private loans were contracted in the U. S. A. by European capitalists or governments and considerably over seven billion dollars was raised by the U. S. government and lent to European governments, mostly in 1918. Remember the "Liberty Loans"? That is where the money went.

Very little of this has been paid back; interest is accumulating on some of it, and more and more has been borrowed since the war. The year 1924, a full decade after the fatal autumn of 1914, saw the biggest peace-time loans of all—$125 million to Japan, $110 million on the Dawes Plan to Germany, $100 million to France to save the franc (after a while the franc backslid from salvation again), $90 million to Canada (to the government), $50 million to the Belgian government, and $40 million to Holland. Since then, there have been other loans, but the figures on which Dunn's book is based do not go much beyond 1924. They do include the prophesy of the New York Times that the loans and investments abroad by the capitalists of the United States (including the government itself) will amount to twelve billion dollars by 1926. Whether the figure has been actually realized or not, we do not know, but probably it was a good guess.

A large section of the book, and the part most useful for reference, probably, consists of material arranged under the names of various countries, all victims of the great American Eagle.

We open at random, and turn up Equador. This is not a very large, nor a very important country; it lies in South America, and it is rather undeveloped, as compared with some other of the states in that continent. But the first sentence under the name catches out interest, it is symbolic of the whole recent process in international finance. "Our investments in Equador are now estimated at $30 million, or six times the figure set by Ingalls in 1920" (and of course there is a footnote giving the reference to Ingalls—there are lots of such footnotes; whoever cares to follow them back to their source will get a wide and liberal education in diplomacy, statistics, banking, foreign and domestic commerce, etc.)

Then, still under the heading, "Equador," we find the names of the particular Wall Street vultures who have begun to feed on the living body of Equador's proletariat. We see at once the Standard Oil Company functioning under two separate names; and two other oil companies of lesser importance in active operation likewise. We find that the South American Development Company mines gold "most of which is exported to this country." (Trust your Uncle Sammy for that!) The S. A. D. C. sent us about a million dollars' worth of gold in 1922. We find just which shipping lines and which railroads are owned by Americans. And proof is given that the electric light and power system, and the street railways of the capital of the nation are likewise owned by Americans. It would indeed be a fair deduction, for one having a knowledge of the ways of American street railways and power companies, to suspect that some of the people in the capital city of Equador are likewise owned by these same American capitalists!

So it goes with all the countries of the world. A very good book to look into when you suddenly find it stated in your Daily Liar that such and such a South American or Asiatic land has forsworn civilization, and is simply begging for stronghearted, hard-fisted American marines to come and keep it from "committing excesses."

The last half of the book is a collection of sample contracts, granting concessions, bankers' loans, and regulating government obligations. These contracts are all interesting, but too long to paraphrase here, or even to give the story of the swindle, the graft, the treason and corruption that accompanied their birth in most cases. Wall

Street seems to have adopted Walpole's most famous principle, "Every man has his price," and added thereto, "When the price is too high, start a revolution." Anyway, they have all the little states of the Caribbean nicely mortgaged with, in most cases, the U. S. government made a partner to the deal, and the Latin-American government told in pretty plain words just when to borrow, when to pay up and how, in what manner to revise its constitution, to avoid having the marines landed. The use of the U. S. Navy as collector of bad debts has extended to Europe, and even Belgium finds that when she borrows money from the bankers of Manhattan, she has to have the blessing of Manhattan's agents in the War, Navy and State Department Building at Washington. Of course when France borrows from Morgan, the U. S. Army is not mentioned. France has an army too.

Dunn's book considers very briefly the future of this sort of thing, but in this relation only, the question of the probable extent of future loans abroad. The possibility of the debtor nations (their capitalist classes) adopting that method of liquidation of debts which was once popular in the Mississippi valley region, by which hot lead is made to take the place of cold cash, is not adequately investigated. Indeed it probably lies outside the proper scope of such a work as this. As we have no room for it here either, except to point out again what all students of history know, which is that France, one of "our" biggest debtors, when she owed Germany a considerable sum of money toward the end of last century seriously debated the question as to whether it was cheaper on the whole to pay or to fight. If she had owed a little more, she would have fought. And Europe now owes the U. S. A. a tremendous sum. It is no accident that as France more and more realizes her obligations to America, anti-American propaganda occupies a greater place in the theatre, in the press, in the utterances of public officials in France.

—Vern Smith.

**AMERICAN FOREIGN INVESTMENTS, by Robert W. Dunn, published by B. W. Huebsch and The Viking Press. Price, $5.**

**A Study of Environment**

After a silence of a decade Theodore Dreiser has written a long novel—An American Tragedy. In two volumes of more than 800 pages he follows the progress of a life from childhood poverty to the electric chair. Clyde Griffiths is the son of street evangelists, poor, miserable, tenth-rate, unordained preachers who are ever urging their unfaltering faith in the God who will sustain them. The precocious boy, wiser than his brothers and sisters, wonders why the divine aid is always in the offing, when it is so desperately needed in the existence of the poverty-stricken family.

At little street meetings, all but deserted, passers-by often pause to wonder at the smudgy fire of faith in the ill-clad group and at the wail of belief the parents raise to meet the strident noises of the city. The boy is ashamed. This is frequently noted by the observers, and they pity him. He frees himself at the first chance from these humiliating, freakish prayer-meetings by going to work. He is first a drug clerk, then a bellboy, in Kansas City and Chicago.

By the time he is twenty he is in Lycurgus, New York, where his father's rich brother owns a large collar and shirt factory. Clyde, after months at a very menial place in the plant, is put at the head of a department, over a group of girls. One attracts him. She responds favorably, and a liaison ensues. Soon, however, he is taken up by a rich girl, introduced to her set, and he wants to forget the factory girl, Roberta. Rich Sondra is lovelier; she moves in a world that to the young man, used to poverty, is enchanting. All might have been arranged well enough, only Roberta becomes pregnant. Clyde tries to have an abortion performed, but he is very "green" and fails. Then he drifts, puts off deciding about the girl, while she is lonely and desperate because her reputation is at stake. She wants him to marry her. Her parents are impoverished farmers, and very religious.

Then he is tempted. He plans her death by drowning. She thinks they are on the way to a place to get married. It is summer, and they row out on a beautiful lake. It is very lonely. He fails at the last moment, losing his nerve. He can not kill her. She sees the strangeness of his eyes mirroring she knows not what terror. She rises to assist him. She stumbles. He strikes out, a camera in his hand. She is struck. Then they are in the water, and Roberta can not swim. Now that the accident is doing for her what he could not go through with, he leaves her to drown, and strikes out for the shore.

He is apprehended, convicted on circumstantial evidence, and the prosecutor fights to kill him because the prosecutor wants to become a judge at the fall elections. Clyde is condemned to die. His mother comes on from the West to try to save him. A frightful year passes in the Auburn death house. A youthful clergyman sympathizes with him, and becomes his friend. This minister and Clyde's mother go to see the governor, who refuses executive clemency.

Dreiser's description of that death house with all its horrors is the most damning denunciation of capital punishment that has ever been penned, and even Hugo's masterful "Last days of a condemned man" seems peurile by comparison. Dreiser tells of the score of condemned Chinamen,

Negroes, Jews, Irishmen, a cultured lawyer and Clyde, victim of circumstances that rode him to his doom. On a night before one of their number is to die the condemned can not eat—"Sometimes it is so bad that even the guards can not eat." At four in the morning curtains in front of the cell doors are drawn. Every victim is awake to die with the one who is pushed beyond the last door and forced into that chair of annihilation. The shuffle of feet follows the screening; then a clergyman's intonations from the psalms. Then the victim calling out, "Good-bye, boys, good luck." The same circuit that shocks life from the doomed also illumines the incandescent lights in the cells. When the lights suddenly dim, and after a minute of indescribable dread, dim again, and then again, someone calls out that all is over, and the "survivors" renew their deadly vigil, dying over and over again.

Clyde suffered in this way for about a year. Some are held for two years. The clergyman thought he had succeeded in converting Clyde, but the boy doesn't really know if he is guilty of murder. He can not repent because he wanted to have nice things, and to be somebody. Contrition is struggled for but he does not feel its comforting power. He is young and wants to live and to be happy. He does not want the credit of eternity, but the cash of here and now. And he must die. The minister thinks he has saved a soul, but when he sees the boy die he wishes that he had done something to save his life.

Toward the last Sondra writes a short note. It is on plain paper, typewritten and unsigned. Her social position and that of her family have been guarded throughout, she being referred to in the trial as Miss X. Clyde feels how futile was his daring plan of destruction. For Sondra he got into the fatal scrape. She was going to marry him. And now at the point of violent death just an unsigned note of sympathy. Already she probably was looking for another prospective, and this time socially respectable, husband. Clyde senses the unfathomable social gulf between the class into which he was born and her class.

Scattered though the many pages are word pictures of rarest beauty, exquisitely charming and compelling. The characters are not mannequins or caricatures. They are real people, living and breathing and loving and hating and idling and working. This vivid artistry more than makes up for the imperfections of construction that rouse the dogs of critical damnation, who with all their ability to parse and to analyze and to castigate are as so many small fry before this literary giant in the labor of creation.

Dreiser sees much, he looks into the hearts of men and women, and he seems sorry for their sorrows and weaknesses. With unforgettable strength and penetration he exposes the inhumanity, the shallowness and callousness, the injustice and barbarity of modern society. His strokes sear the brain with white hot shafts of truth—showing the individual to be destiny's plaything. That is the way he sees life, and as an artist so he represents it.

Beyond that he need not go. The social revolutionary must go beyond. He must be a physician wherever necessary, and a wrecker and builder when the hour of his class strikes, when the wage slaves advance a united cause to upset the regime of plunder. Among other duties and privileges of the new society of industrial freedom shall be that of abolishing the fearful taking of life by the social group. We shall tear down the walls and bars of prisons, for as today society is the real criminal, so on that glorious tomorrow, the cause of crime vanished, dungeons shall have no purpose of class oppression and social brutality to serve.

—Harry Silverson.

## WEAR YOU WELL?

At times the **welfare** of the people is a very thin shell "affair"—**shell fare**—much resembling cell fare.

To put it mildly, it is **fell fare** compared to the succulent **jell-fare** of the parasites. And I fear, **lest the slaves organize,** that their **welfare** means **knell-fare**—for, even now, the dum**best** of critics call it hell-fare. Fare thee well.

—T-b. S.

P. S.—It gets my goat when people who can't tell **fare** from a **sows-ear** yell "fair," leaving the impression that here and there slaves dwell fair, or on swell fare—just as if they were getting something that's good enough for 'em.

**Nothing but the best is bad!**

## OREMUS

Editor Omaha Daily News:

I promised the heavenly Father I would write to the Omaha Daily News if a certain prayer was answered. It was, and many more. I am praying for something that will mean much happiness to me. Will others pray for me?—(Clipped from the eminent Omaha Daily News).

## LAW REBUKES PRACTICAL CHRISTIAN

Saying "Here I lay me," a migratory slave, minus gainful occupation, went to sleep in a lodging house bed for which he had paid his last six bits. In the morning, looking for inspiration, being a religious person, he opened his pocket Bible. At the first turn he read the instruction, "Take up thy bed and walk!" As he had no more bed than a jackrabbit he rolled up the landlady's blankets and started to walk. John Law nabbed him. Taken before hizzoner the migratory explained that he had merely obeyed biblical instructions. The judge couldn't see it that way and gave him thirty days.

## MALE HELP

WANTED: Construction superintendent with a capacity of 1,000 barrels a day.

## THE WIPE

A famous London comedian who need not be named was invited to a peer's house during the festive season. After dinner he was reciting a few of his best yarns, and in the midst of one of the choicest was interrupted by a guest, who said to him: "Excuse me, but your handkerchief is hanging half out of your pocket."

"Thank you very much," said the actor gravely, as he adjusted it. "You know the company so much better than I."

## HIS DAD WAS A UNION MAN

Teacher: "Johnny, if four men are working 11 hours a day—"

Johnny: "Hold on, ma'am. Nix on them non-union problems, please."

### IT'S ONLY TOO TRUE

Writer: I'm trying to write an article on what the miners got out of the coal strike, but I can't think of enough to fill half a page.

Adviser: Well, why don't you write on what they didn't get? That ought to fill a book.

### SOUNDED THAT WAY

Anthony: "Where's Cleopatra tonight?"
Maid: "Oh, sir, she's at home with tonsilitis."
Anthony: "Another of those Greeks, I suppose!"

# Preamble of the Industrial Workers of the World

¶ The working class and the employing class have nothing in common. There can be no peace so long as hunger and want are found among millions of working people and the few, who make up the employing class, have all the good things of life.

¶ Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system.

¶ We find that the centering of the management of industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers be pitted against another set of workers in the same industry, thereby helping defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers.

¶ These conditions can be changed and the interest of the working class upheld by an organization formed in such a way that all its members in any one industry, or in all industries if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

¶ Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."

¶ It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown. By organizing industrially we are forming the structure of the new society within the shell of the old.

STRIKE! -- *A May-Day Sport* -- By Jerger

# TWO POEMS FOR WORKERS

By HENRY GEORGE WEISS

## MAY DAY

This day is holy, dedicate
To Freedom and to Freedom's sons
Who marched against the tyrant state
And dared the anger of its guns.

They sleep in many lands apart,
The martyred dead who could not sleep
In life, because the bleeding heart
Of all the nations made them weep.

Ah, terrible their anger was,
And pitiful the love they bore;
They gave their lives up to the Cause
And perished in the classes' war.

Now pregnant in their dust they speak
To millions marching to the fray,—
No longer humble, blind, and meek,—
Upon the Workers' First of May!

## FREEDOM

You are not free! They lie who tell you so!
Do you not beg for work to buy your bread?
Do freemen have to beg? My brothers, no!
Theirs is the right to work and go full fed.
When human beings walk with humble tread
Before the one who owns the job they crave,
When crying babes go supperless to bed,
Their freedom is the freedom of the slave!

You are not free until yourself you own
The tools and mills on which your lives depend:
Give back into their teeth the mocking lie.
Unite as one! and sweep them overthrown
From palaces of gold, unto the end
That **they** may work and eat, or loaf and die!

# Paving, Slaving and Saving

By J. A. MacDONALD

Gangway For Labor!

"LABOR is holy." It is necessary to be holy to go to heaven. Consequently, dearly beloved, the greatest sin that the workers can commit is not to organize to divide the work with the bosses, as if the workers do all the work themselves, they automatically condemn their bosses to go to hell. A whole retinue of evils can arise from a single evil cause. If the workers commit the sin of not dividing the work with their bosses, hell will be unpaved with good intentions, for what worker does not know that the bosses have no good intentions.

Funny things will happen when one tickles a typewriter under the chin, things that are utterly unexpected, as unexpected in fact as if it were a typist whose chin was tickled. For instance here I was starting to write an article for the Industrial Pioneer, and instead I land right in the middle of a theologic digression, and the fact that "Hell is paved with good intentions." The letter from the religious enthusiast, who has learned that I am in Timmins, Ontario, came with the letter from the editor, and contained this quotation. God and Gahan both wanting me to do something for them was very encouraging, although it ill conformed with my natural inertia; some who are ill-minded might even call it laziness. I leave it to the reader to decide whether the effort of our religious friend to bring the lost sheep—in this case a very hard headed old ram—back into the fold is promising success, from this article. I would save the reader that trouble, only unlike some writers I do not write the last portions of my articles first. It might be a good method, except that I never know where an article is going when I start it.

But to get back. "Hell is paved with good intentions." The quotation is intriguing, because I do not know what it means. Can it mean that good intentions are not necessary to get to heaven? or that hell, having to be paved with good intentions, the workers will have to organize for the job in the next world if they have not the sense to organize

THE SLAVES WILL LIVE LIKE THIS—

in this? Quotations such as that about the early worm that got eaten because it did not have the good sense to sleep late, and "Hell is paved with good intentions" always did worry me.

But if hell is paved with good intentions, so also are the workshops and the workhouses of this world paved with the good intentions of workers to cease working, to become independent, even to have other workers creating wealth for them to enjoy. If the hopes of the workers were possible of achievement, this would be an altogether delightful world, with everyone enjoying the fruits of labor, and no one doing any work. There is a peculiar thing about the working class: every worker is just a little more brainy, a little more cunning, a little more conniving than any of the others, and he is sure, by virtue of these manifold abilities, that he is going to break out of the wall of enforced labor that surrounds him and make a jail delivery into the abundant pasturage of the capitalist class.

And this is reasonable, for hope springs eternal in the human breast, or is inoculated by the magazines and newspapers, the Broad Roads to Success and the prospectuses of mail order schools. I myself would long ago have written the Great American Novel except for missing the "School of Novel Writing," twenty dollars and twenty lessons.

### No Lack of Hopes

Workers may lack soap or soup, but they seldom lack hope, abundant hopes. They not only have hope thrust upon them that they will all be bosses by and by, through the exercise of thrift in the present world, but hopes of future glory, where they will march with the spiked shoes of the logger or the brogans of the ditch digger on streets of gold, with boiling up cans at every corner, and fine jungles down by the railroad tracks, and play Jew's harps if they are Semites, accordions if they are Scandinavians, golden harps if they are Irish, but not bagpipes if they are Scotch—even heaven would be forced to draw the line on noise somewhere!

There are, for example, the hope and good intentions of that worker who ten years ago was going to be a boss by saving his money, practicing rigid economy, avoiding wine, women and song. He has carefully avoided all these, for by and large the worker is more moral than his boss. Everyone knows this, but not so many are aware that the reason for it is that all the vices that are pleasant enough to be worth practicing are too expensive for workers. And for him virtue has its own reward, for he is now in the army of the unemployed, but his hopes are not blasted, they are as iridescent as ever. He is going to get a good job this Summer.

### Alas, Poor Gyppo

Then there are the hopes and good intentions of the gyppo. Wise in his day and generation, he knew that the way to step to affluence and ease was along the trail of hard work and long hours on a contract to blast out the right of way or buck 'em by the thousand. Then he was going into business, hitch his wagon to a star, and so on.

He came into town with the firm intention of putting his money into the bank until the business opportunity came along. Alas, the banks were closed. A habit banks have of closing at three, and another habit blind pigs have of keeping open all night have kept many a gyppo from being now a multimillionnaire. An outraged body and a brain missing the blood that was left on the logs, or in the rock cut, cries for just one drink. I do not blame him for wanting one drink. I approve of a gyppo having all the drinks he wants and then two more cans. He is now feeling good, almost human again, and he is struck anew with his own acumen, his confidence revives as the bottom of the fourth bot—— I mean can—is reached. Having discovered that prohibition is not a failure for the self-evident reason that it does not prohibit, he marches to the game with the step of a conqueror. There is a vacant chair let by another gyppo who had just gone out of business, and he is now in

—UNTIL THEY DO THIS

the game with both feet and a series of four flushes dealt from the bottom of the deck.

"A fool and his money are soon parted," does not cover this situation. This man is a wise guy, not a darn-fool worker, but a contractor if you please. He did not know that he had been cold decked. How could he be expected to know when he had been playing a similar game with a boss for months, with the exception of that the boss used a contract where the tin horn used cards? Our friend has been paving hell with good intentions, and I suppose he is still doing it.

Then there was that other worker who was going to have a home of his own, a wife and children. That's the life! True love never runs smooth, for if it does run smooth it ends up in the grand slam of marriage. But for him it did not. His girl also had hopes. She had read so many stories of the beautiful young girls who had married money —and money even if it is bald-headed, grey-haired and decrepit, is still money. She waited for the grand adventure in which a woman sells her body for a home and comforts. In spite of the religious tracts which make vice all too easy and alluring, the market was flooded, and she is still a virtuous kitchen slavie, and he is as poor as ever in all save good intentions.

### The Separation of Labor

Examples could be multiplied of the various methods in which the migratory workers pave the hell of modern industry with their good intentions and abundant hopes. What need here to paint the life of the ten per cent who are unemployed, of the dog's life of the millions of casuals of industry, without homes except jungles, flop houses and box cars, without anything to tie them to life except the occasional job and hope? The migratory workers are not all of the working class, nor even the greater part of it.

Migratory workers see more of their own conditions than they do of those peculiar to others of their fellow workers. They are naturally most interested in the methods by which the bosses separate them from the job, the brakemen from their box cars, the bulls from their jungles, the doughnut factories from their dimes and the missions from their self respect if they will permit it.

There are workers who own their own homes, or the homes of someone else, either in conjunction with a landlord or a mortgage corporation, or outright.

There are workers who do marry. There are far more married workers than there are migratory workers. I do not say all can afford to marry who do. Heroes and heroines paving hell with good intentions are not confined to the battle fields, where the heroes fight for markets, and the heroines nurse them back to health so they will be in good condition to be shot to pieces. To some this proceeding may seem a waste of effort, but I would remind them that there are technical details in the manufacture of certain kinds of fertilizer that seem foolish unless one is a technician. There are also heroes and heroines of industry who get married. Capitalism is not so foolish a system as to kill itself off in one generation for the lack of slaves for the next. Love, good intentions and hopes laugh at the meagerness of pay envelopes although the pay envelope gets the last laugh. Love is blind as a blind pig, but the darn thing unfortunately has a stomach—but this is one of the lessons not of love but of marriage. Marriages are made in heaven to supply paving for hell. The bosses supply the sulphur for the love match, and nature supplies the future crop of victims.

### Gold! Gold!! Gold!!!

In this theological discussion of the various ramifications of the paving industry, we next come to the worker who saves money. Up to now we have been dealing with old propaganda in new form, but from now on we are forced by the logic of events into a field not often considered by radicals.

I will admit that for a worker to be able to save money is against all the current laws of economics, having at their base the formula that Labor produces all wealth, and that as a result all wealth by right belongs to those who do not produce, which is on the face of it a paradoxical statement until one learns who makes the current definitions of right and wrong. But nevertheless, I insist that workers sometimes do save money.

With the worker having on an average to produce six dollars in wealth for each dollar he receives in wages, most of the saving is of course done by the bosses. But, through a happy series of coincidences, workers sometimes do save money. Radicals may forget this, but bosses do not. A worker who saves money is in one way a menace to industry, because he would not work if he got too far ahead. A worker who does not work is unprofitable, except as one robs him of the little of the product of his labor which an industrial master has overlooked. In any event workers do save money, or the paying industry would not be so interesting a study as it is.

There is in Northern Ontario at the present time the greatest mining boom in its history. The rush to the Porcupine mining territory in which this article is written, is eclipsed. The papers of the continent are filled with it.

Gold has been found at Red Lake. Gold, for which men endure the heat of the deserts, the biting cold of the Arctic. Gold, for which men enter the infernos of the boiler rooms, or face the white and black damp of the coal mine, or blast in the underground stopes beneath the wildernesses.

Gold has been found in Red Lake. Gold, for which women are often forced to sell their virtue, a lesser commodity under our system. Gold for which men sacrifice their wives and lose the laughter of their children. Gold, the lure of a siren

for which men gamble health, limb, life everywhere.

Gold has been found at Red Lake. Gold that is the heaven of ease, bought with the hells of pain. Gold that is the emblem of our civilization. Gold that is the open sesame of all that we are and crave.

Gold was found at Red Lake. Gold that makes even the preacher of another world, also a world of gold, pray with a closed eye towards heaven and an open one focused on the contribution box. Gold for which the prostitute plies her trade and the banker his business. Gold for which men in the jungles and the heights of life alike lie and steal and kill.

Gold was found at Red Lake. Gold for which the politician has been known to sell his country, and for which the writers sell their souls. Gold, the noble metal—blood red with the blood of the workers of every country and of every age. Gold, the red Moloch on whose altar all that is noble and beautiful is crushed and crucified, reviled and defiled was found at Red Lake.

There is in the word itself an insane frenzy of all the baser motives of mankind. The streets of heaven are made of it, and so also as all the history of our class abundantly proves are the pavements of hell.

All the red lust of avarice were let loose. All the harpy things that eat at the heart of labor driving it to death awoke to a wilder voraciousness. Thousands went gold mad.

But not when the gold was found. It was then a carefully guarded secret. A few capitalists knew it, including the owners of the Hollinger, the MacIntyre, the Dome and other mines in this district which last year took over twenty-five million from the mines in the Timmins area. These staked on the findings of their prospectors, the reports of their experts, the suggestions of their geologists. The capitalists had theirs. Everything was now ready for the boom.

The big mining men sent their men by air ship to do assessment work. Then at the door of the worker who had saved money, Opportunity, face rouged, with a capitalist paper in her hand, knocked, and kept knocking. The man who had saved money bought his dog sled, his dogs, his supplies, paid the hold-up profit demanded, and mushed to Red Lake, as others of his kind had stormed the Yukon, trailed through South Africa, prospected Australia, braved the mountains, the deserts and the snows in other epics of gold. They mushed into Red Lake with hope and the blizzards and the lust for gold whipping their backs into superhuman effort. Arriving in Red Lake, he could take up a claim for a consideration, but not within twenty miles of where the gold was found. He could not have the reports of experts, the findings of geologists. But he had opportunity. The opportunity to look at boundless reaches of snow, and to guess by the look of it where the gold lay underneath.

When the snow melts, he will probably discover that he owns development rights on a rock quarry that would be worth a fortune on the outskirts of Chicago, but unfortunately it is instead on the outskirts of Hudson Bay. Another material for the worker who has saved money to mix with good intentions as paving.

In the Spring the man who had been able to save money will be broke. Capitalism will have again functioned in accord with its mission of concentrating wealth into the hands of a few. The capitalist will not have to pay transportation for his workers. They will be there on the spot in such numbers that the wages will be delightfully low for the bosses.

### Making a Fortune at Red Lake Without Going There

But the worker who has saved money will not need to go to Red Lake to make a fortune. Fortunes can also be made by buying Red Lake mining stocks (see prospectus—any of them). If no development work is done by the particular company one picks to make his fortune, the stock will be worthless, except for the promoters who are not waiting for such things as developments to collect what they consider to be their just due. But if the development work is done, and gold in far more than paying quantities is discovered, then of course the dream will have become true for the worker who saved his money and chose this way to wealth.

Some people are so credulous. Of course he will not. In spite of the best efforts of the officials and promoters of the company, it is highly probable that the story will become current that the property is valueless. To give this greater strength the mine will probably be closed down. The small investor will learn he has to put up more money or his stock will be a complete loss. The small investor now knows that he has been stung. Pay more money for a dead horse? The company is squeezed down to the few on the inside, **and the "inside" is never the "ground floor."** Then the mine is reopened, and to the surprise of everyone it is discovered that the mine is worth millions. Who has not met the man who missed being a multi-millionnaire by a hair's breadth? That is quite often the man who had saved a little money working and who thought he was investing in a mine when he was merely furnishing hopes and good intentions for a job of hell paving.

But there are occasional real opportunities for workers who have saved money to land on both feet in the mining industry. Sometimes I. W. W. members deny this, but I myself know a man who was a worker and is now the president of a mining company. The last time I met him I could see a look of disdain in his eye, because I had not risen in the world as he has. His name is on every share of the stock that is issued. He is the "whole

cheese" as he himself would once have expressed it. But when the government finds out the kind of mining company it is, the president will go to jail while the others will divide the money.

Workers save money, at least a few of them do, or how could real estate corporations pay as high as one hundred per cent dividends?

From this I do not wish it understood that I despise or hate real estate agents. I admire them. I like efficiency, ability, proficiency. And in spite of all arguments for politicians, writers of thrift and uplift magazines—who tell the workers how they can lift themselves up by their boot straps with a boss sitting on their backs—editorial writers and newspaper reporters, I still contend that a lie as it is handled by a real estate agent who knows his business, who is a master of all the intricacies of his art, is the supreme masterpiece of prevarication.

My admiration for real estate men is not a new thing; it is seasoned with years of experience. Watching them at work is a liberal education, which the mere inability to buy has never been able to deny me. I vividly remember some of these experiences on which my admiration for real estate men is based.

I had six dollars and thirty-two cents, my wife did not know I had yet (perfectly safe, as she never reads my articles anyway). With all that money I decided to look at some Vancouver real estate. The trip in the auto was not important, except that it was on that trip I realized that, with my lack of command of English, nature never intended me to be a speaker or writer.

Entirely surrounded by oratory we landed at a lot on the side of a hill on Vancouver Heights. There was a seven-foot stump on the lot, with its gigantic roots lovingly embracing the heart of British Columbia, just a nice year's work for an expert miner. The real estate man never noticed that stump. Before us was Vancouver Harbor in all its beauty, shining forth in spite of all man's efforts to disfigure it. He made the most of that harbor, and then was in the graciousness of his heart willing to let me have Vancouver Harbor and that lot for a thousand dollars. He did not own Vancouver Harbor but this was a mere quibble, for had he not sold it a thousand times before? He did not mention either that when he had sold the next lot, the view for which he was charging at least six hundred dollars would be confined to seeing the lady next door hanging out the family washing.

He told me it was a good "buy." I answered in the most casual and meaningless way that it was a good "sell," indeed, because normally I consider it very poor taste to correct anyone's grammar, this including some of my own. I told him that I would consider it, but unfortunately there was no time for consideration as he was going to sell it to another client that night.

But a worker who had saved money would see that it was a good buy, a view like that. He would build castles in the air there, and people them with wife and children. He would pay four hundred down and the rest he would promise to pay in three years and interest at eight per cent. With the possibilities of illness in the family, and the insecurity of employment at the end of three years the real estate man would again own the lot, and five or six hundred that had been paid on it. Then he would have his web spread for the next worker who had saved money, and for whom hope could be stretched into a golden rainbow with one end resting on that stump and the other end over Vancouver Harbor.

Here is something it is worth while to remember. It is not so profitable to sell real estate to a capitalist as it is to sell it to a worker who has saved a little money. The capitalist will not pay so much for it, and then when one has sold it to a capitalist it remains sold. On the other hand by selling to a worker one gets more than the price each time in first payment, and then gets eight per cent for three years, and then one can sell it again to

CAPITAL AND LABOR

another worker. There are almost infinite possibilities for workers to pave hell with merely one lot.

**Another Graveyard of Hopes**

Last year I was in Fort George, British Columbia, which is a town with not more than two thousand souls as the saying is although giving them all credit for souls is a poetic lapse into the ridiculous, made necessary by the absurdity of giving souls to some of the modern writers earlier in this article. But this at least is true, that Fort George was the graveyard of the hopes of at least ten thousand workers who had saved money, and who were to emancipate themselves from slavery through real estate there.

A man who was radically inclined, a reformed preacher by the way, who is now a reader of the Pioneer, and owns a taxi stand, brought me around to show me the Vision of Fort George of 1912, in the cold, grey light of 1925. We passed beside mile after mile of those lot stakes that mark these graves of dead ambitions, dead hopes, and dead good intentions. And still there were other vistas of other grave plots, for Fort George was as large as Chicago in territory in 1912 and '13. It was and is a New York of stakes with a puny Main Street at its center.

Then he showed me Birmingham, the industrial section of Fort George, where the many thousands of workers in the varied industries, in the factories, shops and boiler works were to supply the opulent wealth for the metropolis on paper. It was not new to me, merely a new angle, as in 1912, I had been doing newspaper work and had visioned the wonders of Birmingham through the glowing adjectives of real estate advertisers, and had with them seen the flames from blast furnaces fracture the night, and the chang of machines drowning the stars above Fort George. But now I saw the real Birmingham across the river, the naked bluffs ashamed of their nakedness, and the lots that had cost thousands of dollars with the stakes that marked them darkened until they were lost among the scrub spruce. The only industry there that we could find after painstaking investigation, was the industry of a cow that was trying to make a living under not too favorable circumstances. I had forty-two dollars, and as the fare to Vancouver was only twenty-nine, I was sorely tempted to buy the industrial city of Birmingham with the balance.

My religious friend who thinks that God is sending messages for me through him, that he has to work through intermediaries like the walker telling the straw boss so the straw boss can tell the worker—the oldest of the superstitions—tells me to be careful not to pave hell with my good intentions.

**Organization: The Only Game We Can Win**

I will not, brother. I know hopes are rather deceptive, and not very nourishing; that good intentions may be fine in their place, if one wants to pave hell for instance, but that there is only one game that the workers can play to win and that is the game of organization. Through it they can make this world not the hell of robbery and loot and outrage that it is, but a heaven of service, beauty, and progress.

I also have my religion, and a part of it is that the most contemptible crime a worker can commit is to steal from himself, his wife and children of the product of his labor to give to idlers. I also, in my weak way, would be an apostle of the Future in the mad welter of avarice, and extortion, in these last days of a dying and doomed social system that must also be the doom of humanity unless the workers organize for life in the midst of the chaos that darkens all around. I also know that Saint Peter, grand old fighter that he is described, could have but the stormiest of contempt for workers who tried to cringe and crawl into heaven after cringing and crawling before the robbers and looters of the earth. As slaves who are willing to be slaves are the lowest of created things, so is nature's greatest work a slave forced erect by the determination to be free, with the confidence of a solidarity wider than any other and the song of progress and the future on his lips, the noblest and most God-like thing that nature has produced. He has already achieved immortality, because he has already become a part of the future. The religion of any man who would live in this world, see its crimes against the children of the mills, its clubbing of women, its robbery of the useful and the creative, and do or say nothing to expose those evils and to cure them, and then try to sneak into heaven is too contemptible and detestable a religion for me.

The paving of hell with good intentions is an unorganized industry. It's a scab job. It needs the I. W. W. to put a stop to it.

# THE MAY-DAY SPIRIT

By *JERGER*

# Where are the Radicals of Yesterday?

By ROBERT WHITAKER
(Editor, THE OPEN FORUM)

TWENTY-FIVE years ago the Socialist Party in the United States of America was just getting under way effectively, and had all the vigor and hopefulness of youth. Many comrades were confident that Eugene V. Debs would be elected President of the United States, possibly by 1912, quite certainly not later than 1916. Even more conservative comrades who smiled at this superficial optimism, and in the light of history read more soberly the charts of prophecy, were more than half persuaded that the social millennium was at hand. Did not the vote for Debs mount from one election to another in a way to encourage the expectation that political socialism might speedily become a most influential factor in our state and national legislatures? And beyond the political field came the yet more promising movement of the workers under the leadership of the Industrial Workers Of The World, and kindred organizations, toward the realization of economic solidarity. Even the farmers of the Northwest created an agricultural organization which seemed likely to carry to a success far beyond anything the Populists or Greenbackers had previously realized the revolt of the American farmer against capitalist exploitation. There were many clouds on our American horizon which gave promise then of covering the heavens and breaking in such out-pourings of popular wrath and democratic action as would sweep away the money oligarchy of America without the the necessity of any such violent collisions of power as accompanied the passing of the slave oligarchy in the period of our great Civil War.

It is true that in the midst of this general optimism on the part of progressives generally Jack London published his pessimistic story of **"The Iron Heel."** We read it with that interest and admiration which all of his work elicited then among the radicals of America, who counted London's popular success in the fields of literature, maintained as it was side by side with outspoken devotion on his part to the cause of the social revolution, as one of the encouraging signs that the people were rapidly coming our way. Even the bourgeoisie did not refuse to read him, and his "People Of The Abyss," and the shorter but more challenging, "What Life Means To Me", in which he poured out his contempt on the comfortable classes and openly ranged himself with the world's proletariat, rejoiced our hearts with the persuasion that the world's workers were at last entering into their own. The sensational success of Upton Sinclair's famous expose of the Chicago stock yards in "The Jungle," and the enormous subscription list of **The Appeal To Reason** were added reasons for taking London's pessimistic anticipations of what the American money oligarchy was likely to do as but the indulgence on his part of his love of the dramatic and the horrific. We took his warning kindly enough, but with no serious anticipation that his imaginations were ever likely to become realities, but were the justifiable exaggerations of a novelist's dream.

That which has happened to us is worse in a way than that which London portrayed. At least his workers were alive, and their defeat was not in themselves but in the overwhelming physical forces which were utilized against them.

### People Indifferent to Class War Prisoners

Nothing of the kind has happened, because nothing of that sort has been necessary. There were plenty of indications in the quarter century before London wrote that the American money lords were willing enough to turn upon the workers with ruthless fury and wipe them out wholesale, as the story of Homestead will recall. Such willingness toward unmitigated violence in their own interests is obvious enough on the part of the big capitalists today. But they have had no occasion to call upon their resources for destruction of the working class. The workers, especially since the days of the world war, have fallen into a mass apathy, and even an active self-complacency of acquiescence in the capitalist regime which is worth more to the American plunderbund than would be an army of a million men enlisted on their behalf if the workers as a whole were awake to their own interests and banded together in working class solidarity.

Mooney and Billings are still in jail, and there is no serious effort on the part of the American workers to get them out today. In California, not only have these two unjustly imprisoned champions of labor lost their fight to arouse the people on their behalf, but scores of their fellow industrial agitators lie unheeded in San Quentin and Folsom, and the popular indifference concerning their fate is as impenetrable as the walls of these capitalist

bastiles themselves. A flurry of interest rises for a moment when a cultured and highly connected woman like Anita Whitney is threatened with actual incarceration at San Quentin, but the flurry is as inconsequential as a desert wind, and dies down to the deadness of utter drought again as soon as the case is referred back to the interminable dilly dallying of the courts. The public watches the performance with about as much interest as a village store-keeper exhibits in the play of a cat with a mouse.

Meanwhile the Progressive bloc in the American Congress is a joke, the Democrats join forces with the Republican looters and accept practically the whole program of Wall Street as dictated to the party in power as if they were themselves the primary political beneficiaries of it. Calvin Coolidge, the obviously most inconsequential figure the presidency has known in all its history and the most openly subservient instrument of the capitalist class who has served in that conspicuous place since American capitalism overthrew the slaveocracy of the South, is more popular than any American president has ever been in his own day for at least a hundred years, and the sweep of American reaction is such that Fundamentalism in the churches, and the triumph of bootlegging in the community at large are the items of chief popular interest just now. There is vastly more interest on the part of the workers in the United States in free beer than there is in free thought, and the one time leaders of radical agitation in America are now engaged in promoting health fads, various and sundry money-making concessions, lecturing for or against prohibition of the liquor traffic, or making good their own economic security out of the widespread "prosperity" which we have achieved for the hour because of our position as the credit-giving nation of the world, than they are in the now utterly disheartening endeavor to awaken the forces of democracy here, and consolidate labor on its own behalf.

If I have drawn the picture darkly, nothing that I have said is as discouraging as the facts themselves. Only the statement as I have made it might seem to have in it a note of cynicism and despair of human nature, as if the facts were the fault of human beings who have fallen down in their enthusiasms of years ago, and have abandoned their convictions out of sheer human infidelity to a great cause and the opportunities of the hour. I want to avoid any such conclusion from the frank setting forth of the situation which I have made.

There is nothing in the American situation in particular, or the world situation as a whole which calls for any despair concerning man, or any cynicism toward the Great Cause. We simply have been slow to get away from the notion that our job was merely a matter of whooping it up sufficiently for an ideal, and thereby putting it over. We have all been preachers too much, and scientists too little. And so we are yet. Even our scientists, so far as we commonly go in the use of that term, are mere chatterers of childish idealism when it comes to the social question. Their present-day fads on lines of the new Malthusianism, drawn properly enough from an English preacher who wrote at the end of the Eighteenth Century, the sort of stuff that Wiggam gets off at Five Hundred Dollars a lecture, and Stoddard makes into Harold Bell Wright ethnological fiction, has a tremendous vogue just now because American "scholarship" is eager for anything that will look like solving the economic issue without making a really economic approach to it. Real science, as applied to the central human problem, that of managing our material affairs in the common interest, is hardly existent in America today. But the preachments have broken down, except this pseudo-science which I have pilloried above, and as for the rest it is mainly a matter of getting a living for a few people who can make more money preaching "new psychology," "new thought," or some other newly phrased idealism than they can make in the industrial world.

### "Out of Chaos New Worlds Are Born"

The radicals of yesterday were most of them but preachers, after all. I use the term "preachers" here in no restricted sense, as applying to the "men of the cloth" particularly, nor am I thinking of the fact that many of the prominent platform men of the American Socialist movement were men who had been pulpiteers before they became soap-boxers. The rationalists are quite as much preachers as are the churchmen, inasmuch as they also concern themselves mainly with words and ideas and not with actual economic organization and evolution. The more virulent persecution directed against the I. W. W. has been due in large part to the fact that preaching was less prominent with them, and "action" more emphasized.

The present slump is much more a slump in preaching than it is a backset in economic evolution toward a different world order. There has been really no backset, but an enormous advance. Capitalism could not be stopped by a lot of pretty talk, whether it was in terms of German "democracy," or in Fabian English, or in political Americanism. The effort to slow up appreciably the development of world capitalism by either oratory or balloting was bound to be brushed aside. Doubtless it has its evolutionary place, and the work of yesterday, even if it was mainly immediately futile will probably prove to have contributed something to the building up of those understandings which are yet to prevail. But on the whole understanding must wait on the movement of life itself. And what we are witnessing now is a movement of the life of capitalism such

as laughs to scorn those who would just talk against it, or ruthlessly suppresses them and makes the indulgence in radical oratory too expensive for anybody but a real revolutionist, with whom oratory is likely to be at a discount anyway. Yet is this increasing momentum of world capitalism the very thing which is hastening it to its destruction, and bringing to pass a world situation in which direct action by the workers on a world scale cannot be long deferred. We are in the trough of the waves just now, descending from the top crest of idealistic radicalism, which was broken and shattered by the world war and its aftermath, and not yet far up on the coming wave of actual class collision in which the most conservative of the workers are going to be forced to save themselves by crashing against world capitalism. And when that crash comes there will be found leaders again, who will talk no longer in terms of political idealism but will deal with the situation as organizers and administrators of the economic power of the working class. But mark you, this is not a day of retreat, it is a day of tremendous and irresistible advance toward the realization of the world empire of labor. The talkers have fallen away. But the workers are beginning to emerge in a united front that will encompass the globe.

# THE WORLD WILL

By COVINGTON AMI

**Hear me, ye who sit in purple splendor 'round old Mammon's throne!**
**Hear me, all ye sons of Moloch, ye who make the Race to mourn!**
**Hear me, too, ye pand'ring statesmen guarding where their black flag waves!**
**Hear me, too, ye tinseled Marshals heading their embattled slaves!**
**Hear me, all ye hireling teachers, all ye priesthoods who have sold**
**Truth, the Holy Spirit, and have turned Love's glowing words to gold!**
**Hear me, all ye House of Mammon, all who bend at Moloch's shrine,**
**We, the Workers, soon are coming in a fury all divine!**

**Heart-aflame and by love driven, nation-parted now no more,**
**We are gathering for the battle that the Seers foretold of yore;**
**From all peoples we are coming, from the field, mine, wood and town,**
**And the fight shall not be ended till the Servile State goes down:**
**There shall be, when we have finished, for all children home and hearth,**
**And the songs of happy mothers shall be heard throughout the Earth;**
**There shall be no fallen women, there shall be no broken men,**
**There shall be no homeless outcasts on the broad Earth's bosom then.**

**All the steel that now surrounds you, naked-handed we shall break;**
**All the laws that now protect you, these as nothing we shall make;**
**All the words of your false prophets unto you shall be as dust,**
**And the spider seal the temples where your stricken idols rust;**
**All your gilded, glittering savagery our hands shall sweep away,**
**And the maidens ye have ruined shall demand of you their pay;**
**All your monstrous art shall perish from the Earth's insulted plain,**
**All your reeking hovel cities shall go back to hell again!**

**There shall be no King above us, there shall be no Slave below,**
**There, in Labor's grand Republic, only freedom we shall know!**
**We are gathering, we are coming, far and wide the World around,**
**Truth the north star of our legions, all the Earth our battleground!**
**Rising, coming in love-anger, moving forward by its light,**
**Coming, coming hungry-hearted for the last, decisive fight!**
**Coming, coming from our thralldom, coming victors over all! —**
**We have heard the World Will speaking!—We have heard the Race Soul call!**

# WHAT LIFE MEANS TO A WORKER

## The Story of the Past Winter Semester at the Work Peoples' College

By CLIFFORD B. ELLIS
Instructor at
Work Peoples' College

THEY had seen much in life. They wanted to know its meaning—to interpret it in terms of their own experience. They were a motley gathering. There were over seventy men and a few women—all of the working class. Some were sailors who had sailed the seven seas and been in half the ports of the earth. Some came from the mines of Montana and Wyoming. There were sheepherders from the sage-plains of the Far West. There were craftsmen of various trades. Saskatchewan and Alberta sent their contingent and there were boys who had followed the cycle of the harvest from Texas to the Dakotas, and who knew every yard bull and hard-boiled "push" from Denver Bob and Ole of Ashland to Maricopa Slim of Arizona and Jimmy Under-the-belt of Minnesota. One had beaten his way in the dead of winter from far Saskatoon, with his tuition money concealed upon his person. There was just enough money to make it. There was nothing left over for railroad fare. It was below zero. Much of the way he had to ride outside, exposed to the icy blasts of an almost arctic winter. But he was there. Such is the thirst for education among the workers.

The bell tinkled in the long hall. From the dormitories down the stairs came a rush of many feet and they gathered in the class rooms, eager, expectant, is search of the knowledge that would aid in the struggle to break the shackles of slavery that bound their class. They had saved and skimped and foregone many comforts to get together the price of this season of study and here they were. The winter semester of the Work Peoples' College was open.

### Internationalism of I. W. W. Shown

Only the I. W. W. could have inspired such a gathering. In one group of nine English-speaking students there were represented Sweden, Ireland, Canada, Scotland, Germany, Finland, Russia, America and England. They were of various ages from pink-cheeked twenty to grizzled forty-five. Some had a primary education; some had passed the grammar grades, and a very few had advanced even further. But in all there persisted the same conviction. The capitalistic interpretation of life was false to the workers' interests and perversive of truth. The school of hard knocks had taught them that. They wanted to undo the evil of the years and get re-oriented—to understand with Jack London, "what life means to me."

Through the windows and from the grounds about the College is the vista of Spirit Lake and its island-dotted surface. Now it was a-shimmer with ice and snow, across which the sun cast its crimson bars. Each island rose from the snowy surface of the lake, a sugar-loaf of glistening white, with dark traceries of leafless boughs fringing its shore like filmy lace. Northward lay the city of Duluth; across the lake the dim outlines of buildings gave a hint of the city of Superior; around a bend in the lake shore lay Gary, the model city of the Great Steel Baron, where everything from human morals to molasses is cut to measure and adjusted to suit the dictatorial tastes and interests of the master. Its children are born in the shadow of smoke-stacks and church spires and live their lives between the alarm-clock, the hum of the machines and, of a Sunday, the droning of cut-to-fit steel trust sermons; for Jesus and Gary are in alliance here. Nothing is allowed to happen in this model village that does not chime with steel profits.

### How The Instruction Is Given

And under the very shadow of this steel trust citadel, it was the function of the Work Peoples' College to teach the neglected truths of capitalist production and how it affects the workers. These workers have traversed thousands of miles for that. They had paid their hard-earned dollars for that. They had, in many cases, endured the hardships of box-car transit to reach the College for the attainment of this knowledge.

How could this be accomplished? Economics and and sociology are not easy subjects to teach or to acquire. If scholars of careful training find Marx, the sole capable exponent of capitalist production, difficult and obscure, how were these men to be expected to grasp his difficult analysis of value and surplus value? How could the complex problems of sociology, with their roots in human origins and psychology be made clear to these men whom capitalistic greed had forced from school at the very dawn of life?

The first lesson of the morning session was in economics. The class period was from eight to nine o'clock. We opened with the reading in class of Mary E. Marcy's "Shop Talks on Economics." Its words are simple. Its lessons are direct. They reflect the daily experience of the worker. The students read each a paragraph at a time. From the blackboard the instructor followed step by step, turning now and then to the board to illustrate in graphic outline some cogent lesson of the text. The students were earnest and attentive. They did not laugh when some reader stumbled over an unfamiliar word. They were there to help, not to ridicule.

### Making The Grade To Marx

At nine-fifty the session bell sent its tinkling summons through the halls and the classes filed out to realign themselves in other classes, or to repair to their rooms for an interval of study. The courses were elective. In the twenty class-room hours per week which constituted the elective course of the average student, English grammar and composition, arithmetic, translation, public speaking, bookkeeping and secretarial work, organization and History of American Labor were among those included in the courses selected by most of the students.

In the History of American Labor, Perlman's and Commons' texts were used selectively as sources, but broad discursions were made to include a comprehensive survey of the labor union movement of America from its beginnings down to contemporary unionism. Here comparative studies were made of the American Federation of Labor, its structure and methods, the I. W. W. in history, theory and practice, and contemporary communism. The utmost latitude for discussion was allowed and much clearer conceptions of the various movements were the result of the studies. The history of revolutionary crises was introduced and their economic causes traced. The famous dictum of Fellow Worker J. A. McDonald seemed to prevail, that "a proletarian revolution is possible in a nation of smokestacks but it can not occur in a nation of haystacks."

In economics the introductory course in Marcy's pamphlet furnished an outline sufficient to accustom the student to logical methods of study. A few weeks of this discipline, a period of defin-

Students At Work In Classroom

ing terms and accustoming the student to individual application and research, and then the class was introduced to the text of Marx's "Capital." Paragraph by paragraph, chapter by chapter, from "Commodities" to "Modern Theory of Colonization," the first volume was read and digested. At first by reading in class, then by direct instruction and questions, and finally the entire volume was reviewed step by step by interpretative lectures on the text with blackboard demonstrations.

There is an interval in each mid-forenoon and mid-afternoon during which the students repair to the big kitchen where coffee simmers on the great range and a light lunch is laid out for all to help themselves. It breaks the monotony of class-room tension and lends a social atmosphere of home to the daily routine. At noon the community dining room with its long tables is filled with hungry students and again at six o'clock, dinner is served. The food is wholesome and plentiful. From the dinner hour until bed-time coffee is kept piping hot on the kitchen range and the students are at liberty to help themselves at will.

**Sociology, Biology, Anthropology**

The first subject of the afternoon is sociology. The introductory text used was Engels' "Origin of the Family." The same method as in economics was used. Reading from the text was followed by discussion. Difficult terms and passages were defined and interpreted and side lights thrown upon the subject from historical and sociological source books. This work was followed by Lester Ward's "Dynamic Sociology." These methods demonstrated the capacity of the average mature worker to follow even the most difficult text if properly introduced. The class in sociology not only followed the rather abstruse pages of Ward, but entered into the subject with enthusiasm and understanding beyond that of the average student of greater advantages in antecedent training. Throughout the course, excursions into biology, psychology, geology and various related branches were made. The different theories of evolution, the theories of Lamarck, Darwin and Weismann as well as the mutationists, Mendal and De Vries, were analyzed and compared. "Ancient Society" by Morgan was discussed in the light of Morgan's later critics, the pluralists, Tyler, Boas and Goldenweiser, and Vern Smith's series in the Pioneer, "Was Morgan Wrong?" came into service as source material. Theories of population, from Malthus to Spencer, were discussed and tested by modern statistics and data.

In the field of social research, applied methods, surveys and direct investigations were unnecessary. Not a student but had garnered in his own experience sufficient practical aspects of life and adventure to furnish abundant illustrative material. There was a sailor, a Russian by parentage, who had roamed the "Never-Never Land" of North Australia; who knew the street of Buenos Ayres and the Boca of Rio as well as he knew the purlieus of South Chicago. He had deserted the sea and wandered to the plains of Colorado and Wyoming where he herded the woolies. He had traversed the scenes of Zane Grey's novels, knew the site of the Hidden Valley and had personally met the inhabitants of Robbers' Roost. And he could interpret his impressions. Read this free-verse genre picture of the sheep-herder from his pen:

This Will Be Done Only When Proletarian Education Triumphs

### THE SHEEP HERDER

Consider the sheep herder.
He is a little known atom in the immense swirl of the world-life about us—
A piece of human flotsam, drifted far out upon the sage-plains of the West.
His main job in life is to be lonely.
Loneliness is not a thing that comes to him now and then like a headache or the nerves:
It is part of his daily life to be lonely.
There is no one to whom he may talk;
All around him, like waves of a desolate, grey sea, roll the shadowy sage-plains—and infinite expanse.
Now and then, he goes mad from loneliness and disappears into the yawning void rather than bear the interminable repetend of self-communion and introspection.
But these are the weaklings—the men who do not understand that companionship does not necessarily mean the company of humans.
The sheep-herder (that is, the real one) has solved the problem of loneliness by making the whole world his intimate and companion.
The sky is his friend; for he can lie in his wagon and watch the sun and the clouds by day,
And count the stars by night.
Every insect that crawls, or flies, or squirms, is an intimate acquaintance;
For many a day has been passed away just in watching an ant-hill and trying to figure out what all the activity is about.
Even the dangerous rattlesnake is almost out of the enemy class.

Out there, when you ride the plains,
You see towering piles of rocks a-top the sandy hills reaching high into the sky.
Great boulders form their bases—boulders that required the struggling strength and labor of days to move into place.
Sometimes the rocks themselves have been carried for quite a distance across smooth sand and rutty washes,
Finally to be placed upon the stack with the rest.

Monuments, they are—
Great, towering monuments
That have cost the time and labor of days to build;
And yet, when you ask whose graves they cover—
What battles they commemorate—
You learn that they were built by sheep-herders
For no other purpose than to pass the time away—
To pass the time away—building great, high-reaching monuments
To the Gods of Loneliness.

And yet we, who live where there are things to see, and people to talk to,
We whine against the world and say,
There is nothing to live for!

There was another little lad from North Dakota. He was only six feet and four inches in height and tipped the beam at two hundred and thirty. Of course they called him "Shorty" and "Little Boy." What other name could fit among men whose lives had been filled with contacts with the ironies of existence? "Little Boy" had wandered far. He knew the plains of Texas and the pavements of a dozen great cities. Bronzed and hardy, he had such physical strength and health as all men might envy. He knew life. He wanted to know its deeper meanings. And both he and the sheep-herder-sailor were energetic in their pursuit and acquirement of knowledge. They entered with spirit into the class discussions, took copious notes, seized upon the technique of study readily and browsed through the library, entering upon new fields of discovery like

***stout Cortez when with eagle eyes
He stared at the Pacific; and all his men
Looked at each other with a wild surmise,
Silent upon a peak in Darien.

One of the characteristics so frequently observed among these working class students is the remarkable taste for the excellent in literature. Perhaps it is because they are still intellectually vigorous with the vigor born of insatiety; perhaps it is their intimate contacts with practical existence that gives them a true sense of artistic values; but however that may be, they quickly grasped the finer shades of meaning of such artists as Swinburne, Tennyson, Omar Khayyam (Fitzgerald), and the more obvious if still pleasing quality of Robert W. Service. Love of art is not necessarily coupled with aesthetic degeneration, in spite of the cubists and the longhaired denizens of Greenwich Village.

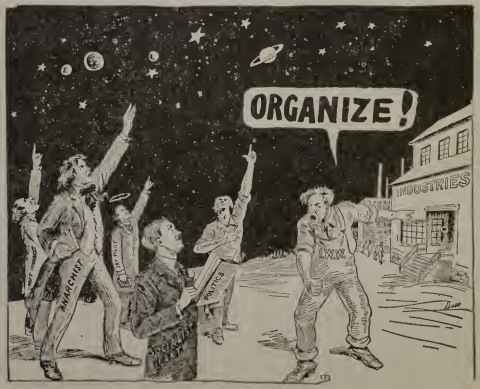
#### Physical Exercise, Debates and Socials

As winter progressed, the lake froze solid. Long walks over its glassy surface and excursions afoot about the islands were made for recreation and exercise. Skating was indulged in by those who fancied it for it is less than a stone's throw from the College grounds to the lake shore. At night there were dances and debates on subjects of interest to the workers. "Birth Control," "Is the World Growing Better?" and "Do Workers Pay Taxes?" were threshed out in the light of Marxian economics. There is a gymnasium equipped with apparatus, parallel bars, rings, boxing gloves, wrestling mat, etc., and regular classes were trained by a physical director. The shower and tub baths are next to the gym and there is ample accommodation for all the students.

#### Spring Means The Exodus

Spring came. The winds grew softer and the snow disappeared from the landscape. Little sparrows chirped under the windows, winking at their mates and suggestively bearing stray bits of moss and grass in their bills. The sun crept northward and the days lengthened. The season of labor was at hand. One by one or in pairs the students turned to the "point of production." Some went to the mines. Others with gaze far afield and the long, long thoughts of youth, "grabbed an armful of box-cars" and beat it westward to the farms of Dakota. Some turned again to the sea, their chosen field of labor. The classes thinned to a lingereing few. Capitalism does not permit its slaves to tarry long at study or recreation. If the education of the workers is to progress, it must be by persistent effort and sacrifice upon their part. If these students are to return for another term, they must make and save another winter stake during the summer.

The season was a successful one. The need for working class education in their own interest is evidenced by the continued elimination by capitalistic universities of progressive instructors. Even as I write, there lie before me clippings from the Denver Post recounting the dismissal of two members of the faculty of Denver University for delving too deeply into the facts of the workers' lives. And last week, Scott Nearing was debarred from the



In The Gymnasium

campus of the University of Minnesota. If there is no need for a workers' college, why in the name of so-called "social control" do the capitalists seem so eager to convert their own institutions into instruments of class rule and propaganda? Listen to this from Lester Ward's "Dynamic Sociology," Vol. II.

**"It must not be forgotten that a system of education to be worthy of the name must be framed for the great proletariat. Most systems of education seem designed exclusively for the sons of the wealthy gentry, who are supposed to have nothing else to do in life but seek the highest culture in the most approved and fashionable ways. But the great mass, too, need educating. They need the real, solid meat of education in the most concentrated form assimilable. They have strong mental stomachs, and little time. They can not afford to take slow, winding paths; they must move direct'y through.**

Men interpret life in terms of experience and education. They reason from such data as they have acquired. There is no such thing as a line of division between the theoretical and the practical. Learning is vicarious experience. The workers must stick to the first star of the I. W. W. emblem and continue to educate as well as to agitate and organize. By so doing they will continue to build "the structure of the new society within the shell of the old."

# The Big I in Italy

"All in favor say I. . . . The Mussolinis have it. So ordered!"

Just before sailing for Africa Mussolini was shot in the nose by a woman from Ireland. Some day it will not be his nose.

# Mussolini

## The Failing Strong Man

By ARTURO MATTEOTTI, Jr.

**Having Arranged for the Abolition of the Italian Senate, Mussolini, Filled with the Old, Old Dreams of Empire, Just Sailed for Tripoli on a Warship. It Is a Strange Business For a Man Who Will Probably Not Outlive the Present Year.**

ACCEPTANCE of the Marxian theory of class struggles carries with it the implication of consistent resort to violence by the classes in history holding supremacy. And this has been the case in all countries. With the presence of classes class struggles are inevitable corollaries.

Oppressed classes embrace violent methods only sporadically; ruling classes, primarily through governments, discharge the technique of suppression as a matter of diurnal routine. The armed forces of the state are permanent entities; armies, navies and police are fixed institutions.

These are facts that the man in the street ordinarily does not understand. His mind is so dulled and poisoned by the mental violence of bourgeois institutions, the press, church, schools and industries, that only the spectacular commands his attention, although it by no means explains to him the forces releasing the spectacles and what part they play in the drama of class warfare. He does not know that they are merely conspicuous outbursts of a conflict which halts for no armistice and knows no peace; a struggle so ceaseless that even in the hours of relative industrial tranquility we have only an armed truce, except where the slaves are so fully enervated that they lack the will to wait watchfully for a propitious moment again to strike a blow.

Lest these generalizations lure me to a digression I shall now proceed at once to a consideration of the Italian dictatorship. Events in Italy have been so sanguinarily spectacular for several years that some aspects of the situation have been refracted, more or less distorted, on the circumscribed vision of workers in your country. It is important that they learn something about Fascism through your excellent magazine.

### America and Fascism

Last year I was in the United States, where I heard both praise and condemnation of Fascism. At a meeting of avowed American constitutionalists a speaker won great applause by stating with due earnestness, "Thank God we have no Fascism in America!" Knowing, perhaps even better than he and his audience, the embryonic nature as well as

the matured virtues of Fascism, I sympathized with the demonstration of liberal exuberance. But my mental reservation loomed large to the effect that the grateful expressions to omnipotence were offered without having reckoned with facts. In America there exist all the elements by which to hammer out a prototype Fascism on the anvil of economic and social circumstances.

Your Mr. Gary has nothing but laudatory remarks for Black Shirtism, and your Mr. Morgan is financing the Italian terror. These astute gentlemen understand the class character of modern society quite well, and they would circumvent red revolution of the exploited by the full flower of reaction summed up in Fascism.

Precisely, this means a tighter strangle-hold on the throat of the working class. Now, in practise just how does this dictatorship work? To answer that question properly it is necessary to review, concisely, Italian conditions out of which the Fascist monster sprang. The very name harks back to the ancient Roman Empire, and in the beginning of the Fascist movement its leading exponents attempted to recruit membership from working class ranks by appeals to patriotic sentiment. The glory that was Imperial Rome's was to be Italy's ideal in her relation to the rest of the insignificant world. These inflated notions failed, however, to fill Italian workers' bellies. Large numbers of these workers cherished other ideals. They had powerful economic organizations and also a numerous parliamentary representation in the personnel of Socialist deputies.

### Italian Bosses Use Black Shirts

Presently it became obvious to the new apostles of Italian magnificance that the working class field was an arena where the advancing tread would crush out the seeds of Fascism. Capitalist ears thereafter were the objectives of Fascism, and the capitalists were constrained to listen with sympathy because they were afraid of the rising strength of organized Italian workers and their revolutionary disposition.

A little later when these workers seized a number of factories, raising crimson flags over them, while Italian ships were floating the same red emblems of proletarian revolution, the bourgeoisie made full use of the Fascisti to wipe out the working class movement in Italy. This movement was itself cleft into opposing factions. The larger number supported indirect or legislative action, the minority direct or economic action. Fascism, led by the murderous opportunist, Benito Mussolini, drove its daggers at the hearts of both factions.

The unions were immediately outlawed, all of them, and parliament became an ornament of what had been the legislative machinery of capitalist democracy. Union leaders and members were attacked and assassinated; union halls were either burned or stolen for Fascist uses; the workers' press was captured, in some cases the plants being smashed and in others being utilized to issue Mussolini's vicious propaganda. Elections became a grim farce. There was, in brief, a total destruction of the visible and physical assets of the labor movement.

### Fascism Entrenches Itself

The Italian ruling class were elated at this obliteration of a menacing revolutionary power, and at first they were perfectly willing to assume a genuflectory pose before this god of destruction, because, as you say in America, "A friend in need is a friend indeed." They looked upon the machinery of terror as their own instrument, invested with no authority but to dam the working class tide of revolt. But the machinery was composed of flesh and blood—and ambition. The Fascisti learned to regard themselves as more than a tool used by frightened exploiters in the hour of emergency. The Black Shirts declared their permanent value and their determination to continue in their arbitrary role superior to the ordinary civil government.

In all of this you plainly see the negation of capitalist democratic procedure. The throne of Mussolini now shakes very perceptibly because the capitalist class of Italy no longer needs a Fascist weapon. The workers are crushed. On the other hand, traditions of modern civilization are strong and the numerous social strata holding them dear are protesting. In fact they have been protesting for quite a long time.

Less powerful bourgeois groups resent having parliamentary action reduced to nothing, and the liberals blaze angrily against this straightjacket which pinches them, although we may remark, incidentally, that we have yet to see where they were ever wroth in Italy by any purely anti-proletarian violence.

### Catholic Church Attitude

In an effort to find parliamentary representation in the April, 1924, elections at Milan the Catholic People's Party bore the brunt of Fascist outrages. Mussolini personally directed lootings, burnings, beatings and two murders because the Fascists had received only a minority of the votes in spite of all their intimidation. Cooperatives were destroyed, stocks were stolen, and workingmen's clubs were burned down, while wholesale bludgeoning was practised.

Thus it will be seen that Black Shirt lust for power now brings into the scope of its venomous onslaughts elements outside of the working class movement proper, and elements that actually stand in bitter opposition to social revolution. This entails complications which will ultimately secure the forcible abolition of Italian Fascism.

An incident which strikingly reveals the attitude of the Catholic Church occurred in Pisa in the winter of 1924-1925. Three members of the Catholic Party were murdered, and the cooperatives and

**The Dictator Says That War Is Inevitable, and All of Italy's Acts Are those of a Government Deliberately Setting Out To Provoke It. Above is Represented War's Ghastly Horrors for Workers. The World War Had 30,000,000 Fatalities.**

clubs of this party were robbed and destroyed. Cardinal Maffi, Archbishop of Pisa, telegraphed to Rome, "As a bishop I weep; as an Italian I am disgraced." And then the following secret message was sent:

**To the Prefects of Florence and Pisa:**

**In view of the unfavorable repercussion of the Vatican arising from the recent anti-Catholic incidents, it will be well for the local directors of the Fascisti Provincial Federation to visit the headquarters of the archbishop and present official expressions of regret and renewed declaratiens of high respect which Fascism has for the Catholic religion. MUSSOLINI.**

The eminent Archbishop of Pisa did not weep as a bishop so long as the Black Shirts respected the black cassock and confined their murders, rapes, thefts, arsons, maimings and general outrages to the persons and property of militant workers. But when mad Mussolini sets upon good Catholics and their property His Eminence is "disgraced." As a matter of record he and the Papal authority were disgraced several years ago when the relations between the "Prisoner of the Vatican" and the dictatorship were so cordial that the former contemplated emergence from the self-imposed "incarceration," and reports were current that His Holiness would soon walk on the streets of Rome.

We should also bear in mind that the Fascist membership is overwhelmingly Catholic. But they are on a sort of spree. They are tasting their power, temporarily impervious to the jeopardy in which they have placed their immortal souls.

The chasm yawning between the papacy and the terror can have but one interpretation. It means that Fascism is losing its grip. The revelations of the Matteotti murder trial are rousing the anti-Fascist groups, and without the strong support of big capital in Italy Mussolini's sun is setting. His desperately ridiculous acts have lately shown him to be ill and worried. No wonder!

### Dictator Gives Orders To Kill

A large number of documents in Mussolini's hand are here in France. He usually writes his own messages and has secretaries take them to be typed. Out of motives of self-protection these secretaries often preserve the original manuscripts. Several of these secretaries have been forced into political exile. Among other papers showing the dictator to be a fiendish murderer is one which, when translated into English, reads:

**Ministry of Foreign Affairs**
**Prefect**
**Turin**

**I am told that the well-known Gobetti was recently in Paris and that he is now in Sicily Stop Please inform me and see that you render life still more difficult for this insipid opposer of the Government and Fascism.**
**MUSSOLINI.**

Dr. Pietro Gobetti was a young writer, twenty-

three years old, who edited a liberal political and literary review. He suffered from heart disease. Yet life was to be made more difficult for him. The Fascist police raided and sacked his home and offices, and even before the death message was sent Gobetti had been beaten almost to death. He managed to outwit the assassins' stiletto and died in bed —hounded to death instead.

Such acts as these render the Black Shirts offensive in nostrils that are not keen when ordinary workingmen are murdered for their opinions and activities.

I previously said that there is a Fascist framework in the United States. Students of the class struggle on this side of the Atlantic regard the American Legion and the Ku Klux Klan as reactionary factions of such sinister flexibility that they may easily be extended for the repressive purposes of the American bourgeoisie whenever needed. This observation is not offered to discourage my readers, but rather to forearm them. The rulers in America are playing their class role, and eventually the workers of America will rise to negotiate their historic obligation. They will the more quickly succeed if they estimate the forces against them without attempts at discounting the capitalist strength. It is not a wise rule to minimize the power of one's opponents. Instead it is the better part of wisdom to calculate carefully and to equip ourselves as best we can for a hard battle against a terrific and merciless adversary.

**Workers Must Seize Industries**

Mussolini worries because he feels the end coming for his regime. There are millions of people throughout the world who wish to see avenged not only the staggering villainy in Italy but the murder of orphans in Corfu. A strong dictator would never have brayed at the shackled Germans in the parlance of the alley rat. He has sown the wind and he can not expect to reap a zephyr. A mighty tide of resentment is rising in Italy which is sure to engulf Fascism and its upholders. A whirlwind will break soon to cleanse the country of this Black Plague, and to crush the head of its serpent.

Dictatorships do not resolve capitalism's contradictions. The social and economic antagonisms are multiplied by them. Surplus value, extracted in greater sums than when unionism prevails, piles up and markets must be found. Unemployment becomes more severe.

The working class movement is destined to rise again and to fling itself against the Fascist persecution, scattering this corrupt phenomenon like so much chaff in the teeth of a gale. In this revival we may confidently expect the Italian workers to gain such experience and power that they will force the struggle further and wipe out of Italian life forever the bourgeois oppression that has so long and so horribly afflicted them. This means that they must recognize the economic basis of power; that they must seize the industries, and leave off the innocuous and devious parliamentary procedure that has already an infamous record of proletarian betrayal not only in Italy but in other states of Europe.

## STATEMENT OF BUSINESS MANAGER

**Notification of Pioneer price changes appeared in the April 21st and 28th issues of Solidarity. Our request for action from the membership and readers on this matter has resulted in a number of branches recording themselves for the increase, with individuals also favoring it. There has been no communication against it, and the G. E. B. members we have conferred with here wish the price to be raised, becoming effective with this number.**

**With the last issue the magazine's size increased fifty per cent while the price is now raised only twenty-five per cent. The increased revenue will put the magazine on a self-sustaining basis. For the last few years General Headquarters has been subsidizing this magazine, and the time has come when Headquarters can no longer bear this burden. Our action, therefore, is in harmony with sentiment throughout the organization and with that of the delegates to the last General Convention. The membership should support their publications, or cease publishing. If this magazine is not worth two bits it is not worth anything.**

**Any who doubt that they are getting their money's worth are asked to compare this issue and that of April with the editions prior to that time. Every effort will be made to keep up the standard.**

**Bundle orders of five or more will be 17 cents a copy non-returnable, and 20 cents returnable; subscriptions will be $2.25 a year; Canada, $2.50, and other countries $3.00. Single copies will sell for 25 cents.**

JAMES SULLIVAN.

# WOMAN and

By EUGENE

I scorn the chivalry that kisses the hand of woman, and then denies that hand the reins with which she might guide the rolling world along; I would not bow to her as being more than man, yet I would give her every right I claim for myself. Still, I cannot think of her without a feeling of reverence that amounts to worship, and that which I worship in her I would also worship in man if he had not banished it from his life.

Great is the hand of man. He smites the mountain ranges, and they smoothe out into plains; he strokes the ocean, and it carries his craft in safety; he shakes his fist at the night, and creatures of steel come forth to do his bidding. But if the hand of man is strong to do, the hand of woman is greater still, because it is softened and skilled to comfort and heal. If the hand of man is magical with accomplishment, the small white hand of woman has even greater magic, in that it soothes and blesses ever. With the touch of her gentle fingers she changes the hard sick-bed into down and dreams. With the stroke of her tender palm she banishes the tears of childhood and gives smiles for sobs.

If man, the Titan, makes the world great, woman, the enchantress, makes it beautiful. If man finds the food, it is woman that brings the babe through paths she sets with roses; and it is she who makes shining and sweet the gateway when the soul fares forth to the unknown land.

Man may make the nation, but woman does more—she makes the home.

When I think of what the world would be without the inspiring influence of woman, I am ashamed of what the world has done with her. She has done everything for the world, and man has done everything evil to her. He has filled her delicate hands with weights she could not bear, and laid upon her shoulders burdens that crushed her to the earth; and though she stumbled on uncomplainingly, kissing the hand that smote her, he has taunted her as an inferior and ruled her as if she were a slave.

Still is the woman guardian of the sacred fire. Should she fail, earth would return to the stone age, and man become again a naked barbarian. It was woman who invented all the arts, from agriculture to weaving, from architecture to music.

It is woman's voice that bears the soul in prayer and hymn toward higher things.

In a world that God made beautiful, there is nothing so beautiful as woman, and without her divine ministrations all things would speedily lose their charm. It is woman that bears the future in her body, and on her sweet and sacred bosom she nurses life into higher forms and nobler ways.

There is nothing so wonderful as motherhood. There is nothing more sacred, more divine, than womanhood charged with

# CHILDHOOD

NE V. DEBS

the future destiny of the race, which means the weal or woe of all that breathe.

No true man can think of his mother other than as perfect. No husband who is still a lover—as every husband ought to be—can believe that his wife is less beautiful or feel that she is less dear than when in the bloom of beauty she first won his heart.

I have a vision of woman that is loftier, nobler and diviner than the mothers and wives, the sisters and daughters, have been in the dark days of the past and are still in the dawning days of the present. In the full-orbed day of the world to come woman shall be free. In that hour woman shall have opportunity; and because her day has come at last, everything that lives shall rise and unfold and share in the common blessings that shall come to the race. Love shall reign instead of hate; beauty shall take the place of deformity, peace of war, plenty of poverty; and all the world, under her unfettered ministry, shall be a home, safe and sweet and satisfying.

---

WHAT sweet emotions the recollections of childhood inspire, and how priceless its treasured memories in our advancing and declining years!

Laughing eyes and curly hair, little brown hands and bare feet, innocent and care-free, trusting and loving, tender and pure, what an elevating and satisfying influence these little gods have upon our maturer years!

Childhood! What a holy theme! Flowers they are, with souls in them, and if on this earth man has a sacred charge, a holy obligation, it is to these tender buds and blossoms of humanity.

Yet how many of them are prematurely plucked, fade and die and are trampled in the mire. Many millions of them have been snatched from the cradle and stolen from their play to be fed to the forces that turn a workingman's blood into a capitalist's gold, and many millions of others have been

crushed and perverted into filth for the slums and food for the pottersfield.

Childhood is at the parting of the ways which lead to success or failure, honor or disgrace, life or death. Society is, or ought to be, profoundly concerned in the nature of the environment that is to mold the character and determine the destiny of its children, and any remissness in such duty is rebuked by the most painful penalties, and these are inflicted with increasing severity upon the people of the United States.

Childhood is the most precious charge of the family and the community, but our capitalist civilization sacrifices it ruthlessly to gratify its brutal lust for pelf and power, and the march of its conquest is stained with the blood of infants and paved with the puny bones of little children.

What shall the harvest be?

The millions of children crushed and slain in the conquest of capitalism have not died in vain. From their little martyr graves all over this fair land their evening images are springing up, as it were, against the system that murdered them and pronouncing upon it, in the name of God and humanity, the condemnation of death.

# Editorials

**MAY FIRST.**—Declaring for a Monroe Doctrine applied to trade unionism in America, the A. F. of L. has "fortified" itself in a policy of blindness that reminds us of the story of the ostrich's imagined security when it stuck its head in the sand. Actually we think that ostriches do not perform in this ridiculous, perilous manner, but leave the patriots, fakers and traitors to the proletariat, headed by the incomparably reactionary Green, to attempt such a stupidly ignoble program.

But Not His Last! Soon Labor Will Get Wise and Take All The Golden Days Of The Happy Future Years!

Neither the workers of this land nor those of any other can successfully fight employers by shutting themselves away from the international solidarity of labor. Nor can they secure even such bits of success as have formerly been won if they try to do battle alone, feeling national sufficiency, because capitalism is now internationally organizing and growing stronger, and no matter how fiercely the various robbers contend for the spoils, these robbers stand shoulder to shoulder, and gunboat to gunboat, to keep the slaves in their slavery.

All social phenomena bear out this assertion. Chinese workers strike in Shanghai against Japanese manufacturers, and the warships of the United States, England, Japan, Italy and France steam swiftly to the scene, while our brave Marines land first to quell the strike. Italian workers threatened revolution in 1920 and American bankers staked the Fascisti to crush it. Steel, iron, coke and coal exploiters of France and Germany manage very amicably to unite in the game of fleecing German and French wage slaves. And when the mills, mines and factories of European countries slacken or stagnate it is well for the mill, mine and factory slaves of America to prepare for unemployment, because these crises no longer torture one country at a time but sweep the world in agonizing waves.

Rapid transportation and lightning-like means of communication have made the world small in the sense that it is more accessible, and its different lands are more dependent on each other than ever before because our civilization is more complex, our populations larger and even the most advanced industrial countries look to the most backward agricultural states for foodstuffs and raw materials. Proud England is a case in point. In 1775 Dr. Johnson said that he viewed the island with equanimity because it produced sufficient food for the maintenance of its population.. Today England is never more than 90 days from famine should food imports be cut off.

The dilemma in which the working class finds itself is that it can not buy, on the wages it receives, the commodities it produces. The inescapable implication is that workers produce, over and above their support and reproduction cost, a surplus value. This the boss calls profits. To increase his wealth and power he reinvests this surplus

value. He may do it in the domestic industry, but this is the era of finance capital, the age of money empire, and the large holders usually invest abroad, financing industries and winning the harvests of concessions, colonial expansion and spheres of influence.

As formerly backward countries tend more and more to develop their own industries, amassing the inevitable surplus value, their capitalist owners look abroad for markets. Bourgeois frictions multiply. The economic cause of war is the only cause of war and it can be summed up in the fact that capitalist nations, driven by the profit system to find foreign markets, collide with other nations engaged in the same search.

There is no solution except that of the organized working class abolishing capitalism, thus guaranteeing to itself the full product of its toil. There would then be no surplus value seeking markets and investment: the world would at last be free.

In September of each year conservative American unionists take a rest, and from the pulpits, the platforms and the press prostituted agents of organized thievery congratulate the slaves on the fact that they are still alive. But each year real wages of the American slaves go down. The bosses call it playing the game and the labor fakers parrot their masters. It is playing the game, indeed, with stacked cards and the rich dealing. The outcome is to be expected: poverty, disease and death sweep the poor players from the board.

In 1924 disabling accidents in American industry increased 30 per cent over the previous year, and last year there were a million such accidents. The National City Bank of New York declares that of every 100 persons now 25 years old an economic division like the following will apply to them in 40 years: One will be independent; four will be well to do; five will be working for a meagre living; thirty-five will be dead—"Many of them for want of attention that money would have secured" —and fifty-four will be dependent on others. This leaves but five in satisfactory circumstances out of the hundred, unless we can include the dead as well placed.

In the world war there were 30,000,000 fatalities, and the product of a generation was utterly destroyed—the sum of $300,000,000,000—to make the rich richer and the poor poorer and to launch the United States on imperialism's highroad as startlingly swift as a meteor through the heavens. Only this meteor of American "prosperity" means hell for the workers of the world.

The reason the Government calls A. F. of L. labor "decent labor" is because it achieves nothing, and blesses its own chains. The reason that the I. W. W. is opposed by the rulers is because the I. W. W. is organizing to destroy the rulers. The place that yellow, lickspittle labor accepts is that one of subjection and impotence into which the parasites thrust it.

We scorn their servility and we denounce their cries for bourgeois pabulum. We refuse to be nourished on any September "Labor Day" by the wishbones flung to us by capitalists. We know them for what they are, and we know the mission that is ours. It is the mission of social revolution, and to this task the I. W. W. and revolutionary labor in every part of the globe have dedicated all of their energies. On the goal of human freedom they have directed all of their hopes made potent by action. May Day is the annual festival day of the world's workers who struggle for emancipation. Let the workers of America recognize the common cause that is theirs with workers everywhere, the cause of smashing the chains of wage slavery, of summarily dissolving the power of capitalism by seizure of the world we have made.

We have one enemy, international capitalism. Our fellow workers are the wage slaves of all lands, of all colors, of all races. The enemy is organized, ruthless, ambitious. We, the workers of all lands, must act together to destroy that enemy, by the same terrific blow wiping war and want and waste from the face of the earth, and ushering in a new order of human relations without master and slave.

**STANDARD OF LIVING.**—Congress, state legislatures, as well as non-legislative bodies, such as various social welfare groups, have said that certain incomes are required for the maintenance of the American family of five, and this is called the standard of living. These calculations cut expenditures to the bone, leaving very little for such "extras" as education and amusement, while the food, clothing and shelter allowances leave no latitude for any but the simplest plane of existence.

And still it is a fact that nine-tenths of the incomes in the United States are insufficient to support a family on this "ideal" American standard of living. So, we are compelled to conclude from this unpleasant, belly-pinching fact that most of the workers are existing from hand-to-mouth and below this standard, thus dying off before their time. It is easier to show the denial of the right to live which is exhibited cruelly by infantile mortality statistics, but it is not so easy to estimate the number of years that are stolen from the adult worker's span of life by the hardships and privations common to his enslaved position.

But we do know that except where gluttony and corrupt living send the rich to untimely graves their lives are much longer than the lives of the poor, and this is not only demonstrable by comparing vital statistic regarding children, but also of men and women. We see a world full of people of all ages wherever we turn, but we turn only infrequently to the cemeteries of the poor and to the potters fields where so many of our class were interred long before they should have been under a free society.

A standard of living calculated by lawyers and social workers, indeed! And one which we are supposed to be satisfied to get. But then the shameful truth is revealed that this miserable dole is not even reached in nine out of every ten cases. Such is the proud record of this damnable capitalism. Away with it! Organize and put a stop to the Herods and Molochs of modern times. We, the workers, have created all the world's wealth, and we want it all.

Moreover, we intend to take it all when our organized power is equal to the task of choking the piracy of a scrofulous ruling class to death.

**HISTORY AND LEGALISM.**—Administration of class rule has always been inseparable from social oppression facilitated by the apparatus of governing violence. Each ruling class by seizure of power has broken the fundamental laws of its dispossessed predecessors and has sought immediately to entrench itself. Under protection of arms the new class decrees new laws designed for its welfare and consistent with its development. In the very nature of affairs these laws debase the dispossessed, prohibiting the governed classes from combining in any manner basically prejudicial to the interests of their rulers.

We live at a time when the advocacy of law and order of the bourgeois pattern, bolstered by ancient impediments to human freedom and modern obstacles to the same ideal, has resulted in such blind worship of this fetish that the American slaves would probably comply with a conscription commanding them to file to the brink of a precipice and tumble to destruction.

At this point some may urge that our supposition is preposterous, but we wish to remind them that the American slaves, though loath to become candidates for trench fertilizer, lost no time about registering in the war draft a few years ago, and walking off a cliff is comparatively simple, decidedly more humane and certainly less painful than being tortured for months and years in trenches and pushed against bayonets and barrage fire.

The legalism of our age is omnipresently exacting, and so generally are the workers driven to unquestioning obedience by the mores of our state worshipping era that it is well to examine what are almost universally regarded as immutable principles of civilization. We may do this best by citing several historical events in which thoroughgoing repudiation of laws brought into being the very commercial, manufacturing classes that today seek to dam the current of historical progress by proclaiming their rule eternal.

As all students of English history know, capitalist England was formed by the Seventeenth Century Cromwellian Revolution and the Eighteenth Century industrial revolution. The class in power prior to Cromwell's success compromised the courtiers, titled officials and members of the higher clergy who were all characterized by indolence, arrogance and excesses. But

THE PURITAN
From Saint-Gaudens' Sculpture

they made the laws and the laws provided that the monarch must be regarded as ruling by God's grace. "Touch not my anointed!" was a biblical injunction favoring the monarchy and the supporting groups just enumerated. That they believed the king to rule by divine right spares us the necessity of presenting voluminous data of the period to show that this dissipated, totter-

ing class considered itself as destined to continue in power forever.

Yet, for all of God's grace armoring the proud neck of Charles Stuart, Cromwell hacked through it at Whitechapel with the axe of revolution. The regicide committed, its perpetrators rid the Long Parliament of all champions of monarchical and aristocratic decadence, and the frugality of the hard-working small merchants, free farmers, artisans and owners of petty estates was rewarded by the inauguration of a new social epoch made "in their own image and likeness." They served the ends of social progress by scrapping the laws of the old order even to the extent of killing a king before his own palace, publicly, and in the most spectacular manner.

Eighteenth Century France presents a very similar lesson. The rising bourgeoisie, incarnated in Robespierre, achieved their revolution against the French crown, the nobility and aristocracy by wedding the hapless Louis XVI to Madame Guillotine and dissolving the hallowed laws enacted by the former regime. Here again human progress was promoted and history's tide quickened by blood flowing through the special sewer from the Place de Revolution.

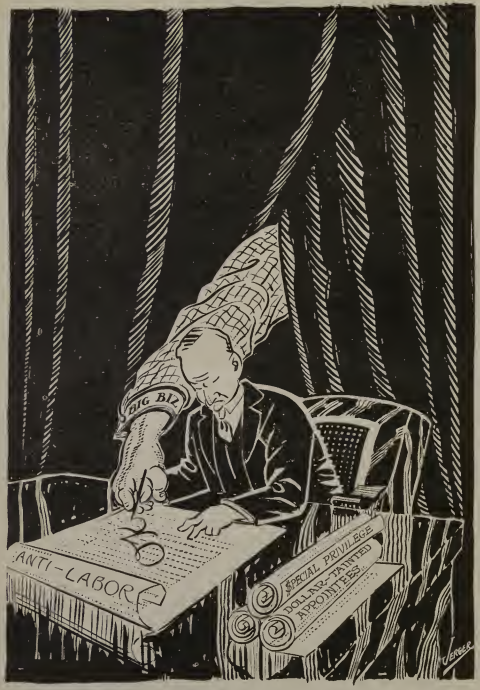
In the same century the American colonies broke from English ties and set up an independent bourgeois government better suited to the needs of colonial exploiters. In severing the bonds with Britain Washington, Jefferson, Hancock, Madison, Franklin and all the influential revolutionaries became outlaws with prices on their heads. But they cast out the English laws made to govern them and flung the British scepter across the sea into the teeth of the astonished monarch. Thereafter they devised their own laws. Indeed, they performed so good a job at the end of the Eighteenth Century that we, the Twentieth Century working class of America, will be obliged soon to secure our happiness in freedom by throwing the bourgeois yoke from our necks, rolling in the gutter the parasitic class now riding on our backs, and making laws in the union halls to suit ourselves. The measure of swift victory must be powerful industrial union preparation, and the revolution's treatment of the overthrown ruling class will depend on bourgeois behavior.

**THE ENGLISH STRIKE.**—On the last day of April the British Government's subsidy to the coal miners expires. Operators say they will not make up the wage difference, and the workers have voted to strike unless present levels are maintained. Therefore May First has keenest interest for militant workers, and it is certain that employers everywhere are alert to the possible revolutionary significance of the impending struggle. The miners form but a fifth or sixth of the number declaring for a strike, transport workers of all descriptions and many other unions having decided to go out in support of the coal diggers. This means that 5,000,000 workers are actively involved, and failure is unthinkable unless they permit their solidarity again to be trafficked by yellow leaders, as was the case on "Black Friday."

When Trotsky says that these slaves require capture of the parliamentary machinery he is wrong. Unless they can command sufficient power directly through industry to overthrow capitalism it can not be overthrown, and it is idle to predicate revolutionary victory on the ridiculous, circuitous tactic of political elections. Ebert, Scheidemann and Noske had full control of the German Government at the time of the Kapp putsch, yet they were compelled to call for a general strike of industrial workers in order to defeat the monarchists. Revolutionary Industrial Unionism is all-sufficient anywhere, everywhere.

**THE PRESIDENT.**—Just now it is Calvin Coolidge who must dance to the tunes called by American capitalism. But the individual who fills the role of chief executive for the bourgeois-owned governmental apparatus is, after all, a thing of little importance. Whether it is a Lincoln, a Cleveland, a McKinley, a Roosevelt, a Taft, a Wilson, a Harding, or a mute person regarded as a Massachusetts strike-breaker who occupies the White House, he is placed there to serve expanding capitalism, and he does so.

Lincoln incarnated the spirit promoting industrial growth in the North, and particularly the Northwest, and he said that he would keep all the slaves in slavery if necessary to preserve the Union. Northern capitalists needed the South, and they could not afford to see an independent government on southern soil, and they did not want chattel slaves because wage slaves are more profitable. Cleveland was such a willing tool of the railroads that he sent troops to Illinois to break the railway strike, sending Debs to prison. And this action over the vigorous protests of Governor Altgeld.



McKinley was Mark Hanna's man and Mark raised the campaign fund of $16,750,000 which placed McKinley in the presidency to do what the banker-imperialists ordered. That was in 1896. Bryan was the Democratic candidate, but his campaign managers could raise only $675,000, so the windbag of the Platte lost. Roosevelt carried forward imperialism's stratagems, with a dash of "trust busting" as a sop to the squeezed little bourgeois. And though he was picturesquely portrayed in the reactionary task of swinging the "Big Stick," the action of the Standard Oil Company is typical of the practical effects of "busting trusts." When the Supreme Court ordered this company to dissolve, the concern became thirty-two companies—on paper, and in 1921 the market value of their stocks increased thirty-five times over the 1911 value, and dividends paid amounted to eighteen times the total capital the company had in 1911, when the highest court in the land "dissolved" it.

Taft followed the program laid down by the bosses, with the authorship of injunctions against labor to recommend him and when asked what he would do if he were jobless, penniless, and with a family to support the erudite legalist said, "God knows!" Prexy Wilson wrote "the New Freedom" with his left hand and with his right welcomed into secret conference the nation's largest bankers and industrialists to frame up going into the war, and while the effulgence of his fourteen heavenly points was flooding the war-torn world with light he kept Debs and the class war prisoners where the bosses wanted them. Then he took Mrs. Wilson 2nd to France, where Clemenceau and Lloyd George raped the 14 points in the closet of Versailles.

Harding was a pleasant mannered country editor with good sartorial instincts. Just before his last illness, however, he lost his geniality long enough to accompany the infamous ex-Governor Hart of Washington to the graves of the Centralia Armistice Day legionnaires who met their fate by trying to break up a union hall. On this occasion Harding denounced our organization, and might have been doing it yet but for an unhappy appetite for certain seafoods.

The present incumbent is a sour-faced nonentity with all the favorable capacity of a servile clerk. As capitalism gets stronger its presidents grow weaker, and this is right because they are maneuvered into office to expedite the orders of Wall Street. In 1924, when a government created commission reported that the sugar trust was grafting through tariff favors, Coolidge suppressed, as far as possible, the facts, and it cost the American people $53,000,000 in nine months. Who says economy? But when it comes to real, high class hi-jacking right under the president's economical nose the Aluminum Company of America carries off the honors. Andrew Mellon is Cal's Secretary of the Treasury. He is also head of the Aluminum Trust. The company started in 1888 with a paid up capital of $20,000. By tariff protection and other schemes it was able in 1923 to realize a profit of 1000 per cent on the original investment, and now has assets of $110,000,000.

But tariff-fixing is only a small part the game. What else is done? Well, we don't have to look far to find out. Mellon's workers receive $3.36 a day. This is, without holidays or losses of time, $88 a month. Andy's income on the steal is $284,000 a month and $173,000 more goes to his brother. Calvin has bid for a reputation for economical administration, and it is not only in words that he is sparing. Mellon has engineered laws to cut his own taxes and

those of the big capitalists. The Supreme Court has ruled that stock dividends are not profits. Result: corporations manipulate stock certificates to get their killings out of the excess profits list, thereby avoiding taxation. Calvin would spare these super-thieves. His eyes and ears are open to assist his masters, but he is much too busy to listen to workers' appeals even when they are suffering intensely from the sting of poverty's lash.

The Passaic mill strikers sent a committee to visit the nation's "first citizen," and he, regarding them and their kind as last citizens or subjects who should bear the anguish of excessive exploitation silently, sent word for the committee to see the head of the Labor Department. French Bourbon monarchs, on advice of financial ministers, went even farther than merely refusing to see delegations from the starving masses. Occasionally they had the delegates hanged and their bodies flung to the poor as an answer. So, perhaps we are, after all, progressing in the "technique of suppression." But still there is similarity in the situations which should give rulers and their presidential lackeys pause. "After us the deluge," was the motto of Louis XIV, and the deluge came.

When presidents of capitalist democracies and White House flunkeys of industrial autocracy have no time, in the world's richest country, to see the masses who create all the country's wealth, we are witnesses to bourgeois contemptuousness and arrogance riding to a fall; we are also mindful of their insensibility to history's lesson. In the words of Jefferson, the blood of tyrants is the natural manure of liberty, and present day tyrants are heading for a shambles. The "eat cheese" advice of an "idealistic" Wilson and the stupid or sinister silence of a Coolidge amount, in effect, to another "After us the deluge." And it will come.

# The Curse of California

By SPECTATOR

MAY MAY, international labor's holiday, passes with many of our number languishing in the prisons of California. This fact brings to the mind of every revolutionist some of the dark pages of working class persecution in that state. One may start with its first page and find workers' blood being shed. Following its history on down through the years that same manifestation of ruling class tyranny is predominant. Always the rule has been: oppress the worker; stop at nothing to keep him subdued.

A brief outline is here given of the many demonstrations against labor in this state. Greater stress is paid the Criminal Syndicalism Law. This is because we have most recently experienced persecution under this law, and we have not come through unscathed. Sixty-three valiant champions of labor's cause lie in California's prisons today, paying the penalty of progress. We can free them. Will we do it?

THE FOLSOM PRISON ROCK QUARRY
Where Union Men Are Condemned to Long Terms at Hard Labor For Their Opinions and Organizing.

### Discovery and Persecution

California was discovered in the year 1510 by Ordinez de Montalvo, a Spaniard. He claimed the territory for his country and gave it as a name, "The Northern Mystery." Little did he realize how appropriate that caption would be. Stories are told by present day historians of the hardships and privations which Montalvo's men had to endure. Outstanding among them is one which gives an insight into the birth of the appalling reign of terror that has since existed.

It seems that after sighting land Montalvo, with a party of his men, went ashore to raise the Spanish emblem and claim the territory. The claiming of this land called for a ceremony which involved kneeling and kissing the emblem by all present. One among the number rebelled at such display and was promptly executed in a manner most vicious. Then, even as in recent years, if one dared to voice a protest, however slight, he was immediately banned either by death or isolation.

Passing from that date on down through succeeding years of which little is known, we come to the days of the gold rush in the middle of the Nineteenth Century. Bancroft, in his works on the Vigilantes of California, tells of the methods used by those in power at that time; of how innocent men were tried and hung without the slightest provocation. It is mentioned here to add to the chain of circumstances which lead up to present day persecutions.

We come to the days of the Spanish-American War when martial law was common. Workers were driven from pillar to post, hounded by the barking dogs of war who dared not carry out the fight they had created.

### Fresno and San Diego Fights

The gigantic struggles of the workers in Fresno and San Diego in 1911, '12 and '13 are the next outstanding events which we will consider. The Fresno Free Speech fight preceded that of San Diego, and it was in this struggle that the I. W. W. received its first recognition of importance in this state. However, it was in San Diego that the I. W. W. were placed definitely on the California map, as precursers of a new regime who would fight for the rights of the downtrodden worker. The fight there surpassed that in Fresno in that it was more fiercely fought. Cold-blooded terrorism against the workers in San Diego, instigated by Tsar Spreckels, roused the ire of every free thinking person in the West. Governor Johnson sent Colonel Weinstock there to investigate the situation; not because he had any love for the workers, but because he was a bitter political enemy of Spreckels. Weinstock reported back that conditions there were far worse than those of old Russia. After these fights it seemed that the workers would receive more justice and it can truthfully be said that for a time they did.

The next greatest thrust given labor was at Wheatland in 1913, where a riot occurred on the Durst hop ranch. A complete outline of this case was given in the Industrial Pioneer for March of this year and it is not necessary to repeat the details here. However, it may be mentioned that after the riot two innocent men were convicted in a Marysville court and were sentenced to life imprisonment by Judge Eugene P. McDaniels. These two men, Richard Ford and Herman Suhr, were sent to Folsom penitentiary. In passing it might be mentioned that this citadel of misery was built at the behest of the Southern Pacific Company, so that that company might be furnished with cheap gravel for its roadbeds. Ford and Suhr were forced to toil each day along with the lowest of felons at breaking rock in the prison quarry. Hammering their very lives away for a crime they did not commit, but condemned because they understood this system of society too well to suit those in power. Thirteen years in prison and one of the victims, Richard Ford, was released on parole, immediately rearrested, indicted and tried on a second charge resulting from the same riot, and finally acquitted. His acquittal was, in short, not only a complete vindication of himself, but also a vindication of his fellow defendant, Herman Suhr, the I. W. W., and of every worker who participated in the Wheatland hop field strike. Despite this fact, Ford remains on parole and Suhr is still behind prison walls.

### Employers Frame-Up Militant Workers

Inspired by the results of the famous Ford and Suhr trial the employers' associations in California planned to rid the state of other militants, who might have the intelligence and courage to carry on labor's struggle. Accordingly, we find the organized workers facing a lockout in Stockton in 1914. Despite the well planned line of action on the part of the employers their scheme went a trifle awry.

They had intended planting dynamite and other high explosives in conspicuous places and charging labor leaders who were active in the Stockton trouble with the deed. In proving that their schemes were frame-ups we refer to J. P. Emerson's confession. Emerson was a private detective, employed by the Merchant and Manufacturer's Association and, when arrested by mistake at Bay Point, California, he confessed that he intended checking a suit case full of dynamite at the Southern Pacific station and then slipping the check into the pocket of O. Tveitmoe, who was secretary of the California Building Trades Council. Emerson also stated that a motor boat was to be bought in the name of Tom Mooney and subsequently it was to be found with dynamite fuses and caps in it.

It was during this Stockton fight that one Hans Le Jeune was caught in the act of planting some dynamite in the room of A. Johansen, now an organizer for the American Federation of Labor, in the city of Chicago. Le Jeune confessed that he was a hireling of the Merchant and Manufacturer's Association, and he also let it be known that something like five hundred pounds of dynamite were to be placed in such places as obviously to connect the deed up with labor leaders throughout the state.

Following close on the heels of the Stockton fight came the Mooney and Billings frame-up in San Francisco, in 1915. The facts of that case are well known; how a bomb was planted and exploded during a parade, killing ten people. The subsequent trial of a number of innocent workers, several of whom, among them Mooney and Billings, were convicted and sent to prison.

### After the I. W. W. Again

September of 1917 found the fight against the I. W. W. on in earnest. Employers combined their forces for the purpose of ridding the state of these militant workers. During that month approximately 125 men were arrested and thrown in jail at Fresno. Twenty-five men were picked from this group and charged with "Conspiring to oppress employers of labor throughout the United States." That charge was later dismissed, yet it tends to show on what flimsy charges a person could be held.

On December 17th, 1917, a bomb was exploded on the rear steps of Governor Stephen's Mansion in Sacramento. This explosion was later proven to have been instigated by District Attorney Fickert of San Francisco, in an effort to frighten the people and mold public opinion against the I. W. W. He had first planned to have the bombing take place at his own home, but a San Francisco newspaper exposed the scheme so he had to seek another location. After the explosion rumors were rife and many threats were to be heard. Stephens claimed that the Germans were after him. Chief of Police Conran and Sheriff Gormley of Sacramento held that the I. W. W. were responsible and should be shot or hung immediately. Gormley went before the Sacramento Chamber of Commerce and urged that telegrams be sent to the California state representatives asking them to enact a law making it a felony to belong to the I. W. W. Because of this many accredit him as being the sponsor of the Criminal Syndicalism Law.

As an immediate result of the explosion 53 members of the I. W. W. were arrested, thrown into a cell 21 feet square and confined there for months. After sixty-four days of incarceration they were charged with violating the Espionage Act.

### Sacramento's Black Hole

All eyes were turned toward Sacramento and every one eagerly awaited a day when the trial would begin. Then came a surprise. Forty-two of the defendants refused to enter a word in their own defense during the course of their trial. They believed it would be useless to do so, as they contended that justice could not be had in that court. Because of this they were known as the "Silent Defenders." In January, 1919, a verdict was reach-

ed and all were convicted. Sentences were given ranging from one hundred dollars' fine to ten years' imprisoment. Five of the men died from diseases contracted while in this small prison cell awaiting trial.

To prove that the forces of reaction in this state work together as one when destruction of any labor organization is their goal, we quote, herewith, extracts from a report by J. B. Densmore, an agent of the United States Department of Labor. This report appeared in the House of Representatives Document No. 157.

September 14, 1918. "I am going to have a meeting with Mulhall tomorrow," said Fickert to an assistant, "and I am going to link the Mooney case up with the Sacramento case."

September 15, 1918. "Fickert and Deputy U. S. Marshall Mulhall who was active in the Sacramento prosecution, were in conference for 2 hours and 20 minutes. Mulhall stated that a good way to get the I. W. W.'s to plead guilty would be to bring in a squad of soldiers and threaten to shoot them. Fickert said, 'The best thing to do would be to get a bunch of soldiers who served in the Philippines and give the——of——the water cure'. Mulhall discussed the possibility of losing both the Mooney and Sacramento cases and said to Fickert, 'You know, if this thing ever breaks we will go down hill so fast that all hell won't save us'." (Mulhall left California immediately after learning that the government had a dictograph record of his talks. On September 26, 1918, there is a record of him phoning Fickert and complaining about having lost his job).

Other extracts in this report mentioned one Goebel, who was proven to have been an agent provocateur in the Sacramento case, and who has since been active in the Criminal Syndicalism cases, working constantly with the oppressors. Jack Dymond, another notorious labor spy is also mentioned in the report.

### Criminal Syndicalism Law Is Born

In 1917 many newspapers continually carried scare headlines denouncing the Industrial Workers of the World. A fertile field of eager readers awaited each issue. The war was on and patriotism ran hand in hand with ignorance. Throughout the long months of 1918 that the "Silent Defenders" lay in a prison cell awaiting trial, this list of newspapers grew and many of them copied the more brazen, mendacious stories that were carried by the Sacramento BEE. These stories were all alleged tales of the methods used by the I. W. W. as an organization to gain its ends, and invariably they ended by advocating lynching parties and similar extra-legal tactics as a means of exterminating that labor organization.

All of this publicity molded public opinion so well that no voice was raised in dissent when a law was introduced making it a felony to advocate sabotage or the destruction of property by force or violence.

**The San Quentin Prison Jute Mill Where Our Class War Prisoners Are Flung to Cough Their Lungs Out**

It was known as the Criminal Syndicalism Act. It was written by Governor Stephens and handed to Senator Kehoe who introduced it in the House. It was passed at a night session of the legislature and signed at midnight April 30, 1919. Hence, we find that May Day is the official birthday of the act. All of the legislators were in favor of it, even Paul Scharrenberg, the labor representative. It might be said here that the I. W. W. did not disapprove of it either, for they did not then nor do they now believe in the destruction of property. However, they did believe that the law should be enforced, inasmuch as it had been adopted and accordingly they expected to see the people who had raided their halls and destroyed their property, apprehended and punished.

No time was lost in making the law effective. It carried a clause that it would become a statute as soon as it was signed by the Governor. On May, 23rd, 1919 the first arrest was made under the new law. After that date one could pick up almost any newspaper and read of a raid on some labor hall. The members of the I. W. W. and the Communist Labor Party were the only ones against whom the law was used. In November of 1919 the first trial was held.

Months passed, each one adding to the brazen, underhanded methods of prosecution; each month seeing the list of arrests, trials and convictions growing. Five years passed and something snapped in the well organized method used by the powers. Convictions were not coming so easily; people were beginning to voice disapproval at the manner in which the arrests and trials were conducted and the reckless abandon so manifest in the spending of the public's money. Nothing was accomplished other than the imprisoning of innocent workers. So it came to pass that in the fall of

1924 a halt was called. Since that time there have been no arrests or convictions.

However, during those six years of strife the workers paid dearly. The following is a brief record and no attempt is made to make note of the number of arrests that were made for minor charges, where men were kept in jails for long periods without charges being placed against them.

| | |
|---|---|
| Arrested and charged with violating C.S.Law | 504 |
| Trials held under the law | 94 |
| Men involved in trials | 264 |
| Dismissed during or without trial | 292 |
| Acquitted | 31 |
| Convicted | 164 |

### Tactics Used To Gain Convictions

One hundred and sixty-four innocent workers were convicted because they had a principle and courage sufficient to fight for it. Today sixty-three of these men remain in prison. Many people may think that a man must have committed crime, otherwise he would not be arrested or sent to prison. Some day these people may be falsely arrested and then they will have an opportunity to hear their own case argued before a modern bar of Justice. Then they will realize that fully as many innocent people occupy prison cells as those guilty of crime.

In an effort to enlighten them and to explain this seeming incongruity we will briefly outline some of the methods used to gain arrests and convictions under this law.

A study of the law will show it to be one of the most adroitly constructed acts of any age. High courts have interpreted it after many fashions, but prejudice seems to be the chief interpreter as well as executive, in the application of the law.

Arrests were made in general throughout the state with little or no regard to the laws. Halls were raided, furnishings broken up and demolished. Men and women were beaten and on occasion children were scalded and men tarred and feathered.

At first the campaign against the militant workers was carried on extensively around the bay region of Oakland and San Francisco. Later other sections of the state took up the persecution.

Sacramento, for a time became the center of trials and judicial abandon. Here men were arrested as they stepped from the witness stand after they had given their testimony. They were held and later tried and convicted; despite the fact that they had been ordered into the county by the trial judge, who had ruled that none other than members of the accused organization could testify in behalf of the defendants.

The trials were mockeries of justice. Jurors were tampered with openly by the prosecution and paid off with automobiles and kindred articles of value. Witnesses were paid as high as $250.-00 a day by the state to give perjured testimony. In short, any and all means were used to secure convictions. Such tactics had to be employed. It was the only way by which a conviction could be obtained, as no testimony was ever offered in any trial to prove that a defendant had committed an overt act.

Los Angeles County, tried more men under the law than any other county in the state. The methods used were similar to those in vogue in Sacramento. Outside the courts, the conditions surrounding the arrests were far worse than in any other county. Illegal raids, destruction of property, maiming of women and children, tarring and feathering of men characterized the methods of Los Angeles County.

Humboldt county vied with Los Angeles, in her methods of inhuman prosecution. The balance of the counties used similar barbarities.

### Opinions Of The Justices

The State Supreme Court, in the McClennegen case ruled that membership in the Industrial Workers of the World was sufficient to warrant a conviction under this act. The Third Appellate Court in the Powell case further ruled that anyone who had contact with such a member was also guilty of violating the C. C. Law. However, the courts of the state differ. The Second Appellate Court, has consistently contended that mere membership was not sufficient to warrant a conviction.

In the Campbell case, the Third Appellate Court has this to say: "This court, however, in the past has had occasion to review and learn something of the alleged principles of the I. W. W. organization. . . . and, while it is true that those principles disclosed that said organization and the members thereof entertained and stood for a paradoxical and singularly drastic notion of what a system of government of the peoples of the earth should be—a notion which there is every reason to believe is far beyond any hope of practical attainment—*we cannot say that the mere teaching or advocacy of that system is beyond the pale of the constitutional right of any citizen. . . . There is nothing in the scheme itself which is inherently wrong or indicative of any criminal purpose in the organization or its members in advocating and teaching the same.*" (*Italics ours*)

In the case of James Roe, by the same court, we find the following paragraph: "The preamble of the Industrial Workers of the World very clearly illustrates their attitude or position towards the governments of this country. . . . . Upon its face the foregoing does not appear to state more than an innocent or legitimate economic proposition. No one of sense and fairness will deny the right of the laboring classes to maintain an organization for proper self protection. No sensible or fair person will deny that equitable division of the profits accruing from the combined operation of capital and labor between these two essential elements of industrial progress and prosperity should be had. Nor is it a crime, per se, or, for that matter a crime at all, for a person or

LENA MILOS
**This Little Wobbly Song Bird, 9 Years Old, Was Dipped By Fiends In a Cauldron of Boiling Coffee in the Raid on San Pedro I. W. W. Hall, June 14, 1924. Police Conspired To Assist This Almost Unbelievable Savagery By "Neutrality."**

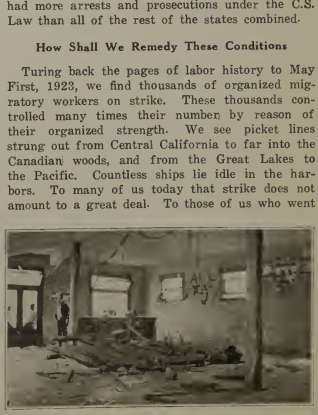
class of persons to advocate a scheme according to Utopian ideals for the government of the peoples of the earth and an equal distribution among all the people of the fruits of all material or industrial activity in all its manifold forms. Such a conditions, if practicable under the existing order of things in this world, would certainly present an ideal situation of the most exalted character."

And again we find this same court making contradictory rulings to the affect that men were guilty by merely belonging to an organization which they previously had acknowledged would be a benefit to society. What mockery is this?

### What Type of Men Are These? Accused and Accuser

Comes now the question, what manner of men were these who were so ruthlessly persecuted from the time of Montalvo down to this day and what manner of men were their persecutors?

The accused: Miners, sailors, lumberjacks, construction and agricultural workers constitute their number. They are pioneers, the vanguard of civilization, for they are the type of men who go ahead of all others and do the foundation work. The miner extracts ore from the bowels of the earth and in so doing ventures into the unknown abyss of which no one is certain; the sailor travels the seven seas in unseaworthy ships, discovering and chartering courses hitherto unknown; the lumberjack risks his life daily in order to bring to earth gigantic trees for wood products; the construction worker lays out railroads across trackless deserts and snow covered mountain ranges and the farmhand travels from state to state to harvest the crops that we all may eat.



Hard of hand and stern of face they have stood side by side maintaining their principles, facing whatever odds came their way. They visualize a beautiful world, wherein all society will share equally in all things of life. It is that dream for which they fight and it is altogether probable that a similar ideal held sway in the mind of Montalvo's seaman.

The accusers: Social parasites who live from the toil of others, constitute their number. California is today and has been for centuries a haven for these people. Unrestricted they flaunt a gilded, iron hand and all who fear, bow down. Henchmen do their bidding and it is these henchmen that are the active oppressors of the workers. Consider the type of men they are. Former Prosecutor Cowan of Sacramento deserted his wife and several children. It was he who waxed so eloquent in pleading for conviction of members of the I. W. W., saying that the accused were wreckers of the American home. Coutts and Townsend, witnesses for the prosecution, were all perjurers and degenerates. Busick, a judge, is noted for his lack of intelligence and for his inhuman practises. It is this class that is the real oppressor of the toilers. Now that the comparison is made, which class do you uphold, the accused or the accuser, the oppressed or the oppressor?

To avoid leaving the impression that in California alone such persecution has existed, the following statistics are offered. Sixteen states, Alaska and Hawaii have Criminal Syndicalism Laws. Fourteen states have peace time sedition acts. Two states have Criminal Anarchy Laws. Three states have laws against "The advocacy of revolution." Thirty states, Alaska and Hawaii have Red Flag and Insignia laws and ordinances. Eleven states have anti-sedition laws. It is, however, noteworthy in this instance that California has had more arrests and prosecutions under the C.S. Law than all of the rest of the states combined.

### How Shall We Remedy These Conditions

Turing back the pages of labor history to May First, 1923, we find thousands of organized migratory workers on strike. These thousands controlled many times their number by reason of their organized strength. We see picket lines strung out from Central California to far into the Canadian woods, and from the Great Lakes to the Pacific. Countless ships lie idle in the harbors. To many of us today that strike does not amount to a great deal. To those of us who went

THE I. W. W. HALL AT SAN PEDRO
**After the Hoodlums and Sadists of June 14th Got Through. The Police Pretended To Have a Call In the Country Just When the K. K. K. Descended on the Hall.**

through it, understanding its real objective and rejoicing at its outcome, it is remembered as an effective method of gaining labor's rights.

The primary demand of that strike was the release of Class War Prisoners. Immediately after the strike was over it was announced that the President and Attorney General were reviewing the Federal case. Seven weeks after that strike these gentlemen offered many of the Federal Class War Prisoners a conditional release. Some accepted, some refused. All knew that there was small danger of May Day 1924 passing with them still in prison. Rather than suffer another such demonstration, we find that the powers of this land, saw to it that on a cool December morning the gates of Leavenworth prison swung ajar and all Federal Class War Prisoners were secure in the knowledge that economic power had wrested the bars that imprisoned them.

It is indeed a wonderful part of labor history to glance back over, but would it not be still more wonderful were an effective strike such as that of '23 to be re-enacted? It can be done and should be done. May Day is here and sixty-three men in California's Twin Hells wonder how our strike plans for their release are progressing.

The San Pedro Raiding Monsters Poured Hot Grease on This Lad. Twelve-Year-Old Andrew Kuljis on Hospital Cot Scalded Nearly To Death.

Economic power did the same job in 1923. Let us profit by that experience. Let us use that same power today. Then and only then will our valiant fellow workers walk free from these modern infernos, aside from the day that their time is served. Strike now and strike hard.

# BOOK REVIEWS

**The Lion's Long Shadow .**

"Whither England?" is the best book that Leon Trotsky has written. It is a searching analysis of the economic and political decline of English supremacy, and a study of the classes, parties and persons engaged in the English class struggle. On the one side are shown all those bending their efforts to preserve the status quo; on the other those whose activities are directed toward destroying existing conditions by revolutionary methods.

In the "Preface for America" he shows his object in putting the title in a query form:

"The inference to which I am led by my study is that England is heading rapidly toward an era of great revolutionary upheavals."

He declares that in spite of all the cant and flapdoodle of Messrs. J. Ramsey McDonald and other Labor Party lickspittles of "gradualness," there is in England a class struggle between the bourgeoisie and the proletariat which is not to be liquidated by misinformation, by chanting psalms or by attempts at peaceful social revolution through application of the legalistic apparatus of capitalist democracy. Trotsky calls for the destruction of the present ruling class, and for the establishment of a supreme proletarian power.

In order to do this he believes that Labor Party purification is a primary requisite, and that the workers must be educated on the fallacy of gradualness, or evolutionary, non-violent approaches to their emancipation. It is wrong to mislead them into believing that they can accomplish their socio-economic deliveration without sharp, armed conflict with a decadent, but very desperate, ruling class, and that the workers' mentality should be made to compass this truth so that they can prepare for their gigantic task.

Trotsky scathingly belittles MacDonald, Smillie, Lansbury, Clynes, Thomas, the Snowdens, the Webbs and the rest of that polyglot assortment of Christian, pacifistic, hypocritical, crown-loving apostles of class collaboration who have found their way into the Labor Party, and from their vantage point are attempting to reduce the workers to such impotence that they will continue to be easy victims to those interested in their political expropriation. His method is explained in these words:

"Our exposition, for the most part, will be critical and polemical in character. History is made by men; the evaluation of the living forces producing the history of the present can not be otherwise than active. In order to learn what are the classes, parties, and party leaders engaged in the struggle, and what the morrow will bring for them, we must work our way through a mass of political complications, lies, hypocrisies, of an all pervading parliamentary 'cant'. Under these circumstances, the polemical method is the necessary method of political analysis."

In his opinion the parliamentary procedure is useful for propaganda, but he makes it quite clear that just as the Roundheads ousted their class enemies from Parliament in the 17th Century, so too, the victorious Labor Party must learn the lessons of Puritan revolutionary mettle, and set up a dictatorship through a transitional period in which the new order is gaining strength and suppressing counter-revolution.

He does not content himself with unsupported statements. He says that these acts must be performed, but he attempts to prove from concrete examples that the revolutionary crisis is imminent and that the trade unions can not save themselves from destruction unless they act as the revolutionary vanguard, strangling the English bourgeoisie into submission, and then destroying it.

He quotes Baldwin's parliamentary casuistry of pacifism. In the House of Commons the premier vowed, "We shall under no circumstances shoot first." Laborites applauded and solemly chorused their asinine "amen" when this aristocratic exploiter and crooked mouthpiece of the world's most piratical political stratum wound up his pious twaddle with a "Give us piece in our time, O Lord!"

Peace to go on cheating the Chinese, driving the Egyptians, starving the Hindus, rending Ireland and a few other holy practises of this most democratic of all governments, to say nothing of skinning the "limeys" themselves.

Anticipating that the secret service systems of England and America will interpret his book as an effort to get propaganda across he says: "To accuse me of revolutionary meddling in the affairs of foreign countries, on the basis of such statements, (that England is going swiftly toward social revolution. P. C.) would be almost equivalent to accusing the astronomer of bringing about a solar eclipse because he had predicted its occurrence."

Beside other forces compelling England to rush directly to revolution he says that the Russian Government is comparatively conservative. "Morgan, Dawes, Julius Barnes—these are the artificers of the approaching revolution."

Of the United States he says: "In revolutionary development America does not stand in the front rank; the American bourgeoisie will still enjoy the privilege of witnessing the destruction of its older European sister. But the inevitable hour

will strike for American capitalism also; the American oil and steel magnates, trust and export leaders, the multimillionnaires of New York, Chicago and San Francisco are performing—though unconsciously—their predestined revolutionary function. And the American proletariat will ultimately discharge theirs."

All this is very interesting, even inspiring, and of course highly instructive. But we should like to know "Whither America?" and hear from the same author on our class problem because, after all, England is far off and our situation is not analogous to that of Britain. We have no labor party here, and we don't want any. Most of us regard attempts to create one a waste of revolutionary energy. The English House of Commons seated several hundred members of the Labor Party. The United States Congress kicked out the lonely, milk-sopping Berger, and our effulgent Empire State could not tolerate in its immaculate Albany legislature five properly elected socialists. The democratic and republican brethren united to eject them and the comrades hit the skids.

Germany had its strong Social-Democratic representation in the Reichstag, and it failed the workers when faced by the war crisis, and later the Ebert crowd formed a coalition with the bourgeois, incidentally uniting in the murder of Karl Liebknecht and Rosa Luxemburg in the post-war reaction.

Then there is France with her Vivianis, Millerands, Briands and the rest of the wolves. Are we American slaves, or slaves in America, to try for a chance at debates in legislatures? The advocates of economic direct action think not. The I. W. W. teaches that workers must unite by industries, mutually supported, to seize the land and the industries.

This is satisfyingly pertinent. There is no circumlocution about our program. However, we believe that the revolution is so near, not only for England but for the whole world, the United States probably lagging behind Europe as Trotsky says, that we shall be spared the parliamentary experiment and disappointment. Trotsky says that when the Labor Party with parliamentary majority to justify it takes its first, great step, the one to nationalize the mines, the British Fascisti will begin the revolution with bullets. The temper of the arrogant rulers of America will not even allow anything like a legislative majority of labor members, and our approach is manifestly not to be prosecuted through such avenues. By direct action in the industries the American proletariat will ultimately discharge their revolutionary function. Let us organize for a terrific conflict, without opportunism and without compromise, but steeled to determined effort to take the whole works.

—Paul Conrad.

## THREE GOOD BOOKS

In presenting reviews of these books I am motivated by an opinion of their excellence and also by the fact that they have not been reviewed previously in our press. They are, I believe, worthy of serious examination by all revolutionists.

Although it has been some eighteen years since I first entered the revolutionary movement, and although I have read innumerable utopian pieces of fiction, I had successfully run the gauntlet without encountering Howells's delightful tale "A Traveler From Altruria," till I discovered it in the catalogue of the Chicago Public Library. In conception and execution the book is excellent, and deserves a place among the classics of the movement.

A Mr. Homos, citizen of Altruria, visits a popular author, Mr. Twelvemouth, at a popular summer resort. His first extensive contact with life under capitalism begins with a group consisting of a banker, a manufacturer, a preacher, a lawyer, a doctor, and a female of the gushing, notoriety seeking type.

Mr. Homos, obviously an educated and cultured man, typical of all Altrurians, violates numerous taboos of the ruling class at the resort because of his generous and social nature, a product of Altrurian life. His total inability to harmonize the blah-blah about the worth of labor and the real social position of the actual useful workers, together with the conversation and comment of the various characters upon life, are the spice of the book. Ever since reading it I have been obsessed with a desire to have a Mr. Homos Jr. visit these scenes and as it seems that this desire is so persistent that I cannot do other than yield to it, the world may be burdened with still another work of this kind. The only hope of mankind escaping this impending evil will lie in my lack of ability.

Some three years ago I first purchased and read, with delight, a copy of "The Next Step." I was then deeply impressed by it, the events happening, since my first reading of it have, to my mind, rendered this work of great importance. It is not fiction, but a serious study of a possible social structure of the future. I have, however, come into contact with but few people in the revolutionary movement who have read it and I believe that it should be widely circulated and perused by every revolutionist.

The author starts with the assertion that the next step in social organization must be the economic organization of all of the affairs of life into "A World's Producers' Society" with a central organization with jurisdiction universal in scope in so far as universal problems are concerned; conditioned by a world's parliament organized on the basis of self-governing industrial groups.

The social organization set forth by the author would proceed step by step from "local, district,

and division to world Industrial groups." In this ascending series of federations or joint organizations "The principle of local autonomy will be maintained in all its rigor."

"Economic federation with local groups enjoying local autonomy in all local matters" rather than "economic bureaucracy, involving the concentration of economic authority in the hands of a centralized group," is set forth as a necessary requirement for the successful operation of such a social structure. Since "concentration of authority is a denial of" and results in "a corresponding loss of local initiative."

On this question the author says: "The individual cannot be expected to exert himself where there is no apparent connection between the effort expended and the return for his effort, neither can he be expected to exert himself in the interest of economic machinery that belongs to some one else. His interest can be maintained only by the hope of a return for the effort that he expends, and by a sense of control over the job on which he works. Among the various experiments that society has tried, in an effort to attain these ends, none has been more successful than self-government."

"Behaviorism" is a book consisting of a series of lectures delivered by the author to classes. It is composed in a style that makes it both easy and interesting reading for the layman, yet within its covers the author has given a complete statement of the Behavioristic Psychological School.

The older schools of psychology have assumed that "consciousness" must be the subject matter of psychology. With this assumption the behaviorist will have nothing to do. What is this "consciousness" they challenge? Merely an evolution of the idea of the soul, they say, and all introspectionists find upon analysis of consciousness "exactly what they by assumption put into it"—nothing more.

Then what is the subject matter with which psychology should concern itself? Behavior and the stimuli which bring about particular responses, they answer. To the behaviorist, human nature i.e., behavior, is one of the most modifiable things imaginable. "If you decide that the human organism should behave in this way, you must arrange conditions of such and such kind." That an intelligent person can "by training in principles and particulars" be almost remade in a few weeks time is one of the assertions of the author.

The ancient superstitions, instincts and inherited talent, are also challenged. " . . . . . regardless of the geological age, or geographical zone or station in life of the parents within the limits of individual variation man is born with the same general set of responses."

On any assumption of innate superiority of any race the author frowns. "I defy anyone to take these infants at birth (black and yellow), study their behavior, mark off the differences in behavior that will characterize white from black and white or black from yellow. There will be difference in behavior but the burden of proof is upon the individual be he biologist or eugenist who claims that these racial differences are greater than individual differences."

The developments which are usually attributed to inheritance of "mental" traits, (instincts, talent, etc.,) are accounted for, quite logically, by variations in structure, habit formation and conditioning circumstances. "Our hereditary structure lies ready to be shaped in a thousand different ways." The same structure, mind you, depending upon the way in which the child is brought up.

The author used the boomerang to illustrate the value or importance of structures. The action of the boomerang of course is dependent upon its particular structure and not upon innate consciousness or instinct. A change in structure naturally changes its action.

In some interesting comments on how we think the author places no "more emphasis upon the brain and spinal cord, than upon the striped muscles of the body, the plain muscles of the stomach or the glands." In other words we think with the body and are creatures of habit and responses rather than mentally directed vehicles.

One might well compare this scientific work with Twain's essay on "What Is Man?" The conclusions are largely the same. This school of psychology is one that every revolutionist should be familiar with. It has demonstrated that all of the bogies of the apologists of the old order are unsound.

—Warren Lamson.

**A TRAVELER FROM ALTRURIA, by William Dean Howells, 1908.**

**THE NEXT STEP, by Scott Nearing.**

**BEHAVIORISM, by J. B. Watson, Peoples' Institute Publishing Co., New York. Price, $2.50.**

**Good Analysis; Bad Conclusion.**

There is a great deal of information about productivity, wealth distribution, legal crime, unemployment, political nepotism, bank schemes, persecution of workers and many other matters of the greatest interest to the working class in Upton Sinclair's new pamphlet—"Letters to Judd"—all very engrossingly written and in the short space of 64 pages. Sinclair goes after the corruption of the system in the slam-bang way in which he always attacks the exploiters; with his eyes open and his head cool.

But when he concludes that the workers should buy out the robbers, saying that it is cheaper and less violent than confiscation, he reckons without his hosts. The present amassed wealth in capitalist hands is of course very dear to its owners, but dearer still is their ownership of the productive machinery and the land by which they retain their prerogatives and hope to accumulate immensely

greater wealth and the power it guarantees. To think that they will relinquish it without the bitterest fight is certainly utopian, and Sinclair seems to think, though he doesn't say so, that if we elect him Governor of California (with the votes we haven't got) and some other socialists to the different law making and executive seats, we can eventually secure such parliamentary strength that the legislative decree will provide for the abolition of private property in the great social tools via compensation for the robbers of all the wealth which we, the workers, have created. He says that "Young Johnny Coaloil will still be able to keep his yacht and his chorus girs on the Riviera, and Mrs. Silly Splash will continue to wear diamond-embroidered bathing suits at Palm Beach. . . . "

Is that so? Well, not by a damsite! Johnny Coaloil will be put on the business end of a Number 2, and some useful work will be found for the erstwhile rich female parasites, and the chorus girls will serve either as real artists or do some directly productive work. If this be a vengeful spirit, Upton, then make the most of it. It is an insult to the intelligence of a working stiff to tell him and his fellow workers to buy out the rich. We couldn't buy if we wanted to, and if we could muster sufficient organized strength to decide that we should force ourselves on the bosses as purchasers of the productive tools, we should by that very fact have the power to take those tools, and put the bosses to work. The only way to get the power to dispossess the boss is to organize the industries.

—Oscar Johnson.

**LETTERS TO JUDD, by Upton Sinclair, published by the author at Pasadena, California. Price, 15 cents.**

**Kaleidoscopic Impressions**

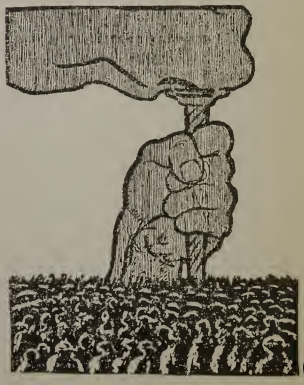
To radicals Sinclair's "The Goose Step" and "The Goslings" are familiar revelations of schemes for controlling the American educational system. From the sage of Pasadena we knew what was coming when he gave advance notices of these studies. But occasionally other nonconformists spring up suddenly and have their fling at showing up the educational machine for the class ruled monster that it is.

For his contribution in this respect, more than for any particular literary merit, Melvin P. Levy is worth reading in "Matrix." The story is obviously autobiographical; a record of impressions registered on its hero's mind from early childhood, through youth and into manhood, with the end a sort of souvenir telling what became of Robert McKim after commercialism forced him away from his love of literature to business success, and in the natural order of things, to a grave decorated profusely with floral masterpieces from the nation's leading Kiwanis.

Much of the snobbery of college life is depicted, and there are paragraphs like these about the teachers which, I think, are not entirely fictitious:

"There is Markley the etymologist. Heavy, obtuse volumes issue from his pen: he is secretary of the Phi Beta Kappa; he is an epileptic. . . . "

"Dutton is an anthropologist, young, cynical, brilliant, underpaid. He is suspect of being a Jew."



"Livingston, calm and handsome, wearing his Oxford ermine with dignity, is a teacher of English. His classes are filled with beautiful girls who are attracted by his person and his amusing lectures. . . . . "

Another paragraph says that all college preparation is done to produce fitter human business machines, and the profs in the Business Administration part of the institution. (Almost any large university will show the same thing, but Levy is talking of the University of Washington in Seattle) are the best paid. Why not? Culture is a secondary consideration; skinning workers is the big thing in life for Babbitts, and those who know how to teach the best methods for good skinning have a high price.

The author should continue to write, because that is the only way to learn the art, and already he shows promise.

—Max Sterne.

# The Slave

By HENRY GEORGE WEISS

THE first intimation that he was a slave came to Gilbert Dowson at the age of twelve. Forces—economic forces of which he knew nothing—ordained that he should leave school and go to work; made it imperative that he should stand ten weary hours a day in front of a long, wide board table and cut, endlessly cut, mile after mile of coat-canvasing into various shapes and designs. Day after day; week after week; cut; chalk out; ply up; cut; for four weary years.

He did not want to do it. His whole soul rebelled against doing it. He wanted to continue going to school. Young as he was he had seen a vision. Something within him had responded to a line of poetry, a rounded period of prose. The lesson books—history, geography, grammar; the staple books of learning—hitherto so dull began to take on the aspect of a golden road that would lead to the gate of knowledge, the gate that would swing wide to let him enter into the fellowship of poets, philosophers, writers. Not that he consciously put it so to himself; but he felt an inspiration lightening the monotonous repetition of a conjugation, the innocuous recital of some general's exploits, the laborious memorizing of a country's exports. Then, blasting the budding flower of his intellect, Work!

An older sister had become too ill to toil longer in the cotton factory; an elder brother had married, thus taking his meagre board-money from the family income.

"It isn't as if it were the Mill," his mother said placatingly when he voiced his objections to the job. "It'll be nicer at Clyde's. You'll learn to be a cutter, and that's a good trade. Besides we need your wages."

Wages!

Three dollars a week. Twelve dollars a month. The pitifulness of it! But twelve dollars a month would come near to paying the rent for the tumbledown shack in which they lived. So to Clyde's he went. He stormed, he wept, he pled. Incoherent words rushed pell-mell from his tongue. Couldn't they see! He wanted—wanted—What did he want? What was this thing he craved so blindly, to them, so foolishly? He couldn't answer. He didn't know. It was vague, even to, himself. Just the hunger for something something. . . . . .

Ah, hunger!

There was the hunger of six little brothers and sisters. And the need of a girl who had toiled to bring him up, the others up. She needed broths, medicines. And the father—the shabby, prematurely gray and stooped father—only made eighty dollars a month! He was chronically tired, this father of his, from working fifteen, eighteen, yes, and sometimes the whole twenty-four hours a day. In debt. To the butcher, the doctor, the grocer. What was the desire of a boy for schooling, education, culture, to the insistent demand of creditors for money, money; to the craving of hungry mouths for food, food; to the hacking cough of a dying girl calling for medicines, medecines?

But he only saw his father ordering him, his mother denying him. He felt that he was a slave to them, their whims; that they drove him cruelly and without thought. He saw only them, and not the force behind them which dictated their actions. In a sense he grew to hate them. Not really hate. No. For he loved his father who was hard on him in nothing else; his mother, who contrived little luxuries for his lunch and petted and praised him. But a sense of injury grew in him, nevertheless.

The shop—that vast room where half a hundred men labored to clip into shape the bolts of cloth of all colors and descriptions—pressed in on him like the walls of a prison for four weary years. Years of coarseness, vulgarity; years of obscenities, degradations; years when he tried to ape the manners, the mouthings of his ignorant fellow slaves.

There were girls—the sewing-machine girls—who sweated in another vast cavern above the one in which he labored. Pretty girls, ugly girls, suggestive girls. Girls who leaned their bodies sensuously against his; girls whom he hugged in the passageway, took liberties with in the corners. Girls who seemed to flame his blood, sear his flesh. Yet only girls working as he was working, slaving as he was slaving. Modest girls being made bold; bold girls laughing at the timidity of raw youth. All a welter of hot animal emotions, unrestrained by intellect, unadorned with thought.

He reacted to his environment by becoming as sordid as the men around him; yet instead of dulling mentally as did they, his brain soared beyond the confines of the job in a thousand day dreams. His tongue asked himself a million questions. Of this, of that. He lived the life of the place; loathed the life of the place; fled like a convict every night from the place. Fled to the streets; the long lighted streets; the streets that he walked with other youths, following the girls. Mashing.

"Where you goin'?"

"Where do you think?"

"My way, kid."

"Say! if you get fresh with me. . . . . "

That was the routine of it. The give and take.

Sometimes he picked a girl up. Then there would be ten cent sprees. Ice-cream, soda pop; home at midnight; bed; back in the morning to the treadmill, heavy-eyed, reluctant. This the round of the week; this the tenor of the days. Drab, colorless, bestial. Living the life of his kind; yet rebellious. By a strange quirk of the brain, by the functioning of a cell over which he had no control. With the thought of escape now active, now latent. Reading, reading, here and there. Glimpsing beauties, sensing truths. Until one day the bars were wrenched asunder and he came out of his cage; came out over the body of the sister who had died; over the coffin of his brother's wife who had succumbed to an attack of influenza. Came out of his cage—or so he thought.

"You can go back to school, if you want to," his sad-faced mother said. "I guess we can manage it—now."

So back to his studies he went. Back to the school-world of which he had dreamed. Only to find himself an alien; a being from another plane. Out of touch with his schoolmates who were younger than he. Feeling old in comparison. Incredibly old and awkward. To them he was queer. They made fun of him. The teacher thought him an oddity. Resented him, rather. Somehow he couldn't seem to learn. He stammered when he spoke. Was unable to co-ordinate his longing for knowledge into words that would adequately question, explain.

Six months of dogged struggle took place. Six months of mental, of physical torture, when he dragged himself to his classes by sheer strength of will. Then he quit.

What was the use? He was a failure. What had he made in arithmetic? Thirty! History? Ah, he had made ninety there! But that seemed a fluke, for in geography and grammar he had failed miserably. Why had he failed in grammar? When he wanted to juggle words. When he spent hours proving over rules. But the rules seemed to elude his memory. Perhaps his brain was deadened with the monotonous toil implied in four years of snipping; four years of breathing in lint, sordidness, vulgarity. He did not reason about it. He knew only something had gone from the books he had craved; some glamor departed from the printed word; that he couldn't concentrate, study; that something in the atmosphere of the schoolroom, in the attitude of the scholars and the teacher, embarrassed him, smothered him, drove him from their midst.

So back to work he went again. Not to the cutting room. No! He would have died before doing that. But this time on the water front, where he found part time employment loading freight cars for a railroad company. He was big for his age; strong; so he heaved the boxes and bales, wheeled the truck, and made twenty-five cents an hour. Sometimes he made two-fifty a day. Wealth! Came a period of drinking, smoking, carousing; of seeking women: the kind that sold themselves a dozen times a night for the doubtful privilege of living in Munk the Jew's horrible dive. But through it all thinking, thinking. By a strange quirk of the brain, by the functioning of a cell over which he had no control. Endlessly saying to his mother, his brother, himself:

"If I only hadn't left school the first time."

A vast resentment filled his being.

"When I could have learned," he said bitterly, "you drove me to work like a slave."

A slave! That's all he would ever be. First it had been to his family; now it was to ignorance, lust.

Thus he worked, loafed, sinned, pondered; embittered, muddled; until he met Jane. Just a simple girl. Sweet, alluring. Going to high school. He made broken confessions to her; read with her; studied with her; and, of course, fell in love with her. Once more there was glamor on the printed page; once more the bars were wrenched asunder—this time by the miracle of love— and he came forth from his cage— or so he thought; because the new cage was much roomier than the old one, much lighter, and blessed by the presence of the girl he desired.

Within twelve months of their meeting, he married her; according to the Catholic rites; adopting her religion.

What did it matter? Religion meant nothing to him but pleasing her. So he turned from his Protestant faith. Mass, Communion? Holy enough with her by his side. Thus he reasoned. But in time he became conscious of the bars of this new cage. One year, two years. No further this way. Three years, four years. No further that way. To left, to right. Bars. She had discovered for him the public library; then he discovered books for himself. His thirst for knowledge was insatiable; his intellect out-soared hers.

"Tell me—why mustn't I read Kant?"

"It is forbidden. The Church. . . . . "

"The Church be damned!"

Tears. Recriminations. Making up. Going to confession to please her. Forgiveness. Temptation again.

"Why mustn't I read Ingersoll?"

"Oh, he is terrible!"

"Darwin?"

"He's an atheist."

"The Age of Reason?"

"Is forbidden."

He rebelled.

"You must talk to Father John."

Talks, talks, talks. With the priest. Genesis versus science; evolution versus theology.

"What proof have I the Church is right?"

"You must have faith, my son."

Faith, faith. Surrender reason for faith. Blindly believe what blinder men told. His spirit rebelled; his intellect refused. Yet he paced his cage. Curbed his tongue. Hid his books. Until

the flesh revolted. Until the words kept running through his brain:

"I am a slave to a priest-ridden woman; to a church that peddles superstition and fear!"

Then as he was struggling chaotically with his doubts, his fears, came the strike of longshoremen and checkers. He was working as a longshoreman and belonged to the union, of course; but that had been a matter of routine; something he had never bothered his head about. Not once had he gone to a union meeting. But now the union had called him out; had called five hundred other men out. Because the gangs worked fifteen hours a day for a week at a time. (This was in 1912). Sometimes the night through to finish a ship. Because the wages are low. God knows they were! Though Jane scrimped and managed, the children went poorly shod and insufficiently clothed. But he had accepted low wages and long hours as a necessary evil. Something to be borne with fortitude. But now there were strike leaders telling him that they need be borne no longer. Strange phrases began to be heard. He did not understand them. They were strange to him. Socialism! He had thought he knew what that word implied. A foolish idea of dividing everything up among the workers. But now he was bewildered. He did not know what to think. Until the night the police loaded him and several other strikers into a patrol for the terrible crime of picketing. There was a gash on the side of his head. A policeman's club had done that. As he mechanically wiped away the blood trickling down his face he thought. Never had he thought more clearly. Those pamphlets he had read. He pondered them over. The speeches he had heard. On the corners of the streets, in his union hall. They rang in his ears. He began to understand. His hands clenched; his jaw set. Behind the police, the law, he began to sense it, to see it. Gigantic, ruthless. And he had blamed his poor, stooped, overworked father, his sallow, dispirited mother. Fool that he was! On them he had laid the onus of his dispoiled childhood when the blame laid elsewhere.

All the smouldering resentment, of his being crystallized into burning hatred—hatred of the monstrous, the soulless thing that overshadowed him with its bulk. He knew his enemy at last.

He had been, he was, not the slave of his father, his mother, his wife, his employers, but the slave of the cold, remorseless complement of them all—THE SYSTEM!

**STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC., REUQIRED BY THE ACT CONGRESS OF AUGUST 24, 1912,**

**Of Industrial Pioneer, published Monthly at 3333 Belmont Ave., Chicago, Ill., for April 1, 1926.**

STATE OF ILLINOIS )
COUNTY OF COOK ) ss.

Before, me a **Notary Public** in and for the State and county aforesaid, personally appeared **James Sullivan,** who, having been duly sworn according to law, deposes and says that he is the **Business Manager** of the **Industrial Pioneer,** and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management, etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 411, Postal Laws and Regulations, to wit:

1. That the names and addresses of the publisher, editor, managing editor, and business manager are:

**Publisher The Industrial Workers of the World, 3333 Belmont Ave., Chicago, Ill.**

**Editor John A. Gaban, 3333 Belmoont Ave., Chicago, Ill.**

Business Manager **James Sullivan, 3333 Belmont Ave., Chicago, Ill.**

2. That the owners are:

**The Industrial Workers of the World, 3333 Belmont Ave., Chicago, Ill.**

**John I. Turner, General Secretary-Treas., 3333 Belmont Ave., Chicago, Ill.**

**Edw. E. Andersoon, Chairman Executive Board, 3333 Belmont Ave., Chicago, Ill.**

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages, or other securities are: **None.**

4. That the two paragraphs next above, giving the names of the owners, stockholders, and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stock, bonds, or other securities than as so stated by him.

**James Sullivan,** Business Manager

Sworn to and subscribed before me this 24th day of March, 1926.

## THE AUCTION BLOCK

Reliable, steady, intelligent, well-recommended man, from twenty-five to sixty years of age, to sell farmers in this State."—Ad in Minnesota paper.

•••••••

## A CURÉ IN THE ZOO

A provincial French priest, troubled by tales of Darwin visited a monkey house where a chimpanzee proceeded to mimic the good man. Fascinated, he clapped his hands; the chimp did likewise. When the priest nursed his chin Mr. Simian rubbed his own, and when the abbe scratched his head in wonder the chimp, very naturally, began scratching his own cranium. It was getting beyond the father.

Then, mindful of his holy calling, the priest, brows thoughtfully wrinkled, said:

"Say ONE word, you devil, and I'll baptize you!"

**". . . well . . . what d'ye want now?"**
**"The earth!"**

•••••••

## GOOD PHYSIOLOGY

**Youngster** (aged 10): We have a dumb girl in school. The teacher in hygiene asked her where digestion took place and she said in the Panama Canal.

**Father:** Well, where does it take place?

**Youngster:** Why, in the complementary canal.

•••••••

## CANINE LITERATI

"Lay down, pup. Lay down. That's a good doggie. Lay down, I tell you."

"Mister, you'll have to say, 'Lie down'. He's a Boston terrier."

•••••••

Long enough have we believed, now we want to know.—**Buckner.**

## AND CODGERS

**Teacher** (junior geography class): What are the principal agricultural products of Cape Cod?

**Charles:** Cod liver oil and codfish balls.

•••••••

## FIGURE IT OUT

**Tim:** I attended a wooden wedding today.

**Eddie:** Who got married?

**Tim:** Two Poles.

•••••••

## RAILROADER

**Cutor:** (examining Wobbly witness in a California C.S. case) **I work for** wages. Now what industrial union would you fellows put me in?

**Wobbly:** In the Railroad Workers' Industrial Union.

**Cutor:** Railroad workers?

**Wobbly:** Sure. Your business is railroading workers to the penitentiaries and jails.

•••••••

## A COUPLE FROM T-BONE

**Scissor:** (sharply) I tell you it can't be done! They'll sell out. Every man has his price!

**Wobbly:** (impressively) That's right! They'll sell out—**for the full product of their toil.** Nothing less.

•••••••

**Brakeman:** (in high dungeon) What! You haven't a union card? And you've got the nerve to ride this train! Get off—UNLOAD!—Yes, both of you. Why you're worse off than a ship without a rudder!

**First Hobo:** (as they are going) Wot did he say, **a stiff without a brother?**

**Second Hobo:** (peeved) Naw, he said a ship without a rudder—darn him!

**First Hobo:** (thinking) Well, I guess he's right. We don't seem to be getting anywhere.

# All Together for a Banner Drive!

By Frank Thorpe
(Secretary-Treasurer of A. W. I. U. No. 110)

THESE lines are being written while the General Organization Committee of Agricultural Workers Industrial Union No. 110 are meeting in Chicago to prepare what should be the greatest organization campaign in the history of our Industrial Union. Mindful of the responsibility before us we must approach our problems with utmost earnestness. Success of the drive this year means industrial union progress of such vast proportions that even relatively few comprehend its significance. Our growth is tantamount to the greater development of the entire organization. Whenever an Industrial Union achieves advances, the other Industrial Unions and the General Headquarters are strengthened. Thus the purposes of the I. W. W. are forwarded.

**Now Wouldn't That Make A Town Clown Swear!**

This issue of The Industrial Pioneer reaches the field just prior to the One Ten Conference at Alva, Oklahoma, where our membership are going to continue preparations for the work of organization that must be accomplished this year. Alva is the town where harvest workers each year begin their drive through the wheat belt. Our active membership dictated wisely at the last I. U. Convention when they designated this place for the Spring Conference. We need not dilate on the strategic value of their choice, its worth being obvious. But whatever the site of our deliberations they can be effective only if we work for organizational good, and work for it clear-eyed and determined to prosecute the plans which are formulated and adopted.

With this thought in mind it is timely for us to consider, in concise language, the chief problems confronting us. Denied opportunity to ride from town to town in the grain territory on passenger trains, for the reason that workers who are so socially necessary to insure the nation's bread are not considered worthy of wages sufficient to provide railroad tickets, the "hands" have, until recently, depended solely for transportation on freight trains. But now, with the advent of the harvest auto tramp, we are faced by a serious competition. What does this signify?

Formerly John Farmer was compelled to seek labor power among the groups gathered in towns. To a great extent he is still obliged to pursue this tactic. It is disadvantageous to him, and he does not like it. Approaching workers made stronger by association, he endlessly blurted his pious wish that things would be better if only he did not have to hunt the "pesky go-abouts" where they congregate. Then came the second to fifth-hand tin lizzie, and unorganized workers in twos, threes, fours and so on, rode rapidly to the farmhouses, where they had previously relied on the slower box cars. This innovation greatly aids the farmer. These workers, **apply to him** for work. Formerly the farmer approached them and **requested them to accept** work for him. By the new scheme the farmer meets applicants already less able to demand good wages and conditions because they are not with the collective power in the towns.

Since our work of organization must provide, and provide without delay, for bringing these auto tramps into the ranks of the A. W. I. U., we must tackle the job this year. Those harvest workers who are not to be reached in the towns and on the trains must be organized right on the jobs. Our members and delegates must get on the jobs as rapidly as they can and organize the auto camps. In this way, and in no other way, can we make an asset of what is now a menace on which we can not look with indifference or incompetency.

### The "Coffee Grinder" Problem

Developments of productive machinery can not always be estimated solely by the size of machines used. There is a phenomenon in the small machine form which has entered the grain region, militating sharply against our task of uniting harvest workers. I speak of the increasing prevalence of small, 18- to 28-inch thrashing machines with three bundle racks. Readers not familiar with farm machinery require some light on this statement. Until a few years ago large, 72-inch, fourteen bundle rack thrashing machines, and sizes slightly smaller, were owned by thrashers who did contract work, moving the machines from farm to farm. The thrashers did the hiring and fed the workers, who could stay from 60 to 90 days with a single employer.

Now the small, relatively inexpensive thrashing machines have practically supplanted the larger ones, except where four or five farmers go together in a co-operative and jointly own the big type machine. But for the most part 18- to 28-inch "coffee grinders" are used. Farmers can purchase them because

**Coffee-Grinder In Operation**
Courtesy International Harvester Co.

they are cheaper, and they can more easily operate them because they are enabled to put more members of the family to work on them, and, if necessary, get the neighbors to help. The runs on these machines on individual farms now average between 12 and 20 days. Thus can be seen how introduction of a greater number of machines is operating against employment of harvest wage slaves.

### No Reason To Be Discouraged

From what has been described it appears that elimination of wage slaves from the domain of King Wheat is inevitable proportionately to the machine's advance. This is quite true, but not more so in agriculture than in other industries. It is a fact that machine invention is constantly throwing an augmenting horde of workers on the pile of jobless reserves. We contend that the only real and final solution is revolution by the workers so that they shall take possession of all land and productive tools, democratically apportioning labor and products equitably. But this is a task predicated on the presence of power, and we have no power, and consequently no rights, without industrial organization. A. W. I. U. No. 110 exists and moves to do in agriculture for organization what other I. W. W. Industrial Unions must do for unionism in their respective industries.

Our goal is very clear and our tactics are calculated to attain it, but we must learn to reach that goal of emancipation by meeting practical issues every day and all the time, or we shall be frustrated in the attempt to grasp our dreamland

of human happiness. So, in discussing matters of peculiar interest to our welfare we are dealing in subjects that have a vital interest to the general welfare of the working class. We should not lose sight of this two-fold aspect of Revolutionary Industrial Unionism, nor should we feel disheartened by the most seemingly insuperable

LARGE THRASHING MACHINE AT WORK
Courtesy International Harvester Company

obstacles raised by the masters to shut us from the light of freedom. We must point to that hateful barrier, show the slaves their class position in society, and suggest to them their almighty potentialities. In short, we must "fan the flames of discontent." Our organization must thrive on its ability to face issues squarely and to apply proper tactics fearlessly.

In spite of the auto tramps, and in spite of the "coffee grinders," we have an immense chance to organize this year in the harvest country. Experts predict that the crop will be at least twice as large as it was in 1925. And it is going to take many thousands of wage slaves, in addition to the auto tramps and home workers, to bring it in. There lies our chance for organization work.

### Advertising Stunts

Another matter we must mention is that of the advertising done in post offices, public places and newspapers relating to the labor supply needed. As wages tend to fall when there are more workers than jobs, it is not a mystery why the numbers will be exaggerated. The purpose of such misstatements is to flood the harvest country with far more slaves than there are jobs for them to get on, and in this way create a competition for the jobs resulting in greater profits for John Farmer. And the fact that the holders of mortgages and commision men and wheat pit gamblers will skin him in turn is not our immediate concern. Therefore, give such propaganda about how many "hands" are needed a liberal discounting and you can not go far wrong.

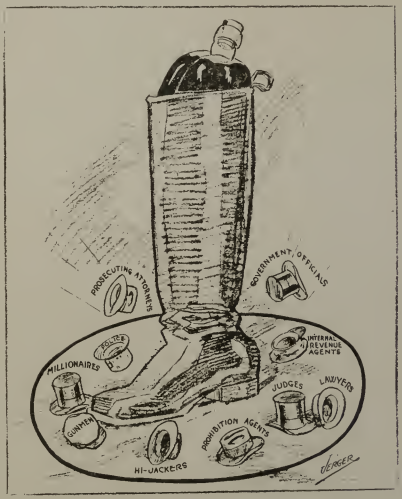
This has become axiomatic among revolutionary workers: that they can not succeed in uniting their fellow workers without the powerful weapon of education. All members and delegates of One Ten who want to see an unprecedented success in building up our Industrial Union should recognize the matchless value of our publications for inculcating class consciousness into the working class. Accordingly it is your duty to take the publications into the field to the limit of your ability and to see that they reach the uneducated slaves. Make a supreme effort to put our papers and magazines on a better footing than now prevails. As we make our press stronger we make our Industrial Unions more powerful. There can be no other result.

### One Ten Proud of Its Record

The solidarity of I. U. 110 has been tried in many a fiercely fought battle, and it has not been found wanting. We have battled hard and won many important victories. There is no finer record of working class achievement in the whole world than that which is the history of our organization, no matter what our faults have been. We have learned to fight for freedom and those who learn to struggle must learn to rise over their errors, to correct them, and to carry the conflict to advanced positions. Our victories have meant just this: we have by industrial solidarity been able to better our own lives and the lives of our fellow workers, even where many of them have failed to come under the standard of Revolutionary Industrial Unionism. Every gain we make is a gain for our class; it means improvement in the material conditions of the workers, and it constitutes a threat to organized thievery that even as I write this is being challenged as never before across the sea in England. Whatever we have done has been done by common understanding and organized action, and we can do nothing with other weapons.

Immediately before us is a season pregnant with promise for One Ten if we plan well and carry our plans through without faltering, without bickering, with the good, old fighting spirit that is so dear to the hearts of our rebels and so costly to the ruling class leeches. Last year, with poor crops, we succeeded in One Ten in organizing 8,507 agricultural workers. Ten thousand new members in 1926 is the least we should anticipate getting. Twice that number is not outside the range of possibility. Battling together, with good morale, and the Industrial Union interest uppermost, we should, when self-disciplined, make 1926 a banner year in the annals of I. U. 110. This is our need and it is our goal. You have the power to realize this accomplishment. Go to it, and win!

# The Sinister Syndicate



By ALBERT WEHDE

Book rights reserved by the author.

SATURDAYS in summertime are busy half-days for Chicago. The stores, closing at one o'clock, cause the day's business to be transacted withing the short hours of the forenoon; congestion on streets and conveyances is the inevitable result. On such a day I happened to be riding on an East-bound Madison Street electric, my route calling for a transfer to a South-bound Dearborn Street car. I occupied a seat well in the center of the car which was crowded as we crossed the river. Passengers leaving at every corner in the loop the crowd soon thinned and presently disclosed the figure of a man standing near the front exit, to the motorman's right. He seemed familiar to me, looked just like Ernie Trachtenberg, a former fellow worker, whom I had not seen for several years. Being now near my transfer corner I arose and walked forward, intending to greet my old friend with a hearty slap on the back. As I approached him and obtained a full view of his face, however, I discovered that I had erred. He was a stranger to me with a resemblance to Ernie so bafflingly close that one might easily be taken for the other. Dropping my uplifted arm I refrained from my intended friendly demonstration.

He seemed to be unacquainted with the city and its ways. Blocking the exit, he permitted himself to be pushed to the right and left, though stolidly maintaining his position and moving only a few inches in apparent rustic bewilderment. When the car came to a stop and I was ready to leave I had to admonish him loudly to stand aside and let me pass. A boyish looking person of prosperous appearance stood behind me, slightly to the left. Bending his body forward he looked into my eyes, his facial expression bespeaking huge amusement at the stupidity of the party in front who now moved out of the way while I stepped into the street.

I have long had the habit of carrying my money in the left rear pocket of my trousers. Another habit, less bad though of no practical use, is to feel of this pocked frequently, especially when in a crowd or when arising from a seat. I had done so at this time and had satisfied myself that my billfold was in its place, but when feeling again as I boarded the Dearborn Street car I was disagreeably surprised to find the pocket empty, —its contents were gone.

It was a clear case of pocket-picking and there could be no doubt of the perpetrators; my friend's double and the smiling youth composed a team of light-fingered gentry. I jumped off the moving car and running back tried vainly to reach the Madison Street electric. Not being able to catch up with it I confined present efforts to scanning the faces of passers-by, hoping to find the two scoundrels. Equally unsuccessful, I told my troubles to the traffic cop.

"They got into you, hey?" he grinned.

"That's what they did—fifty dollars in bills—I could identify them anywhere!"

"Identify what—the bills?" His grin broadened.

I was in no humor for jesting and my answer was brief and terse. Then, accepting his advice, I hurried to the First District Police Station to report the theft.

The place was littered with plain-clothes men whose scrutinizing glances appeared calculated to disconcert timid souls. They were an ill-groomed lot, shifty of eye and coarse of speech. My first impression was that they were prisoners, but meeting interrogative looks and seeing no uniformed officials, I approached one of them and inquired for the desk sergeant. I was told that he had just stepped out but would return in a minute.

"What do you want of him?" I was asked and I told my story. A half-dozen of the men gathered around me and listened. There was silence on their part, the silence of contempt, cutting me to the quick. I felt like a boob.

Whatever may said of our detective force, its members are not afflicted with an inferiority complex. Their haughty demeanor, their glances of pitying contempt, almost made me regret having called and I would have left without filing my complaint if the sergeant had not then appeared. He was in uniform and plainly a higher type of man. Lending a sympathetic ear he took notes of every essential, booked my name, address and telephone number and advised me that I would be called to view and try to identify any pickpockets or suspects who might be arrested within the next few days. He cautioned me to respond promptly to every call as most of these pilferers were arrested on suspicion and the judges were unwilling to hold them without definite charges no matter what their previous records were. I promised and went about my business.

I was called to three different police stations within the next week, and viewed dozens of men as they were marched past me in single file. There were slim-built youths of dapper appearance, sheikish looking jazz-hounds; bleary-eyed men of middle age, paunch-bellied and slattern whom it was difficult to distinguish from plain-clothes officials; elderly individuals were there, too, with that hang-dog look acquired in many years of prison-life. All of them looked at me in cynical defiance, meeting my eyes with brazen stares. The men I looked for were not among them.

The brotherhood of pickpockets seemed to be holding a convention in Chicago just then. Charles G. Dawes, running for the vice-presidency, addressed a large audience of friends and neighbors from his home porch. After the meeting the lawn was found strewn with empty wallets; a federal secret service man also fell an easy victim, losing not only his money, but his star and other credentials as well. The press entertained its readers with daily reports, humorously penned, but failed to record arrests and convictions of the malcreants though many suspects had been picked up by the police.

"We can never convict these birds," a sergeant told me. "As soon as we make an arrest the gang sends a lawyer who is kept on its regular payroll and the machinery for beating the law is set in motion. No matter how strong a case we have, the prisoner gets out on bail and one of his friends calls on the victim. Whatever money was taken is refunded with an addition to recompense for loss of time and inconvenience, threats are used if need be, so that when the case is called for trial there is no witness and the defendant is dismissed. I'll tell the world, those fellows have the thing down pat; pocket-picking is the safest game there is."

I assured him that I would neither be bribed nor intimidated but meant to prosecute at all hazards if the right men were ever apprehended.

During a call at the South Clark Street police station I had a long talk with an officer in plain clothes who appeared especially eager to help me find the men I was looking for. In courtroom and corridor were some twenty men whom this officer pointed out to me, telling me that all of them were well known pickpockets and that most of them had been arrested within the last few days. All had furnished bonds for their appearance and were now to face the judge. None of them resembled the men I was so eager to find and my present mentor seemed even more disappointed than I was when I failed to make any identification. The court's opening terminated our conversation and having matters of greater importance to look after I left the building.

A slim man whom I had noticed among the loiterers, and who had eyed me in a manner to make me wonder who he might be and what he might want, followed me into the street and fell in my step as I walked toward the loop.

"Couldn't identify 'em, hey?" he addressed me, casting a sidelong glance as though he wanted to read my thoughts. I told him that I could pick my men out of any crowd but that so far the police had failed to get the right individuals.

"Say," he spoke up, "why the devil don't you pick out any of these fellows? They are all professionals with records a yard long. Blame your loss on any of them—they'll call on you and make it right with you; none of them can afford to come up before the judge and have you testify against them. If you are smart you can get your money back and more besides. Why in hell should you be the loser?"

Here was an angle I had never considered. He was pointing a way to get ample revenge and "easy money" at the same time. It seemed so simple, too. A member of the pickpockets' syndicate extracts one's wad and as the real culprit can not be found any brother member is accused. Having a bad record, he cannot afford to stand trial. He prefers to make good the loss, adding whatever else can be extracted from him by this blackmail. Simple and sure, the "honest" man is reimbursed and nobody is cheated except justice —poor, blind hussy!

But I was not tempted. Instead I felt sudden disgust with my present companion. My fingers itched; I longed to strangle the fellow. Never-

the less I controlled my feelings in an urge to fathom the depth of his infamy.

"The police have my name and address," I said. They will summon me to appear in court and if I fail to respond I will be subject to prosecution for contempt or may even be charged with compounding a felony." I was curious to hear his rejoinder.

His talk was odd. Part of the time he used the words and enunciation of an educated man, and then he would change to the language and tone of a roughneck.

"That's easy," he insisted, "if your name and address are changed on the blotter all hell won't find you. If you don't get a summons how can you be expected to appear in court? Don't let that worry you, I can fix that!"

"How can you fix it?" I asked.

"Say, listen to me, when I say I can fix it, I can fix it, and you bet I will fix it. I have been in this game for ten years and I know what I am doing. These dips think themselves clever, but I beat their racket every time. They know it, too, but they can't help themselves. They are on to me and if I should go around myself giving testimony against them I would not get very far. I can't raise a holler and claim that some gink lifted my poke; I sprung that on them too often. You have never been in a police court before and the judge will take your word for anything you say. Now don't be a damn fool. Do as I tell you and get some dough out of these birds. You can use it, can't you?"

Yes, I could use it. Fifty dollars was not to be sneezed at. I pondered and mused in silence. Watching me closely he went on talking:

"All of these half-witted crooks have prison records and if anybody takes the stand against them and swears that he was robbed and positively identifies any of the fellows, the judge soaks them the limit—ten or twenty years in Joliet. Do you think for a moment they will let it come to a trial? You bet they won't! They will see you and square themselves with you. If you claim they took a thousand dollars from you, you can get a thousand iron men out of them, providing, of course, that you pick out a fellow who has got something and whose standing is good with the gang. If you pick out somebody who is a nobody in the profession you won't get it. That's all there is to it. It all depends on your picking out the right guy. You can get a wad of easy money; you'd better go to it!"

My companion was evidently under the impression that his argument was finding favor with me and as I remained silent he continued:

"I know every one of them and I can put you wise; some of them own lots of property and can pay a stiff sum. I'll pick out the fellow for you to identify if you will make it fifty-fifty with me. You are running no kind of a risk. What d'you say?"

"How about my name on the police blotter?" I asked.

"Oh, forget it! I've got a fellow in the right place. I'll tip him off and he makes a little change in the name and address. That's the easiest part."

The revelation was complete. A syndicate of thieves, with an attorney on its payroll, working hand in hand with a paid servant of justice! And all of them at the mercy of a miserable blackmailer. I almost pitied the poor pickpocket.

I had heard enough. As we reached Madison Street I turned abruptly, leaving the scoundrel to form his own opinion of my reluctance to take advantage of his generous offer.

I received no further summons to identify suspects.

## BUSINESS MANAGER'S STATEMENT

**In America today there are only a few revolutionary magazines, with combined circulations approximating 50,000 copies. This insignificant showing is totally insufficient to agitate and educate the workers. The combined circulations of capitalist magazines in this country easily run to 15,000,000.**

**Over 70 per cent. of the population is composed of workers, but they do not read the literature of their class, and are slaves because of their ignorance. This vicious condition enslaves all of us, and while we admit that the task of educating them is necessarily slow, we contend that The Industrial Pioneer should have a circulation right now of not less than 50,000.**

**Now these slaves have to be organized, and we are the ones who must do it—it is the job of the whole I. W. W. membership. No one else is going to do it for us. It is unanimously agreed that there can be no organization without education preceding it, preparing the ground, so to speak. It is also agreed quite as generally that the press is the most effective educational medium. And it should be clear to all that our Industrial Unions are not more powerful because our press is weak.**

**What are you going to do about it? The chance is ours to get the unorganized and misorganized to read the publications. Are you going to let the great chance pass by, and through such failure descend ever lower in the existence scale where the bosses want you? You owe a duty to yourselves and to your class which you can discharge only by making your I. W. W. press grow. Let's unite as never before and double the circulation!**

**JAMES SULLIVAN.**

# WHAT EVERY SCHOOLBOY KNOWS

## And What He Doesn't Know about the Working Class Revolution in the Philippines

By DANIEL TOWER

GEORGE BUCHANAN FIFE, writing in the New York Evening World about Mark Sullivan's new book, "Our Times," utters an observation concerning recorded annals of this republic which tempts analysis. Mr. Fife says:

"The victory of Admiral George Dewey over the Spanish fleet at Manila on May 1, 1898, is held by historians to have opened a new vista of American history. . . . Midnight of April 30 . . . found Dewey off Manila harbor, twenty-six miles from the city. He steamed in with lights shielded and encountered only three shots, fired from the sentinel island of El Fraile. At dawn he struck, closing in on the Spanish fleet, and **every schoolboy knows** what followed his famous order, 'You may fire when ready, Gridley'."

Bold-face in the above are ours. Yes, every boy who has been to school since May Day twenty-eight years ago knows what happened in Manila Bay that day and afterward in the Philippines; the one defect in his knowledge of the subject is that what he knows about it is almost invariably not true. He has the deeply imbedded impression that Dewey scored a glorious victory; that the Spaniards were licked by virtue of the superior strength and intelligence of American arms. We who went to school in the days of "Remember the Maine" and "Cuba Libre" and "Dewey for President" were told the glorious-victory stuff by our teachers; and we read it in the newspapers.

### Hand-Picked Facts For the Youthful Mind

School histories generally treat the American invasion of the Philippines in that robust fashion; if any chronicler of events for the young mind in any of our states ever handled the Dewey fanfare otherwise, it may be assumed that the American Legion and National Security League has by this time rooted his book out of the curriculum.

In William H. Mace's "School History of the United States," published by Rand McNally and Company, we find a typical example of the Manila Bay story as ladled out to adolescents:

". . . Commodore George Dewey, commanding an American fleet in Chinese waters, was ordered to attack the Spanish fleet in the Philippines. Before daylight, May 1, 1898, Dewey sailed into Manila Bay. . . . In four hours he had completely destroyed the enemy's fleet of eleven vessels, silenced the shore batteries of Cavite, and had killed and wounded hundreds of Spaniards without the loss of a single American.

"Dewey blockaded the city of Manila and awaited the arrival of land troops before taking possession. This victory produced enthusiasm in America and excitement in Europe. It was America's first step into new relations with the whole world."

### Romance and Dewey In a White Suit

This simple recital is accompanied by a reproduction of a painting depicting the battle in romantic colors. Nothing is said about anything that had happened in the Philippines before Dewey arrived there.

True, on another page, after telling of events in Cuba and Porto Rico, Professor Mace does say this:

"As soon as General Merritt could collect an army on the Pacific Coast and transport it to the support of Admiral Dewey, Manila was forced to surrender (August 13th). In the Philippines, as in Cuba, the natives had revolted against the tyranny of Spain and *aided* the Americans in defeating the Spaniards."

Again, the italics are ours. From this paragraph by Professor Mace one would

naturally gather that the United States had taken the lead in driving Spain out of Luzon and all adjacent islands, and that the natives had joined in to help this noble purpose. Certainly no other inference can logically be drawn from the word *aided* in the Mace text.

But what are the facts? It is not true that the Filipinos *aided* the Americans in defeating the Spaniards. The truth is that the Filipinos had been in active revolt against their oppressors for a year and a half—and the Americans came along and horned in on their fight, set up an alliance with them, and presently took their whole archipelago.

### Rizal's Death Is Signal For Rising

It had been a revolt of a patient, long-suffering working class against exploitation by the capitalists of Spain, against the friars, against the military, against a rule of iron. Peaceful ways had been tried, and the Filipinos had come to the end of peace. José Rizal had counseled peace. He was the great man among them—doctor, artist, philosopher, linguist, author. He had counseled peace, but he had written too much truth about social conditions in the Philippines—in his novel *Noli me Tangere* (Touch Me not) and in other works. For this unveiling of reality Rizal was arrested for sedition, tried without counsel, and executed by a firing squad on Bagumbayan Field near Manila. A gala day for the Spanish grandees there—women waved handkerchiefs and men threw their hats into air as Rizal fell. Charles Edward Russell and E. B. Rodriguez tell the story masterfully in their book "The Hero of the Filipinos."

That was in December, 1896. A great day for Spain—but also the beginning of the end of Spanish rule in the Philippines. Rizal's death was the signal for the brown brothers to rise. They could endure no more. . . . Let Russell and Rodriguez tell of that rising:

"'Viva Espana!' How poor are they that will not ponder history! From the hanging of John Brown to the Emancipation Proclamation was three years and twenty-nine days. From the murder of José Rizal to the surrender of Manila was one year, eight months, and seventeen days.

### Holy Wrath Turns Against Oppressors

"On the day the murderous court martial pronounced Rizal's death the Filipinos began to slip from the city and join the forces of Bonifacio. . . . Silently they went and by thousands. The insurgent lines swept up as close as Cavite, so strong had the uprising grown. There, in the face of all the vigilance, all the spying, . . . they stood in the trenches with arms in their hands. Guns came from the thickets, the roofs, the *carabao* stalls. Soldiers that enlisted without rifles fought with *bolos* until in the first encounter they could wrest guns from the Spaniards. Inadequately armed, badly fed, ragged and untrained, they went into battle and overwhelmed the Spanish regulars, because they had been fired with a vision of freedom and holy wrath against the System that had struck down their champion."

Fresh troops came form Spain, but they could not quell the revolt. Disaster struck the Spanish

DR. JOSÉ RIZAL, DISTINGUISHED MARTYR FOR FILIPINO INDEPENDENCE

army at every turn. . . "On August 10, (1898,) Aguinaldo captured the Manila waterfront, and had the city at his mercy. On August 13 it surrendered, not to him that really had reduced it, but to the American naval and land forces; although of such land forces there was but a handful."

One will search far through school histories for mention of Rizal. Yet to write the story of the Philippines without telling of the part he played in the struggle there is like recording the history of Negro slavery without mentioning John Brown.

### Torture and Death In Filthy Jails

Clear light is thrown upon the Philippine question in a new book, "The Conquest of the Philippines by the United States," written by Moorfield Storey and Marcial P. Lichauco. Storey is former president of the American Bar Association and Lichauco was the first Filipino graduate of Harvard College. The book was issued by Putnam.

Storey and Lichauco tell of atrocites visited upon persons suspected of being revolutionists—of men being hung up by their thumbs, of bones crushed,

of mutilations for life, of men dying of suffocation in filthy jails, of women dragged from homes by night. This under Governor Poltaveja. Finally, as a matter of policy, the Spanish government recalled Poltaveja and sent a more peaceful administrator, General Primo de Rivera. He wanted peace, and offered amnesty to all who would lay down their arms.

The Filipino leaders agreed to cease fighting if certain things were guaranteed to them, particularly these: expulsion of the friars, parliamentary representation, freedom of the press, religious toleration, administrative and economic autonomy, restoration of all friar lands to their original owners, no more banishments, legal equality for all classes.

Rivera agreed, but his promise was false. He denounced the friars, but did not recommend their removal. The natives waited a reasonable time, but he made no reforms. Insurrections broke out afresh in various parts of the archipelago. Forty-nine days before the United States declared war on Spain, the rebels were besieging the Spanish in the city of Cuba, 400 miles south of Manila, and U. S. Consul Oscar Williams advised Washington that Manila was under martial law, that Spaniards were killing rebel prisoners there without trial, and that a republic was being organized in the Philippines as in Cuba.

### Promise of Independence Is Forgotten

More about the situation is given by Albert G. Robinson in his book, "The Philippines: The War and the People." Robinson served there as correspondent for the New York Evening Post in 1899—1900. He tells of another dispatch to Washington in March, 1898, in which Consul Williams said: "Insurrection is rampant; many killed, wounded and made prisoners on both sides. . . . Rebellion never more threatening to Spain." Despite assertions to the contrary, Robinson avers, the insurrection, of 1896, though interrupted and declared by Spain to be at an end, was still in progress when Dewey arrived.

On April 23 this nation declared war on Spain. Aguinaldo was then an exile, and was in Singapore. E. Spencer Pratt, U. S. Consul General there, arranged a secred meeting attended by Aguinaldo, three of his associates, the editor of the Singapore Free Press, and Howard Bray, an Englishman long resident in the Far East. At this meeting, according to six of the participants, a provisional agreement was drawn up under which it was specified that Philippine independence would be proclaimed, a federal republic would be established by vote of the rebels, and that an American protectorate would be recognized on the same terms as those fixed for Cuba. Afterward Pratt denied this; but he arranged for Aguinaldo's co-operation with the American forces, and Aguinaldo immediately returned to the Philippines and assumed command of the rebel troops.

Bray declared subsequently that Aguinaldo "had, in view of what took place in Singapore and the telegrams received from Commodore Dewey (then in Hongkong) full justification for believing that the United States would raise no objection to the complete autonomy of the Philippines, and would, after the Spaniards were expelled from the islands, establish a protectorate over the whole group."

### Cheers, Songs—and Dewey For President!

When Dewey sailed for Manila, the Spaniards were already practically licked by the natives; they had been unable to dislodge an insurgent army within ten miles of the capital. So all Dewey had to do was to sail into Manila harbor, fire a few shots against an inferior fleet, and win a victory without the loss of a single life. How Americans at home cheered themselves hoarse over that victory! Dewey was a hero. Hearst boomed him for President. The school children or the American people or the Hearst papers or somebody gave their pennies to buy a house for the Commodore, and he was made an Admiral. Songs were written about his courage, and everywhere there were colored pictures of him in a white suit.

Consul Wildman at Hongkong wrote a letter to Aguinaldo which is in the Storey-Lichauco book: "Do not forget that *the United States undertook this war for the sole purpose of relieving the Cubans from the cruelties under which they were suffering and not for the love of conquests or the hope of gain. They are actuated by precisely the same feelings for the Filipinos.*" Testifying later before a Senate committee, Dewey said that Aguinaldo "did wonderfully well. He whipped the Spaniards battle after battle. . . . I knew what he was doing—driving the Spaniards in—was saving our troops." Again he said: "I was waiting for troops to arrive and I thought that the closer they (the Filipinos) invested the city, the easier it would be when our troops arrived to march in. The Filipinos were our friends, assisting us; they were doing our work. . . . They could have had any number of men; it was just a question of arming them. They could have had the whole population."

Thousands of prisoners were taken by Aguinaldo's troops, and were treated humanely, as Dewey's dispatches show. And having ample reason to believe, from the acts of the Americans, if not also from their statements, that this country would cooperate in the establishing of a native government, the Filipinos unfurled their flag at Cavite and proclaimed independence on June 12, 1898. Not until two months later did the American occupation forces enter Manila.

*But the United States ignored the new government, made a treaty with Spain whereby for* $20,000,000 *the Philippines were ceded to this republic, which thus obtained from Spain a vast territory to which Spain herself had no title.*

This high-handed proceeding brought a revolt of the Filipinos against the Americans, and there followed a bitter war. Censorship was clamped

upon press dispatches, and a campaign of extermination was begun against the Filipinos. Major General Elwell S. Otis was in command of the army. The general rule among the American forces was: "Take no prisoners!" Storey and Lichauco give a sickening list of atrocities against natives.

FILIPINO TERRACED RICE-FIELD. THE WHITE PLACES ARE WATER. THIS NATIVE CULTURE ANTEDATES THAT INTRODUCED BY CHRISTIANS

Only a few Americans were court-martialed, and usually they were let off with reprimand.

One General Smith, accused of ruthlessness, was put through the form of a trial after Mark Twain and other notables demanded an investigation. It was shown that Smith instructed Major Waller to take no prisoners, to kill and burn; and that Waller's men were to kill everybody over ten years of age who was capable of bearing arms "as the Samar boys of that age were equally as dangerous as their elders." General Smith admitted giving the orders, Storey and Lichauco explain; moreover, he sought to justify them. He was found guilty and was sentenced "*to be admonished.*"

### Water Cure Becomes American Sport

When information was wanted from captured natives, they were given the water cure. The victim was pinned to the ground, and water was poured into his mouth—as much as five gallons! This stopped all speech, of course, so the captors would squeeze the water out of him, by jumping on him. This was done to hundreds of natives. One Captain Glenn, an army judge advocate, ordered the water-cure given to a man, was tried for it, and was fined $50. Storey and Lichauco continue:

"All these charges and convictions, all these reliable accusations, as well as the official copies of the orders given by General Bell . . . and General Smith . . . directing that the war be conducted in the most rigorous manner possible were known to the Secretary of War." People in the States were beginning to hear of these atrocities. Yet on February 17, 1902, the Secretary of War issued this statement: "The war in the Philippines has been conducted by the American army with scrupulous regard for the rules of civilized warfare, with careful and genuine consideration for the prisoner and the non-combatant, with self-restraint, and with humanity never surpassed."

How many natives were killed during the unofficial war between the United States and the Philippines? Storey and Lichauco quote General J. M. Bell as estimating that *in Luzon alone one-sixth of the native population was wiped out.* Luzon then had more than 3,500,000 population; *one-sixth* of that number *meant* 600,000 *men, women and children.* General Bell said naively: "I think that not one man has been slain except where his death served the legitimate purpose of war. *It has been thought necessary to adopt what in other countries would probably be thought harsh measures.*"

While all this was going on, and while the American forces were losing heavily from bullets, *bolos* and disease, a heavy-handed censorship kept the newspaper correspondents from putting the facts onto the cable. Military headquarters, where Major General Otis ruled, gave out countless falsely optimistic bulletins saying that "the situation was well in hand" and predicting early dissolution of the Filipino forces and a speedy ending of the war. Otis and his aides did not question the truth of dispatches which the correspondents wanted to put on the cable, but contended that it would have a bad effect on the morale of people at home.

### "Every Fight a Glorious American Victory"

Matter cabled from the Philippines, says Robinson in his book, "must support the local and Washington administration, right or wrong in all their acts. It must suppress anything and everything which was in any way discreditable to the American army. It must avoid all that would tend to create an impression at home that the army was anything other than fat, healthy, happy and contended." In the same book R. M. Collins, Associated Press news chief, is quoted as saying: "In this way the entire American press was made the personal organ of Otis . . . every fight became a glorious American victory, even though every one in the army knew it to have been substantially a failure."

Apparently nobody in governmental circles in Washington knows any more now about what has happened in the Philippines since 1896 than any schoolboy knows. President Coolidge has lately appointed an Ohio politican to go over and find out what the Filipinos are all the time kicking about. If the Ohio man should find out what is the trouble over there, what will Mr. Coolidge and his friends do about it? Any schoolboy knows.

# Enslaving the Children

By L. F. POST

THE GLORIES OF SUNNY SOUTHERN CALIFORNIA

**WE were at our evening meal, my wife, her sister who was visiting us and myself, and I was speaking about evils of child labor. My sister-in-law, a self-satisfied trained nurse, snorted: "Oh, you radicals make me tired! I've never seen this 'child labor' you're always talking about."**

Her inflection of the words "child labor" verged on a sneer. I asked her if she wished me to prove the truth of my assertions by showing her right there in that town a particularly pernicious form of this curse.

"Of course, if you can," she challenged.

"Are you ready to take a short walk?" I asked.

"Why, it's getting dark!" she exclaimed, and mocked, "Won't you wait till tomorrow to show me your horrible examples? They don't 'enslave' the children at night, do they?"

"Of course they do. Right now it is going on half a mile from this house," I countered.

Had we been alone she would not have consented, but her sister's steady gaze was fixed on her and she was uneasy.

"Yes, go with him," urged my wife, who enjoyed in anticipation the defeat of her smug, patriotic sister. "You may learn something."

In a few minutes we were on the street and before very long we reached the glass factory where I let her see for herself the little boys, six, seven, eight, nine and ten years old, opening and closing molds for the blowers, cracking off, carrying glass articles to the annealing lehrs, and doing many other tasks. They worked 8½ hours. Day and night shifts alternated each week. The factory was under the jurisdiction of the American Flint Glass Workers Union, an A. F. of L. body, and about this same period—the spring of 1917—when these boys struck, the skilled mechanics of that organization secured scabs to defeat the little fellows.

But, needless to say, my sister-in-law was convinced that all was not as she had thought it to be in this best of all favored lands of a free people under the starry canopy of God's glorious skies, etc., etc., etc. Her natural compassion came into play, and that ended the incident.

* * *

### Early Textile Child Slavery

Since that time in Pennsylvania I have watched the development of child labor in many industries, and the attempts at reform, and their effect. So, in this article, which I have asked the editor to run in two issues, I want to consider the matter from the different angles of individual harm to the child, the child's family, and the working class. In this work I have been generously assisted by the National Child Labor Committee, and by the United States Department of Labor, from which latter source most of my figures and a great deal of my material has been drawn. Some historical facts are valuable at this point to get a proper background for the discussion. Accordingly we shall proceed to outline them.

When the English feudal system was disintegrating in the reign of Edward III laws were passed compelling children to work, and the Poor Laws of Elizabeth's reign provided for child labor as "a

prophylactic against vagrancy and pauperism." The new wage system was offering fresh opportunities for exploiting workers, and children are cheaper to buy than adults. Hence the laws. Puritans and Quakers, out of religious motives which hated indolence, made their children work, and in Bradford's History we find him saying of the former that:

"As necessitie was a stern taskmaster over them, so they were forced to be such, not only to their servants but in a sorte to their dearest children; the which as it did not a little wound ye tender hearts of many a loving father and mother, so it produced likewise sundrie sad and sorrowful effects. For many of their children .... having learned to bear parte of their parents' burden, were, oftentimes, so oppressed with their hevie labours that though their minds were free and willing, yet their bodies bowed under ye weight of ye same and became decreped in their early youth." (Page 23.)

Laws to put children to work were early enacted in the American colonies. The "Great and General Court of Massachusetts required the Magistrates of the several towns to see 'what course may be taken for teaching the boys and girles in all towns the spinning of yarne'." (Massachusetts Bay Records 294).

The connection between this statutory anxiety and the rising textile industry of the 17th Century is patent. But Alexander Hamilton, one of the greatest American Fathers, and the patron saint of the United States Supreme Court, said that the increase of manufacture was a good thing for many reasons, among them being that cripples and others unsuited to the rigors of agriculture could be employed in the factories. He said, too, that children could be made "more early useful" by putting them in the factories.

About this time in England (the last of the 18th and beginning of the 19th Centuries) almshouses and orphanages were being emptied of children in response to the capitalist demand for a larger and cheaper labor supply, an in most cotton mills women and children were employed at an 18 to 1 proportion over adult males. That was a long time ago, but it is the same desire for profits possible from workers, who by sex or immaturity are more helpless and tractable than men, which keeps child labor flourishing, a blot on humanity and a shame to the apathetic working class which permits it to exist. Child labor under capitalism is not peculiar to any decade or locality. It was more intense in the earlier stages because employers had not yet learned that the dead goose lays no golden eggs. Reform labor laws of the 19th Century in England came as a result of two forces, one external, the other internal. The first was trade unionism, the second was a mental awakening of employers. These latter permitted the legislation, not because the industrial conditions were harmful to the children and workers as a whole, but because they saw—after destroying countless thousands of the proletariat in the factories—that they were wiping out the slave supply faster than it could be reproduced. Thus the statutory magnanimity.

In the English mills pauper children from toddling ages up were driven from dawn till dark, pausing only for a few minutes in which to gulp the maggoty swill their masters provided. These children slept beside the machines so that no time was lost going to and from them. In this Year of Our Lord 1926 the foreign capitalists operating in China are doing very nearly the same thing, and almost incredibly rapacious greed is decimating thousands of Chinese boys and girls who have the misfortune to fall into the tender mercies of our good Christian capitalists, or for that matter, good Japanese bosses who learned the tricks of bourgeois exploitation from these Christians.

### About the 20th Amendment

Following is an excerpt from the report of the Children's Bureau of the Department of Labor (U. S.) for the fiscal year ending June 30, 1925, summarizing the existing status of the proposed child labor amendment to the Constitution:

The proposal was submitted to the States by Congress on June 4, 1924, and was brought before 43 legislatures with the following results:

Ratified by both houses in four states (Arkansas, Arizona, California and Wisconsin).

Approved by house, but rejected by senate in Montana.

Rejected by both houses in 21 states (Connecticut, Delaware, Florida, Georgia, Indiana, Kansas, Maine, Massachusetts, Minnesota, Missouri, New Hampshire, North Carolina, Pennsylvania, South Carolina, South Dakota, Tennessee, Texas, Utah, Vermont, Washington and West Virginia.)

Rejected by one house in 9 States (in addition to Montana) (Idaho, Louisiana, Michigan, Nebraska, Nevada, North Dakota, Ohio, Oklahoma, and Oregon.)

Action postponed in two states (Iowa and Wyoming.)

The proposed amendment is this:

"Section 1. The Congress shall have power to limit, regulate, and prohibit the labor of persons under eighteen years of age."

"Section 2. The power of the several states is unimpaired by this article except that the operation of State laws shall be suspended to the extent necessary to give effect to legislation enacted by the Congress."

### Points That Were Debated

It is interesting to know that the National Association of Manufacturers fought the amendment and that these and all capitalist opponents made much of the fact that children up to 18 years would be encouraged in habits of idleness, and that no child under that age could legally do any useful work. In a debate between Owen R. Lovejoy, then General Secretary of the National Child Labor Committee, and ex-Senator Charles S. Thomas of Colorado, "Resolved, that the proposed 20th Amendment to the Constitution of the United States should be ratified," Mr. Lovejoy for the affirmative said:

But we are asked if it is not our desire that the government should prohibit all child labor under eighteen years of age, why give the government power to do so? This can best be answered by sketching the kind of child labor law I believe my distinguished opponent and his associates would gladly accept as reasonable: (a) A law to prohibit the employment of children under fourteen years of age in all manufacturing, commercial, and mechanical pursuits, in tenement home work, in canneries, and in those types of agriculture which are carried on to the obvious injury of the children compelled to work in them. (b) To limit the hours of labor for children under sixteen in those occupations to an eight-hour day, six-day week, and no night work. (c) To regulate the employment of children under

THIS BOY SLAVES LIKE THIS—

eighteen so as to exclude from occupations dangerous to life, limb, or health.

This is our position. We have waited through all these months of heated controversy for our opponents to tell us where they stand. What kind of a child labor law will they stand for? How much protection do they want American children to have? I trust Senator Thomas will favor us by explaining at what point, if any, he would consider such regulation of child labor extreme or drastic. But he may say, "So far as our state is concerned it does protect them." Yes, but not all states do. If such protection is good for the children of your state, is it not good for the children of all states? How far have we gone in the latter respect? Seven states permit children to go to work at fourteen without evidence of ability to read; 18 states do not make physical fitness for work a condition of employment; 12 states allow children of fourteen to work eight to eleven hours a day, and one has no limit whatever to the day's work; 25 states allow children of fourteen to run elevators; 19 states have no laws prohibiting children of fourteen from working on dangerous machinery; 36 states allow children of sixteen to oil, wipe or clean machinery in motion; 37 states allow children at 14 to work on scaffolding; 30 states have no laws prohibiting children of fourteen from working around explosives.

Furthermore, if power were given to protect children only up to sixteen, there is no question that the states which protect their children up to eighteen would be urged to trim their laws down to sixteen. And those who are fighting this amendment would be the first to urge such a step—on the ground that federal government did not approve of protection beyond sixteen. But ought this power to be limited in scope so the government could not interfere with farm labor?

Mr. Thomas in rebuttal mentioned that the proposed law was bureaucratic and socialistic. At any rate, it has been defeated, and we should not regret the action except in that it deprives us of being able to indicate once more employers flagrantly violating another of the statutes which they defy at will. In the Labor Department report quoted above is this further statement concerning the matter of legislation as affecting children:

### What the Labor Department Says

It is not to be expected that the efforts to secure the ratification of the amendment will be abandoned as long as large groups of children suffer from premature employment or too long hours because of the failure of the state legislature or state administrative officers to prevent such exploitation, or as long as evidence of the interstate character of the problem increases. The summary of child-welfare legislation shows little improvement through state legislation during the last year, and reports of investigations made by the state departments of labor in New York, Pennsylvania and New Jersey give evidence of the interstate movement of child labor and work for children.

If you examine that statement critically you will see that it speaks of the **"failure of state administrative officers to prevent such exploitation."** And on that failure we base our contention that federal legislative action is not going to work either. In Pennsylvania where I saw the little glassworkers toiling through the night half-asleep, emaciated, before the great heat of the furnaces in surroundings uniformly unhealthful and vile, child labor laws then existed making such employment illegal, and they still exist there, but in Pennsylvania, New York, Georgia, California or anywhere else legislation intended beneficially for workers is not en-

—TO KEEP THESE PARASITES LIKE THIS

forceable except where the workers compel observance by the power of organized economic action. Economic necessity and capitalist greed form the upper and nether stones of the occupational mill that grinds the joy, youth, health and spirit of little bodies into holy profits.

The history of every state with child labor laws is a history of such general disregard that these laws are not worth the paper on which they are written unless as monuments to the earnestness of men and women who abhor the curse of child labor and believe (however wrongly is not the point here) that it can be remedied or abolished by parliamentary procedure. The enslavement of children continues because their labor is more profitable to employers than would be that of adult workers in like occupations.

CHILDREN IN BEET FIELDS HELP THE SUGAR TRUST

I shall conclude this month's remarks with a consideration of the economics involved. Next month we can continue the investigation with facts of child labor as it exists in the United States. These facts will be supported in every instance by government reports.

### Conclusion

Wages for workers are not the result of individual humor, caprice or sentiment, but are determined by the workers' living cost plus that required to replenish the slave stock, thereby guaranteeing to employers an uninterrupted flow of labor power. Now wages so determined do not insure to slave class children anything more than just sufficient for their sustenance until such time as they can be exploited in industry. Except among advantageously situated workers (i.e., skilled mechanics, technicians, etc.) wages paid to workers are below the level of a decent standard of living as computed by United States government officers. Hence, the large majority of proletarian fathers can not maintain their broods without the assistance of other members of the family, and this frequently includes not only their wives but children. Years ago Robert Hunter called atention to the fact that the hardest years of proletarian family life are when the children are small. And it is when they are small that necessity forces them into gainful employment —in a larger sense not gainful but a staggering loss.

My other point is that the exchange of commodities in capitalist economy brings an international aspect to bear on the subject. Even should higher wages be gained in this or any other country, and this is, of course, what workers must tirelessly struggle for or be thrust down from whatever existence levels they have gained the living standard can not be maintained so long as the present economic system holds sway. All those who would improve the conditions of the working class—class, remember, not any **group** in this class—by passing labor laws, should take into account that surplus value extractions will bring recurrent crises to shake our industrial life, and that this surplus value piling up in China, India, Europe and elsewhere demands marketing. The American cotton mill slaves, for instance, can not maintain their present living standards when competition from other lands wins the market against American capitalists in cotton. Organization can combat it, but it must be revolutionary industrial union organization or it is powerless in the long run. The only alternative for unemployment, which is the visible and menacing cancer eating toward the heart of the capitalist system, and for all evils inhering in the wage relation, is the destruction of ruling class power, by which act surplus value extracting, or profit-taking, is abolished. This necessitates revolutionary procedure and in the I. W. W. philosophy a revolutionary activity consummated by the superior force of industrial unionism of the working class frequently and best expressed as Economic Direct Action.

# Historic Fables - *The Fable of Heroes and Sheep*

By COVINGTON AMI

ONCE upon a time heroes were heroes and sheep were sheep. In those far off halycon days there was no civilization, no democracy and no Christianity. No shepherds and no collies were there. Law and order were utterly unknown. Savagery was rampant everywhere. Men and mutton roamed the earth as they would, when they would, and where, whither and whence they would. Gods, kings, captains, Caesars, presidents, premiers, plutocrats and pontiffs were conspicuous only by their absence. All was well with the world. But that was a long, long time ago, ages and ages and ages ago, my son. "The Golden Age" it was called. But it did not last long. Something spoiled it, I do not know just what. Some call it evolution and some call it God, but, whatever it was, both heroes and sheep survived. The heroes probably because the politicians took care of them, the sheep because the shepherds watched over their welfare. But, as I have said elsewhere, the halcyon days did not last long after the politicians and collies arrived. Law and order became necessary if society was to be saved for civilization. First the chief, then the conqueror, then the Caesar, then the pontiff, then the presidents and premiers were It. Now it looks as if the grand chiefs and commissars would have their inning at us averages next. Well, however that may be, after many revolts on the part of the heroes and sheep, chaos was finally put down and the state became God of Gods and King of Kings. It is a wonderful institution, the state. It can do no wrong. It is beyond good and evil. To criticize it is to commit the heinous crime of Criminal Syndicalism. To revolt against it is, not only treason in the ntynth degree, but even more blasphemous than that against the holy spirit of truth; for manifestly, when truth collides with politicians she should get the worst of it, should she not? She should and does. All of which is preeminently right and just. For is not the voice of the people the voice of God and the voice of the politicians the voice of the people? Ita est. You may answer this ineluctable logic after the scornful manner of the young, saying, to wit: "Well, all I gotta say is God's got a bum voice these days." But in that you would be far worse than wrong, my son. Consider what would happen, not to heroes, say, but to sheep if the sheep did not have any shepherds and collies to guard them from the wolves, care for them, pen them, fleece them and eat them? You may object that it doesn't make any difference to the sheep whether the wolves or the shepherds fleece and eat them. Wrong again, son. It makes all the difference in the world. Don't the shepherds provide fine fenced-in pastures for the sheep to live in, work in, and sleep in? Don't they, therefore, pay them a fair day's wage for a fair day's work? They do. If, then, the shepherds do take all the fleece of the sheep and part of the mutton, what of it? Are not the shepherds entitled to the wages of abstinence? Certainly they are. Just look at how much better off the sheep are under the care of the shepherds than when they were at the mercy of the wolves. Besides there are other considerations of a still more altruistic nature. Just think how the sheep would suffer all through summer time if the kindly shepherds did not deflate them of the fleece. And what, I ask you, would become of the surplus supply of mutton if there were no shepherds to find a market for it? It would all be wasted on the buzzards, wouldn't it? "Bull!" I hear you say? Ah, no, my son, it is not "Bull"—it is Orthodox Economics, and you should not jeer at the supersciences so. But this is not all the good the shepherds do to the sheep. There are the great public services they are forced to maintain for the sheep. Not only do they provide an efficient, humane and intelligent police force of collies to protect them—the sheep, I mean, not the heroes—from the wolves, but they oversee their welfare in many other ways. For instance, just this one instance: Yesterday the sheep had to grub their living out of the ground as best they could, had to do everything for themselves. Today, how different it is! Now they have luscious pastures, a plentiful supply of pure, sweet water, nice warm sheds to loll around in, and many, many other comforts, even luxuries, things their fathers never dreamed of anybody but shepherds using. How wonderful it all is, and the shepherds provide it all at their own cost, it is all free to the sheep. True you may say the shepherds are doing all this only in order to be more certain of securing the fleece and mutton produced by the sheep, and with the least possible bleating and butting. Don't be so

cynical, my son. If at times the shepherds do send whole herds of sheep to the slaughter, what of it? Just think how frightful would be the pressure of sheep population on pasture if it were not for these periodical slaughters! Remember, sheep know nothing of birth control, and as all good shepherds know that it is highly immoral to impart such knowledge to them, hence the necessity for the slaughters. Besides, the slaughters serve a triple purpose. Economically they tend to keep sheep population within the bounds of pasturage. Spiritually they exalt the sheep and prevent patriotism and piety from perishing. Socially it makes the world safe for democracy by keeping sheep bucking sheep so strenuously that they have no time left to think about getting together and butting off the shepherds and collies. It is a very nice arrangement for—What's that? "What's all that got to do with heroes?" you want to know. Well, nothing much that is extraordinarily different that I can think of. Only it has always struck me to consider how strange was the fate and finish of both heroes and sheep. But as both of them seem to be satisfied only a damned agitator would think of upsetting their serenity. So I won't. I'll quit right here, before my loyalty to the Declaration lands me in Leavenworth. MORAL: Cheer up, heroes, the worst is yet to come!

## WELFARE SONG

By WILL HERFORD

Sing a song of "Welfare,"
A pocket full of tricks
To soothe the weary worker
When he groans or kicks.
If he asks for shorter hours
Or for better pay,
Little stunts of "Welfare"
Turn his thoughts away.

Sing a song of "Welfare,"
Sound the horn and drum,
Anything to keep the mind
Fixed on Kingdom Come.
"Welfare" loots your pocket
While you dream and sing,
"Welfare" to your paycheck
Doesn't do a thing.

Sing a song of "Welfare,"
Forty 'leven kinds,
Elevate your morals,
Cultivate your minds.
Kindergartens, nurses,
Bath tubs, books and flowers,
Anything but better pay
Or shorter working hours.
—From May Days, an Anthology.

# Industrial Rest Not Unrest

By A. A. Graham.

1. MARCH 16, 1926, Luke Parsons, plead guilty to grand larceny and burglary in the district court at Topeka, Kansas, and was sentenced to 5 to 10 years in the penitentiary for having broken into the storeroom of the Union Pacific hotel here to get something to eat.

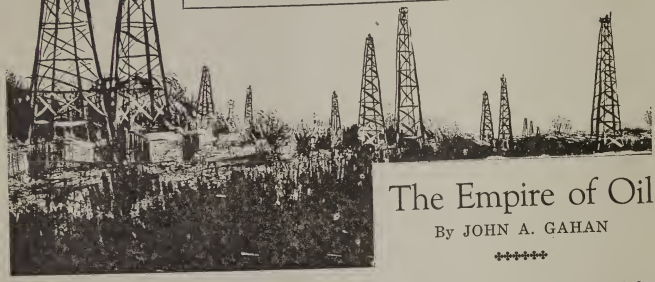
He told a long story of unemployment and suffering; and, when the judge was questioning him, the fact clearly appeared that he had purposely done this to be sent to the penitentiary, where he said he would rather be than outside, for there he could get something to eat, as he had had experience both inside and outside.

He was seeking a place of REST.

2. October 5, 1925, George Smith, nicknamed Hatchet-Face, plead guilty to highway robbery in the same court, and was sentenced to 21 years in the same penitentiary.

In his confession, Smith admitted he knew his series of holdups in rapid succession in a restricted district would soon land him in the penitentiary, but that was indeed his purpose also, as he, too, had had experience both inside and outside, and preferred the inside, where he was free from suffering on account of unemployment.

He, too, was seeking a place of REST.



I give the exact facts in both these cases, verifiable from the records, so I will not be charged with relating "parables" for the occasion.

These, as you see, are parallel cases, and are not isolated but representative of a general condition I have long known to be on an ever-increasing intensity. If this be crime, then what is government?

3. A 7-foot woven-wire fence has recently been built around a lake in Central Park. New York City, to prevent the unemployed and suffering and necessarily despondent from there drowning themselves.

There, in a water grave, they, too, have been seeking REST.

"The whole world coal industry is suffering from the present crisis. The permanent causes of this crisis are the development of coal mining in countries like India, Canada, Australia and Africa, and the technical advances leading to economy (oil, hydro-electric power) for coal."—A. J. Cook, General Secretary of the Miners' Federation of Great Britain, in the Chicago Herald-Examiner, May 9th, 1926.

# The Empire of Oil

By JOHN A. GAHAN

WE FIND that the British miners' leader is on the **qui vive** as competitors invade that energizing domain ruled until the last quarter-century by the absolutism of King Coal. Rightly he considers the rising power of these rivals, and in this series of articles which are to continue in the July and August numbers of The Industrial Pioneer will be manifested the enormous dimensions assumed by oil in the industrial arena, the adumbrations of which fall shroud-like over national destinies and threaten not only living standards of English coal diggers, but the fast-shrinking modicum of "liberty" now "enjoyed by the world's workers.

Oil is the latest and strongest despot in the affairs of men, superseding in importance the older tyranny of coal, iron and steel which dominated unchallenged for a century. Scott Nearing, in his "Oil and the Germs of War," says: "The oil industry is the infant prodigy of the industrial world. Barring the automobile industry, with which it is intimately connected, none has developed in a more spectacular manner. . . . There was no oil industry prior to 1860, when the world's total production was about half a million barrels. . . . Oil has been one of the major industries only during the past 25 years."

The same authority ends his excellent pamphlet with figures from "The Mineral Industry" and the "Oil Trade Journal," which so eloquently reveal the growth of oil production until 1922 that I run them here for your earnest perusal.

### THE PRODUCTION OF CRUDE PETROLEUM

(1860-1922) in the five countries reporting at least ten million barrels for 1922, together with figures for total world production. Figures in millions of barrels.

| | U. S. | Mex. | Russia | Persia | Dutch E. Indies | World Product'n |

| 1917 | 335.3 | 55.3 | 69.0 | 6.9 | 12.9 | 506.4 |
| 1918 | 355.9 | 63.8 | 40.5 | 7.2 | 13.3 | 515.5 |
| 1919 | 377.4 | 87.1 | 34.3 | 6.4 | 15.7 | 558.6 |
| 1920 | 443.4 | 163.5 | 25.0 | 12.4 | 17.5 | 694.8 |
| 1921 | 469.6 | 195.0 | 28.5 | 16.7 | 18.0 | 759.0 |
| 1922 | 551.2 | 185.1 | 35.1 | 21.2 | 1.0 | 851.5 |

So well known are the reasons for this vast increase that we need but briefly mention them. Before the advent of the combustion engine, oil was an inexpensive, dependable means of illumination and fuel in territories outside the realm of urban gas

and electric companies. And though the liquid still serves these purposes to a limited degree, its great development has been conditioned by its ability to serve propulsion needs. An interesting comparison from the **Japan Year Book** for 1924-25 is pertinent. The publication says:

**"The consumption of petroleum in Japan by private users is estimated in the neighborhood of 2,600,000 koku (1 ton equals 6 koku) per annum. The total must reach some 5,000,000 koku if the consumption of the navy is taken into account."**

Japan produces oil in Sakhalin, and imports from California, Java, Borneo and Mexico. I have chosen Japan in this connection because the Mikado's Empire is neither "Flivverized" nor "Packardized" to any general extent, and the significance of consumption for private uses contrasts strikingly against "consumption for the navy." As time passes, factories, automobiles, railroads, ships and air craft use an increasing volume of oil, and without it the chief types of airplanes and dirigibles find their wings clipped. Household usage of oil is dwarfed by trade and military utilization of the mineral.

The determinant of victory in manufacture, commerce and war prior to the 1914-18 conflagration was the coal, iron and steel trinity. England, France, America, Japan and Germany forged ahead by developing these industries at home or abroad. And when the Teuton Junkers previsioned defeat of their arms unless they could get oil (chiefly for the army's eyes—airplanes), the Kaiser issued a special order on April 28th, 1917, instructing von Falkenhayn to recapture Bagdad, Mesopotamia's capital, in order to secure the dark liquid treasure. But they failed and lost the war, German imperialism being drowned in a sea of Entente and American petroleum, notably the latter. In Lord Curzon's words "The Allies floated to victory on waves of oil." We shall return in due course to this phase of our subject, outlining the place of American interests in the oleous game of Europe and Asia.

In a more general manner we should remember that the international conferences in Europe, of which we have heard so much, have all been saturated with petroleum and statesmen's pens are dipped in oil to write the government-supported mandates and treaties of petroliferous economic empire. It matters nothing that their carefully guarded language usually tabus the magic word "Oil" is the talisman forcing them to meet; it is the charm that lures oil company agents to the scenes, where they direct, "unofficially," the whole current of deliberations.

From the San Remo Conference of April 1920 to the signing of the Locarno Pact oil has monopolized the stellar role on the stage of bourgeois imperialism, and when we reach that part of our study I purpose showing detailed reasons for governmental concern, and the motives of the tricky delegates of these powers who frequently combine the offices of state appointee and corporation representative. So intimate is the relation of owners and seekers of oil and the subservient states that in this commodity more than any other is being verified the statement of Marx that governments are the executive boards of ruling classes.

Within the last few months Mexico has been dramatically limned in the American press, and all sorts of arguments have been used for and against that country's "moral right" to order its own affairs. Because of what is to follow I am moved at this juncture to interpolate that we may well remember that trenchant axiom of capitalists, "There is no sentiment in business." Well may it be paraphrased for the more comprehensive purposes of business through politicians, "There is no sentiment in diplomacy."

Capitalist states are indeed hard to please. After protracted and noisy grief on the part of American politicians because of Mexico's "instability," it would seem that the liberal Calles ought to suit Wall Street and its Washington offices in the White House, as the Calles government opposes social revolution, is nationalistic, progressive and friendly to United States interests. These virtues should certainly satisfy our puritanical statesmen. But, no. In June, 1925, Secretary of State Kellogg gave a signed statement to the press defining why the administration was at enmity with the Mexican government. He said that insufficient

protection was given to the lives and properties of American citizens in Mexico; that American citizens were being deprived "unlawfully and illegally" of their property; that labor's "unreasonable demands" threatened Mexican stability. He also declared that a revolutionary movement was then forming. For these reasons the American government was compelled to demand better protection not only for American citizens **but for all other foreigners as well,** and that the Washington administration previously behind the Calles government must adopt a neutral attitude.

Calles' government saw that the United States was looking for trouble and the Mexican president disarmed Washington with these words:

**"I declare that my government is determined to comply with the duties devolving upon it by international right and to guard the life and interests of foreigners. Based on loyal co-operation and on the unchanged customs of international friendship, my government hopes that other nations will help it to this end. But I will never allow that the government of another nation try to claim a special situation for its citizens in my country and I will not permit any foreign interference which is contrary to the sovereign rights of Mexico."**

Now as regards revolutions forming in Mexico Mr. Kellogg ought to be well advised, since the United States has engineered so many there and among other weaker peoples. Let us prove this by very rapidly reviewing Mexico's more recent history. From Nearing and Freeman's "Dollar Diplomacy" we read that: "Diaz built the edifice of his power upon concessions which were granted to those who had the means to carry forward the development of Mexico's immense natural resources." Also: "Under the administration of Diaz Mexico enjoyed peace and a superficial prosperity but the chief beneficiaries of this prosperity were wealthy Mexican and foreign corporations. Mexico was rich but the Mexicans were poor."

Porfirio Diaz wanted to balance the power of the Doheny oil interests which had shot the first important oil well in Mexico on May 14th, 1901, at Ebano. So he handed concessions to Lord Cowdray of the British Pearson interests. In 1910 Francisco Madero, representing many business elements as against the great, feudalistic land-holding class and the church which backed Diaz, opposed the latter's eighth candidacy for the Mexican presidency. Madero was "counted out." The election was contested, and a revolution started. That revolution against Diaz, who supported British oil through the person of Cowdray, was fomented with the support of the American oil exploiters backed by the American State Department. Huerta's revolution which murdered Madero, was engineered by Downing Street, because Huerta stood for British oil. Subsequently Carranza and Villa were aided by this country because Edward L. Doheny (of later fame in the Tea Pot Dome steal) and his colleagues ordered it. Only in the light of oil can be explained this "diplomacy" and that which intervened at Tampico, and sent Pershing across the Rio Grande chasing Villa when the latter failed to keep serving American oil monopolists.

With this sketch we shall better grasp the meaning of Kellogg's position, and understand more fully what follows concerning the present estrangement precipitated by Washington. The latest and most daring gesture of hostility to the Mexican government appeared in the April 17th, 1926 issue of (sic) "Liberty," a magazine printed in Chicago with non-union labor at the W. F. Hall Printing Company. This journalistic jingo enumerates Mexico's most appetizing commercial morsels. It gives the geographical extent, 760,093 square miles. Then it says that there is a "14,250,000 population, including about 40,000 Spanish and 18,000 Americans." That: "It produces almost one-quarter of the world's oil, one-third of the silver, five per cent of the gold, and has practically inexhaustible coal." Then very pointedly, "Its mineral wealth is virtually untouched." The editorial inventory of assets in "our sister republic" includes a $500,000,000 mine investment by American capitalists, and $1,000,000,000 in oil. We are reminded of the agricultural and cattle wealth already existing, and of the potential coffee and timber riches that can be developed by American money. "Mexico," says **Liberty,** "could support 50,000,000 persons in plenty where now the vast majority of its 14,250,000 live in wretched misery." **"The per capita wealth is a few cents."** (Bold-face mine).

This frank mouthpiece of American Empire tells the interested that, "Rubber development (in Mexico) would help smash British control." I now quote the remainder of the inspired word of this conspicuous champion of the workers' right to stay unorganized and be better exploited. Here is the summary of its superlative chauvinism:

**The United States (and the world) needs oil. More than 20,000,000 automobile owners are vitally interested in having Mexican oil and rubber developed. We (and the world) need Mexican ore, cattle, coal, and ranch products.**

**Apart from selfish political aspirations, greed, and ignorance, there are no reasons why Americans should not pour their surplus wealth over the politically drawn boundry, carry prosperity and education to their neighbors, and in return receive cheaper and more raw materials.**

**In this ridiculous economic situation, the Calles government is enforcing a "Mexico for Mexicans" policy, forbidding alien capitalists to own more than forty-nine per cent of the stock of corporations, and expelling teachers who have striven with totally inadequate numbers to improve conditions.**

**The wiping out of the boundry would be a blessing to Mexico, a benefit to the United States and the world. How long this barrier can stand between dire need of capital on one side and natural demand on the other depends upon the patience of the Americans. A war may be necessary to remove this obstruction to economic advancement. All wars are born of stupidity, and this one would be more than usually stupid, since the same results could be obtained by friendly co-operation.**

**If war comes, Mexico will be the winner. Her government and her armies will fall, but her people will be infinitely more prosperous and happier.**

The sweet solicitude of **Liberty** for the "half-starved peons," its tender compassion for our "uneducated" neighbors south of the Rio Grande almost moves me to tears. Only I am spared the lachrymation because I know that in this great, advanced, enlightened, matchlessly free and glorious United States of America there are 3,000,000 **illiterate citizens,** and that not radicals but prominent, proficient, bourgeois physicians qualified by training and experience to speak have stated publicly that 4,000,000 American children go to school each

morning minus their breakfasts. I know, too, that several million more children are enslaved in the most up-to-date Yankee fashion in the industries of this country. If you will turn to another part of the magazine in your hands you can see for yourself some of the photographed evidence and read various truths about American "prosperity" as it affects the little ones. Then, finally, I am aware of the benefactions of the publishers of **Liberty** who pay their women wage slaves a niggardly pittance, rush them like mad through the long shifts, and are so mindful of the welfare of these employees that they can make up a living homehow, anyhow, but not from the W. F. Hall Printing Company.

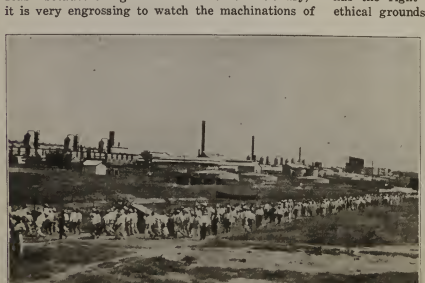
GENERAL STRIKE PROTEST IN TAMPICO AGAINST MURDER OF OIL WORKERS BY TROOPS IN 1924. ARROW POINTS TO I. W. W. BANNER

When secretaries of state and capitalist journalists are so candidly opposed to the Mexican Government it augurs ill for the political independence of that country. Since my plan in these articles has been to describe Mexican oil phenomena first the quoted State Department venom and the jingo scurrility just related are very apt. Mexico merits this enmity because there are vast deposits of oil in Mexico. That fact overshadows all other considerations. You noticed, did you not, that according to the *Liberty* figures, over a billion dollars are invested by Americans in Mexico. The Mexican News Service (Bulletin No. 31 of May 5th, 1926) gives less pretentious, but still formidable, figures. The service says that:

The capital invested in oil in Mexico according to countries is as follows:

| Mexican | Mexican pesos | |
|---|---|---|
| United States | 448,157,836 | 57.46% |
| England | 204,048,322 | 26.16% |
| Holland | 88,639,949 | 11.37% |
| Mexico | 23,519,946 | 3.02% |
| Spain | 7,101,092 | 0.91% |
| Cuba | 4,061,963 | 0.52% |
| Italy | 1,367,056 | 0.17% |
| France | 1,119,993 | 0.14% |
| Germany | 693,998 | 0.09% |
| Venezuela | 468,999 | 0.06% |
| Belgium | 225,000 | 0.03% |
| Switzerland | 226,000 | 0.03% |
| Norway | 150,945 | 0.02% |
| Sweden | 150,000 | 0.02% |
| | | 100.00% |

Mexican petroleum production slumped in 1925 due to the failure of American oil companies to produce to capacity in Mexico. These interests averred that over-production prevailed. They wanted to boost prices and therefore arranged matters so that oil was not too abundant on the market. The table above indicates the continued existence of the bitter contest between American and English capitalists in Mexican oil production. And though geological experts, motivated by interest and prejudice, differ on the extent of the sub-soil oil wealth in Mexico, they can not disagree on the fact that of the 150,000,000 acres of oil land in that country only 15,000,000 acres are under development. This economic prize is still so immensely tempting, especially to capitalists fighting as never before for world markets, that we can not anticipate cessation of the conflict of interests questing oleous aggrandizement.



American capitalists need more oil than can be supplied by United States wells. Oil imports must increase to meet the demand, and, as is indicated by the above figures, Mexico is a very convenient source of supply, and one which the wily Doheny and his satellites were first to exploit. The contest for Mexican oil terrains may develop into a first-class war, either between the governments whose nationals seek the oil, or between the United States and Mexico, in which case England might be the latter's ally.

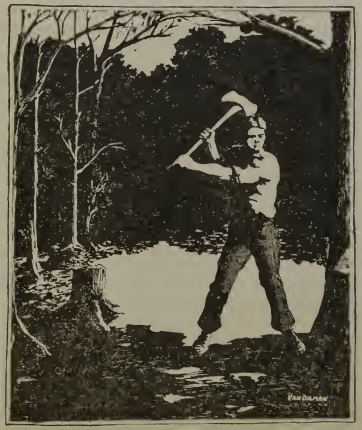
Figures for 1925 world oil production are not yet available, so I am presenting the Mexican News Service table for 1924.

| | Barrels | Precent |
|---|---|---|
| United States | 714,000,000 | 70.4677% |
| Mexico | 139,678,294 | 13.7854% |
| Russia | 45,162,000 | 4.4572% |
| Persia | 31,845,000 | 3.1429% |
| Dutch Indies | 21,000,000 | 2.0726% |
| Roumania | 13,296,000 | 1.3122% |
| Venzuela | 9,500,000 | 0.9376% |
| India | 8,150,000 | 0.8044% |
| Peru | 7,812,000 | 0.7710% |
| Poland (Galicia) | 5,710,000 | 0.5636% |
| Sarawak (British Borneo) | 4,500,000 | 0.4441% |
| Trinidad | 4,284,000 | 0.4228% |
| Argentina | 3,844,000 | 0.3794% |
| Japan | 1,600,000 | 0.1579% |
| Egypt | 1,107,000 | 0.1093% |
| Columbia | 500,000 | 0.0493% |
| France (Alsace) | 436,000 | 0.0430% |
| Germany | 350,000 | 0.0345% |
| Canada | 175,000 | 0.0173% |
| Czecho-Slovakia | 100,000 | 0.0099% |
| Italy | 33,000 | 0.0033% |
| Algeria | 14,000 | 0.0014% |
| Cuba | 4,000 | 0.0004% |
| Other countries | 130,000 | 0.0128% |
| | 1,013,230,294 | 100.0000% |

In 1901 Mexico produced 10,345 barrels of oil, with a value of 2,069 pesos, and in 1924 it produced 139,678,294 barrels, with a value of 272,084,563 pesos. In 1911 Mexico began exporting oil, shipping 901,596 barrels. The 1924 export was 129,699,788 barrels. The United States received about 73 per cent of this export. England about 7½ per cent, Holland around 2 per cent, and Canada approximately 1¼ per cent. Most of the rest went to Latin American countries.

The American Empire, conscious of oil's preponderant worth in trade and battle, covets Mexico, and but for English antagonism would engage Mexico in a second war. The Church in Mexico is with the old, decadent, arrogant class of rich landholders, who have been on the decline as the aftermaths of several revolutions. While Cardinal Bourne of England calls on Catholic workers to scab "because the general strike is revolutionary," it is very engrossing to watch the machinations of the Catholic Church in Mexico where it is striving to foment revolution. The *Leyes de Reforma* (Reform Laws) rousing the law-defying clergy in Mexico provide that all real estate held by religious communities is national property. This legislation merely re-affirms many Mexican statutes taking their initiative from the model of 1859. The laws are intended to separate Church and State and to keep the clericals out of politics. Article 130 of the 1917 Constitution declares that priests and ministers of all faiths must be Mexican citizens. Foreign priests carrying on official functions since then have acted extra-legally. A group of them plotted against the government with the Archbishop of Mexico, who is a Mexican citizen. *The Nation* of March 17th, 1926 comments in this manner on the mildness of the judgment when these conspirators were tried and found guilty: "If a country has the right to deport pernicious foreigners on ethical grounds or for transgressing not only the laws but even the mere police regulations of the places where they live, so much more justified is a state in expelling an alien who, disregarding the hospitality bestowed upon him, defies the law and endangers the peace of the country."

OIL STRIKERS MARCHING WITH RED FLAGS TO JOIN 1924 TAMPICO DEMONSTRATION—LA HUASTICA REFINERY IN BACKGROUND



Accompanying photographs of Mexican oil strikers, reproduced from the January 1924 issue of this magazine, show that all is not roseate for the poor, benighted workers under the industrial tutelage of American big business. It is well for us to keep these facts in mind because the time may come sooner than many expect when troops and

Marines again go into Mexico to defeat our fellow workers in oil and other industries who are organizing for industrial freedom. The American government which intervened in Mexico, ordered Black Jack Pershing across the line of a supposedly sovereign country, played one party against another for the benefit of the thief, Doheny, is trying to find a pretext to bring Mexico to her knees, is searching for the chance to establish in that land unquestioned, unchallenged American capitalist domination, political and economic. Despite the lofty idealism of our journalistic contemporary, "Liberty," on the blessings that are to be derived in such a case by Mexico's masses we are extremely skeptical. The thousands of Haitians murdered by Marines, the acts of massacre of '98 in the Philippines, the economic ruin of the Virgin Islands under the Stars and Stripes, have made us dubious about these blessings. By the gunboats of Dollarica shooting prosperity into "backward," "culture-starved" Chinese strikers at Shanghai; by the enslavement by American capital in China of children by hundred thousands under seven years of age in the new factory system introduced to "civilize" the heathens; and by many another historical incident of the eagle's prowess among weaker folk our faith in the refining, ennobling influence of United States financial and industrial imperialism plus cannon has been rudely, irreparbably shaken. All that we suggest to modify President Calles "Mexico for the Mexicans," is a slight change to cause it to read: "Mexico for the Mexican workers."

Next month our study deals with an even vaster theater of oil diplomacy, intrigue and force. We are going to examine the Russian, Siberian, Persian and Mesopotamian oil situation. To understand this gigantic engagement of oil monopolies and their governments is to hold the key of knowledge in world diplomacy. We shall study the antagonistic movements of Standard Oil and Royal Dutch Shell, together with those of other subsidiary concerns. Our study should contribute to clearer comprehension of the class struggle raging througout the capitalist world and insoluble without the distruction of the ruling class by revolutionary tempered hosts of militant workers economically organized the world over.

## *Show Your Appreciation!*

"Beware of a movement that sings!" said a wise tyrant of old. Yes, and well may modern industrial autocrats beware of the I. W. W. movement that sings as it fights, and produces artists capable of such fine studies as that just below, and others throughout this magazine.

From all parts of the world we are daily receiving labor press exchanges containing reprints of the cartoons and drawings first run in our own I. W. W. press. Likewise, we constantly see translations of Wobbly poems and articles, and we know that the workers outside of America, who are more frequently class conscious than the species **Scissorbillicus Americanus,** are greatly influenced by the philosophy of the Industrial Workers of the World.

It's about time that you, the members of the I. W. W. as a whole, get behind your press and give it the support that it deserves. With English, German, French, Spanish, Mexican, Scandinavian, Australian and Asiatic workers alive to its value, don't you think you should wake up and send in a sub for yourself or someone else?

# Editorials

**THIS IS THE I. W. W.**—Workers are makers, builders, givers of all good, creators of all wealth. Employers are thieves, wasters, destroyers, takers of wealth they do nothing to produce. Industrial tranquillity prevailing as a minority class of drones robs the majority class of workers would mark the latter's mental and spiritual bankruptcy.

Class war rages because capitalists deprive the workers of the wealth made by labor. Economic direct action is the I. W. W. method for destroying bourgeois power over wealth by working class seizure of the means of production.

Corporation payrolls each with seventy to a hundred thousand employees are common to industrialism. Great concerns control entire industries combining manifold trades. Gary's word is law to United States Steel. Banking firms decree work or idleness for millions of wage slaves. Standard Oil tankers are on every ocean. Ford has not only automobile plants, but glass and fabric factories, mines and a railroad. Conflicting trade unions are unequal to this combination. Yet William Green preaching disunion, class collaboration, and contented slavery, on his knees to the boss, whines, "We are not revolutionary, O, Lord!"

A trade union fighting the O. B. U. of Bosses is like facing an army with a corporal's guard, or a Big Bertha with pop-guns. Industrial unionism of employers must be matched by industrial unionism of workers making common cause because they know that what is good for the worker is bad for **all** bosses, and what is bad for the boss is good for **all** workers.

We do not want the right to **exist,** or the glorious opportunity of existing only to **work.** That "right" belongs to every mine mule and pack-horse in the world. We workers make all wealth and we want it all. To get it by economic direct action is the main purpose of the I. W. W. Fighting the boss class all the time on the jobs and on strike will train us to act together both before and after we have smashed capitalism. We shall break the shell of this slave system when our organized economic might is able to resolve social order from capitalist chaos.

## PREAMBLE OF THE I. W. W.

The working class and the employing class have nothing in common. There can he no peace so long as hunger nad want are found among millions of working people and the few, who make up the employing class, have all the good things of life.

* * *

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and aholish the wage system.

* * *

We find that the centering of the management of industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers.

* * *

These conditions can be changed and the interest of the working class upheld hy an organization formed in such a way that all its members in any one industry, or in all industries if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

* * *

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our hanner the revolutionary watchword, "Abolition of the wage system."

* * *

It is the bistoric mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have heen overthrown. By organizing industrially we are forming the structure of the new society within the shell of the old.

**BRITISH GENERAL STRIKE.**—It is doubtful if capitalist mismanagement was ever more startlingly shown than in the operation of English collieries for the last few years. To this capitalist anarchy the miners' strike must be charged. The walkout was not a revolution, but a vast movement of organized industrial workers striking together in support of the miners' heroic resistance against a more miserable existence standard than now obtains.

In 1913 British coal production was 287,000,000 tons; in 1924 it was 267,000,000, and in 1925 the tonnage dropped still further to 245,000,000. English coal exports for 1925 were 22 per cent. below the prewar average. This decline is attributable to the enormous inflation of coal capital, and the technical backwardness of the owners. German coal is beating the English product on the European market. British managerial inefficiency holds tenaciously to obsolete machinery in spite of the French example of coal mine production increased since the war because modern machinery is used.

Between 1914 and 1921 the English coal industry, with a capital value of £135,000,000, yielded profits amounting to £308,000,000. Much of this huge surplus value was converted into nominal new capital on which additional profits had to be made. This shows that the owners are hardly as "poor but worthy" as they want the naive to believe.

Last July the operators attacked the wages of miners, by negotiation, but this was solidly opposed on "Red Friday." Then the bosses ordered their government to appoint a Coal Commission to do their dirty work. In 1925 the subsidy averted a strike, but it cost, up till April 30th of this year, £21,000,000. In the Economy Bill before parliament the government tried desperately to cut down expenses. How? By going after the parasites' "unearned increment"? Oh, no, the government obeys. and respects its masters, so it tried to reduce the unemployment and health insurance doles. And the Coal Commission, what did it recommend? Composed entirely of capitalists it said that **wages must be reduced.** This recommendation is quite interesting as an example of bourgeois regard for our welfare when we remember that in January 1926, 500,000 English miners were receiving less than £2 a week!

Concerning hours, the Commission said that no change should be made unless the miners should "freely prefer some extension of hours with a less reduction in wages." The miners did not prefer it. And this recommendation was not offered in solicitude for the miners' conditions, but was based on business reasons, for when did master classes ever care a snap of their fat fingers for slave class producers? The Commission declared that increased hours meant increased production in an industry where the owners were having the greatest difficulty in marketing the product of shorter shifts. Either that confronted the rulers or the alternative of throwing more miners on the state's unemployment insurance. And an increase of hours would place the English miners' workday in a worse position than that of any important European area, save Upper Silesia.

The Commission said that the wage reduction should be 10 per cent. The 1921 miners' minimum wage is set at 20 per cent. over 1914, and the government index for living costs is fixed at 75 per cent. above. The report says: "This does not mean simply a return to the minimum of 1921, i. e., a uniform reduction of 10 per cent. on the present minimum percentage. In some districts less may be needed, in others more. It will be for the mine owners and the miners to carry out by negotiation the necessary downward revision of district minima."

The subsidy was regarded on all sides as a makeshift, and the Trade Union General Council made every effort to induce a change of front of those bent on prosecuting this vicious wage slash. The strike was set for midnight. While the General Council met, Baldwin's cabinet was conniving near by. The premier showed his utter incompetency in the serious situation by becoming panic-stricken because he "heard" that the Daily Mail printers had struck. Accordingly he adjourned the

cabinet meeting, did not advise the Trade Unions, and when the latter's representatives came over after eleven o'clock they found the doors locked and the chambers dark. Immediately after this incident midnight brought the strike.

It was the greatest strike in the world's history. Eleven million workers demonstrated their vast power and paralyzed British industry. While Secretary Cook of the Miners' Federation said that the police and military would not shoot their own "kith and kin," employers and their governmental lackeys were helpless and fearful. The strikers were charged with "anarchy," but when all is known the world will realize that there was never a more orderly period in Britain's history. This is true because the solidarity of labor is almighty and needs no violence.

Then, with the bosses weakening rapidly, came the General Council betrayal. In a few more days the employers and Baldwin would have been begging the workers to set industry's wheels turning again, and the miners' fight would have been won. But there was another "Black Friday." The Council sold out, capitulated disgracefully and stupidly, and let the miners fight their own battle. But it should be recorded to the everlasting honor of millions of workers that they did not stampede to the industries even when the order was given. Still, the damage was done. Employers saw that the time was ripe for a sweeping offensive against organized labor. They declared that discrimination in reinstating the workers was to be shown as a punitive measure. Many papers began operating on a non-union basis. Of the 500,000 railroad workers it was announced by the owners that only 350,000 were to be replaced. The rest are to be **strafed**—speeded up—while the discarded 150,000 railroaders can join the unemployed. The rulers are intent on rooting out the general strike idea. It looks too much like revolution.

The miners are still out, terms of an extension of the subsidy are being argued, but had the General Council been faithful to the general strike we should now be witnesses of a complete victory of the workers. Efficacy of the I. W. W. tactical program for the conduct of strikes was justified by the English conflict. Economic direct action, manifested on the largest scale ever witnessed, had the bosses by the throat crying for help, and it was winning the battle quickly and fully. The bosses trembled lest it should dawn on the strikers to spring over the living wage demand and rush along the economic highroad to industrial freedom. Labor's solidarity had to be smashed or the bosses were lost, and the smashing came because of the colossal treason of ignorant leaders and crooked leaders and lickspittle leaders.

But is it all loss to our class? No, indeed. A war is not made by a single battle, and one general strike must be followed by others to maneuver into position to win the class war. The workers do not need politics or politicians any more than they need employers or other vermin on their backs. The economic way is the only way to freedom. Our organized power in industry is all-sufficient to take the industries, and there is no other manner in which they can be seized and operated by the revolutionary proletariat.

England's workers are sure to repeat the general strike. Economic pressure will compel them again to act together. In our generation we should expect to see the end of capitalism in England by the triumph of the industrial workers advancing in economic formation. They shall take the industries by this procedure; drive the employers out of control; and use every means at their command to keep them out. That is the comprehensive task of class conscious unionism determined to destroy the wage system. Every activity directed for or incidental to the seizure and maintenance of the land and industries is, in the I. W. W. conception, the necessary function of Revolutionary Industrial Unionism. The workers in England, America, Russia or anywhere else can overthrow capitalism and achieve economic emancipation only by using Economic Direct Action.

# Sing To Us

By HENRY GEORGE WEISS

SING to us bravely of the martyred dead
Who with their bleeding feet had stained the path
Of shame, of degradation and of wrath
Reaction made them tread.

SING to us of the saviors of the race
Stoned, hanged and shot for brotherhood of man;
Hill, Everest, Little, breathe such names and fan
The flame of freedom to illume our face.

SO SHALL we find the ardor to go on
When friends forsake and martyrdom is nigh;
So shall we, hearing, feel our courage high,
Though dungeons yawn.

**Joe Hill, I. W. W. song writer and organizer, was framed up, falsely convicted of murder, and killed by the State of Utah on November 19, 1915. He met death before a firing squad.**

**Frank Little, I. W. W. organizer, was mutilated and lynched at Butte, Montana, on August 1, 1917. "They couldn't dam" his "life blood, so they spilled it."**

**Wesley Everest was one of the defenders of the I. W. W. Hall at Centralia, Washington, against the lumber trust mob on November 11, 1919. He was caught, later taken from the jail by "respectable" business men, unsexed by a prominent Washington doctor, and then hanged to a railroad trestle.**

**All of these fellow workers and many more have paid the greatest penalty dealt to thinking slaves who rebel. But you, the workers, are not asked to die for the cause of freedom—you are asked only to LIVE for it.**

FRANK LITTLE

# The Socialization of Invention

By A CIVIL ENGINEER

IN SEVERAL issues of the present series of the Pioneer, it has been my privilege to analyze some recent inventions from the point of view of their bearing upon the workers most directly affected by their application as well as to point out, in every specific instance, the marvelous adaptability of the structural form of organization known as industrial unionism to give to the workers most interested in these industrial changes the power to prevent a lowering of their wages, such being the common result of mechanical improvements to production under a regime of private ownership.

As a synthesis of some of those articles, it may not be amiss to attempt a study of the process of invention in itself.

What is an invention?

An invention is a better way of doing a certain thing than the one in current use.

There are many very nice stories connected with the birth of invention, most of them myths. Newton walking in his garden saw an apple fall from a tree and, presto, the law of gravitation was invented. Unfortunately apples have hit millions of people on the head before and since Newton, and have failed to establish in their minds the slightest connection with gravitation. Had the same Newton not, for years, been thinking about that particular phenomenon, the falling apple would have taught him nothing. To that extent only, the story may be true.

Marconi answers the question better. He claims that invention is not a special gift but an achievement born of necessity and at work in all of us. An invention, in his opinion, is a novel device that meets a new need and accomplishes its purpose more efficiently than the method in current use at a given epoch.

The main cause of invention then is economic necessity and that necessity is a matter of social consciousness. An invention only becomes valuable inasmuch as it meets that consciousness.

A workman, in a factory, makes an ingenious device which helps him in his daily task. The fact becomes known to his fellow workers but does not spread beyond that group. Again, the same man contrives a home-made bicycle which is an object of interest to the whole town. But when that obscure inventor perfects an appliance that revolutionizes a whole industry, the facts are published to the world and enter the larger social consciousness.

There have been great scientific discoveries all through the ages. Heron of Alexandria invented a steam turbine 200 B. C. The Chinese invented gunpowder hundreds of years before the Europeans and went no further than to use it for fireworks. Those discoveries lay dormant and to us of the present day they are but interesting accidents.

**"Socialized invention is so evident a function of society that a large part of it has already been thrown upon the government agencies in Washington. The political state is today shouldering the financial burden of the research work only to hand over the results to private owners and corporations as a means of further exploitation of the great masses of the people.**

**"The work of invention of a future age neither can nor will be carried out through the political state. The political state is unfit for any kind of economic or technical mission. Socialized invention and the social ownership of the fruits of such invention will never reach the wonderful scope which the progress of modern scientific methods is ready to give them unless the economic state of the future in the shape of a functional federation of economic activities, is substituted for the present political state, whose function and nature are predicated upon the existence of a useless super-class of private owners."**

In every invention which is successful, there enters a primary social element. An isolated invention or new idea is worthless until brought into subordination to the general body of existing knowledge. An invention must take place on the fringe of existing knowledge, inside the borderland between yesterday and tomorrow.

There exists a fundamental difference between the inventor and the engineer. Very few engineers have made inventions. Many inventors have failed or have achieved slow success because of lack of engineering skill in construction and design. Inventor and engineer, in relation to invention, are very different people, although sometimes living inside the same skin. Individual invention began by the exercise of the imagination but patented improvements on existing inventions are more engineering than invention.

It is on account of that relation of invention of the individual kind with imagination more than realization in material form, that so many inventions came in doubles and even in triples. The

same idea, on account of its social origin, leads to the same invention springing up in two or three different places at the same time. An urge of a social character existed in many minds and brought about simultaneous responses in different places at the same time. The result was the endless discussions as to priority which surround the materialization of every new idea.

The social urge which leads to invention also caused people to work together with the result that, even in the course of the individualistic period, inventions have increased the possibility as well as the necessity of men working together for one purpose.

A great pioneer invention, after it has been conceived in general outline, leads to problems which it is impossible for one man to solve. After Alexander Graham Bell gave the world a telephone which could hardly transmit speech in its initial stage, other men had to be engaged to reduce the invention to commercial practicability. One of these men, to whom we really owe the modern telephone, was Thomas A. Edison, although the general public does not know it. He was engaged by the original promoters of the telephone to make the instrument commercial. Since that time, equally brilliant but more obscure men have devoted their lives to the improvement of the telephone, men who do nothing else but invent improved systems to meet the expanding needs of the future. Such men are Charles Scribner, J. J. Carty, William Dean and others.

Our own unforgettable Charles P. Steinmetz has given us what constitutes perhaps the best classification of inventions in existence. According to Steinmetz, there are three main classes of inventions.

1. Fundamental inventions which create new fields for human effort or open a new era in the history of the world, such as the steam engine, the steamboat and the locomotive.

2. Inventions which are merely steps in the design and development of things, such as a new form of gear shift in the automobile or a new method of winding an electric coil.

3. Incidental or accidental inventions such as puzzles, tricks, etc.

Most patents are issued on combination claims, in which the invention consists in a new way of assembling old elements. It is only very seldom that someone discovers something entirely new.

The evolutionary process of invention may, in turn, be established as follows.

First period: Individual inventions.

Second period: Transitory period of individualistic inventions subordinated to commercial feasibility.

Third period: Standardized or socialized inventions.

The second period is, by all odds, the most interesting. It has always most distinctively appealed to popular imagination. It involves, first, the struggle of the inventor to get himself taken seriously. Eli Whitney was thought something of a nut until his cotton gin actually started ginning. Bell was a visionary schoolmaster until a group of Boston lawyers began to perceive the first boundless possibilities of his first crude telephone. George Westinghouse was a plain nitwit for declaring that a moving train could be stopped by thin air.

With recognition came generally a struggle for the ownership of the now accepted invention. For the success of the individual inventor involved a struggle between invention and ownership, a relation between invention and capital. The rule-of-thumb accidental inventor generally got robbed by the commercial organizer.

The reason for this occurrence has not always been correctly grasped because it is based upon the fundamental characters of our economic system.

A commodity which is the result of invention needs to be constantly studied, experimented with and improved. Where that is not done, other inventions will soon supersede it and drive it off the market. To carry on this work successfully, a mechanical genius is usually required. Such men, however, are frequently visionary; they have seldom had a business training. They are rarely capable of co-ordinating and controlling the many and complex factors that go to make up a successful manufacturing institution, yet they are an essential part of such an organization.

So, many if not most of the pitfalls that confronted the individual inventors were of their own making. They generally started out by demanding a flat sum in cash. The business men knew that an invention must be developed and commercialized and, therefore, they preferred to buy it on a royalty basis.

Here the inventor found himself in the presence of the economic factor which wanted to protect invested capital. Many railroad men have in their mind one or two inventions that may improve railroading, but which are not adopted because their adoption would require a rebuilding of our entire railroad system.

All that haggling between invention and capital generally came to a head in a fight in which the capitalist got the best.

If an invention had any immediately marketable value, the capitalists generally had it in use from Maine to California before the inventor knew it, patent or no patent.

Two recent cases have proved the truth of this statement. The first is the case of Carlson. He invented the side-loading process in use in the smelting of copper. The smelter trust went ahead and used it for years. Carlson started a fight in the courts and got the worst of the battle. Finally, at the end of his rope, he assigned his claims to

bankers who agreed to stake him. As I write, he is a patient in a charity hospital. For years he lived in cheap lodging houses on the San Francisco waterfront, many times skipping a meal. All the time, the legal battle was raging with some of the finest legal talent in the nation on both sides. Recently the higher courts decided in favor of Carlson but the trust lawyers never admitted defeat. After every decision they started out on a new tack. Present decisions make Carlson the prospective possessor of twenty-odd million dollars. It is not much of a prophecy that he will never reach the day where he will finger the actual cash. He is old and privation has shortened the span of his days.

In the same city lives one Blake F. Hopkins and a lower federal court recently ruled to enjoin the Standard Oil Co., Moore and San and others from using a spraying machine for painting without paying him royalties. Hopkins's machine is probably the most successful spraying machine ever devised. It was put on the market eleven years ago. He also has now millions coming but the lawyers for the trusts know how to play the court game to the limit. It may be another eleven years before Hopkins handles any real cash, if he ever does.

Many more similar instances, hundreds of them, could be quoted. Steinmetz sized the situation up in its true light when he stated: "The independent engineers and individual inventors are, as a rule, not commercial. With them the invention is the thing. They are thus depending on others for the flotation and success of their creations. This makes them, with few exceptions, the prey of corporations and the victims of disastrous litigation."

Some people more anxious to defend the capitalistic system than to establish the truth will interpose the objection that the inventor is protected by his patent.

The scope of any patent is limited. To become patented, an invention must be described in such a way that anyone skilled in the art can make use of it. It is an accepted principle of law that one cannot patent an idea. A patent is a protection until someone else proves that he invented the patented commodity before you. So, in most cases, a patent is only a license to sue or to be sued.

A valuable invention may not be open to patent because it has been described in print in such a way that anyone could do the same thing.

When Lewis Nixon was building the first American submarine, he spoke to Morgan Robertson, the writer, about the necessity of a scheme that would allow the captain of the sub to see where he was going. The writer immediately suggested a telescoping tube with mirrors set at the proper angle that could be shoved to the surface when the sub was submerged. This was practically the periscope. Nixon liked the idea and started out to patent it. It would have meant a fortune for Robertson, but the examiners of the patent office went back to a copy of Jules Verne's "Twenty Thousand Leagues Under the Sea" and the writer did not get his patent. Verne's description was so detailed that Robertson could not even claim priority for the idea.

In other cases, a patent is so all-inclusive that it becomes inapplicable and would practically hamper industry. This was the case of the Selden patent. It was so broad that it covered any kind of a gasoline engine. Henry Ford disregarded it and was sued. He lost out in the lower courts but, on appeal, he won out on the strength of the fact that the patent only covered two-cycle engines. The four-cycle engine was not in commercial use at the time the Selden patent was taken out. The litigation cost the contending parties over half a million dollars.

The omission of the slightest detail of a previous patent in a new contrivance constitutes an improvement. The original patentee, in such a case, is guilty of claiming more than he needs.

The general cause of all this hairsplitting may be found in the circumstance that the individual inventor always forgot that he was but a stage in an endless process, a theoretical moment in a continuous flow of time. What he lacked was a sociological view of the constant change of human tools under the influence of economic necessity.

The time factor plays an important part in invention. Time is of the essence of mechanical invention in any field. Generally any single inventor contributes but one radical innovation in any domain which is then later taken up again as a secure objective element by the following inventor and pushed forward under the same circumstances as previously. The span of time between the original invention and its improvement serves to produce a kind of habituation which strips the preceding discovery of its personal character and makes it mere technical material for the next inventor to work on.

The consoling feature of this situation consists in that it has served to attract attention upon the value of the labors of those who have failed. The rules of private property sent them away without any reward but, after all, their research work was valuable to the next investigator who stepped in where they had left off and finally found the long looked for solution on the basis of what the unsuccessful ones had learned through their failures.

With the advent of the corporations, the individual inventors began to disappear. The corporations needed new processes and, in order to get them, they reduced the inventor to the status of a wage worker, paying him to experiment and claiming the ownership of all what he might discover. Steinmetz considered this arrangement as preferable to the old hit-and-miss system. He remarks that the corporation provided the problem and all the necessary means to its solution and that, under

such conditions, the pay of the experimenter covered the product of his originality.

The individual inventor always started from an ill-defined point of departure. The corporation inventor faced specific problems passed over to him in the course of his duties.

Then the corporation went one step further. It divided a technical problem into several minor inventions which were passed over for solution to experts in various fields and then put together under the direction of the company's engineers. Instead of one salaried inventor's, the invention thus became the joint product of the labors of many specialists.

The invention of telephoned photographs is an instance of such a procedure. Twenty-four telephone engineers invented to order, each one detail of the process.

Here we have the new or socialized form of invention. It disposes of a wealth of facilities and equipment which the old rule-of-thumb inventor could never have dreamt of possessing.

The work which the inventors of large corporations are doing could never have been accomplished by independent inventors of ordinary means. In developing what is known as the Rex pulling over machine, for example, a machine which is to be found in every well-equipped shoe factory, the hired inventors of the United Shoe Machinery Company spent no less than a million dollars. They solved a problem which independent inventors had long given up as utterly impossible. Similarly the development of the tungsten filament lamp was the result of the expenditure of millions of dollars on both sides of the Atlantic, in special laboratories maintained by the largest electric companies in the world at an enormous expense.

The tungsten filament lamp is an improvement upon the carbon filament lamp that Edison gave us some twenty years ago. To perfect it, it became necessary to conduct research work in metallurgy, chemistry, physics, optics, physiology, psychology, spectroscopy, microscopy and half a dozen more sciences. The task of giving to the world such inventions is so complex, so huge, that an independent inventor with the fortune of a Rockefeller could never have hoped to cope with it. No man has knowlege enough to do it. The problem must be divided among a hundred specialists each of whom solves the little special problem assigned to him.

One of the consequences of that high cost of inventions is the limitation of the work to one single or to a very small number of agencies. Work that years ago would have been the share of any inventor who felt like doing it, is now confined to one laboratory or to two or three universities.

Another consequence is the introduction of the time factor, always associated with the machine process. A corporation not only orders an invention and pays for it, but it wants that invention perfected within a given time.

The newer form of invention now in existence among us is social in its origin and society must realize the danger which threatens its existence when the results of a process which is social in its origin are allowed to be appropriated by a private corporation.

It is up to society to invent socially, to organize the process of invention deliberately, to preserve its continuity by subsidizing, criticizing and directing it.

Economic necessity right at the present time calls for new inventions which no man in his right mind could possibly conceive as the private property of an individual or a corporation.

Let me give one or two instances.

Nobody individually discovered the micro-organism that caused hog cholera and a yearly loss to this country of eighteen million dollars. Could anyone honestly conceive the serum which has brought the disease well under control and which the South Dakota Experimental Station considers as 90 p. c. perfect, being owned by a private firm?

The University of Wisconsin reduced the loss due to oats-smut from 20% to one-half of one per cent, saving the agricultural industry of one single state four and a half million dollars per year. Who, besides a lunatic, would want the ownershhip of such a discovery to be vested anywhere else than in the collectivity?

Even the private direction of modern investigation would not fail to interfere with the value of the results obtained.

The National Canners' Association ordered and paid for an investigation of botulism. Such an investigation because financed by those who are commercially most interested in it must be one-sided and less valuable than if it had been made by a Washington bureau.

There is danger, from a social point of view, in leaving research work concerning food preservation to the laboratory of the National Canners' Association. Such research work should be social.

Never has the illogical and unscientific character of our whole social system appeared more glaringly than in this matter. Socialized invention is so evident a function of society that a large part of it has already been thrown upon the government agencies in Washington. The political state is today shouldering the financial burden of research work only to hand over the results to private owners and corporations as a means of further exploitation of the great masses of the people.

Many of the processes which lie at the basis of the Dupont companies, in the manufacture of explosives, were invented socially in the U. S. Bureau of Ordnance and became the property of those corporations either through outright gift or through

the hiring of the men who had helped to bring them about.

The work of invention of a future age neither can nor will be carried out through the political state. The political state is unfit for any kind of economic or technical mission. Socialized invention and the social ownership of the fruits of such invention will never reach the wonderful scope which the progress of modern scientific methods is ready to give them unless the economic state of the future in the shape of a functional federation of economic activities, is substituted for the present political state, whose function and nature are predicated upon the existence of a useless super-class of private owners.

I shall probably be met, at this phase of my argument, with the facile retort that inventive genius will become extinct if we dare to lay hands upon the huge financial rewards which must be hung up as a bait to inventors to bolster up their steadiness of purpose and sharpen their genius.

I deny the very premises upon which this objection rests.

Take the case of Edison. He is not today as rich as many of the financiers who exploited his patents, and most of his wealth is not the result of his inventions as much as it is the fruit of his commercial activities in the production and marketing of the commodities manufactured under his patents.

This is true to a much larger extent of Henry Ford. He is primarily wealthy not as a great inventor but as a commercial leader of inventive activities carried on through the organization which he has created.

In the appreciation of the corporation for which he worked, Steinmetz was the greatest technician that ever lived. The General Electric gave tangible proof of its appreciation when it gave up the idea of further raising his salary and told him to check against it for whatever funds he wanted. I do not believe that there exists another instance like that in the whole of our industrial history. And there could be no better conclusion to this article than the very words in which Steinmetz himself disposes of the stock argument of modern capitalism in the matter of incentive to invention.

"Obviously, in socialistic society, there would be no special interests opposing the inventor's fullest recognition; no man belittling and denying his invention for commercial reasons and the realization that a successful invention would be immediately adopted by the whole national or international industry, and used for the common good, that it would make the inventor a hero, but a hero of creation and not destruction—as have been most heroes of the past—all this will be an incentive for the inventor far greater than anything present day society has to offer."

**Realism And Romanticism**

"The Great God Brown" is a play of masks, of the fantastic, the *alter egos* taking turns on the stage with the egos. It was too deep for me and for four others I asked to read it, so we must let it go at that and wait until the author or someone else explains what it is all about.

"The Fountain" is better, good romanticism, but in the tale of Ponce de Leon, O'Neill is not as good as in his realism. "The Moon on the Caribbees"

and "Bound East for Cardiff" were reviewed in the January 1925 Pioneer, and they are very gripping plays. "The Long Voyage Home" is a one-act tragedy and the best in the collection of nine plays contained in the volume. This is set in a dive on the London water-front, a place frequented by sailormen and prostitutes. "In the Zone," "Ile," "Where the Cross is Made," and "The Rope" are the other titles.

In spite of all the defects in the first two plays named above, they have passages of great beauty and strength, and throughout O'Neill has done a fine labor. The publishers are also to be congratulated on the good taste shown in the binding and arrangement. The book is really a work of art. And in the subject matter—save for the fantasy—are the wisdom and realism which have made O'Neill a power in the new drama.

**Too Many Humans For Peace?**

Proceeding from the premise that the pressure of population obliges governments to find foreign or colonial territory for their surplus people, John Bakeless has written a very enlightening book endeavoring to show the causes of modern war. His theorem, as he states in so many words, is that present conditions are alarmingly similar to those existing just prior to the war in 1914, and that an explosion may be imminent.

Without doubt population is growing, but to say that such growth is the cause of war is a superficial observation. It is, however, convenient to investigators who repudiate the surplus value theory, because then it is not obligatory on them to get down to fundamentals. The capitalist class is guilty not only of keeping production curtailed by throwing millions of workers out of jobs during crises, but it is responsible for a managerial waste in addition, which engineers, not radicals, have estimated to be enormous, and on top of this crime capitalists pile another—that of destroying, by other means than consumption, fully half the wealth produced by workers. While wage slaves need corn for food we find farmers burning it for fuel because there has been "too much produced." Potatoes rot in the ground because to harvest them all in seasons when nature is most gracious with her gifts means to lower the price. Child slaves in woolen mills have been found to be without underwear; workers wear broken, bum-looking shoes though they produce the best shoes ever known to the race; and it is a normal condition for factories to operate at only 75 per cent of their productive capacity. And this where the workers are speeded as never before. The reason for the failure to utilize the entire productive powers is found in idle machines, and other equipment.

Knowing that the existing productive ability of the workers is fully equal to assuring all who toil a living standard immensely better than now prevails, and that, with utilization of the parasitic class in wealth-creating roles and elimination of waste due to greed and bourgeois incompetency, the conditions of the race can be improved so greatly that it is idle to set limitations, we reject Mr. Bakeless's premise as unscientific, and consequently

untenable. Productive ability has been solved; distributive arrangements must be perfected. As such arrangements are attendant upon the overthrow of present rulers and the assumption of all power by the workers, it is more "respectable" to blame "overpopulation" for making wars, than the presence of surplus values requiring markets in whose quest national rivalries are engendered.

Still it is quite educational to read the book. It is illustrated with maps, has a bibliography and index, and does correctly analyze the strategy of diplomats and governments in international dealings. But to credit capitalist states with any paternalistic concern for the wage slaves born in these states is to fail at understanding the nature of the state. This nature is oppressive, and it is for nothing but oppression of one class by another that the economic masters who own the state allow it to function. Plenty of all human necessities are created by the workers, and they can have the whole product when they put the bosses in overalls.

—Ellen Martin.

THE ORIGIN OF THE NEXT WAR, by John Bakeless, Viking Press, New York, 1926. Price, $2.50.

—o—

**A Good Text Book**

"Psychology," by Everett Dean Martin, is a large book of 302 pages, constituting a well written inquiry into the most diverse habits of human beings, attempting in this way to arrive at mental processes reacting to environmental stimuli. The book gives the "Place of William James" in psychology, that of Freud and the psychoanalytical school, to whom the author gives great credit for shedding light on the science, the behaviorist position and others. Little more than the briefest mention of the lectures-in-print can be made here.

These lectures are on how we think, the meaning of intelligence tests, the place of propaganda and public opinion in psychology, an examination of religion, politics and class consciousness, and many other matters of interest to students.

In the lecture on religion, the author, admitting religion to be emotional, tries to discover just what it is, as Plato did. Martin's conclusion is that it is the effort for redemption, salvation of the soul from sin. This will illustrate to you just how much fuss the book is sure to stir up the more it is read, especially as Professor Martin treads on toes indiscriminately. Many religionists reject the theological explanations concerning religion as a purely salvationist phenomenon, and regard the group life of human beings, as lived through the ages, in itself a religious act and the inherent purpose of religion. Such an opinion will have nothing to do with theology. The word's derivation will support this contention.

But you should read the book if you want to find a wealth of information, and if you are looking for points to approve or disapprove. You'll find them there, without a doubt. I did, and so should you. The last paragraphs bear this out. Listen to this:

"The king rules by the grace of God; the mob by the precept of Righteousness."

And this:

"It is in this sense (urbanity, ability to suspend judgement, self-understanding, idealism, and appreciation of value) that psychology has educational importance. I do not say that psychology is all; by no means. The student should, if he has not done so before, develop an interest in classic literature, in general philosophy and natural science. . . . Our aim has been to attain insight such as will enable us to know when we and others are merely rationalizing and when we are trying to solve real problems. By means of this insight we should be better able to see the true meaning our our behavior and to make some progress at least in self-control and in a knowledge of what is worth doing, which is, after all, the same as a knowledge of men. It is only with such knowledge, and under the voluntary leadership of those who have it, that social progress can ever create or preserve the things which differentiate men from monkeys and distinguish the civilized man from the savage."

—Louise Myers.

PSYCHOLOGY, by Everett Dean Martin, The People's Institute Publishing Co., New York City. Price, $3.00.

**How Albion's Bosses Started**

The outstanding facts of the industrial revolution of 18th Century England, its historical setting and social consequences, are interestingly and effectively portrayed in "Rise of Modern Industry" by J. L. Hammond and Barbara Hammond. Here is told the story of how commerce, stimulated by the discovery of new trade routes from Europe to Asia and by the colonization of the Americas, impregnated the old economic order of England and caused it to give birth to an entirely new system of production.

With the discovery of unlimited markets for manufactured goods of Western Europe, markets that promised profits greater than any dreamed of by the old traders in the silks and spices of the Orient, prevailing methods of production became utterly inadequate and every energy was bent toward the improvement and speeding up of industry. Under the ever present stimulus of an insatiable demand factories grew up and displaced the spinning and weaving industry of the homes; the demand for iron and steel goods led to the application of coal to the ore smelting process and this in turn drove the coal mine owners to search for an economical method of removing the water from the deeper pits. The solution was

found in the application of steam to the pumps. Soon thereafter the steam engine took its place in the factories, immeasurably facilitating production, and became the factor that more than any other distinguished the new system from the old.

Most interesting is the readjustment that took place to bring the whole social organism into harmony with the new system of production. The class always craving wealth and anxious to enhance its power, found new methods and safer ones to exploit the workers.

The feudal lords, as soon as they saw profits in prospect from the sale of agricultural products, dispossessed the peasants and confiscated the commons. The peasant became either a wage slave in the city or a wage slave in the country where formerly he had been at least semi-independent with certain privileges guaranteed by custom and law. Indeed, for many of them there was no alternative, workers were forced into the factories whether they wished to go or not. In the 17th Century, and part of the 19th, a worker was any poor person five years of age or over.

Government reflected faithfully the anarchy that prevailed in industry. Old laws that were in any way favorable to the workers were first generally disregarded and then repealed. New practices intolerably injurious to the workers were introduced, and having become established in spite of many vigorous protests, they received the sanction of Parliament and became laws. Workers' organizations were declared illegal.

Philosophy, science and religion gave almost unqualified support to the new order. Sanitation in the working class districts was not thought of; education and amusement for the workers was denounced as being unnecessary and dangerous. It was not until 1834 that a law was passed prohibiting the employment of boys and girls between the ages of 9 and 18 for more than 10 hours a day.

The authors are inclined to give some credit for the expansion of industry and for the adoption of measures restricting the rapacity of the new master class, to the growth of "public spirit" within it. We find little evidence of this in the whole story. Canals, roads and bridges were not built until increased profits appeared as an inducement. Agriculture was not improved until expanding markets promised a rich reward, and not until the peasants had been largely dispossessed so that the advantages would all accrue to the nobility. Finally laws restricting the employment of children and laws regulating the conditions of employment generally were not enforced until it became apparent to the more far sighted of the capitalists that the abject misery of the workers was an ever growing menace to their position.

The closing chapter of the book, "The Beginning of a New Society," does not offer much consolation to the modern proletarian. Perhaps it is because the authors do not realize that the necessary complement of the industrial revolution is the social revolution which will abolish classes and wage slavery and place the benefits of machine production within the reach of all mankind.

—Carl Keller.

**Left Winging the Wobs**

In "Left Wing Unionism" I was naturally more interested in what is said about the I. W. W. than any other part of the labor movement, because I am an I. W. W. And he has plenty to say of our "evangelism," lack of business methods, our being a "remnant" going downhill, and that we have barely 10,000 members. Why did Mr. Saposs, after declaring us to be chiefly a migratory worker organization, choose a winter month for his figures? Our financial statement for the last fiscal year will show a year-around membership of 16,355, and had Mr. Saposs picked a summer month for his findings he would discover a membership of from twenty to twenty-five thousand.

We are charged with having little or no sense, and of failing, because of this stupidity, to organize the American workers. But later on he says that we are good propagandists. Is good propagandizing consistent with organizational stupidity? If charges of stupidity are to be made kindly direct them at the unorganized and misorganized workers who belong with us but remain outside.

The author also mentions that we are "anarcho-syndicalists." Who told him that? We are neither anarchists nor syndicalists. Anarchism is a philosophy which opposes organization. Syndicalism is a "loose federation of trade or industrial unions." The I. W. W. is the **organization of revolutionary industrial unionism,** broadly patterned after capitalist business monopolies, and whether the workers of the world win their economic emancipation **under** the I. W. W. administration or not, they will win it only by using the scientific, practical class war tactics of the I. W. W.

In conclusion let me advise Mr. Sapoos that while the I. W. W. is rapidly recovering from the 1924 controversy, the Emergency Program gang are rickety and disappearing by their own internal disaffection. Whatever vestige of it remains by this fall will be converted by the 110 migratory harvest workers. To place us in the category with them is grossly unfair and utterly ridiculous. Our financial statements, our activities, our ten publications, numerous halls and general solvency bear this out.

Saposs says he got much of his information from members in the Rocky Mountains. That might be an interesting way to get facts, and again it might

not. Why not visit 3333 Belmont Avenue in Chicago to get the truth from our financial reports, which are accurate? The I. W. W. has done more for the American working class than any other organization, and it will yet give to this class the means of delivering itself from the wage system.

The rest of the book deals with the history and theories of radical union tactics, dual unionism, amalgamation, boring from within, etc. Even though the author has failed to appraise the I. W. W. correctly, the volume is instructive. —**Morris Adler.**

**LEFT WING UNIONISM, by David J. Saposs, International Publishers, 381 Fourth Avenue, New York. Published in 1926, 192 pages. Price $1.60.**

**AXE AND GARLAND**

"When thunders of rebellion shake the world," such as the titanic fury of the French storm toward the close of the 18th Century, it is certain that a many-faceted literature will reflect the conflict's somber hues, and also the rays of glory breaking when the rumblings at last die away. Writers, according to their various fancies, find an apparently endless impulse to portray the battle of giants. We have, thus, a voluminous literature of the French Revolution.

It is with circumspection that one should place pen to paper where treatment has been so detailed and universal, where interpretation has been as diverse as the peculiarities of human imagination, passion and rectitude. An eagle's flight is not comprehensible to the toad; ability to create a portrait rests on the artist's capacity to understand his subject, profoundly, intimately, sympathetically. And pygmies would do well not to appraise titans. Thus many accounts of the French struggle fall short. The merchant class fought for its place in the sun, a place eclipsing all other classes and destroying, with the aid of the workers, royalism, and the nobility with roots in the land. But, again, the mark is frequently overshot by shafts released from hands that would, in receiving the counterfeit gold of "Liberty, Fraternity, and Equality," believe it to be pure.

A strong hand has guided the pen which wrote "The Game of Love and Death," a hand of command, urged to strokes of compelling beauty, and rare understanding. Romain Rolland holds before our fascinated gaze a fragment from the book of revolution, revealing interests and passions, the fierce war of classes, intellects, emotions, that shook France so violently, and that, when threatened by the power of foreign kings, said in the genius of Danton "We shall fling to them the head of a king as a gauge of battle!"

A conventionary, 60 years old, who is honored as a scientist, rebels against the Terror, but is, at first, afraid to speak. His wife is 35. She respects her husband, is faithful to him, but loves a proscript, who is himself a revolutionary. The latter, tiring of flight, with only her image to keep him alive when his friends, fearful of the axe, refuse him shelter, food, even a glass of water, returns to Paris and finds refuge in the scientist's home. A spy reports this. The conventionary comes home from the Convention and learns the situation. The house is soon ransacked. The lover is hidden. Later the host—Courvoisier—refuses to comply with a visiting political opponent's request that he stand with Robespierre, the almighty (for the moment) power. Then the visitor gives him two passports so that he and his wife can leave France. He says that the burden of the scientist's head is more than Ropespierre can bear. This cynically.

When he goes out the conventionary tells his wife and the proscript to take the passports and escape. Jerome Courvisier is prepared to stay and perish. The lover, filled with shame but also with a sudden reluctance to die, takes the passport. Sophie tears hers into bits. She elects to remain with her husband and mount the scaffold. The play ends with them speaking quietly of their last night together. Sophie, who shows a fine character throughout, says:

"If at least we were leaving a child behind us! . . . Why. why was life ever given us?"

Jerome: "For us to conquer it."

(A silence. They have risen. Sophie, leaning against Jerome, looks at him and smiles in resignation. They stand, one in front of the other, and do not separate again. Sophie's head is on Jerome's shoulder. They do not even observe the door when it opens. Approaching voices are heard.)

Sophie: (With a melancholy smile) "To conquer..... Farewell, my friend. The laurels are all cut."

(A rough knocking at the door.)

Jerome: (Very tenderly) "The high wild woods of laurel. . ."

Sophie: (Pointing to a branch of lilac that has lain on the table since the opening scene.) No, give me instead that fading cluster of young blossoms, those lilacs . . ." (Courvoisier gives her the flowering branch. She kisses it. The door opens. . . A band of armed men.)

**Eurasian Oil Grab**

Louis Fischer, who spent several years in Russia (1922 to 1925), has written an unusually informing book on the diplomatic game played in the interests of oil monopolists. He traces the motives of the great powers in backing their rich nationals for securing petroleum terrains, with special emphasis on the Genoa Conference. Mr. Fischer admires Bolshevist statecraft and says that the Russian oil industry at Baku is gaining in efficiency and consequent production. .

A too apparent espousal of the Soviet Govern-

ment cause injures the work which should be as far as possible an investigation and not a propaganda treatise. He frequently refers to the benefits alleged to be had by Russian workers under the Bolsheviks. We sincerely trust that this is true, but while the political prisoners are still kept in Siberia and the wage system rules, we have our doubts.

Concessions galore to the earth's most successful, hence most dangerous and heartless, capitalists must be secured by armed force. Capitalists will not invest without the guarantee of such security, and whether it is realized by a Bolshevik army over

the wage slaves or armed intervention by the governments of investing nationals, the workers must pay the price. If bayonets and gunboats protect foreign investments of financial empires, what can be expected of the long (49-year) leases but foreign invasion the moment the Russian workers (not Bolshevik officials, mind you) revolt for their deliverance from wage slavery?

It is regrettable that Russian politicians and not Russian workers must conduct the affairs of that country, and that the greater productivity of Russian resources proceeds from the more proficient technic of expropriating the producers for internal bureaucratic and foreign bourgeois gain.

Finally, let us say that perhaps the politically-minded Bolshevists thought they did right in divorcing the workers from democratic control of the industries these same workers wrested from the Russian bourgeoisie. However, Kollantay and Souchy think a mistake was made in suppressing the proletarian voice. And even Lenin believed another revolution inevitable in which the Communist party itself must be overthrown by the workers. Is it, then, expediency or ethics which keeps revolutionary working class political prisoners in Siberia? If another revolution is required eventually to overthrow the present Moscow regime "counter-revolutionary" loses its villifying force, and we are justified in asking when is revolution revolution and when is it counter-revolution? Moreover, we have seen the increase of production in other capitalist countries synchronize with the debasement of the workers of these other lands, and therefore do not necessarily relate the mounting Russian production, in oil or anything else, to any absolute betterment in the living standard of Russian workers.

Still, this is a digression out of the practical scope of points chiefly treated by the author of the best book on oil stealing yet written. I recommend its reading to workers who want to know what oil means to their class and to world diplomacy.

# THE STRIKER

By ROBERT WHITAKER

Many have sung the soldier
From the rude, red days of old
To this madder hour of more murderous power,
And death schemes manifold.
But no one has sung the striker,
Though a better fighter he
For the living cause and the larger laws
Of the empire that is to be.

Many have sung the statesman
Of nation and state and clan;
Though he served himself from the purse of pelf
And lorded it over man.
Yet greater than he, the striker,
Lacking both fame and fee,
At the cost of all he has built the wall
Of the city that is to be.

Many have sung the scholar,
Maker of book and school;
Though his ease was earned by the throng unlearned
Who slaved that the few might rule.
But the lore and law of the striker
Setteth the whole world free,
Neither ease nor toil shall the spirit spoil
In the knowledge that is to be.

Many have sung the saintly,
The pure of all times and creeds;
But alas, the good have denied the food
For even the children's needs.
Kinder by far the striker.
And truly more righteous he,
For he stakes his meal on the common weal
And the justice that is to be.

Some day, when all are toilers,,
And nobody toils for naught;
When the worker rules over kirks and schools,
And shapes all the realms of thought;
They shall sing the song of the striker,
No longer an outcast he,
But with arms abreast he shall stand confessed
In the triumph that is to be.

# Revolutionizing "Clinton's Big Ditch"

By T. P. SULLIVAN

STEEL MOTORSHIP IN THE ERIE CANAL

FOR many years the industrial development of the United States has taken vast strides forward, particularly in the marine industry. In this one industry more progress has been made in the last hundred years than in all its previous history. This development was brought about through the invention of steam power and created a new era in marine transportation. Many articles have been written dealing with the development and evolution of the tools of production in the marine industry. We have learned that the Indians hewed down trees and burned out the centers of them in order to make canoes to transport their warriors in times of strife and conquest against hostile tribes and also to use them for peaceful pursuits, when harvesting their crops, etc., and of the period of the sailing ships with their great stretches of canvas afloat in the breeze driving the ship onward through the trade routes to the ports of the world.

### Fulton's Steamboat

The invention of the steamboat by Robert Fulton was an epic in the history of marine transportation which revolutionized marine trading and made man the master instead of the slave of the elements. Heretofore man embarked upon sailing ships not as master but as slave of the elements and many months, even years, were consumed in the completion of a voyage. The elements had to be contended with and used when it was to the advantage of the ship and fought when they reached their fury and threatened destruction to the ship and its crew. The invention of the steamboat did away with the necessity of the sailing ship and the elements necessary to carry the ship over the trade routes into the ports of the world.

Steam was now the dominating factor in the propulsion of ships, and man was able to defy the elements, as ships raced around the world from port to port, the wind singing through the masts and rigging and columns of dense smoke emitting from their squat stacks in defiance. The ships ploughed through mountainous seas into ports of refuge. The development of the Deisel engine made it possible for ships to be propelled without steam, and the Flettner rotor-sail without artificial propulsion, but with all the safeguards of modern invention as it affects development of marine transportation. The story of the heroism of the crew of the S. S. Roosevelt is too fresh in our minds to repeat, but was made possible by the invention of wireless telegraphy.

As this onward stride takes place in types of ships and the methods of propulsion and safety another important development is also taking place which also revolutionizes transportation. This is the development of inland waterways and canals. Many large bodies of water have been connected by the building of canals, such as the Panama Canal which connects the Atlantic and Pacific Oceans and the Suez Canal which connects the Mediterraean and the Red Seas and in that way

the Indian Ocean. The development of these engineering projects makes it possible for ships to cut the distance of voyages in half and also to avoid passing through treacherous bodies of water such as rounding Cape Horn in the Western Hemisphere and the Cape of Good Hope in the Eastern Hemisphere.

The Great Lakes of North America are known as the "inland seas" and the largest bodies of fresh water in the world. On these waters steam huge freighters carrying the output of the coal mines of the middle Atlantic and the Central States to the upper lake ports and returning with the iron ore from the Mesaba Range and the golden grain of the West. The ore is unloaded at the steel plants in the lower lake ports and the grain is sent to Port Colborne or Buffalo where it is unloaded and reshipped to the Atlantic seaboard and the ports of the world.

### Beginning of Erie Canal

For more than a century and a half people who were interested have talked of connecting the Great Lakes with the Atlantic Ocean by a ship canal. The first attempt to improve the inland waterways in New York State was undertaken by private companies chartered in 1792. A portion of the series of locks built by the Inland Navigation Company at Little Falls is still in place. This project was on a small scale and was built to take care of the immediate needs at the time.

The first state canal construction work was begun on July 4, 1817, at Rome, N. Y., and the Erie, or main branch, was completed in 1825. This was known as the Erie Canal, and it is doubtful if any transportation project was ever a greater success. This canal had a bottom width of 28 feet, a width at water surface of 40 feet, with a four foot depth of water. The first boats on this canal carried 75 tons. On the first trip down the canal a breaker of water from Lake Erie was carried and emptied into New York Harbor, signifying the connection of the two bodies of water. As in many cases where huge experiments are made in the interest of progress, the reactionary multitudes sneered at De Witt Clinton, the governor of New York at the time and the father of the project, predicting failure for the canal and terming it "Clinton's ditch" and "Clinton's folly." The canal was a huge success both from a financial standpoint and as a means of transportation. Power was furnished by mules who were driven along a path on the bank of the canal, the tugs on the harness being attached to the canal boats. This was the only means of propulsion at the time, and lasted for many years.

Up to the year of 1883, when tolls were abolished on the canal, it had repaid the state not only all it had cost for construction, operation and maintenance, but it had turned in the handsome profit of $43,599,177 over and above these charges.

What was of greater benefit than the profit concerned, was the fact that the Erie Canal fostered the growth of that great industrial zone which, with its chain of cities and factories extends from Buffalo to Troy and on down the Hudson River to end at Greater New York. When the railroads appeared they found this well established trade route, so that as a traffic line to the West it was not only the first in point of time, but it has remained the first in importance in the United States.

### Interesting Facts About the "Ditch"

The first enlargement work on the Erie Canal was commenced in 1836 and finished in 1862. The bottom was increased to a maximum of 56 feet, and at the water line to 70 feet, with a depth of seven feet. In 1896 the work of deepening the Erie Canal to nine feet was begun, but was completed only at disconnected localities.

As the population of the states in the Middle West increased, lake commerce grew in proportion and the agitation for a deeper waterway between the inland seas and the ocean became more pronounced. The Canal was again reconstructed and called the New York State Barge Canal. This improved route was opened in 1918. The minimum width at the bottom of this canal was 75 feet, width at the surface 123 feet (minimum) and a mininum depth of 12 feet. This new canal contained 35 locks which had a length of 328 feet, a width of 45 feet and a depth of 12 feet at the sills. The route was as follows: Starting at the government lock at Troy, it followed the Hudson River to Waterford, where the westward turn is made. A land cut of two miles in length is utilized to the Mohawk River into a pool created by the construction of a fixed concrete dam. The Mohawk River at the canal channel entrance is at an elevation of 169.5 feet above the surface of the Hudson River at Waterford and is 184 feet higher than sea level at Albany. This canal channel entrance is two miles from Waterford and in this distance there are five locks in which the canal fleets are elevated 169.5 feet. The operation takes about seventy minutes. From this point navigation is carried through the canalized Mohawk River, with short land cuts at intervals, past the City of Schenectady to Frankfort, thence through an artificial channel that parallels the Mohawk River, to Rome, and crossing the divide, enters the Oswego Watershed, ten miles west of Rome and, following Wood Creek for five miles, reaches the eastern end of Oneida Lake.

This lake is the largest natural body of water in the canal system, the channel stretching across a distance of 21 miles to Brewerton at its western end. From Brewerton, the Oneida River is followed to its junction with the Seneca River at Three River Point, thence through the Seneca River to the Clyde River, and to and through the Clyde River to the foot of Lock No. 27 at Lyons. Here

the bed of the Ganargua Creek is utilized, with frequent land cuts, to Palmyra, from which place the channel lies in the former Erie Canal, widened and deepened to a point just west of Pittsford.

An artificial channel there exists to the Genessee River, which is crossed about two miles south of the Rochester Terminal on a pool created by a movable dam, and traffic enters what is locally known as the 60-mile level, consisting of an enlargement of the former Erie Canal, to Lockport.

At Lockport, by means of two combined locks, navigation is raised 50 feet to the elevation of the Niagara River, and thence an artificial channel is utilized to Tonawanda Creek. The canalized creek is followed to its junction with the Niagara River at Tonawanda. Through the Niagara River traffic passes to Lake Erie at Buffalo, the vessel being raised to the level of the lake by the government lock at Squaw Island. The distance from Troy to Lake Erie at Buffalo is 355 miles, of which 215 miles lie in natural waterways and 140 miles through artificial channels.

Along the canal there is a clearance of 16 feet under bridges and guard gates. There are no tolls on the canal, and there are 43 terminal warehouses situated along the canal at various ports as well as a grain elevator in Brooklyn with a capacity of 2,000,000 bushels of grain.

To mark the channel through canalized rivers and lakes where considerable width of water exists, an elaborate system of buoys and lights is maintained. At present about 2,100 lighted aids to navigation of various types are in place.

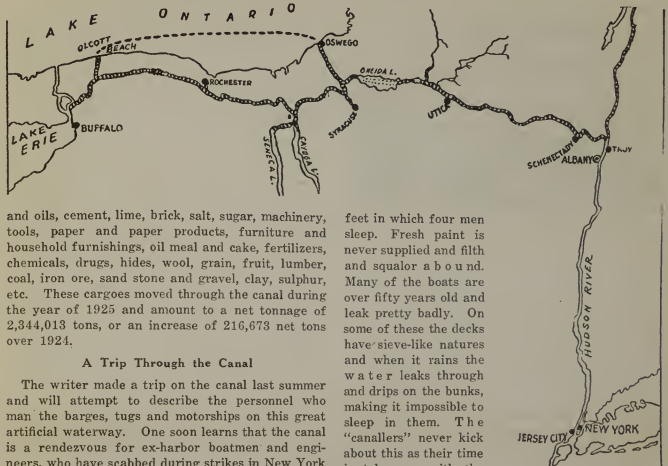
### Many Deisel Engines Used

The type of power used on the present canal is steam, although many tugs of later construction have Deisel engines installed, and the average speed of these tugs with a fleet in tow is about four miles an hour. Some of the larger motorships on the canal make a speed of about ten miles an hour and are usually run on schedule. The Standard Oil Company and Interwaterways Line, Inc., operate a fleet of motorships which have express service.

The usual length of the navigation season is about eight months, from April to December. The canal is available at all hours, and the channel is well lighted at night.

To maintain an adequate supply of water to support canal navigation many sources are utilized. From Lake Erie and the Niagara River the water finds its way through Tonawanda Creek into the canal channel and as far east as Palmyra, navigation is deepened solely on the Lake Erie supply.

At Palmyra, the channel lies in the bed of Ganargua Creek, whose line is followed to Lyons where the western feed is supplemented by the discharge from the outlet of Canandaigua Lake. Through the Seneca River come the waters from the great natural reservoirs, Cayuga and Seneca lakes.



Movable Dam on Canalized Mohawk River, Showing Lock at Left

### Diversified Cargoes Carried

East of Oneida Lake there exists the most difficult problem from the standpoint of water supply, and to insure an adequate boating depth in the areas to be served, four systems of reservoirs have been created. The Delta Reservoir four miles north of Rome has a storage capacity of 2,750,000,000 cubic feet of water. The water is fed into the new channel at Rome. Another reservoir, which is known as the Hinckley Reservoir, has a storage capacity of 3,445,000,000 cubic feet.

There are no tolls on the canal, and it is maintained on the profit taken from the old Erie Canal previous to 1883 when tolls were abolished. The cargoes transported over the canal are various. According to the report published for the year of 1925, recently issued, the following are some of the cargoes: iron, steel, other metals, petroleum

and oils, cement, lime, brick, salt, sugar, machinery, tools, paper and paper products, furniture and household furnishings, oil meal and cake, fertilizers, chemicals, drugs, hides, wool, grain, fruit, lumber, coal, iron ore, sand stone and gravel, clay, sulphur, etc. These cargoes moved through the canal during the year of 1925 and amount to a net tonnage of 2,344,013 tons, or an increase of 216,673 net tons over 1924.

### A Trip Through the Canal

The writer made a trip on the canal last summer and will attempt to describe the personnel who man the barges, tugs and motorships on this great artificial waterway. One soon learns that the canal is a rendezvous for ex-harbor boatmen and engineers, who have scabbed during strikes in New York Harbor and were driven out by the enraged strikers immediately after the strikes terminated.

There is no union on the canal, although several members of the I. W. W., including myself, have made one or two trips on it. Besides the scabs the great majority of the boatmen are backwoodsmen, many of them unable to read or write. They are not interested in better conditions and are content to spend their meagre wages on moonshine and wild women, which are plentiful along the canal route.

These people are distinct from the ordinary class of seamen and many of them have spent their entire lives on the canal, and the result is that their minds are about as broad as the canal itself. Needless to say, popular prejudices abound, and the hate of the foreigner and the radical is supreme. Many of the men on these boats are very elderly and enjoy telling tales of the "Old Erie Canal, when we worked twenty hours a day." It is hard to reason with these hoosiers, and a strong back and weak mind are the most important qualifications to obtain employment.

They are termed "canallers." The food and wages on the canal are fair, but long hours of labor and filthy foc'sles which are infested with vermin, more than offset the fairness in other respects. In the summer the mosquitoes are thick on the canal and enter the "glory holes" where the men sleep. Practically all the boats are the same. The sleeping quarters are holes about 8 feet by 5 feet in which four men sleep. Fresh paint is never supplied and filth and squalor abound. Many of the boats are over fifty years old and leak pretty badly. On some of these the decks have sieve-like natures and when it rains the water leaks through and drips on the bunks, making it impossible to sleep in them. The "canallers" never kick about this as their time is taken up with the thought of the next lock, and a bottle of moonshine which is so easily secured. On some of these tugs and canal boats the crews are in an intoxicated stupor at all times, and much damage results, such as crashing lock gates and guard bridges and running the fleet aground, high and dry on the shore, when the pilot is feeling the effects of the moonshine. Many of the more sober men are afraid to sleep in the "holes" when the pilot is drunk, as it doesn't take much to sink a fifty-year-old wooden boat. It is hard for the decent class of seamen to stay aboard these boats very long, and many of them quit in disgust after a short period.

### Booze and Accidents

Regardless of the merits of prohibition and the Volstead Act, the towns along the canal are as wet as the canal itself, and sinkings are quite frequent due to the inebriation of the pilots and engineers as well as the rest of the crew.

This condition is well known to those entrusted with the guardianship of law and order as can be readily seen from the report of the superintendent of the Department of Public Works at Albany recently issued.

This paragraph is significant: "As has been pointed out before, the Eighteenth Amendment is responsible for many of the complaints that are made regarding the condition of the canal. Judicial notice can be taken that evidently it is not difficult to obtain bootleg liquor at certain places along the

Little Falls Lock, Highest Lift on Canal, 40.5 Feet

canal. Reports have come in of intoxication aboard the boats. The alibi of every captain who runs aground or gets out of the channel through improper navigation is that the proper depth has not been maintained. We have had numerous complaints of boats drawing nine feet striking bottom when in the same week and under exactly the same conditions boats drawing over ten feet have gone through the same channel without striking. It will never be possible to prevent the complaint of shallow channel because so long as captains have to report to boat owners they are going to give the best alibi they can, and the best alibi is that the channel depth has not been maintained."

### Concentration of Canal Capital

With the exception of the "Green Fleet," Transmarine Corporation and a few big towing companies the boats are owned by individuals and are worked on shares. On some tugs as many as three or four individuals own shares in the tug and attempt to squeeze every penny of profit out of the investment.

As in all industries the tendency to wipe out the small competitor is also prevalent in the marine industry, and is readily seen on the canal. We find the owners of large steamship companies entering the trade and taking away the business of the small boat owners. The latest to try this is the Munson Line which will have a fleet of barges and tugs on the canal this summer. It is only a matter of time when the small fry will be wiped out and forced into the ranks of the wage slaves and the employ of the larger companies.

The success of the inland canal as a means of transportation and connection of larger bodies of water has developed these canals at a tremendous pace in the past fifty years, and as time goes on the necessity for a deep water canal to accommodate ocean-going ships has become the topic of discussion in the marine world. The enormous freight rates in existence on the railroads has compelled shippers to look for more economical means of transportation and the result is the agitation for a deep water ship canal between the Great Lakes and the Atlantic Ocean.

### Proposed Deep Water Ship Canal

Two routes are suggested, one through the United States and Canada, with its outlet to the Atlantic at the Gulf of St. Lawrence, and the other the revolutionizing and reconstruction of the New York State Barge Canal. The sabre rattlers and war lords are recommending the all-American route, so that it will be controlled by the United States in time of war and can be used for the transportation of supplies.

The five Great Lakes are the means of transportation by water for a large territory. The states bordering on them are large in area, population and production. These lake states with the more westerly ones now produce an enormous tonnage of both agricultural and manufactured products. And as the years go by the output of farm and factory will increase and the demand for cheaper water transportation to the markets of the world will become more insistent. There is also the development of hydro-electricity on the canal and there are at present nine dams in existence from which power to run the canal is withdrawn at present and the waterpower possibilities are enormous.

In order to convert the Barge Canal into a deep water ship canal it will be necessary to deepen the canal to 25 feet and remove all the low bridges and guard gates that ships may pass.

The route that ocean ships will take is from New York to Waterford through the Canal to the junction of the Oswego Canal to Oswego, and thence across Lake Ontario to the Welland Canal into Lake Erie and the ports of the Great Lakes. This plan as drafted by engineers has the principal backing and appears to be the most feasible and superior to the St. Lawrence project. The St. Lawrence project would start at the eastern end of Lake Ontario through the St. Lawrence River Valley and the Gulf of St. Lawrence to the sea, a distance of about 1,200 miles, closed for four months of the year and risky to ships from the danger of icebergs during the greater part of the year outside the gulf of St. Lawrence. The route across New York State would start at Oswego on Lake Ontario through the present canal to the Mohawk and valley and thence to the Hudson at Troy. This is a distance of only 166 miles.

It has been argued that canal navigation is too slow to meet modern traffic requirements, but a rate of five miles an hour is admitted to be practical on the proposed canal; this means that the actual canal journey can be made in 33½ hours. The trip on the broadened and deepened Hudson to Sandy Hook is only 165 miles. Here steamers can run at full speed, say ten miles an hour. The entire trip then can be made in 50 hours. This route is seldom troubled with fogs and ends at New York Harbor where the ocean is free from the menace of icebergs.

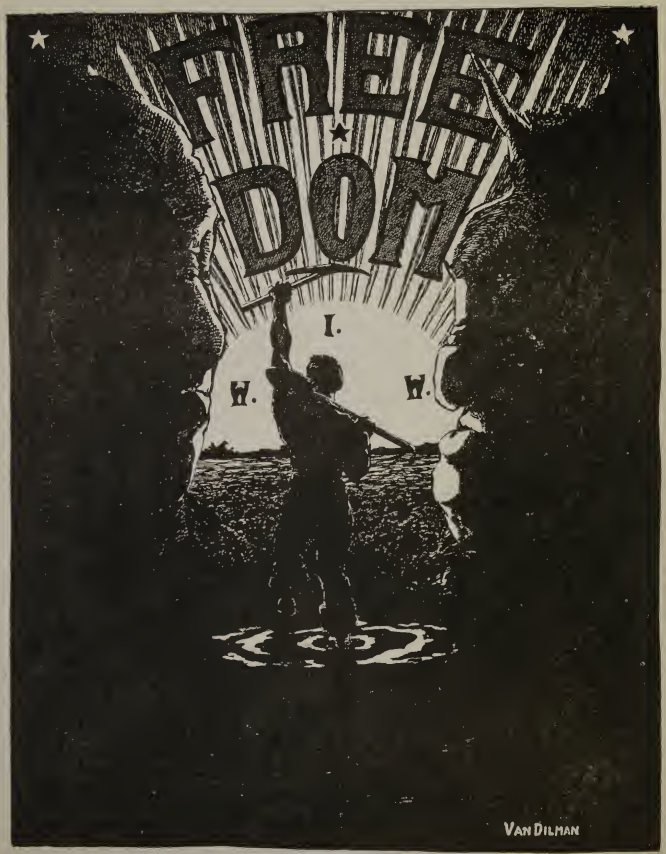
History repeats itself, and as Clinton was condemned one hundred years ago, so are the exponents of this immense project. The deepening of the canal for ocean traffic is being opposed by the small boat owners on the canal and in true "hoosier-like" style they cry out to the politicians to prevent it, but it appears as though it will go through as scheduled as it means progress, and when the canal is completed inland New York will assume more of a cosmopolitan attitude and the prejudices now popular there will be wiped away and then the "canallers" may be subject to reason, and I. W. W. literature and doctrines will educate them the same as they have educated the seamen of the world, but which as yet has failed to reach the alcohol soaked and degenerate brains of the "backwoods boatmen" who inhabit the State Barge Canal.

# REVOLUTION

By JAMES LYNCH

THE American workman wants no revolution. He is constructive not destructive." So says William Green, true to his policy of adhering to Mr. Gompers's principles—harmony between Capital and Labor—class collaboration. Were this great misleader living in the Feudal Ages, his philosophy would probably read something like this:

"The European serf wants no revolution. He is constructive not destructive."



However, history has shown that the idea that revolution is destructive is false, and that all progress is made possible by means of revolution. When a social system has fulfilled its purpose, it must go. Men must adapt themselves to their conditions of life or perish. Changes in the methods of production produce new conditions of life, which in turn bring about revolution. Ruling class attempts to prop up an outgrown system — to interfere with the forward march of progress — are not only destructive, but have been shown to be futile and useless. Every social system that is known was brought about by and destroyed by revolution. Capitalism is no exception. It was brought into existence by revolution, and it contains the seeds of its own destruction.

This is William Green A. F. of L. head Who Tells The Wage Slaves of America To Help Their Masters By Working Harder.

With the introduction of machinery there came a struggle between those who wanted to exploit the workers as serfs and those who wanted to exploit them as wage slaves. The capitalists won out. Capitalism, being better adapted to the new methods of production, completely displaced feudalism.

The mission of capitalism is now accomplished, and we have a struggle between those who own the machinery of production and the many tool-less who must beg for permission to use those machines in order to eke out a miserable existence. The struggle will continue until the workers of the world organize as a class, and overthrow the system of private ownership of the means of production and distribution. Revolution is inevitable.

This Way to Industrial Democracy!

# Westward the Flag of Empire Wends its Way

By J. A. VAN DILMAN

EVENTS that must shake the world to its foundations are fated to transpire in and around the Pacific. The flag of World Empire shifts from Western Europe to Eastern Asia, with America occupying a prominent place in a pause prefatory to the move that will prove its last. Curiously enough and in line with evolutionary theory its trip around the globe parallels a first chapter in the volume of human history which with its closing prepares for burial all foregone systems detrimental to society and the bursting forth of a glorious tomorrow from the red-scarred womb of preceding ages.

Many of us already mature in years are destined to witness this turning point in the history of man which is about to bring forth in anguished upheaval, greater than any we have yet experienced, the beginning of an era of Industrial Democracy based on production for social use instead of exploitation for the glory of the few—which acknowledging one structural form, shall know "neither race, creed nor color," and no principle other than the "World and its Wealth to the Workers."

Like a coastline whose general direction is north and south, but which seemingly points toward everything but its goal, historic evolution of the race trends unobtrusively to an ultimate end. Neither waves of revolutionary progress nor years of repression and black reaction can deflect it more than temporarily from a course along which it advances almost unconsciously to acceptance of ideals which yesterday were the ravings of lunatics, today are radical nightmares, and which will be the matter-of-fact truths of tomorrow.

To many, not having closely analyzed or having done so locally, narrowly or superficially, workers taken as a whole seem a hopeless, almost stupid lot; apparently incapable of rising beyond personal or family interests even to those of group, craft or industrial unity, much less to a stage where they can understand and "feel" the necessity for international and racial co-operation.

This, while true, is to be expected of a development from an animal state where the race for survival has been so keen; and its consequent conservatism while regrettable in that it has served to render humankind into a slow moving body obstructive of its own progress, yet had its excuse for being in times past when excess of caution was far more advisable than hare-brained adventuring. The old herd instinct has not been displaced by a new psychology in the few centuries since capitalism, discarding its swaddling clothes, has grown to a full, blooming maturity that, verging on arrogant senility, presages its early, inglorious demise; but it has indubitably and deliberately been misguided into false channels by successive ruling classes, all of them motivated by self interest as opposed to those of actual producers.

A heavy mass because of its ponderousness seldom moves except as a body; nor can it keep pace with elements created by processes within, which escaping because of their very fluidity, stream far in advance; heralds for a gathering momentum that follow in their wake irresistibly to crash all barriers standing in the pathway of destiny.

Radical elements, impatient for its fruit before the tree has matured, are often prone to hope prematurely for mass reaction to seemingly intolerable conditions and measuring time in terms of human experience, expect a conservative whole, whose psychology has been ingrained by pressure of ages, to respond readily to revolutionary propaganda which, alongside the blaring trumpets of master class discords, is weak-voiced indeed. Now a moment's reflection should convince that a collective mentality hardly awake to the

weight of its chains cannot be roused to sudden, simultaneous rebellion by mere magic words in a matter of months—even years; themselves but fleeting moments in the history of its evolution.

On the other hand, to believe that Labor's seeming immobility is permanent and unchangeable places us in a class with Bourbons of all time, for the good natured brute while inclined to follow lines of the least resistance "can" be roused to action by repeated proddings.

### What Crises Develop

Many who have given the best years of their lives in unremitting, enthusiastiic toil for the organization of workers into a form eminently fitted to cope with arising conditions, have succumbed to despair in the face of Labor's seeming torpidity. Yet we believe that hopeless as their combined sacrifices may appear on the surface, they have been effective of deep-seated results which only a real crisis can reveal.

Who for instance would have ventured the prediction that an army of Russian mouziks could be prevailed on to desert almost **en masse**—and in face of cold-blooded court-martial—the banners of its overlords? Reasons for organization of such a stupendous and dangerous undertaking might have been based on the clearest of logic, yet it would have been sheer insanity to attempt it unless conditions augered success. Very few would have dared such a venture ordinarily and they without solidarity of their fellows would have been summarily disposed of.

Still, four years' horror in the trenches;—ragged, half-starved and helpless;—facing with bare bayonets all the death-dealing efficiency of Germany's war machine, solidified these peasants instinctively to the point of accomplishing what under any other circumstances no kind of propaganda could have stirred them to.

To become discouraged after years of apparently fruitless toil in behalf of industrial organization proves nothing but the unsoundness of our own profundity and knowledge of the class struggle; for a change is taking place, even in the attitude of individualistic America, against that time when the structure of a "New Society" shall burst to freedom through the "shell of the old." Nor should we, becoming impatient, race too far in advance of plodding masses who more shortsighted, cannot vision glories of a far seeming future,—but tempering eagerness with dogged perseverance, strive to keep in touch with our main army wherein all power resides.

Mass mentality, scarcely capable of other than interests simple and direct, cannot be enthused by questions except as they are enforced upon its immediate consciousness; because, stultified and rusty from long disuse, its visionary power is impaired and naught remains but subconscious desire for better things; wherefore muddling along somehow it makes mistake after mistake, to waken finally in the face of great crisis to a sense of responsibility and realization of its own invulnerable strength.

There are individuals, only too many in fact, who "never" learn, but we speak of a collective mind which constantly changing its component parts "does" improve gradually, should we trouble to scrutinize its history for a period of, say, even twenty years.

How long since is it that harmless soap-boxers were greeted with rotten eggs, and brick-bats, or at least with derision? The ordinary man was gullible enough not so long ago to accept as "gospel truth" any weird tale interested parties might choose to circulate regarding socialism in any of its forms. Even the "Initiative, Referendum and Recall" was considered a wild dream of radicals up to comparatively recent times.

Today the average worker has arrived at a stage where the Santa Claus of Capitalism's tale is regarded as a more or less disagreeable humbug, but retaining outworn traces of an individualism acquired under easier environment, he still has glimmering hopes of rising "personally" into fringes of the profit system; which make it possible for him to condone its errors and evils. This state of mind is encouraged deliberately and with malice aforethought by the master class as one method of maintaining itself. Still, times do move and with them come faint stirrings of a proletarian conscience. We are progressing, and where the pace is too slow "interests" eagerly kick us in the pants to a position of further advancement in class solidarity.

### Workers More Driven Than Fooled

On the other hand we are confronted with a seeming tendency toward reactionary sentiment among wage slaves. This would be discouraging were it not for one thing that deprives it of sting. Quite lately we were treated to the phenomenon of mob psychology at work yelling for La Follette and electing Coolidge; an incident quite immaterial we cheerfully grant, but proof nevertheless that the average voter thinks he knows what he wants but doesn't know how to get even that. Waiving interest in its political aspects, it evidences that the worker is no longer so much being fooled as driven. This of itself may seem cause to some for utter despair, yet we hail it as indicative of the beginning of the end for a system thus forced into exerting economic or other pressure to accomplish its aims.

The master, conscious of his class, has been and is concentrating into industrial units which become so powerful that without similar alignment workers are helpless as individual snowflakes in the face of a blast furnace.

Coolidge could hardly be considered an idol except with Wall Street and was elected by threat of economic force emanating from haunts of barons who form an "extra legal executive board" which dictates down to the last hound dog in America.

"No Coolidge and Dawes: No job and no wages" was the insinuation which cracked our heels together to stand at attention. Thus explained, another bug-a-boo—that of working class reaction—resolves itself into a question of industrial pressure through fear of unemployment, the blacklist and other ennobling innovations of money hungry morons who, gone crazy with power, lust to degrade honest wage earners to a level with themselves.

This is as it should be, for rebellion cannot thrive except in soil of oppression, and it is to be considered a matter for congratulation that night sticks and gas bombs become more and more popular as methods of enforcing capital's "golden rule ethics" where sugar teats known as "the full dinner pail" and "pie in the sky" formally served so efficiently and well.

The world is uneasy—a sure sign that something brews in the cauldron of near future events. The heart of capital, ever contemptuous of a class that has rendered itself into unthinking slavery, flutters with fear of a "Frankenstein monster" which dimly craves to devour its own creator.

Where and how will be staged the great drama out of which a class, that has drifted down the ages in slavery of one form or another, must emerge victorious over all parasitical by-products of preceeding experimental ages or fail dismally of its purpose?

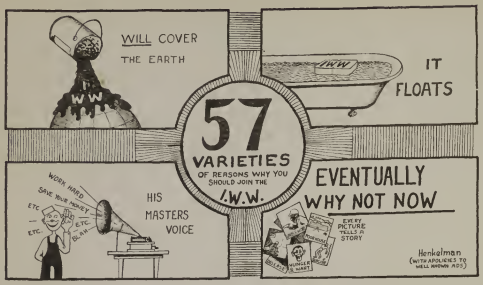
Like the surging of tides, nomadic humanity at one time rolled its overhelming surplus out of vast barrens of the Orient in search of new lands and homes and among its ranks there waved the "Flag of Empire" borne aloft from the cradle of our race. This influx, hardy and daring, assimilated and absorbed, produced stock whose fresh virility was no doubt responsible for much of Europe's aggressiveness during succeeding centuries and elements of which later were carried along with its customs and ideals to America; there to strengthen for the final leap of its institutions across the Pacific, where riding to power on the crest of success, the whole structure of human exploitation must tremble momentarily before crashing to utter destruction.

### Bosses Hungry For the Far East

The Flag of Empire grown ragged and rotten with human blood rests for a time in an arrogant America that lacking unity of thought and harmony of understanding without which, setttling into a state of somnolent bliss is impossible—and possessed of natural resources necessary to power—has become the dominant factor of an age where distances are annihilated by modern systems of communication and transportation; to stand just now at a high peak of power and prosperity as judged by standards of governing interests.

The key to our problem lies in Far Eastern parts. Capital, rapidly concentrating and burning its candle at both ends, seeks to reduce production and distribution to a perfected robber science and, unheeding that it is already forced to high pressure methods of salesmanship which mortgage a great part of our future earning capacity, and proposes still further to cut down an already limited world market and depress standards of existence to a low universal level by creating more millions of wage slaves. This, with an eye among several things, toward avoiding immediate troubles connected with importation of coolie labor into other lands, by transplanting industry bodily to the home of cheap labor power and stupendous resources laying to hand almost untouched.

Already the field has been ploughed. China, Japan, and India among other Oriental nations, have proven their worth to the master but here enter factors whose effect will prove so cataclysmic as to rend clouds of despair for sight of the new flaming day.



### Labor Alone Is Immortal

The seed of destruction is already at work—a disease germ of greed that knowing no bounds must rage on to its end. This system may barely survive to accomplish international capitalism, but Labor alone, basing its rights on truth and justice for a majority, has as many lives as the human race.

A dozen hands reach across seven seas to grasp each the same prize, while China and India schooled in passive resistance and long practiced in clannish lore, already rise to national consciousness which spells easy acceptance of a working class philosophy capable of routing exploitation on every front.

Not that international "Wolves of Capital" will hesitate at appalling massacre in an attempt to bring such vast resources under control. Organized thuggery on an unprecedented scale, first by mercenaries and later by various national military forces, will prevail. Even now China with its half billion people begins a life and death struggle against exploiters that combining for conquest are as ready to spring at one another, once the quarry lies quivering at their feet.

War—on such an unprecedented scale as to horrify its own instigators however, nervously brooding over Eastern Asia; is ready to crash with all its mangled hideousness into the lime-light, till every nation is involved and pulled down in one world wide welter of bloody catastrophe. Thus wends the Flag of world Empire; proud flaunted by reaction to its final ending; on soil which having given birth to its glories, prepares for its burial under chaotic debris, out of which Labor awakened shall step forth to seize levers of International Industry for production of peace, plenty, and a form of democracy that only slaves who too long have toiled in sweat and died in unsung misery are capable of appreciating.

## GENTLE GESTURE

We have been accused of being "too sarcastic" by the leading authorities on sarcasm. They are mistaken. We're the other guy. My sarcasm is **just sour enough**, and carefully compounded like felony or prescriptions. And if I make it less sarcastic, my sarcastic readers will sour "on my efforts" and start wondering if the editor has lost his mind for printing it.

The other day, when, sicker than usual, we hies ourself over to a clinic, to be tuned up. The doctor sat us in a chair and made soundings and took observations—murmured something about "symptoms indicate" to his sweet looking apprentices who profoundly nodded in perfect comprehension. . . . I was given a nickel's worth of throat gargle for 50 cents, plus 25 cents admission—and was told to take five drops with a glass of water three times a day.

Well sir, the three glasses of water have failed to cure me.

Now, I don't know but the doctor knows what is the matter with me, and I believe that he truthfully told his apprentices what is the matter with me—now they know—but why in the name of blazes didn't he hand me the cure?

As an "experiment" I was a perfect success—and I would have made an ideal "object lesson" for the rest of the summer.

Unfortunately I'm very sensitive even to most delicate swindling. . . . "Ah," they say, "you've been getting sick 50 years—it will take a long time to cure you."

Indeed! Well, in that case, I'd hate to have you repairing an electric light system—we'd have to stay in darkness too long.

Do you call that sarcasm?

—**T-Bone Slim.**

## TYPOGRAPHICAL

A compositor, finding himself out of work, was lucky enough to get a job as waiter.

One of his first customers, when he served with soup, called him back and said:

"Waiter, there's a button in this soup."

"Very sorry," replied the waiter. "Printer's error—should be mutton."

## A JUDGE THINKS

He had already sentenced the usual line-up of able-bodied men to the workhouse. The last victim up, waiting for hizzoner to say something, was a one-armed man. Hizzoner thought it wouldn't be very profitable to send a one-armed man to the workhouse. Suddenly the face of the judge brightened.

"Oh, yes, I have it," he said. "Sixty days turning the grindstone."—**Carl Degner.**

## WHOSE UNITED STATES?

One per cent of the total population owns about one-half of the total wealth of the country. Two per cent of the population own about two-thirds of the wealth. Two-thirds of the population owns nothing worth listing. Do you see what George Huddleston, labor congressman from Alabama, meant at the beginning of the war when he asked why the people that own the country shouldn't be left to fight for it?—**Brookwood Review.**

## BUILDING THE NEW SOCIETY NOW

# Preamble of the Industrial Workers of the World

The working class and the employing class have nothing in common. There can be no peace so long as hunger and want are found among millions of working people and the few, who make up the employing class, have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system.

We find that the centering of the management of industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers.

These conditions can be changed and the interest of the working class upheld only by an organization formed in such a way that all its members in any one industry, or in all industries if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."

It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown. By organizing industrially we are forming the structure of the new society within the shell of the old.

THE PLUNDERBUND RULES "THUMBS DOWN."

# Sacco and Vanzetti

By RALPH CHAPLAIN

By *Henry George Weiss.*

*Brave Comrades, chained in agony,*
*Who strove for heaven yet to be,*
*Shall you come from Gethsemane*
*To perish on the loathsome tree?*
*Shall you climb up to Calvary*
*To glut the hate of tyranny?*

*No, never! Hosts of Labor, rise*
*And speak for them Greed crucifies,*
*With voice of thunder smite the stone*
*Of prison walls and claim your own,*
*Your ultimatum score the high—*
*SACCO, VANZETTI, SHALL NOT DIE!*

SIX LONG years have passed, and Sacco and Vanzetti are still in prison! Not only are they in prison but they have reached the end of their rope, as far as the law is concerned, and are now awaiting the hideously long postponed hour of execution. To the raw injustice of their arrest was added the farce of a trial, then, the mockery of an appeal. It is proposed to top off the whole proceedings with a formal little party in the white room where the big electric chair is located.

What is there to say about this case that intelligent people do not know? Very little! It is the Great American Frame-Up running true to form. It happened, when I first read of the Sacco, Vanzetti trouble, that I was one of those whom the Witch Burners had honored with a prison sentence. This was at the time when the back-wash of the war had submerged the country in a wave of red-raiding and red-deportation hysteria. The ugly and malignant anti-labor hatreds, engendered by the "war for Democracy" were dying down a little, but dying a horrible death. The first word that came from the lips of political prisoners, in reading of the case was "frame-up." Political prisoners knew something about these matters. They had learned from experience. The plight of the two Italians was also discussed by diverse pay-roll and bank robbers who happened to find themselves in the hoose-gow with us. We listened eagerly to all comment by such prisoners. These craftsmen, after discussing the case from every angle, scoffed at the idea of Sacco and Vanzetti being guilty of practicing the trade of pay-roll robbery without first having served an apprenticeship. Some were highly ammused at the ingenuousness of the police in pinching a couple of mild-mannered, bland-eyed "nuts" and permitting the real artists to make a get-away. Pay-roll and bank robbers knew something about these matters; they also had learned from experience. And one of the first things these experts noted was the very obvious fact that men having the appearance and mental characteristics of Sacco and Vanzetti are usually hardly worth while when it comes to a bank or payroll job. After all a trade is a trade.

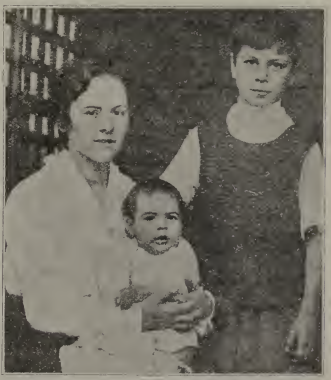
It was predicted by political prisoners whom I remember talking about the case, that the two Italian workers would have a hard time of it, not because they were guilty; but because they were workers—and Italians.

Looking back at the case now I realize how true these predictions were and how equally true the caustic comment of the professional robbers. The entire case is so thinly veiled—so transparently a matter of class persecution that wherever the facts have been followed, there is scarcely a person alive who wouldn't wager his right arm that the Italians are innocent. It is like the Mooney case: the whole world knows that Tom Mooney is innocent; and yet Mooney is in prison. Such is the octopus of the Law when workingmen are entangled in its tentacles. The difference is that Tom Mooney is on the west coast and Sacco and

The defendants as they were escorted through the streets of Dedham four times a day.

Vanzetti on the east coast while Mooney's fate has been determined as one kind of death and the fate of the two Italians as another kind of death. But the destiny of each of the three has been ordained as death —death for the same cause, loyalty to Labor.

This morning's paper referred to Sacco and Vanzetti as, "the two Italian gun-men" —the regular form of propaganda in cases of this sort. Gunmen! Only a few weeks ago one of our most brilliant young State prosecutors was out joy riding with a group of gangsters. He was killed by a machine gun broadside when a rival gang fired into the car. How did he happen to be in the auto hob-nobbing with men he was being paid to prosecute? No one knows. All we know of such matters here in Chicago is that gun-men, Italian and otherwise—are seldom executed unless they execute one another. Men are afraid to serve on the jury when gun-men are being tried in Chicago. Maybe if Sacco and Vanzetti had been gun-men and bad actors instead of workers and idealists they would not be in prison at present.



Sacco and Vanzetti are foreigners. This is a point that is held against them by many of the Witch Burners of Massachusetts and elsewhere. There must be something wrong with them or else they would have been born in the grand free U. S. A. They were good enough to slave in the shoe factories of the east, but not good enough to be permitted to have ideas of their own. It is an admitted fact that if there two men had not been radicals they would not have been arrested.

What is expected of the foreign-born worker in America any way? Of course the KKK is the final authority and really represents the peculiarly perverse psychological attitude of the slavish and arrogant scissorbill mind. It seems that the foreign born worker, above everything else is expected to work but not to think or join a

union or become active in the Labor movement or anything of that kind. We are, all or us, expected not to do the last mentioned things but the doing of them becomes more reprehensible in the eyes of the Powers that Be in case one happens to be of foreign extraction. This is what the capitalist papers and politicians call, "preserving our American institutions from contamination by European influences." It is from this source that the famous bromide originated, "If you don't like this country, go back where you came from." The American scissorbill worker is many times as harsh in judgment as the Rotarian. As Gurley Flynn has said many times, "It is a question of the man who came to America on Monday or Tuesday calling the man who arrived on Wednesday or Thursday a foreigner." Not only calling him a foreigner but seeking to build a wall of suspicion and distrust between him and the rest of the world. This is the type of mind the capitalist press seeks to develop among workers. If however, the foreigner happens to be a so called nobleman, the matter takes on a different aspect altogether. Then our richest and prettiest women fairly mawl one another in an effort to lay their beauty and riches at his feet. The best homes and clubs are opened to him, while the police stand back at a respectful distance. No doubt America, in a world dominated by despotism and dictatorship, holds up the standard of Democracy. This must be so or we wouldn't hear so much about it in the papers. But I am frank in admitting that Democracy is too deep a subject for me to understand.

Last winter Chicago society women arranged a big benefit ball for Russian White guard army officers who live in our midst (without working) until they can connect with the daughter or widow of some parasite and a few dimes for doughnuts. The papers were full of half-tone portraits of society buds and these gallant panhandlers. When the Prince of Wales visited the Field Museum in Chicago the lady KKK's turned out in such multitudes to get a glimpse of the royal nincompoop that curio cases were upset and women and children were trampled under foot—a real bargain counter stampede. Democracy is a curious thing and one hard to understand!

In the case of Sacco and Vanzetti however things were different. Daugherty and Palmer were in good repute. The Department

Sacco's Family After Arrest

of Justice in those days seemed to be functioning for the KKK. The papers told us that the Red Menace was at our heels. The country could only be saved by drastic action. Raids, deportations and imprisonments were matters of daily occurence. The hand and voice of every good patriot in America was raised against every foreign born worker who was either red or well read. The class line was drawn clearly. Sacco and Vanzetti were not only foreigners but they were workers—shoe workers—also they were "reds." They were caught red-handed distributing literature—defense literature in behalf of a friend and a fellow worker who had been spirited away by the authorities. This is the crime the two men were arrested for—nothing else. Nothing was known about the payroll robbery and murder at the time of the arrest. The police never found the perpetrators of the stick-up but they did hold tight to Sacco

and Vanzetti. These men were foreigners, workers—reds; they would serve as well as the robbers. It would make a good case and society would be protected. And thus it has been for over six years now.

Sacco carried a gun—a small revolver. It was a foolish thing for him to do but the raids, arrests, deportations and mobbing of radical foreign born workers had impressed his mind in this manner. Perhaps it was a warped instinct of self protection that caused him to procure a pistol and drop it in his pocket when he went out into a hostile world to do the daring deed of distributing literature for an unpopular cause. But he did it. Sacco carried a gun. Expert testimony and numerous photographs have proved beyond question of doubt that this gun did not fire the shot that killed the driver of the payroll car. But this didn't matter: Sacco carried a gun—he was a gun-man and a foreigner and a red and the jurymen were scissorbills and the newspapers were newspapers. No doubt the death of Salsedo* to Sacco's mind, even now, induces him to think that he did the right thing. Sacco didn't know that he could not fight all the ignorance and prejudice and hysteria of America with one small pistol. But Salsedo was hounded and tormented to death. Even at present the truth of the tragedy is deeply hidden. And Salsedo was a friend of Sacco's. Sacco's gun was the ineffectual counterpoint to the Terror that ruled the country at that time.

Sacco and Vanzetti have been in prison now for six years. At present they are awaiting the announcement of the date to be set for their execution. Protest against this latest act of judicial barbarity in America has circled the globe. There is yet a great deal of work to be done if the two men are to be saved.

If organized Labor had industrial power enough and knew how to use it Sacco and Vanzetti and hundreds of other workers innocent of crime would not be in prison. Unfortunately organized Labor not only hasn't got the power but it doesn't know how to use what power it has got. Sacco and Vanzetti can't wait until the workers organize and force their release by means of industrial pressure. Sacco and Vanzetti are sitting in their cells listening for the sound of a grating key in the lock and the sound of strange voices in the corridor. It is no longer a matter of months and years; it is a matter of days and hours.

A very considerable volume of protest has developed in favor of the RELEASE of these two innocent workingmen. This protest in growing daily. Readers of the Industrial Pioneer should put aside differences of opinion regarding defense tactics and theory for the time being. They should join their voices to the many that are being raised, not for commutation of sentence to life imprisonment, but for RELEASE. This is emergency. Meetings and all kinds of publicity will help. Letters and telegrams to the Governor of Massachusetts in a huge number will cause the executionists to realize that the eyes of the workers of America are focused on things being done there.

There is too much apathy in the world already. It is a poor rebel who will not do his bit under circumstances like these.

* Salsedo, in whose behalf Sacco was distributing literature, jumped from a 14th story window in New York, while he was a prisoner of the Department of Justice.

# March On!

**By Covington Ami**

For freedom of the Shop and Soil,
United all, in union strong,
United all, in union strong,
March on! March on! and sing the song!

Break! break! the rusting chains
That bind your hands, your hearts, your brains!
Throw off the superstitions old
That keep you serving slaves of Gold!

United in one Union great,
Your Class, your Race, emancipate!
March on! March on! O Men of Toil!
Strong Undermen of Shop and Soil!

# Building the New Society Now

By J. A. MacDONALD

## IF WE WANT A NEW SOCIETY NOW IS THE TIME TO START BUILDING IT

THE ABOLITION of the wages system is not the goal of the I. W. W. The goal of the I. W. W. is not merely the abolition of anything, but the building of a new social order. And it is in this that the Industrial Workers of the World most differs from all other radical organizations. Ask any of the spokesmen for any of the other radical organizations what they mean by a new society, and they are as vague and nebulous as a Christian trying to describe Heaven. They have plans of various natures for the overthrow of capitalism, but when asked about the structure of a new society to replace it, one finds that they have not thought of that. In some indefinite way they seem to confuse the work of destroying capitalism with something entirely different, the building of the new society, although there are many possibilities besides the functioning of a new society at the death of capitalism.

We often hear that all radical organizations have the same goal, the overthrow of capitalism, and that they differ only in tactics and methods to achieve their goal. The I. W. W. stands alone among radical organizations in that it has a definite program for the building of the new society. That is its goal.

The preamble of the I. W. W. gives the "abolition of the wages system" as merely a watchword to be inscribed on our banner. A study of that tense, militant document shows it growing in emphasis and power in sentence after sentence that is battle and hurled defiance, with the meaning and highest significance of the preamble contained in the last paragraph in which the goal of the I. W. W. is laid forth in all its vast significance, and condensed in the last sentence, "by organizing industrially we are forming the structure of the new society within the shell of the old."

The natural questions of the workers the morning after the overthrow of capitalism would be: "How do we eat, and when? How are we to handle the industries, the world we have conquered?" These questions which other radicals disregard now, cannot then be disregarded, because on them will hinge the whole future of humanity. Yet we find parliamentary radicals in such a mental state when faced by this question, that we are sure their only answer would be to quote Taft, "God knows."

Industrial revolution means merely the destruction of capitalism. It is merely the overthrow of an old system—a necessary thing it is true, but it is no more building a new system than tearing down an old building is constructing a new one.

### *New Societies Overthrow Old Ones*

The stand of the other organizations is that after capitalism is overthrown will be early enough to build or think of building a new industrial society. But the verdict of history is that new systems do not have their birth when the old are destroyed. Capitalism existed for centuries building the structure of its new society within the shell of feudalism. Feudalism ceased to be the dominant system because Capitalism, the structure of the new society of that day overthrew it.

Industrial revolution means a period of struggle between a new society and an old *in which the new wins.* This struggle in itself is not industrial revolution, as it is the change in the ownership and management of industry itself which is the revolution. We thus see from a study of history that the building of the structure of a new society is not a thing for after a revolution, but that revolution is itself merely a phase in the development of the new in which it rises to power over the old. Revolution is itself a product of the evolution of a new society.

The building of a political organization cannot be the building of a new society, because while parliamentary radicals may be far from scientific, yet they admit with Marx and Engel that the function of the proletariat is to destroy the political state with the overthrow of capitalism.

What is this which must be destroyed? What is capitalism? It is basically an industrial system, based on the looting of the workers on the job. When in *Capital* Marx studied the capitalist system, he did not deal with legislatures, congresses, parliaments. He knew that these were merely things on which the capitalists spend part of the surplus value they had stolen from the workers. These he recognized to be a part of capitalism, because the institutions, ideas, ideals and beliefs of any social system are ruled by its dominant class, and the class who control the earth and the machinery of production are always the dominant class. In studying capitalism he did not study the institutions on which capitalism spent some of its money, but the institutions where it made its wealth. He studied the relationships of the capitalist to the commodity and of the workers to commodities. He studied the working places of the world, and that exploitation of the workers which is the life's blood of the capitalist system. Capitalism owns and controls other institutions because it controls industry, and the reverse is not true.

The tree of capitalism is rooted in the industries and fertilized with the blood of the industrial workers. One may pass his time, and be a respectable reformer, or even cheat himself that he is a revolutionist, by picking some of the leaves off the tree of capitalism, or even taking off some of the limbs. But this is not radicalism, because radicalism means going to the root of things. The industrial revolution means taking capitalism by the roots out of industry, and when this is done the limbs will die automatically.

Capitalism is a system based on the acquiescence of the workers in their own robbery. When the workers as a class refuse to produce for the profits of capitalism, capitalism as an industries system is doomed, because this is the source of its wealth. But before the workers will do this there must be gigantic organization. This refusal, this general strike of the workers would be the very essence of revolution, but it would not be the building of a new society. The power of capitalism where it gets that power would be destroyed.

But one imagines the workers leaving all the working places of the world, refusing to produce wealth. Then the workers would also starve to death, because those things on which the continuation of human life depended would no longer be produced. It is the idea of workers going on strike en-masse by leaving the job which has been in the mind of workers who say that the general strike is general nonsense, and so far as the building of a new social order is concerned it undoubtedly would be. A General Strike, that would really be general is unthinkable unless the worker were organized by industry, and then organized together on the basis of the class struggle, in an industrial unionism wide as the working class of the world. A General Strike in which the workers quit the industries to overthrow capitalism would be foolish, imbecile.

*A General Strike on the Job.*

I have in front of me an article written by a member of the I. W. W. in a discussion with the editor of the "Industrial Solidarity," which says:

"Does he (the editor) mean the workers can overthrow capitalism and take possession of the earth and the machinery of production by the simple means of a General Strike, and leave the factories," etc.

Capitalism can be overthrown through a general strike. But by leaving the factories they could not take possession of the earth and the machinery of production, because the ownership of the earth is dependent on the ownership of industry, and *to take possession of the machinery of production means staying on the job.*

Then he says: A strike means leaving the job or factories." But a strike either big or small, local or even general does not necessarily mean leaving the job or fac-

tories—certainly not in the I. W. W. A general strike on the job with the workers taking over the industries, and operating them for themselves would not only be revolution but it would also be the functioning of a new society. Until the workers cease producing for profit, it does not matter what is occuring on the barricades, or on the streets, or outside of industry, capitalism still exists. *The essence of revolution is ceasing to produce for the profit of a parasitic class.* And the essence of a new society is the workers, industrially organized, operating the industries for the benefit of all instead of for a few.

It has been objected that this requires too great an organization of the workers. There is a common picture of the destruction of capitalism by the mob. But a mob cannot run industry, and if there is no organization industrially for revolution; *if that cannot be built as the result of years of propaganda and effort, how is it to be built in a few days because there has been a mob revolution?* The picture of the workers refusing to pack an I. W. W. card and to organize industrially, but packing instead twenty-two centimeters in their bedding, and poison gas factories in their suit cases is laughable. The strongest power the worker has is his power to withraw that labor power on which capitalism rests. Until the workers are willing to organize for the overthrow of capitalism, it is logical to suppose they will not overthrow capitalism, and until they organize to carry on a new society there can certainly be no new society.

The new society is not something to be built after the overthrow of capitalism. It is something that must be built now, as the force to challenge capitalism for power, and the force to dominate industry with the overthrow of the present society.

The I. W. W. is not only building up a unionism to fight for higher wages and conditions under capitalism. It is marshalling the organization to overthrow capitalism as an industrial system, and the same form with which it does this, the industrial organization of the workers, is the new society, with each industrial union producing its products for exchange for the products of other industrial unions, and other industrial unions functioning in the distribution of these necessities of life to where they are needed, and all these industrial unions cooperating as parts of that organization representing all workers, the Industrial Workers of the World.

The I. W. W. does not ask the workers to take a step in the dark, saying "we will have a revolution, and then everything will be lovely." "We don't know what the new society is going to be like, but it will be heavenly." My definition of the new utopian Socialism is one that believes in a new society, without any method of getting more than revolution, which is an entirely different thing. If we want a new society now is the time to start building it. And here is where the I. W. W. alone has a plan, a method for the new industrial society, where it alone is scientific. It seems to me that the man who has the belief that a resolution will make an industrial commonwealth automatically, that it will just happen in some magical way, has such an abounding faith that I am surprised he disbelieves things that require far less faith such as that Jonah swallowed the whale. Others believe in a new society. The I. W. W. knows what it wants and how to get it.

# The Old 400

By FRED MANN

## A BRIEF REVIEW OF THE SUCCESSFUL STRUGGLE TO ORGANIZE THE HARVEST WORKERS.

SPRING IS gone, summer is here. The barley, wheat and rye stand much higher; the greenish color changes with each puff of hot wind to a yellowness that is nearly white. As far as one can see are fields of grain. The heads are filling out and as they dance to the rhythm of the breeze, one is reminded of the ocean and its mighty waves, rocking hither and thither in serene peacefulness, only interrupted by some discordant wave that refuses to be good.

The roads are dry and smooth. All the way from the Texas Panhandle to the Nebraska state line the weather has been ideal; only unforseen forces, such as hail or a tornado, can now offset the fact that this year's yield will be the greatest of the last decade.

In some respects urban life in the southwest is akin to that of the small European community. After eight months of quiet and seclusion the village, town, city and even the isolated farmhouse, all begin to show signs of renewed life and activity. In the late autumn, winter and early spring months everything seems dull on the farm. The farmer tends his cattle, repairs the fences, eats and sleeps. He goes to town when the weather permits. The town is dull. Its streets are deserted. Some of the stores shut down for the winter and the only life evident is in the waiting room of the railway station, at the post office, or in the loungingroom of the hotel and in the poolhalls. But soon the small town will teem with the activity of a city.

Already strangers are seen on the streets in clothes typical of workers: faces tanned by the sun and wind, wear lines that spell many experiences and privations; hands calloused, having the color of the soil. Each day more and more of them appear. Where do they come from, and why do they come?

### They are America's most important army.

Each year they come, not all of them willingly, to garner the crops that will help to feed 120,000,000 people besides a surplus of millions of bushels for export.

These migratory workers help to provide the upkeep of luxurious apartments, private chauffeurs, lap dogs, and all that makes up the so-called life of the 400. The gamblers in the Chicago Pit and the stock exchanges of Minneapolis, Winnipeg, New York and Liverpool, take enormous profits as the result of the labor of these unkown workers. The small town banker and merchant in the grain districts also depend on these workers for their existence in the business world.

Most of these men have no permanent homes. They are the vast army that our modern society keeps always on the move. To them falls the task of doing seasonal work in agriculture and miscellaneous construction.

In the last two years the tin lizzie has been fast displacing the side-door pullman as a means of travel. Two, three or four of these workers pool their meager resources and purchase a second-hand Ford. This affords them a little more independence; in beating their way on the trains they are always running the chance of arrest for the "sharp eyes" of the law always sees some minor infraction of the law when it is committed by a worker.

In reality the "auto tramp" (as he is generally referred to) suffers more economically than his fellow "box car" traveller. Wages received by these workers are not sufficient to enable them to pay fare from place to place. The owners of lizzies are faced by a situation in which they are almost helpless; "heads I win, tails you lose," is their plight. Having invested their last dollar in a car they either have to work for any wages that are offered or sell the car for what they can get. They must have gas and oil for they must move almost continually to keep up with the harvest.

The harvest does not start all over the country at a certain time. It begins in the south and spreads to the north. From the middle of June to the last of November it is in progress. All the way to the northern sections of Saskatchewan, Alberta and Manitoba these workers plod their way. It is estimated that from 50,000 to 60,000 men are employed in the harvest in Oklahoma and Kansas during the normal season.

Each year the number employed decreases. The organization of production by the farmers and the increased use of improved machinery are the responsible factors. With a show of sincerity the federal farm bureau and the U. S. chamber of commerce have advised the farmer to study production as a cure for his financial ills. Agricultural colleges in almost every farming community have taught the farmer how to use machinery to the best advantage. Accordingly the farmers have found it profitable to organize themselves. Three or four of them purchase a tractor and a separator and with exchange of

labor they only employ half the crew they did in former years. One nine-foot binder pulled by a Fordson will do three times the work formerly done by eight horses and two men. The automatic stacker, shocker and loader take their places in this re-organization. The small separator manned by a crew of five or six is now as efficient as the big outfit with a crew of twenty-four. True, there are more of these small machines but the total number necessary to operate them is smaller. The workers, however, flock to the harvest in greater numbers than ever.

The average earnings of the harvest hands for a period of five months is not much over $200. The wages vary from $4 to $8 for a ten hour working day. Nearly all of the $200 is usually spent for clothing, for food and for expenses on the road. Prices are exorbitant. The merchant harvests the harvester and is never in fear of a crop failure.

Conditions on the job are what the workers make them. The working day has generally been from ten to twelve hours. There was a time when the sunrise was the beginning and sunset the end of a day's work; sometimes when the moon was full and bright a few extra hours were thrown in for good measure. One old-timer remarked that it was once common for the farmer to pay off his hired men with a shotgun; in more recent years some farmers paid with checks that were not honored when presented at the bank, and the cheated worker found he had no recourse by going to the law. Why should the law worry about tramps? If the worker was insistent he was often pickhandled and driven from town. Social outcasts, these workers merely existed, enduring privations and insults such as no other class of workers have experienced. Agricultural slaves in a "free" capitalist society.

This unbearable oppression and exploitation reached its apex in the few years prior to the world war. The Industrial Workers of the World was the first and is today the only organization, that has ever seriously undertaken to deal with this problem. The history of the first few years of the I. W. W. in the agricultural industry can be written "with drops of blood." The workers recognized the benefits of organization, while

the bankers and merchants organized together with the big farmers, began to wage a fight on this youthful but virile workers' organization that will go down in the annals of labor history among the greatest of the events recorded.

In Minot, N. D., in 1914 and in Kansas in 1915 and 1916, this new organization fought with a stubborn determination to raise the standards of living for the worker. Hundreds were jailed, thousands beaten, many were tarred and feathered and driven on the run across the Kansas prairies. The press used every known means to discredit A. W. O. No. 400, as the organization was then known.

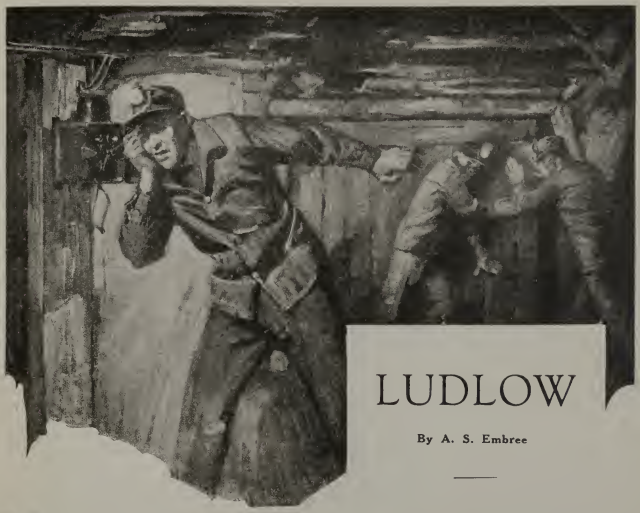
But it was all of no avail. The number of organized workers was fast increasing. In 1916 the red card served as a credential for the bearer that he was resolved to break the chains that held him fast in slavery. A half-crazed master class became frantic; but the greater was their determination to crush the I. W. W., greater still rose the enthusiasm among the workers. Wages and job conditions began to improve. The despised homeless hobo became overnight a man of courage and character, worthy of respect because he was able to command that respect.

Scattering the gloomy clouds of fear the sunshine of courage renewed the spirit of the agricultural worker. He began to experience the things he had dreamed of for so many years but lacked the means of putting into execution. New and higher ideals replaced the old. A society without master or slave began to formulate in this young giant's brain.

Activity replaced the laziness and mental sluggishness so often found among the unorganized. Fired by the struggle the worker went on his way with songs, born in the fight, on his lips—songs that truly represent the revolutionary sentiment of America's working class:

We are coming home, John Farmer;
we are coming back to stay.
For nigh on fifty years or more,
we've gathered up your hay.
We have slept out in your hayfields,
we have heard your morning shouts;
We've heard you wondering where in hell's
them pesky go-abouts?
It's a long way, now understand me;
it's a long way to town;
It's a long way across the prairie,
and to hell with Farmer John.
Here goes for better wages,
and the hours must come down;
For we're out for a winter's stake this summer,
and we want no scabs around.

Wm. D. Haywood when addressing a large audience, was asked why the Agricultural Workers organization was designated 400. He replied, "Because they are the cream, the four hundreds, of America's fighting proletariat."



"Solidarity" became the slogan, higher wages and better conditions the immediate demands, and the abolition of the wage system a watchword never to be forgotten in their fight.

And through the years since 1915 the fight has gone on without cessation. Higher wages, shorter hours and better conditions have been obtained as a result of the determined fight.

This year the prospects for organizational activity are of the brightest. Active members and hundreds of delegates are already in the field. The crop this year in Oklahoma and Kansas promises to be the biggest in a decade and wet weather during the last few weeks will make it necessary for the farmers to employ many in addition to the number usually required.

Thousands of new members will be enrolled and will add by their numbers and activity to the power of the organization, getting more and more of the better things of life for the once despised migratory worker.

# LUDLOW

By A. S. Embree

ALTHOUGH I have read several stories of the Ludlow massacre and the events leading up to it, I have always been desirous of hearing the story at first hand from someone who had been in the struggle. So when I heard that X..... had taken an active part in the strike and battles, indeed, that he had been in command of the strikers in the tent colony at Aguilar, I went after him and gave him no rest until he consented to tell me the story:

*

Soon after the strike started in 1913 I was put in charge of the strikers who were concentrated in our tent colony at Aguilar. Our colony was located on a flat which was then just outside the city limits of Aguilar.

The first incident I remember after we got located, was that the Empire Co. imported gunmen and they established themselves on a hill about 600 feet away and started shooting towards the town. The citizens objected to this shooting and the marshall and about 50 of the citizens went up the hill and protested. They arrested one of the gunmen and brought him in and they reported that these gunmen were trying to start trouble.

Soon after that we had a payday—that is, money had been sent in from the international office for strikers' relief and was being distributed. Naturally, the strikers flocked into town to get their money. On the street I met a man who had come in from Black Diamond, about seven miles out, and I knew when I saw him that he was a gunman. I spoke to him and he asked me why there were so many people on the street. I told him he knew there was a strike on and added, "I know you are a gunman and if you want to avoid trouble you had better leave town." He replied that he would leave town if he could get a horse and buggy. I walked toward the livery barn with him but on the way he stepped into the bank and asked to use the phone. Another striker and myself stepped behind the door where we could hear what he said. He called up the Empire Co. and said, "Tell the boys to come in and to bring Winchesters and six-shooters; I have plenty of ammunition but need a rifle." When he finished phoning we grabbed him, took him to the livery barn, made him hire a horse and buggy and started him for Black Diamond.

Someone phoned to the Rugby tent colony about 4 miles north of Aguilar and told the strikers there he was coming. Before he got to Rugby he was beaten badly and died while being taken to Pueblo.

A week later a detachment of state troops came to our tent colony about 8:30 in the evening; Major Hamrock and Captain Garwood were in

LUDLOW MONUMENT, ERECTED ABOVE CELLAR WHERE WOMEN AND CHILDREN WERE CREMATED

Mountain Peaks near Aguilar.

command. They came to the gate and demanded admission. The pickets reported that the major wanted to speak with me, so we admitted the officers only.

Major Hamrock told me the soldiers had disarmed all the gunmen along the line, and if there were any gunmen in or around Aguilar they would disarm them too. Then he said he would give us a square deal and asked that the strikers give up their arms. I told the Major we had only 14 guns for guard duty. The officers then withdrew and the troops were placed in permanent quarters.

### Soldiers Make Trouble

Everything went along quietly then for two weeks. The saloons were open and the first sign of disturbance came when the soldiers started drinking. Then the troops began to beat up citizens and strikers and the officers sent out details to arrest strikers. I was arrested and held in the guardhouse for two hours and released after an ordeal of questioning.

Then a company of cavalry was sent in. The mounted soldiers paraded the streets daily running citizens and strikers off the sidewalks. They also started drinking and there were wild orgies every night. They shot up the Princess Theatre —a man on the street was shot in the neck and badly injured. The soldiers went into the saloons demanding drink and if the bartender refused they shot up the place. In one saloon four men were sitting at a table playing cards; one of them, Pete Garlevo, was shot through the arm by a soldier. Years later the state paid him $10,000 damages. When the soldiers got drinks they had the bartender charge it to the state. One saloonkeeper had $7,000 on his books which he was never able to collect.

### Girl Kidnapped and Assaulted

About a week after the cavalry company came in one of Aguilar's best citizens was walking up the street about seven in the evening with his daughter who was about fifteen years of age. Two militiamen coming towards them separated to let this man and his daughter pass between them. As they passed one of the soldiers hit the father on the head with a gun stunning him. The girl was kidnapped and assaulted, but was returned to her parents about ten days later. She lived and gave birth to a child.

As an instance of what was happening at all hours of the day a striker named..... and myself were passing the theatre on our way from a strikers' meeting. We stopped to look at the bills advertising the show when two of the militia came up and prodded us with their bayonets, cursed us and ordered us to get back to the tent colony.

One afternoon Major Hamrock with a captain and a lieutenant came to the colony and asked us why we had pits dug all around the enclosure. We told him they were for refuse—empty cans, ashes, etc. He ordered us to fill them up. Three days after this three companies of infantry and one of cavalry searched our tents for arms but found none. Shortly after these troops left Aguilar and went to Ludlow and a week later Adjutant-General Chase came to Aguilar with troops and three pieces of artillery which he paraded through the streets and then left for Ludlow.

### Cement Bridge Battle

A few days later at 7:30 in the evening, I received a phone message from the Ludlow tent colony to get 60 men with full equipment and proceed at once to Ludlow. Some of our men were in the tents and some of them were around town. To gather them together I went to the fire station and rang the fire bell. A business man came along and protested telling me I could be fined for ringing the bell when there was no fire but I had no time to argue with him so simply pushed him out of the way.

We got our 60 men (could have had 500, but without equipment) and went to Ludlow and made camp. I reported to the officer in charge and asked for instruction and was told to have the men ready for action. All that night a huge searchlight stationed on the hill at the Hastings Co. mine played over the tent colony, and our outposts reported that about 250 men were advancing toward the colony. At daybreak these gunmen were reported to be close in but no attack was made. Noon came and still no attack. The Aguilar contingent was to eat first and while we were eating shooting started from the Cement Bridge and Water Tank Hill. Then I got orders for the Aguilar men to move from the tent colony across Green's pasture making a flank movement toward the rear of the attacking body. The pasture was a mile wide and three-quarter mile long with pinion trees growing along one edge. A railroad track ran along the side of the pasture nearest the tent colony. I asked if they were sure that none of the gunmen were ambushed in the pinions and was told that the pinions were kept under observation and that they believed they were clear.

We advanced in skirmish formation and had almost succeeded in crossing the pasture, coming within 400 feet of the pinions, when gunmen ambushed there opened fire on us. We were compelled to retreat and went back to the railroad track followed by the gunmen. At the track we made a stand behind the embankment, using the rail for gunrests, the men stationed 15 feet apart. One Italian boy persisted in sticking close by me. During this engagement a shot hit the rail between us—an explosive bullet, wounding the Italian boy seriously and myself slightly. The main body of the strikers drove back the attacking force at Cement Bridge and we compelled the gunmen facing us to retreat. Among the strikers there were five wounded while the gunmen lost seven killed and 20 wounded.

The next day we returned to Aguilar as we got a report that 50 mounted guards were advancing from the Lester mine to make an attack on the Aguilar colony. At six in the evening I got a phone message that these guards had passed Ruby on the way to Aguilar. This was early in the month of April and a snowstorm with wind amounting to a blizzard made it impossible for us to see clearly. We stationed our men in two groups of 50 each, east and west of the north road along which the guards were advancing, the groups being about 300 feet apart to avoid the danger of shooting one another. The group on the east side of the road allowed a team and wagon to pass, but confused by the blizzard, a few of the men started firing after it got past; so when the team and wagon came towards the group on the west side we also started shooting and killed both the horses. Soon after a car came along and stopped to pull the wagon to town; still confused we fired again breaking the windshield on the car and almost hitting a woman. Then we discovered our mistake, explained matters and made arrangements to take them to town and pay the damages.

In the meantime the guards had advanced to within a quarter of a mile of our position, heard the shooting and retreated.

### Deep Cut Battle

A few days later we were informed that the companies were recruiting an army of Baldwin-Felts detectives, thugs and gunmen from other parts of Colorado and from Texas and Arizona, and a few deputies as well. This force was being gathered at Trinidad, and our men at that point kept us informed on what was going on. It was not long until we got word to prepare for an attack on the Ludlow tent colony.

This attacking party was furnished by the mining companies and the Colorado & Southern Railway wth four steel gondolas to be used as armored cars, and a locomotive. Not one of the union engineers or firemen would consent to run the train. So an ex-engineer who had scabbed during the last railroad strike volunteered to pull the train and one of the Baldwin-Felts detectives served as fireman.

When we got word that this train had left Trinidad (the Aguilar contingent having again gone to Ludlow) a strong force of armed miners was sent to intercept the train. At a point about a quarter mile south of the tent colony where a steel bridge crosses an arroyo and a deep cut lies west of the bridge on a curve in the track, we placed our men on each side of the cut after blocking the track with old railway ties.

The engineer did not see the obstruction until he got well into the cut but as he was running slowly he brought the train to a standstill before hitting the ties. We could see straight down into the steel cars, and the attack began soon as the train stopped. The engineer was killed immediately; it was some time before the Baldwin-Felts detective got the train started back and in the meantime the shooting was fast and furious and lasted until the train was out of range.

We had no casualties. Our friends in Trinidad sent us word that they had seen 35 bodies taken to the morgue and that as many more wounded were taken to the hospitals.

### The Ball Game.

These events bring us up to the 18th day of April, 1914. It was Sunday afternoon and a ball game had been arranged between the miners and a team from the militia.

There was a big crowd of spectators, most of them strikers and their sympathizers. There was a great deal of rooting and cheering as the miners had the best of the game all the way through. When the game ended with a victory for the miners the crowd went wild and the cheering was tremendous.

Col. Linderfelt seemed peeved that the miners had won the game and resented the cheering of the crowd. He was heard to remark: "That's all right; you people have your holler today but we'll have the roast tomorrow."

The following (Monday) morning the militia

**Development work; Drilling Machine on Tripod.**

came to the tent colony with a large force and searched the tents for arms and ammunition. They tore up the floors and destroyed beds and other furniture.

In the afternoon two militiamen came up to our pickett lines with a white flag. They reported that Col. Linderfelt and Capt. Hamrock wanted an interview with Jim Filer and Louis Tikas, who were then officers in charge at the tent colony. These two men went with the militiamen to Linderfelt's headquarters.

The miners' outposts could see all that occured although they could not hear the conversation. They could see that there was a heated debate and accordngly they watched proceedings closely. When the debate lasted about fifteen minutes they saw Linderfelt suddenly seize a rifle and shoot Tikas down. After he fell Linderfelt struck him over the head with the riflebutt. Someone else, the outposts could not see who, shot Filer. Both men were killed while under the protection of the flag of truce. We knew then that there must be a battle.

No other events of importance occured on Monday, but both sides prepared for a fight.

That day our contingent was in Aguilar and that night we received word of the killing of Tikas and Filer; also that a fight was inevitable. We had few guns and very little ammunition but the miners insisted on going to Ludlow. Early Tuesday morning we started, 200 men with only 12 rifles and very little ammunition. Long before we reached Ludlow we heard the shooting. Our direct advance from the west was blocked by the militia; we were driven back but making a half circle we came into the tent colony from the east. When we arrived we found the attack was on in full force.

### The Massacre.

That morning about seven o'clock the signal was given for the militia to attack. About 7:30 they advanced on the tent colony in full force, 300 strong, well armed, with machine guns and three pieces of field artillery as well. They quickly drove in our outposts. There were 500

C. F. & I. Mine near Walsenburg

Waiting for Daddy.

miners in the tent colony but after the seizure of arms the day before we had only 65 guns including the 12 in the Aguilar contingent, and a limited supply of ammunition. Yet with that small force we held the militia back all day covering the retreat of women, children and unarmed men to the Black Hills about three miles east of the tents. Some of the women and chidren would not leave their men who were fighting, others did not get started in time and these sought refuge in cellars under some of the tents; a number of them gathered in the basement under the floor of the mess tent. After we were finally driven back from the tents the soldiers rushed in and immediately began to saturate the tents with coal oil and set fire to them. Then as some of the women and children tried to run from the tents they were fired upon and struck down by the soldiers. One woman and her son of 14 leaped from a burning tent; soldiers standing near allowed the mother to come out but pushed the boy back into the tent were he was burned to death.

Charles Castro had been killed in the fight; his wife was cook at the mess tent; she and her three children would not leave without the father. With a number of others they went into the basement under the cook tent. When the big tent was fired by the soldiers they were all suffocated and burned to death in the Hell Hole.

### The Retreat.

Those of us who were still fighting found that our ammunition was almost gone but we continued to cover the retreat of the unarmed until they reached the Black Hills. We were under fire from the four machine guns and the field guns, besides the rifle fire. But the retreat was made in good order.

On reaching the Black Hills we found that our water supply was half a mile out on the prairie. Whenever a man or a women went after water

Placing a "prop."

they were subjected to fire from the field guns. And then before dark we observed that we were almost surrounded by the militia.

We knew that our position was untenable and after a conference those in charge ordered camp fires to be made and kept burning and also that lights be kept burning in the tents to a late hour. Only one way was found to be open for retreat. Leaving the tents lighted and the campfires burning, we made our getaway successfully and reached Aguilar about daybreak.

In the morning the militia advanced in force on the Black Hills and captured the few vacant tents.

**Soldiers Driven Out.**

At Aguilar we commandeered schools and other public buildings to shelter the women and children. The story of the Ludlow massacre had reached the people of the entire country and aroused great indignation. Public opinion veered strongly to the side of the striking miners. Sympathizers by the hundreds volunteered their services and many companies of volunteers started on the march for Aguilar, quite a number of them from other states; 250 miners completely armed came in afoot from Fremont Co. The strikers obtained quantities of arms and ammunition. They made a general advance against the state troops and drove them out of Las Animas and Huerfano counties.

Gov. Ammons, seeing that his forces were beaten, asked for a three day truce. There was a considerable difference of opinion among the leaders of the strikers but the truce was finally agreed upon. Then the federal soldiers came in and that ended the war.

(That is the story. We continued to talk for an hour or two and he gave us many other items of events connected with the struggle. One or two of them may interest the reader.)

The mine owners at Hastings had succeeded in geting a few scabs. They had advertised in papers in the east promising they would give to each strikebreaker 160 acres of land adjacent to the mines, steady work and $5 a day. When they arrived they were taken under guard direct to the mines and lodged in shacks and herded by gunmen when not in the mine. If they refused to work they were driven to it by the gunmen. At night their shoes and clothing were taken away. But two of these men escaped. They came to Aguilar at ten o'clock one night clad only in their underwear and shirts. They made affidavits to the statement made above and also that four of the men who had refused to work had been killed by the gunmen and their bodies had been burned in the coke ovens.

At one time one of the Aguilar businessmen volunteered to drive his car to Pueblo and get a load of guns and ammunition. He had a Ford and had no trouble getting there. He made the purchase and started back. At that time the

The Miner's Home

county road ran through Lester and one of the guards at the Lester mine stopped him at Bunker Hill. It was quite dark. The guard asked, "What have you got in the car?" Our friend replied, "Guns." The guard stuck his head inside the car to have a look. The driver hit him over the head with a six-shooter knocking him cold, and drove through without any further trouble.

* * *

(In my excursions to the mining camps I have met many who have been through that terrible ordeal. A middle-aged woman, mother of a thirteen year-old girl told me the following:)

My husband and I were living in the Ludlow tent colony with our baby; she was four months old. About seven in the morning of April 20th we heard the first explosion (signal for attack by the militia.) Two other explosions followed, about five minutes apart. Then we could hear the machine guns and the bullets came whistling by our ears and through the tents. When some of these bullets struck anything—poof—they would explode and scatter pieces of lead all over. I went with my baby to a cellar under one of the tents and my man went to the railroad track to help fight the soldiers. They held the soldiers back all day and all the time I was in that cellar hearing the shooting and all the other noises of the battle. It was almost evening when my husband came back and we came out of the cellar and went to an arroyo on the other side of the Black Hills where we hid ourselves until morning.

While we were running away from the tents we looked back and could see the soldiers setting fire to the tents and could hear them shouting and shooting. They found one Italian woman afterwards in a cellar under one of the tents. She was going to have a baby and she suffered so much before she died that she had pulled all the hair out of her head.

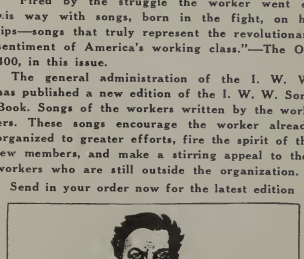
When they drove us out of the company house we had taken all our belongings to the tent colony. We had no chance to take any of them with us and they were all burned by the soldiers. All we had then was the old clothes we were wearing.

My father had been living with us in the tent colony but we persuaded him to go to Trinidad early that morning before the attack began. When he heard of the fight and massacre he came to Ludlow the following day and searched the ruins of the tent colony trying to find out if we had been killed. The soldiers found him raking through the ashes and took him to the guard house where they kept him locked up for four days. His anxiety brought on a severe sickness so they brought him down to Trinidad. He was partially paralyzed. In the meantime we had managed to get to Trinidad and I was sick and dreadfully worried when I heard my father had gone to Ludlow looking for me.

He told us afterwards that the strikers who had been taken prisoners by the militia were compelled to work hard every day and if they refused to work they were whipped.

I have never been well since that day.

* * *



These are the stories of only two of those who survived that historic struggle. There is wealth of material among the miners who have been through the 1913-14 strike and battles in Colorado for anyone who has the gift of putting it in writing.

And among these tried and true fighters for the cause of Labor there is again stirring the spirit and determination to organize and demand and obtain more of the good things of life for themselves and their families.

**"Fired by the struggle the worker went on his way with songs, born in the fight, on his lips—songs that truly represent the revolutionary sentiment of America's working class."—The Old 400, in this issue.**

**The general administration of the I. W. W. has published a new edition of the I. W. W. Song Book. Songs of the workers written by the workers. These songs encourage the worker already organized to greater efforts, fire the spirit of the new members, and make a stirring appeal to the workers who are still outside the organization.**

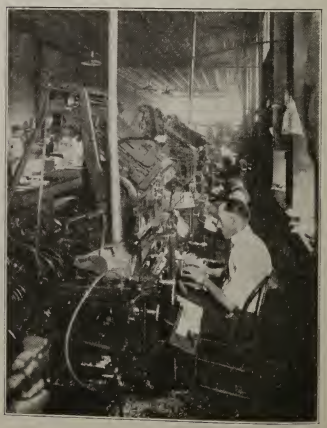
# OUR PRESS

By *C. E. Payne.*

PERHAPS the most vital part of the Industrial Workers of the World is its press. This was well understood by federal authorities in 1917 when the postmaster general revoked the second class mailing privilege of an average of four "unpatriotic" publications a day for several weeks, according to his own announcement.

Among those barred from the mails were Industrial Worker and Solidarity and most, if not all, the foreign language papers of the I. W. W. During the next three years an enormous amount of work and expense were required to circulate any publicity of the organization, the expense for mailing alone being over ten times what it is at present.

Besides the extra work and expense, there were thousands of copies, at times amounting to almost the entire issues, destroyed and never delivered. This was done after accepting our money for postage, causing us the loss of the papers and of the money for postage besides. So common did this become that the Chicago post office had a large rubber stamp made with the words "Nixies—I. W. W. Papers." In the post office language a nixie is a piece of mail that from any cause cannot be delivered.



At present there is a comparative lull in the persecution of the I. W. W. and our press on the part of the powers that be. Our papers go through the mails, with very few exceptions, on the same basis as do the papers of other concerns. It is not because of any kindly considerations on the part of the postoffice authorities that the circulation is allowed, but simply because they consider the damage we do the capitalist system to be less than the howl that would be raised by suppression.

But it is certain that in the course of the class struggle, which at any time may become class war, our papers will again be suppressed—if the lackeys of the master class have the power to do so. In times of stress no opposition, no matter how small, is tolerated by the master class. Everything except power stronger than their own is ruthlessly trampled down when their own power is menanced.

We should take advantage of this comparative lull in persecution to increase the power and influence of our press. Our only hope lies in increasing that power and influence to such an extent that when we are again attacked we can at least tear an enormous opening in the offensive of the attacking capitalist class, even though we may not be strong enough to save our press from annihilation.

If we have no press we will soon have no organization. Likewise, if we have no organization there will be nothing for the press to represent.

However, there is an extremely important matter which some well organized press must perform and which the I. W. W. papers can do better than can any other in America. That more important work is

# What Answer You?

*What mystery does lie behind*
*The veil that shadows future years?*
*What portent has this agony*
*That bows our Race in bitter tears?*

*What is this kingdom prophets cry—*
*(Of hideous prosperity;)*
*That riding rough-shod rules the world;*
*To curse unborn posterity?*

*What manner slaves have we become—*
*Or spineless worms that humbly crawl;*
*Beneath the stony stare of Greed*
*Which giving naught; demands our all?*

*Down with this monarch arrogant—*
*That dares to snatch from human kind;*
*Sweet ripened fruits of honest toil—*
*To cast it back a tasteless rind!*

*How long are we to suffer thus—*
*Like oxen, plodding patiently*
*Beneath a heavy galling yoke,*
*And goads that prod incessantly?*

*When shall we cease our grovelling—*
*Abased before mere human lust—*
*Till welded "Thews of Industry"*
*Sweep back the Monster—into dust?*

*Our lot is but the cravens due*
*Who stupid mopes—and whines in vain;*
*Or meekly prays that loyalty*
*May 'title him to softer chains.*

*When shall we rise; who moil and toil*
*Thruout the world—on every shore;*
*To vanquish Greed—and banish it*
*From hearts of Men—for evermore?*

publishing just such articles as Leland Olds is writing. But his work is too general to really reach the minds of the workers as yet. We must go into every factory, mine, mill, camp and counting room and show every worker just what each individual company is taking out of his labor.

We must show to each worker the stream of wealth he creates and its course into the vaults of the giant banks of the nation. Generalities will not do—we must be specific. We must show the banking connections of each firm and just what wealth that firm is forced to pay to the over lords for the sacred privilege of doing business.

The organization now has a few men who see what is needed in the line of publicity, but they have almost no facilities for doing it. We should have a hundred specialists and experts for each one who is now "trying to do it all." Not until we have them can we say that we are really doing any effective publicity work.

It is true such things cost money. Also, when we go into the market to bid against the capitalists for labor power in the form of special ability we are handicapped. But it is either do it or have our press suffer form chronic starvation, which is more enervating to the members than would be sudden and violent suppression by the authorities.

The press and the organization are each vitally necessary to the other. We strengthen the organization when we build up the press. It is our chief point of contact with the unorganized whom we must reach to succeed in our revolutionary task of overthrowing capitalism. As we push the press among the unorganized, making it their spokesman, they will give power to the organization until it shall be invincible.

# Coal and the General Strike

By VERN SMITH

BRITISH industry is founded on coal. Even as late as 1875 half the coal in the world was produced in England and Scotland. When the machine age dawned over a muscle trained society, iron was needed in hitherto unheard of quantities. And as the machine age came first to England, the hunger for iron was first there. Iron ores are rather wide spread, and have been worked from very early times. But iron ore has to be smelted. As long as the feudal ages lasted charcoal smelting provided iron enough for the armor of the knights and the chains with which they bound their villains; more than which was scarcely needed. The requirements for charcoal did not interfere with the great forests that sheltered the king's deer.

But when the new machine textile industry began to covet iron, that meant the forests had to go, cut down to provide charcoal for iron smelting, and when the forests were gone, there came a crisis. The fate of English industry trembled in the balance, while newly rich capitalists and their scientific hirelings madly hunted for a substitute for charcoal.

They found it in coal, still called "pit coal" in England to distinguish it from charcoal. England had coal, and could make coke, and steel; the English coal mines though far from being the best in the world, were the first to be worked on a large scale.

We pass hurriedly over the superficial effects that the use of coal had on the industry of England; how it brought the smelters out of the shadow of the woods and clustered them around the big centers of transportation, and not too far from the mines, making a great shift in the population of the country, adding enormously to the slums already grown up in the textile manufacturing centers.

The change in the technique of industry made another change for the worse in the lives not only of those who labored at smelting but those who provided the fuel. Charcoal cutting and burning was a relatively healthy outdoor trade—now the charcoal burner was out of work, and hunting a job in the black, gas filled tunnels of the underground mines. In mining he competed with his wife and child, drawn into the industry—the child to act as a breaker boy, and the wife too often as mere draught stock, to pull the cars of coal along low passages where mules could not be used.

And as industry went on expanding, and the call for coal in the iron industry was continually added to by the demands for fuel for motive and other power, the numbers of miners grew and grew, until at present nearly a million toil in many mines or "pits" scattered along the two main seams of British coal.

The coal of England lies principally in Southern Wales, where a body about twenty miles wide and fifty miles long, running from East to West, is the heaviest producer, and in a long disconnected body of coal that extends up along the western side of the island, and turns in a series of broken beds across Scotland from Ayr to the mouth of the Firth of Forth.

There is one large coal field on the Eastern Coast, in Durham and Northumberland. About half way between the two extremes of the North and South series of coal beds, lies the coal of Yorkshire, Derbyshire and Lancashire, with the great port of Liverpool in the eastern edge of the coal fields, and the important manufacturing cities of Leeds, Sheffield and Manchester in the very center of it.

The miners unions started rather late in the history of the British Labor Movement. As was to be expected, with a new industry, in which the working force was made up of men driven out of other industries, and in which women and children worked from the very first, it was hard to get unions started.

It was during the last half of the nineteenth century that the coal miner really began to organize on a large scale, and that the little local unions began to federate into larger unions.

In the beginning the Miners Federation was made up of many independent unions, and as these have gradually lost their power to the central body, they have also been decreased in number. When Beatrice and Sydney Webb wrote their "History of British Trade Unionism" in the last decade of last century, they recorded twenty-seven unions, constituent parts of the Miners' Federation of Great Britain. The latest figures I have (1924) show eighteen of these internal unions, some of which are called federations themselves. They seem to be really districts, with local autonomy in somewhat lesser degree than among the United Mine Workers of America. They do not any longer overlap each other, territorially. They do retain the old names, which, like "The National Union of Scottish Mine Workers," the "South Wales Miners Union," etc., bear witness to the disunion of the workers at one time.

At the present time the Miners Federation of Great Britain is not only the most militant of all the larger British unions, but is the most industrial in form. Unlike some of the other federations (for example the United Textile Fac-

tory Workers Association, which leaves all the power to make contracts, declare strikes, etc. with the local unions of which it is composed) the Miners' Federation of Great Britain resembles an industrial union in that it makes the agreements for the entire industry through its central headquarters, and does not strike by districts or by local unions. The British coal strikes are ordinarily general strikes of the whole industry. It is well realized by the workers in the British mines that their safety such as it is depends on this solidarity, and nothing like the district contract policy of the United Mine Workers of America, contracts overlapping in time, is tolerated among them.

With devilish cunning the employers have many times endeavored to split the solidarity of the coal miners of England by bringing about the district agreement, but the miners have indignantly resisted every time. They see through the trick. The last time is just now, when the employers, and the British government, are once more urging that the basic agreement for the minimum of wages and conditions and the maximum of hours be laid aside and lowered in certain districts where the production is not quite as heavy per man as in others.

The proposals made by the employers are in every case for a reduction of wages but the reduction proposed is uneven, running from a wage cut of two shillings ten pence (approximately 68c) per day in South Wales and Monmouth (the most important coal fields) to only one shilling per day wage cut in the central coal fields. It may be pointed out that the wage paid in South Wales was the largest wage of the larger districts and amounted to ten shillings nine pence per day (about $2.58). It could hardly be called excessive.

The British miners are the most radical, the most clearly class conscious, the most militant section of the British heavy industry. All during this century they have set the pace and forced the issue. The miners were chiefly instrumental in organizing the Triple Alliance of 1915, when the mining, railroad and transport unions agreed to stand together and strike as one. The miners went on strike in 1921, when the bureaucrats of the railroad and transport unions broke up the Triple Alliance and smashed solidarity.

Once more, in the summer of 1925, it was the miners who prepared desperately to resist the open shop and low wages drive decreed by the organized British capitalist class. And this time they found loyal allies among the rank and file of the other great unions. An organized left wing movement forced the "leaders" of the other unions to grant emergency powers to the General Council of the Trades Union Congress, and something even more efficient than the Triple Alliance was brought into being.

To understand the strategic position of the General Council, a brief survey of the British form of organization is required. British unions are coordinated, so far as they work together at all, through the Trades Union Congress, which meets every year, and is a very large body, with a broad representation. Not all unions send delegates, but most of the workers in England are represented, in one way or another, at the Trades Union Congress. Any union can send delegates, whether that union is dual to another, or not. Representation is based on numerical strength. The delegates represent the smaller divisions of the unions, also, and are a little more likely to reflect the spirit of the rank and file than is usual in such congresses among reformist unions.

The Trades Union Congress elects a General Council, to hold office until the next Congress taking care to have on it representation of all the large federations. Since 1925, this General Council has had, by agreement among the unions whose representatives are on it, and with the sanction of the Trades Union Congress, the right to call general strikes in sympathy with the strikers of any unions. It is a real, "General Staff of the Unions." Its powers are ample; its weakness is in its personnel. The pie card artists with big reputations naturally get elected to the General Council, and since they have been a long time rising to that high position, they represent, for the most part, the feelings of the rank and file of years ago, and not the sentiment of the present day rank and file. This explains how they could do so cowardly and foolish a deed as to call off the General Strike of May, 1926, in defiance of the wishes of the workers themselves.

The non-miner workers knew very well just what a drive against the wages and conditions of the miners means. They are well aware of the threat to their own wages and conditions. They are ready to fight. When the government, representing the mine owners and all other capitalists, while pretending to represent the "public," granted the coal subsidy last summer, to pay the miners' wages while letting the coal owners make the wage cut on their books, everybody knew that this merely postponed the fight. When the subsidy expired, and the coal companies posted notices at the pit heads that the wage cut would go into effect on May 1, the reluctant "leaders" in the General Council were forced to take action. All the world knows what that action was, how under date of April 30 the General Council issued its famous "General Strike Order," that inasmuch as a lockout existed in the mining industry, all work should stop likewise in certain other industries, known as "the first line." The essential provisions are quoted from the General Strike Order, as follows:

•(Continued on Page 26)

"The tragedy is the moral failure of these leaders. That they lacked foresight, that they had neither imagination nor nerves and wills of steel—that is pardonable. They were elected to run Unions and not make history. But the deep stain upon them is that in this struggle, which had evolved the passionate loyalty, the selfless idealism of the mass, they sullied its record and nullified its sacrifices by abandoning the miners to their fate."

Leading rival factions in Britain's general strike. Upper portraits: Arthur Henderson and J. H. Thomas, conservatives. Lower portraits: Ernest Bevan and Albert E. Purcell, radicals.

When British Miners Voted to Strike.

Ben Tillett, secretary of Dock Workers and A. J. Cook, secretary of Miners' Federation.

Arrest of a striker; Britain's general strike.

"Only the close of this great chapter of working-class history was unworthy of the splendid record. Hitherto, when one talked of a General Strike, the doubt was always whether the mass would answer the call. It astonished the most hopeful. When the end came, there was no break in our ranks. No failure of zeal or steadiness forced surrender on the leaders. It seemed on that unlucky Wednesday incredible that they could have stopped this superb demonstration of solidarity and left the miners to fight alone."

# Coal and the General Strike

(Continued from page 23)

"TRADES AND UNDERTAKINGS TO CEASE WORK. Except as hereafter provided, the following trades and undertakings shall cease work as and when required by the general council:

"Transport, including all affiliated unions, connected with Transport, i.e., railways, sea transport, docks, wharves, harbors, canals, road transport, railway repair shops and contractors for railways, and all unions connected with the maintenance of, or equipment, manufacturing, repairs, and groundsmen employed in connection with air transport.

"Printing Trades, including the Press.

**Productive Industries**

"(a) Iron and Steel.

"(b) Metal and Heavy Chemicals Group.—Including all metal workers and other workers who are engaged, or may be engaged, in installing alternative plant to take the place of coal.

"Building Trade.—All workers engaged on building, except such as are employed definitely on housing and hospital work, together with all workers engaged in the supply of equipment to the building industry, shall cease work.

"Electricity and Gas.—The general council recommend that the trade unions connected with the supply of electricity and gas shall cooperate with the object of ceasing to supply power. The council request that the executive of the trade unions concerned shall meet at once with a view to formulating common policy.

"Sanitary Services.—The general council direct that sanitary services be continued.

"Health and Food Services.—The general council recommend that there should be no interference in regard to these, and that the trade unions concerned should do everything in their power to provide food to the whole of the population.

"With regard to hospitals, clinics, convalescent homes, sanatoria, infant welfare centers, maternity homes, nursing homes, schools, the general council direct that affiliated unions take every opportunity to ensure that food, milk, medical and surgical supplies shall be efficiently provided."

It is not within the scope of this article to describe in detail the tremendous upheaval that resulted. Neither is it necessary, for in spite of every intention on the part of the British industrial magnates and the government to censor the news, and misrepresent the truth, the facts were so big and so essentially startling that they broke through all bounds, and are known in outline at least to everybody. The government's publicity service, centering around the "British Gazette," a scab paper, printed on one or two sheets, and distributed free by the million copies, was hardly noticed. Its sole result was to pile up a loss of hundreds of thousands of pounds. The Daily Herald (Labor paper) was suppressed. The "British Worker" (an emergency sheet) published the facts and the foreign press got them by observation. The essential fact was that industry practically stopped, because those industries allowed by the strike order to go on functioning could not do so in the face of the transportation tie up. The government's scab organization, the "Order For The Movement of Supplies" was intended to keep transportation going, chiefly through volunteer truck driving. The cars and trucks blocked the streets and roads, and transportation stopped. A few trains were kept running by the strikers to carry food, and military engineers kept enough running to convey troops where they wished, but industry stopped. The government claimed that running the food train was a great victory against the strikers, and everybody in England laughed at it, for the food trains were, by the terms of the strike order, "white" (not struck). However, after a few days, the excesses of certain fascisti, and the continuous misrepresentation of the government, together with the threatening of the workers with armed force, caused the General Council to call out the "second line," including especially gas and electric light service, except for hospitals, and a curtailment of the food train service—the theory being to let the scabs work at that rather than something else.

All grants of money to the strikers from abroad were stopped by the government, and the General Council itself rejected any that might give the government grounds for accusing them of a revolutionary aim.

Then suddenly, on the ninth day of the strike, it was called off, by the General Council, at the height of its success, and only afterwards it was found out that negotiations had been going on secretly between Prime Minister Baldwin and the Council, through the intermediation of a slippery fellow known as Sir Herbert Samuel, who promised the council, unofficially, that if they would call off the strike, the prime minister would see that the miners did not suffer, and he might grant another subsidy while the industry was reorganized. As soon as the general strike was called off the government repudiated Samuel's bargain, Samuel himself declared that the labor leaders had misunderstood him, and that he promised only to try and get the government to give these terms suggested, and capitalism started in to take revenge by firing active union-

ists, re-hiring with loss of privileges, etc. For a short time it looked as though the strike was on again, but Thomas of the Railroad union signed what practically amounts to a yellow dog contract for his men, agreeing never to go on general strike again; other unions compromised with their employers—and the miners were left on strike alone.

The workers will have the last word to say. That they are disgusted and angry is putting it mildly. There is likely to be a rare house-cleaning during the year, while the conventions are held, and the next Trades Union Congress will probably be a wild one. Meanwhile the rank and file, though anxious enough to speak, are gagged. Their voices will be heard at the conventions and congresses. Just now we can only judge which way the wind blows, by the straws flung up by certain officials nearer to the men in spirit than those who betrayed them, and who have access to newspapers. W. N. Ewer, foreign editor of the London Daily Herald, through whom authentic stories of the strike were cabled to America all during the nine days, says:

"Thus the net result of incredibly bad generalship and naive diplomacy on one side and cynical unscrupulousness on the other has been to leave the coal war where it has been for many months and to cripple the possibility of a new rally to the support of the miners.

"A confidence trick of the crudest nature has turned a struggle which was on its way to a resounding victory into a disastrous defeat, compared to which the famous "Black Friday" is a joke.

"The only consolation is that the struggle has been a wonderful demonstration of solidarity, courage, and enthusiasm of the rank and file. Fundamentally, the strength of the British labor movement is greater than ever before.

"That in the moment of demonstration and realization of that strength this should be the outcome of the magnificent fight is one of the most tragic things in the whole history of the movement."

J. Ramsay MacDonald distinguished himself almost as much as the railroad workers' "leader" Thomas, for defeatism during the strike—indeed, the New York Times editorially praises MacDonald and points out that his recent speech against the strike places him "much nearer the British coal owners than it does to Karl Marx." And MacDonald is supposed to be the leader of the Independent Labor Party. But H. N. Brailsford, the editor of the "New Leader," official organ of MacDonald's following, states himself in this manner:

"Only the close of this great chapter of working-class history was unworthy of the splendid record. Hitherto, when one talked of a General Strike, the doubt was always whether the mass would answer the call. It astonished the most hopeful. When the end came, there was no break in our ranks. No failure of zeal or steadiness forced surrender on the leaders. It seemed on that unlucky Wednesday (when the General Strike was called off.—Ed.) incredible that they could have stopped this superb demonstration of solidarity and left the miners to fight on alone. But so it was. The object of the Strike has not been won. The miners, fearless as ever, are still locked out of the mines. The notices, with their threats of starvation wages which moved even middle-class opinion to indignation, are still posted up against them. And for four days, from Wednesday to Saturday evening, each trade for itself, without the promised aid of the whole alliance, had to struggle against threats of lowered wages and victimization. The great host was suddenly deprived of its formation, and in every corner of the battlefield, regiments and companies were fighting unsupported against the counter-offensive of Capital."

And describing the negotiations with Samuel, he says:

"What was the mood of the Council during its talks with him on the Monday and Tuesday? I have heard several accounts. Mr. Pugh held that the Strike was then exerting its maximum effect: he wanted to end it before a breakaway was discernible and before disorder began. But there was fatigue and there was nervousness in the Council. Rumors talked of an intention to arrest its members, and perhaps to sieze Trade Union funds. That may have been considered, but if so, Mr Baldwin vetoed it. There came occasionally bad news from a very few places—Bristol, Reading and Coventry—though everywhere else the enthusiasm, the steadiness and the good temper were amazing. But some members were impressed by these few unfavorable reports. What, if the Strike went on, would be the next step? To call out "the second line," which meant the Post Office workers and the gas and electricity services? From that prospect the Council recoiled. Mr. Thomas was uneasy under the accusation of "unconstitutional conduct;" he foresaw disorder and talked of the "streets running with blood"—though strikers and policemen in this incorrigible English Strike was playing cricket together. His one platform speech—if it was fairly reported—was that of a man who dreaded and in fact disapproved the strike, for which he had voted.

"Amid these painful discussions the Alliance broke up. The Council took its decision to end the Strike on this Tuesday night, and took it without informing the miners. But it did inform the Government, and when it again met

the miners on Wednesday morning, it was only to beg them to join in a surrender which, in fact, they had already made."

And then in damning conclusion:

"The tragedy is the moral failure of these leaders. That they lacked foresight, that they had neither imagination nor nerves and wills of steel—that is pardonable. They were elected to run Unions and not make history. But the deep stain upon them is that in this struggle, which had evoked the passionate loyalty, the selfless idealism of the mass, they sullied its record and nullified its sacrifices by abandoning the miners to their fate."

And all this time the miners strike, almost a million men, grim and determined. Back in 1921 when the Triple Alliance left them, with an absolutely empty treasury, they struck for thirteen weeks—thirteen weeks on strike relief averaging four dollars a man for all that time. Now, with millions of dollars collected for them in Europe, with every labor union in the world except those of the A. F. L. determined that no coal shall go to England to break their strike, they have been striking when this is written, for five weeks. They may go on for five months. Meanwhile things are sizzling all over the British labor union world, because they are left to strike alone. Something is going to happen.

# Applying Natural Law

By D. S. DIETZ

**Yes! Our peace and our contentments,**
**While on rocks of truth must stand,**
**Gain by wisely noting lessons**
**In the fields that Nature planned.**

## PROCESSES, UPHEAVALS, SURVIVALS

Idleness is death, progress is Life. Powers of regimes are but temporary. Upheavals are manifestations of the law of survival.

The human race is not going to the dogs. Man, by his own blunders, his own pigheadedness, creates critical periods. Even so, he survives them somehow. But never did the beneficiaries of the plunder times receive any rewards from the processes of race survival.

In the light of Natural Law (even the little we profess to understand it) the financial oligarchy of the worldwide predicament do not understand. They are in the dark. Thus, it always was in and about the "feathered nests." Of course, swag-feathered, unduly feathered.

It is the hungry, the homeless, the propertyless, the mortgaged (those who paid the bill, at whose expense, etc.), through whom the law of survival acts. When our capitalists say: "We have survived. We shall continue to survive. . . . " we glance at the big trees of the forest and grinningly remark: "They survived . . . to topple." Young growths are not dependent upon the older growth.

### Group Victims

In human affairs no theory can survive whose organic principle, hence underlying thought and ideology, is based on pure selfishness. Or a group to enduringly prosper at the expense of its victimized groups. The three principal group victims are: the industrial workers, the working farmers, the working bourgeoisie (mode of distribution). Bond holders, mortgage holders, coupon clippers, rent collectors and some others are parasites pure and simple—social pests. They trot with the oligarchy.

### What a Worker Is

According to the Marxian theory of value, any human being who works one hour, one day, one month, or more at useful employment is to that extent or length of time a worker. **Honest human conduct**, above criticism. The only human effort without belittling stigmas.

But under the present mode of production, working farmers and bourgeoisie naturally develop a dual mind. Capitalistic on the one side and worker on the other, they do not know, neither one does, which mind will dominate the being; therefore, not eligible to a working class revolutionary organization until such time as industrial conditions compel them to discover which is the real mind and act accordingly. That time is coming for great numbers of them.

### Darwin and Marx

In passing we further vouchsafe: The subjects, evolution, biology, environment, psychology, are some of the branches (as the tree has branches) of Darwinism. Darwin was a student of the great outdoors. He began a greater work than can be finished and understood in one generation, or in two, or three. Likewise, the same is true of Marx. Marxian theories will become understood sooner

because they apply more closely to everyday human necessities. And yes! In the final analysis the big outdoors is the great social textbook. What is scientific research in all its applications, but an effort towards the apex of simplicity—educational, mechanical, social?

### Two Economic Theories

The Law of Economic Determinism is a Nature process. Natural economics and bourgeois economics are as unrelated as truth and falsehood. In the animal kingdom, outside the human specie, all eat, all are sheltered. Atmosphere, sunshine, rainfall, are Nature forces contributing alike to every creature of all species. And so shall the land and all thereof reward every human being unselfishly.

### Nature Rights Denied Millions

Capitalism performed a mission. It was a stepping stone. All the great continents have been discovered and brought to a state of human exploitation. It taught all the workers how to "fit in." Taught organization! And now, at times, it refuses millions to fit in. Yes, with all its bigness it selfishly denies millions the right to food, clothing, shelter, homes. Ah! what is the reason?

The answer is simple. The modern student, scattered in and about industry, not in capitalist universities or parliaments, readily answers truly and thus: It has reached its limit. Cannot function further for the people—the races. Where these students are found is significant, also. There is growing to maturity among industrial workers a young actor who is destined to take the world stage. His name is Johnny Practicality.

### False Framework Upholstered

Within the next great step in human survival capitalism cannot perform. Literal continents are explored. Great abstract continents are now in order. The theory never did nor ever can apply to an abstract conception of human good. Race good. Hence, the necessity of ever preaching. Ever inventing philosophies peculiar to itself as upholstery for a dirty frame. Therefore dual and dishonest in its bigness. Organically false. Its principal base is materialistic, its principal aim pure selfishness. Its fallacy is in the latter principle. Natural law is inevitable, exacting, but never selfish as within the specie. Humanity is the specie, not capitalists.

### Capitalist Boomerang

At present the theory is being applied to other peoples exploitedly. Not continents, but peoples, thus hastening its own end. The effort becomes a boomerang to the theory and its beneficiaries. Note evidence piling up in world current events.

Another boomerang lies in the bourgeois conception of survival. It is really interpreting Darwin falsely. We see expressions of it in the capitalist press every day. Such words and phrases as "we," "us," "ours," "our government," "best people," "cultured classes," and slurring the other side of their conceived fence thus: "riffraff," "fringe of society," "tramps," "the disgruntled," "farmers better go and slop their hogs," etc. Capitalists think they are the specie and that to subject the balance of the human race to their will is "survival of the fittest." It takes capitalists to manifest bigotry. In Darwinism capitalism is a trifle. Trifling is right.

### The Natural Trend

Today's worldwide criticism of capitalism tends to an end. The discussion is natural; therefore, the end must be natural. Or, to put it in another way: an industrial peace is the goal of humanity. Only by such a peace can there be Industrial Freedom—Industrial Democracy. Let us try to visualize the objective aim. Herein we can merely touch the base, a conceived point to begin.

To clarify, it seems necessary to create a formula; perhaps faulty and crude technically, but necessary to keep the natural law idea clear. Also, we must now use the phrase: Natural Social Forces. For the study of revolutionary Industrial change, they are five, namely: (1) sunshine; (2) atmosphere; (3) rainfall; (4) land (all thereof); (5) labor power.

Anyone will readily see that those mentioned are five natural forces directly necessary to life on earth—human existence. These five are necessary to grow a single hill of potatoes. They are the forces directly responsible for all that man has created on earth. Any one of them lacking, all life ceases.

How insignificant man becomes in the light of natural forces! He is merely involved in the 5th element. And yet, and it is to laugh! the parasitic personnel of man presumes to control the 4th element and all thereof, through subjection of the 5th element. What bigotry and idiotic nerve!

Man, who is of the 5th force, through his activities in the 4th must conform to the spirit of the first three. They bespeak most plainly the theory of Industrial Communism. That theory is involved in Industrial Unionism; and, it is a natural theory.

Now back to the job: it is not so much a matter of "overthrow" as it is a matter of preparedness. Prepare for the topple; else politicians will rush in where industrial workers fear to tread. The industrially energetic fear nothing when properly organized. Self-organization is the real brand. All the laws of Nature are behind the working element of man when that element discovers what it wants. Evidently it has not paid the price sufficiently yet. It needs to suffer a little more. Sorry!

You cannot drain a swamp uphill. Capitalism is the lowest level in human intelligence.

# Some Observations on the Building Industry

By *Sam Murray.*

ARCHITECTURAL science and the skill of the building workers has played a most important part in the history of civilization. One of the lines of demarcation between it and the higher stages of barbarism is the birth of the art and science of building. Given a ruling class and the necessary concomittant—a priestly class—and the art of constructing magnificent dwellings and temples will follow as a natural consequence.

We do not know how old civilization* is. It is considerably more ancient than any written history. For instance, we read in the Book of Genesis of a city named Ur; excavations have lately disclosed that six thousand years ago, at the time when the deity was supposed to have been busy creating the world and fashioning man out of the dust of the earth, Ur was a thriving city and masonry was uncovered showing that building workers at that time posessed skill and technique equal to that of the present day. "Prehistoric" building workers have handed down to us history more ancient and in many ways more reliable than any recorded in books. What would we know today of the wonders of ancient Egypt, Peru or Mexico but for the structures that testify so credibly to the skill and industry of the workers who built them? Nor is it reasonable to believe that these wonders were wrought by chattel slaves, as it is unlikely that skill equal to that could be developed in this class of labor. It is a question how much credence can be placed in the traditions of freemasonry, but they testify that the eight-hour day was in vogue in the ancient order and that the members "Served their masters with freedom and zeal." The masons seem to have been the first free laborers or rather the first wage slaves. They also seem to have been the first to organize. The world "Lodge" so

* The word is used here in the "Bourgeois" sense a society where one class is exploited by another.

commonly used does not mean in its literal sense a body of men organized together but a living or sleeping place. Ancient masons were migratory workers domiciled during the construction of a building in "Lodges" or camps, similar to the construction camps of today. They seem to have been well organized for benevolent purposes, if not for militant unionism. Their form was industrial; they entered apprentices doing the laboring work; and the work of casting the brazen pillars and holy vessels of the temples was performed by the most advanced masters of the art. All were masons or in the process of becoming such. However it could be said that they were as much a religious sect as a union or benevolent order. Thomas Paine attributes their origin to the priests of the sun. This to me is the most reasonable theory on account of the intimate connection between sun-worship, the study of astronomy and geometry (the bases of architectural knowledge) and the building of temples. They worshipped one god—"The Supreme Architect of the Universe who constructed the world on geometrical principles." The sun was the visible agent of the deity through which they made their offering and in whose presence they performed their rites. They considered the study of astronomy and geometry a religious duty and their calling as sacred. It is probable that the masons of the middle ages took advantage of their monopoly of the skill necessary to the construction of church edifices to retain their traditions and ancient religious rites in the face of Christian persecution. This, in my mind, is the only way that the hostility between the Roman Catholic Church and freemasonry can be explained. The coming of capitalism and the Protestant religion with the degeneration of the building art brought about the perversion of freemasonry into its present form.

However, I believe that with the data that has come down to us we are justified in stating that the masons were the first to organize and that before the coming of capitalism the building workers enjoyed the position of privileged workers in an honored calling. But capitalism, the great leveler,

changed all this. With the use of a variety of materials, the division of labor, and the help of craft union humbuggery the modern building worker has been so effectually divided that he has become a ridiculous caricature of the unity and brotherhood that characterized the ancient freemasons.

*The Modern Building Worker.*

In marked contrast to the condition of the building worker of ancient and medieval times, with his benevolent guild, was the building worker under capitalism before the advent of the modern labor movement. We learn that in the early history of this country building mechanics were required to work as many as fourteen hours a day for just enough compensation to enable them to survive. However, the building worker later played a most important part in the pioneer stage of modern unionism.

With the coming of capitalism and the division of labor in the factory the building industry became effected in like manner. The construction of a building became the work of several trades. In the same way the contracting became divided and a group of men of the same trade would be employed by a master mechanic. Thus we see the craft union appearing as the logical result of the condition of the industry. The calling of trade strikes and the signing of se-

parate contracts followed as a natural consequence. Since each union performed an entirely different kind of work and for a separate boss, there was little excuse for cooperation, and as the lines of demarcation between the trades were clearly defined little chance for jurisdictional disputes. However, in time the question of hours, strike funds and the employment of common organizers gave rise to the inter-trade federation. Then with the onward march of machine production and the introduction of new materials and processes came the subdividing of the old crafts and the introduction of entirely new ones, and what is far worse in the eyes of the skilled mechanic, the simplification of the work, so that in many cases little or no skill was required for labor that formerly belonged to the trades. Then the large contractor who employed them all, or sublet to the master tradesmen, appeared, so that the inter-trade federations found themselves in the midst of a mixed medley of trades and half trades, all enmeshed in a tangle of jurisdictional disputes in which it was impossible to define any distinct limits to the several vocations, so that the time arrived when 90 per cent of their time and energy was taken up in fighting one another and the other ten in a vain effort to secure better working conditions and force concessions from the boss.

Early in the game some began to look forward to the time when the workers would control the industries and operate them for the good of all through cooperative and democratic management. However, as capitalism was still in a crude state of development the agitation quite naturally took on a political form and often did more harm than good by diverting the energy of the worker from the union and filling his head with false hopes. Since industrialism is the determining factor in society and political institutions merely tools to be used by it, the natural inference is that unless the unions are strong and active, political action can be of absolutely no consequence to the workers.

In this country, particularly in the building industry, the advocacy of political action has had little effect on the minds of the workers and they have been more inclined to accept the theory that if they stuck to the union and secured the things that were immediately obtainable they would be better off in the long run. True, the idea of a society where the workers would control their jobs and share their joint product had always appealed to the workers. The trouble was that the advocates of these schemes were inclined to neglect the consideration of the problem that the worker was most interested in his job conditions and his next week's pay.

Another manifestation of the craft union era of labor was the development of the professional labor leader. He was often somewhat better than he is generally represented to be and more often considerably better than his stupid following, but just as a reed will bend in the face of the wind so will the official of a dense constituency yield to the influence of his en-

vironment. The building industry in the last thirty years has furnished a fertile field for this influence. The nature of the work often demands a constant shifting of jobs by the worker and as no practical method had been devised to apportion the work it was easy for a leader to surround himself with a group, and by gaining the favor of certain employers, monopolize the jobs. So besides the jurisdictional disputes and intertrade strife they had the internal dissension over employment which had a tendency to turn the union into a job hungry mob.

Under this system the leader who could gain the good will of the largest employers could secure the strongest following until it came to the point where the only purpose of membership in a craft union was preference in securing a job. The union man to retain that preference often had to outwork his fellows so that the union became the instrument of securing more work for the same money. Under this system building labor leaders developed an autocratic control that made it impossible for a worker to live without their favor. They not only held a tsar-like grip over the union members, but in some cases were even able to force the employers to share their profits with them in order to avoid labor troubles. In the April 1925 issue of the Pioneer in an article on P. H. MacCarthy of San Francisco entitled *The Passing of a Building Trades Boss*, and in the October 1925 issue in an article entitled *Industrial Unionism and the Building Trades*, the writer of these articles has pointed out instances to show how the labor bosses in the building industry, prior to the war, had bought and sold the workers like cattle and ruled them with an iron hand.

The ending of the war brought about a new era. The millionaire contractor, backed by the great financial interests, has rendered the craft union obsolete for any other form of action than that of securing jobs and insuring its members, and, as in some cases, running banks. In the San Francisco bay district there is at present a strike of carpenters on, with only one demand—that of preference for union men in the matter of employment under non-union conditions prescribed by the building exchange. The character of this strike can be judged by the fact that a judge the other day, from the bench, endorsed the beating up of scabs and deliberately incited to lawless violence by advising the tarring and feathering of a watchman engaged in protecting non-union men. It is easy to understand this: The judge wants the jobs monopolized by the homeguards to insure his re-election. This in California where men were lately being given 14-year sentences for peaceably trying to organize industrial unions. The A. F. of L. is not a union it is a clique.

### *Industrial Unionism and the Building Industry.*

In the early part of this century active unionists, forseeing the ultimate downfall of parliamentary action in the matter of bringing about the downfall of capitalism, and realizing the fallacy of the craft union policy of dividing the workers employed under the same boss into a variety of conflicting jurisdictions, conceived the idea of

organizing in such a way as to eliminate the objectionable features of craft unionism, and at the same time form the structure and develop the training necessary to enable the workers to take over the industries, and thus by practical methods realize the aims of the dreamers of the past without in any way interfering with the daily struggle for better conditions on the job. The organization of the Industrial Workers of the World, or I. W. W., followed.

In most industries the I. W. W. has thus far merely acted as an educational nucleus pointing out to the workers the futility of repeating past failures, and patiently waiting the time when the industry as a whole would be ready to accept the new form of unionism. However, the last twenty years have developed numerous situations which the craft unions were entirely unable to meet and the situation has been often taken in hand by a mere handful of the members of the I. W. W. with result that exceeded the most sanguine expectation of the participants, and that in the face of opposition that the craft unions were never called on to face.

Now, the I. W. W. has an organization of building workers: Building Construction Workers Industrial Union No. 330 is prepared to organize the building workers from the man who levels off the lot to the one who polishes the floors under the principle that an injury to one worker is an injury to all. This would do away with jurisdictional disputes and give the workers a power that would be irresistible. And as the I. W. W. follows the principle of legislation on the job by members employed there, it would do away with the labor boss and his job hungry following. Just as freemasonry succumbed to the rampant individualism and just as that individualism and mass unionism as well had to yeild to the more practical and up-to-date federated crafts so have the crafts arrived at a stage where they are impotent for militant job action. The breakdown of their militant spirit and their tendency to evolve into lateral activities from job hunting to banking has left the workers with no protective organization in the face of the power of post-war world capitalism. Under this condition any effort to engage in political action or any scheme to "bore within" or "amalgamate" the old unions is patently absurd. Efforts of this kind will generally be found to be nothing more than a sensational movement on the part of would-be labor leaders and notoriety seekers, and can in effect only serve the old gang with a new lease on life. If you want to warm a dead union back to life just set a bunch of revolutionists and patriots squabbling for control.

It may appear to some, on account of the lull in labor union activity the last few years, that labor organization is on the wane. Such a conclusion is illogical. Since the organization of the primitive building workers there has been one union following another and each performing its mission in conformity with the demands of the time and passing out when its work was done only to be followed by a union that had a mission of its own. Modern industrial development has laid the foundation for a worldwide and universal labor union compared to which the old unions are as a horse compared to an automobile. To doubt that we are now on the threshold of a newer and higher form of unionism is to ignore all the signs of the times.

---

## Industrial Solidarity IS NOT SUPPRESSED

Several times in the past the representatives of big business have made trouble for this militant organ of Industrial Unionism. Once it was shut down, at the time of the big "Red Raids." During that period the workers missed their own newspaper, which had been giving them the news of Labor's struggles and aspirations. They failed to get it, and it was not their fault.

### IF YOU DON'T GET IT NOW IT IS YOUR OWN FAULT

**We are publishing Industrial Solidarity once a week, at I. W. W. Headquarters, 3333 Belmont Ave., Chicago, Ill. Subscriptions are $2 per year. or $1 for six months. Single copies cost five cents; bundle orders cost three cents per copy.**

# The Workers' International Educational Society

By JOSEPH WAGNER
Secretary, W. I. E. S.

Members of the I. W. W. and readers of the Wobbly press are of late frequently meeting with the initials of the W. I. E. S. Naturally, many of them are wondering what kind of an organization the W. I. E. S. is, and not knowing they have to guess at it, and often meet a false opinion of it. It is therefore proper that a brief outline of the aims and purposes of the W. I. E. S. be given as well as explaining the necessities that called it into existence. In order to do so we will first quote the most important parts of its Constitution.

"This organization is formed to print, publish, sell, circulate, distribute books, pamphlets and literature of any and all kinds and description; to carry on educational work among the working class; to give lectures, courses of instructions; to hold meetings and to promote, inculcate and disseminate education and learning in all branches and on all subjects and to acquire, own and maintain such real estate and personal property as may be necessary and expedient to accomplish and effectuate the purpose for which this organization is formed.

"The management and control of the said corporation shall be vested in a board of five directors to be elected by the members, and who will hold office for the period of one year and until their successors are elected and qualified, such elections to be held annually at such time and place as the members, by a majority vote cast, may determine. The board of trustees shall select a President and a Secretary and Treasurer of the said corporation. The Treasurer of said corporation shall give bond in an amount to be determined by the said Board of Directors.

"Both individuals and organizations whose principles and doctrines are in harmony with the principles and doctrines of THE WORKERS' INTERNATIONAL EDUCATIONAL SOCIETY may become members of THE WORKERS' INTERNATIONAL EDUCATIONAL SOCIETY, but no person shall become a member of this company until the applications of such individual or organization has been approved by the Board of Directors. The Board of Directors has the power to refund any sum or sums paid by any individual or organization for a membership in this company, and cancel such membership or memberships.

"The membership shall be divided into ten thousand voting units. Any member may acquire, own and hold not to exceed ten voting units. Any labor organization or group of workers, or society may hold not to exceed five hundred voting units, provided the application of such individual or such labor organization or group of workers shall be approved by the Board of Directors. Every individual or organization shall have the right to cast one vote for each voting unit held or possessed by such individual or labor organization.

"Such voting units shall be sold for the sum of $5.00 each to any person, or organization, whose application is approved by the Board of Directors, and when such application is approved and the said voting unit is sold as aforesaid, the person or organization holding such voting unit shall then have the right to vote.

"The Board of Directors shall have the power at all times to purchase such real or personal property as may be necessary or expedient to effectuate and accomplish the purpose for which the company is incorporated and are hereby authorized to empower the President and Secretary, by resolution, to execute in the name of the company, contracts, deeds, mortgages, or any other documents, papers or obligations that may be necessary to carry on the business of the company.

"No member or holder of a membership certificate shall be entitled to vote or participate in any of the general or special meetings of the members unless such member's application for membership has been approved by the Board of Directors, and such member has been registered on the company's books as a member at least ten days prior to any general or special meeting of the members.

"Adopted at a general meeting of the company, this 14th day of February, A. D. 1926."

It will be noticed that in the Constitution of the W. I. E. S. there is no reference to the I. W. W. In fact the W. I. E. S. is a corporation "not for pecuniary profit," and has no **legal** connection with the I. W. W. But on the other hand of the approximately 800 shares sold, at least 750 are in the hands of active I. W. W. members, of I. U. branches and language groups. It has been endorsed by the last Convention of the Lumber Workers' Industrial Union No. 120, also by the Agricultural Workers' Industrial Union No. 110 Conference held at Alva, Oklahoma, pledging their hearty support to the W. I. E. S., and making the sale of shares of the W. I. E. S. part of their summer drive.

If it ever will be able to put any of the educational program in practice, it is obvious that the education it will put out will be in conformity with the I. W. W. program, not because of any laws, but because its membership being I. W. W., that membership would not countenance any other kind of educational program.

Probably some will think that since the acquiring of shares in the W. I. E. S. is not restricted solely to I. W. W. members in good standing, there is a danger that the control of this society might slip

away from the I. W. W. members, and its machinery and property be used for purposes contrary to the I. W. W. But even the possibility of that danger is averted by certain clauses of the Constitution. It is true that any worker **may** buy a share, or a voting unit (or even ten votes for that matter) but the Board of Directors is supposed to pass on the eligibility of every applicant, and he can become a member of this society only with the approval of the Board of Directors. More than that: the Board of Directors has the power to cancel the membership of any member and refund the money paid in by such member for his shares.

The policy of the W. I. E. S. is determined at its General Annual Meeting, where the Board of Directors is also elected. The membership being largely I. W. W. those General Annual Meetings will be held at the same time and in the same locality as the General Convention of the I. W. W. This is of course for the convenience of the membership of the W. I. E. S., for then all individual shareholders, all I. W. W. branches, and all I. U.'s holding shares, can send their proxies to their respective delegates to the I. W. W. convention, or to their G. E. B. member, or to some general official of the I. W. W. to represent them in the meeting. Thus although **legally** separate from the I. W. W., the same personell will determine the policy of the W. I. E. S. as that of the I. W. W. And the same element will elect the officials of the W. I. E. S. as elects the officials of the I. W. W. Therefore there is no more danger that some outsiders will gain control of the W. I. E. S. by holding a few shares, than of the same element gaining control in the I. W. W. by getting themselves I. W. W. membership cards.

But, what was the reason for organizing the W. I. E. S. if it is to do the same work that the I. W. W. was doing for the last twenty years?

The W. I. E. S. was organized as the result of the financial difficulties confronting the I. W. W. at the time of the last General Convention of the I. W. W. The delegates to that convention found that for years the revenue of the General Office of the I. W. W. was insufficient to allow it to do much constructive work. After the E. P. trouble, financial conditions got even worse. On top of that—whether wisely or not—in the midst of that critical financial situation, the general officials of that time went to work and fulfilled the wishes expressed by two general conventions of the I. W. W. to buy a building for the General Offices and for the I. U. Main Offices, and the Printing plant. The money, even for the first down payment on the building had to be borrowed, as well as the money to cover the expenses from the old place to the new. Two mortgages on the building were given for the rest.

The delegates to the convention, after mature consideration, thought that the best thing would be to sell the building to a holding company, that should create a fund to meet the payments due on the building, and hold the building for the use of the organization. It is generally believed that it is not wise for a revolutionary organization, like the I. W. W., to own property, especially real estate, not because it would tend to make the organization more conservative, but because it is a direct invitation to be dragged into court, sued for libel or for picketing, or damages done by strikes, etc.

So on the suggestion of some Finnish fellow workers it was considered advisable to imitate the methods used in handling the Finnish I. W. W. daily "Industrialisti," and the "Work People's College" of Duluth, Minnesota.

The application for incorporation of the W. I. E. S. was made by several delegates to the last General Convention of the I. W. W. with the approval of the other delegates. Since its organization in December, 1925, to the end of May, 1926, it received from sale of shares $3,585.00, of which $2,405.00 was paid on the building. At the beginning there were some heavy expenses incurred with the organization of the corporation, but since then the cost of handling the money does not exceed 10 percent.

Since it was organized it sent an organizer, jointly with the General Office of the I. W. W., to an extended tour in the East, and in March it sent the same organizer (John Kiviniemi) on an extended organization tour through the West and Northwest.

The immediate objective of the W. I. E. S. is to raise enough money through the sale of stock to be able to take over the financing of the headquarters building at 3333 Belmont Avenue, Chicago, thus to release the energies of the General Officials of the I. W. W. from real estate worries, and give them a chance to tend to the task of organizing a powerful union of the workers, the Industrial Workers of the World.

## OBSERVATIONS OF COVAMI

**New Jersey's Version:** "Suffer little children to come unto me and I will club the hell out of them."

* * *

**The way of liberty** is hard to those, whose feet are used to beaten paths.

* * *

**Freedom** will not die while Labor lives, and Labor is immortal.

* * *

**Direct Action:** Controlling the product of toil, by Toil, for Toil.

* * *

**All The World's** trouble is that Labor does not own labor.

# THE SLACKER

By HERBERT MINTER

When the Great War broke out I was working in Vancouver, B. C. in the Canadian Pacific Railway shops.

The call came for army volunteers. Many quit their jobs to enlist for service overseas but I had no such intention.

Recruiting posters were everywhere. Recruiting sergeants were at every busy corner trying to enlist men for France. I was stopped by them time and time again. But I always refused to join.

Two young soldiers one day spoke to me on the street and asked if I wouldn't sign to go to France. I replied "No, I haven't lost anything over there."

One of them retorted, "Neither have we."

"What are you going over for then?" I asked.

"Oh, just for fun," they answered.

I thought to myself "So, just for fun these lads are going over to kill Germans they have never seen."

I had been a sailor. I had worked with Germans and men of nearly all other nationalities. And I had found the German sailors about the same as those of any other nationality. Some of them were good; some of them were bad. I saw no reason for going over to fight them; yet as the days went on I found myself greatly troubled and wondering whether, after all, I was not mistaken.

I was pondering thus, on a stroll through Hastings Park, trying to fathom the reason or necessity for wholesale slaughter when my eyes happened to rest on a clergyman sitting on a park bench and reading a newspaper.

I sat beside him, then commented on the weather and he replied pleasantly.

Abruptly I asked whether he thought it would be right to join the army and kill my fellow man.

He replied emphatically, "It is the Lord's will. The Germans are agents of the devil. Every day I pray to God for victory for the allied troops."

"But," I said, "the Germans, and for that matter, all the nations in this war are praying for victory to the same God. Is not God a loving and Almighty God?"

"Yes," agreed the minister, "he is."

"Then," I demanded, "why doesn't he stop the war?"

"You have no right to question God's way of doing things," snapped the clergyman angrily. "You ought to join the army and fight for your country."

I too became angered and shot back at him, "You, a minister of the gospel, tell me to kill. Doesn't the bible say 'Thou shalt not kill?' It looks to me like the devil's way of doing things, not God's."

"Young man," raged the minister, "You are a heretic. I wont speak another word to you."

And he went away leaving me to conclude that most people were accepting the war blindly, but that I would do my own thinking.

As the weeks rolled by I received letters from my people in England telling me my three brothers had joined the colors and had sailed for France. Certainly none could say our family had any taint of yellow and, from the way they wrote, I gathered that my parents expected me too, to be over there soon with the Canadian forces. My kin, the posters and the brass hands, all seemed to be saying "Join."

"Join up!"

But my conscience said, "No, don't, it's all wrong." And I obeyed my conscience.

Then one day the company I was working for laid off a hundred of us. The superintendent told us our king and country wanted us and the company did not.

Up to this time I knew nothing of the cause of the war. I had merely been filled with its ballyhoo. I tried to find out from people I thought ought to know. Some said it was for the defense of our country but I could not see that. Some said it was to protect Belgium and France. Yet I figured that in other wars England and France had been enemies.

I was told, too, that it was a war over colonies, a commercial war. It seemed to me that through the press, the posters and persuasive orators those in power could create hate for any nation. I was badly confused. Unemployed and perplexed I decided I would prefer starvation rather than enter on a war that seemed wrong to me.

At that time I was very fond of a pretty little blond girl named June. She worked in the Granville restaurant, a waitress. One evening a week it had been our custom to meet, usually taking in a movie show.

We were strolling toward the theatre one evening when she asked suddenly and in a queer tone, "Joe, why don't you join the army?"

I told her why, simply, truthfully. June was silent, but she gazed at me furiously. I felt that she believed my explanation was merely an alibi.

When we met again she said she would rather walk and talk than go to the movies. She said, "I would rather look at the soldiers in their fetching uniforms."

Most of the soldiers were in khaki but we met one in a blue uniform with gold braid across his tunic and a broad gold stripe down the outer side of each trouser leg.

"What a pretty uniform," exclaimed June.

Then in a cajoling tone, "Joe, you would look fine in that and I would be proud to walk with you."

"Not in that uniform or any other uniform," I replied.

"I suppose not," she said sarcastically. I was now quite certain she thought I was afraid to enlist. The remainder of the evening passed miserably. June din't seem to notice me at all. I went home with her and kissed her goodnight but she did not return my kiss. I trudged home, despondent that she had misjudged me and that she could not realize that I was obeying my conscience and was not afraid.

Still confident, however, I went to the restaurant her next evening off. She came outside and told me that one of the girls was ill and she had taken her place for the night and that she could not go out with me until next week. It was the first evening we had missed.

I went to a poolhall to fill in the evening and met one of my old friends. He had been a shipmate in other days.

"The war is all wrong," he ventured when we approached the inevitable topic, "but the majority seem to think it is all right, so what's the use of worrying. Better do like the rest and join up."

"Nothing doing," I replied, "let's take in a show."

We went to a movie. The front rows were filled with soldiers. They sang "What's the use of worrying," "Pack up your troubles," and "Smile, smile, smile."

I thought, "Don't worry, just go across and kill and smile."

After the show I left my friend. On my way home I saw June across the street with a soldier. I gazed at her but she was so intensely interested in what the soldier was saying that she didn't see me. I was filled with anger and humiliation.

I made it my business to meet June the next evening and demanded an explanation.

"The soldier I was out with last night is not afraid to fight," she snapped, and added, "And that soldier is not a slacker."

I half shouted, "So that's the way you look at it. Your soldier hero probably joined up just because the mob was doing it, carried away by the war hysteria. He didn't stop to think. Perhaps some sweet young girl liked him better when he was in uniform. But you can't make me fight in a war I don't believe is right."

I said "Goodnight," then added "Goodby." I never saw June again.

Meanwhile all through the city men were being laid off. I looked for work but nobody wanted help. Sometimes they called me a slacker and told me to join the army, but I noticed those who gave that advice did not join up themselves. There were days of hunger and, out of sheer desperation, I almost gave in.

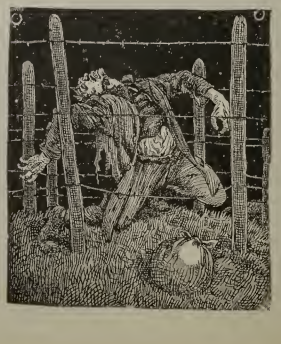
Then came a letter from home. My youngest brother had been killed. I saw red. Everything left my mind but the idea of vengeance for his death. I wanted to kill every German that crossed my path.

Quickly I set out to enlist. Outside the first recruiting station I found hung a tremendous poster, "Death or Glory, Boys." Beside it was a sign that read "Join now and go overseas with the Blue Devils." Another poster read "Give the Germans Hell."

I signed. In a few weeks we were in France and it wasn't long before we were at the front.

No need of telling of the hurried training and the hardships of No Man's Land. But one incident will bear relating.

We were one night hardly a stone's throw from the German line. All through the night there had been something in the air that portended action.



An officer came along our line towards dawn and told us that the Germans had strung up two Canadian soldiers. In retaliation we were to take no prisoners. No quarter. No mercy. Kill! Kill! Kill!

And after that any German who carelessly showed the top of his head found that there were plenty of men on our side, including myself, ready to try to blow it off. I didn't miss very often. I was out for German blood.

In the afternoon we got word to be ready to go over the top.

When the signal came I was among the first over, raging like a wild animal.

A shell struck close by. Death all around. Eight of us were separated from the others. Lost, we finally found ourselves near a German dugout.

Those inside came out with hands held high in the air.

But we had received our orders and we obeyed them.

As we looked over the bodies I felt my rage cool swiftly. One of those we had killed was a mere lad, about the age of my own brother. It came to me that killing these Germans was not avenging the death of my brother. Something was wrong.

These Germans had been sent out to fight and kill just as we had been sent, without having had anything to say about it.

And I had volunteered to fight and kill for revenge which now failed to give me satisfaction.

My fight was not with these pawns in a game—a dreadful game called war. I found myself calling it murder.

We finally found our company. Both sides had suffered terrible losses. I was disgusted with it all. I felt that in joining the army I had been a slacker. But I was in the army and for months after I remained in No Man's Land. My war lust was gone. When I killed it was only to protect my own life. I was sickened by the inhuman deeds I saw committed on both sides by war-crazed men. But I was helpless to stop it.

At Vimy Ridge I was wounded in the leg and sent back of the lines. They patched me up and sent me to England on crutches.

A band met us at the pier and a crowd cheered us as valiant heroes.

But I knew that I was a slacker.

At home, too, my folks greeted me as a hero.

Both my brothers were wounded, one of them remained a wreck.

They say we won the war. Perhaps we did, but every nation was loser.

Perhaps some day humanity will make inhumanity impossible.

This can only be accomplished by the organized power of the working class.

## They Will Say

By CARL SANDBURG

Of my city the worst that men will ever say is this:
You took little children away from the sun and the dew,
And the glimmers that played in the grass under the great sky,
And the reckless rain; you put them between walls
To work, broken and smothered, for bread and wages,
To eat dust in their throats and die empty-hearted
For a little handful of pay on a few Saturday nights.

—From Chicago Poems.

# American History in an Economic Light

By JOHN I. TURNER

## A BRIEF SUMMARY OF THE STATUS OF THE WORKER IN COLONIAL TIMES AND DURING THE FIRST YEARS OF THE REPUBLIC

Voltaire said that his first steps toward acquiring knowledge was in unlearning what he had learned at school. The same thing is probably as true in many cases today as it was in the days of Voltaire. The general tendency in all schools, under the present system, is to teach the child false ideas that will create within his mind respect for the existing order of society. Especially do the ruling class desire to have the workers patriotic. Consequently the child is told many stories about the great and noble deeds of the fathers of his country. This is more true of America than of any other country. Here the school boy is made to believe that the most of the early settlers of the colonists were as spotless as saints. Patrick Henry, Captain John Smith, George Washington and many others are characters that stand out as examples of everything good in men. To him the American revolution was a fight for freedom and the constitution of the United States was framed to protect civil liberties. And such are the common opinions today. But a little research into the economic history of America will enable us to see our forefathers and the institutions they created in a different light.

The idea that America in the early days was a land of equal opportunities to all is erroneous. The colonial lands were grabbed by members of the aristocracy of England and other countries. These grabs were commonly executed through land grants made by foreign sovereigns. European kings and queens found that granting large tracts of American lands was an inexpensive way of rewarding their favorites. In other words, a landed aristocracy was transplanted from Europe to the Colonies.

From the beginning they enacted laws to protect themselves in their holdings and to enable them to grab more and perpetuate a system of exploitation and domination that their ownership of the means of life made possible.

As manufacturing developed the landed aristocrats became manufacturers and commercial traders. They had to have workers to exploit. In addition to the black chattel slaves, who were introduced into Virginia early in the seventeenth century, white slaves in ship loads were imported from England. They were known as bonded and indentured servants.

The conditions of the workers of England were bad. Many, hoping for relief from oppression, sought a way to America. Lacking the means of transportation they would agree to a term of servitude here in payment of their passage. The ship owners that plied this trade would sell them to the plantation owners for from five to seven years, according to the terms of indenture. After serving the required time they were to be freed.

Thousands of felons were released from prisons to be brought over to long terms of servitude. Usually they had been convicted of debt or other trivial offenses for which the English laws provided severe punishment. Also, thousands of women and children of the poorer classes were kidnaped and shipped to America by unscrupulous traders.

Colonial laws were drastic in regard to these servants. In some colonies a servant would have five days added to his or her term of servitude for each day's absence from work without the master's consent. Sometimes a few days' absence would give the master authority to double the time of the indenture. Violations of other petty laws gave grounds for further lengthening of the term of slavery. Whipping as a punishment for servants was meted out by the courts. The "courts" were always masters and land owners. In the cases of black slaves the Virginia laws provided for dismembering, such as the plucking out of an eye or the removal of a hand.

After his release from indenture a servant was faced with a serious situation. His most vigorous days had been spent in the services of his master. The only land available was far out among the Indian settlements. To take land under such circumstances was to an individual practically out of the question. He could only offer his services as a wage worker and compete with the chattel slaves and bonded and indentured servants who constituted more than half of the workers of America. His lot was by no means a happy one.

Under colonial laws many workers were imprisoned for debt. Long sentences were handed out for the most trivial offenses. The prisons were filthy and vermin-infested. Often they were underground and dark and damp. The ventilation was poor and the food horrible.

The Revolutionary war was a fight between the English and American manufacturers. The manufacturing classes of this country demanded the right to manufacture whatever they desired to and the right to sell their wares created through the exploitation of American workers.

The intelligent workers of the States were not enthusiastic about going to war. They knew that it was not a war to free them. In spite of much

# A Letter to Jesus

By COVINGTON AMI

Jesus Christ,
Paradise Avenue,
New Jerusalem, Universe.

Dear Fellow Worker:

I just now picked up the Universalist Leader, which is published in Boston, Mass., which is an ancient city located in the northeastern corner of the United States, which is another Holy Empire that has come into existence since the first one crucified you. I tell you all this because I thought you might not know anything about the new geography of Earth, said geography having been carved up considerable since you left here injuncting the Christians to always live together, regardless of race, nationality or previous condition of servitude, in one great Brotherhood. Incidentally, in carving up the map of the earth, said Christians—leastways that's what they call themselves—I ain't saying nothing against you, you understand—have carved up each other and whole hosts of innocent bystanders something shameful, and are still at it.

But I digress. As I was saying, I just read in the Universalist Leader, page 24, May 24, 1924, a heluva statement made in a resolution adopted by a conference of the Universalist Church—it's one of your churches, they claim, and not one of the worst either—sitting in Birmingham, England—which is a city on the other side of the Atlantic Ocean across the way from Boston, Mass.—and this is what they said:

"Recognizing that, as the State is ordained by God, Christians ought loyally to accept its obligations and duties of citizenship. The authority of the State ought only to be challenged in the name of God."

Is that true? I don't believe God guilty of doing any such thing. But I am not a Christian any more than you were, so am not an expert in the ways of God. Anyway, it don't seem reasonable to me that God would go to work and create about 1,750,000,000 human beings and then ordain the State and turn it loose to commit wholesale murder on them by styling said wholesale murder "glorious war." Neither does it seem reasonable to me that he who "gave the earth to Adam and his children forever" would come along centuries later and ordain the State—I hunch **you** know something about what the State is from your own experiences with the Holy Roman Empire, on which all our modern States are patterned—to steal it from them and hand it over to the same sort of gang as you scourged out of the temple, moneychangers and the like. It ain't true, is it? I don't believe it of God. Do you? I **know** God didn't ordain the State to let the Bosses (who own the Politicians who are the State) fill their sweatshops, cotton, woolen and silk mills and canning factories full of millions of helpless little children and exploit them to death. At least I know **your** God didn't do that, because you loved little children so. But then, as I said, you were not a Christian and, maybe, therefore, you didn't know what a real, honest-to-god God was.

You will also note that after libeling God by holding him and not the Plutocrats and Politicians responsible for the ordaining of the State, the resolution coolly goes on to affirm that, "The authority of the State ought only to be challenged in the name of God." Well, why don't God challenge it? If anybody libeled even me that way I'd sure challenge him, them or it, all right. And that isn't the worst of it. This here State in which I am living doesn't recognize any such thing in its Constitution. It says it is ordained by "Us, The People." That's a lie, too—'cause the American Empire was ordained just like the Roman Empire and every other State the poor old earth has so far bled under—by guns and swords and cannon and gallows and jails, by the plunderers, of the plunderers, and for the plunderers . . . . . But, as I was saying, that ain't the worst of it, 'cause if this here State ain't ordained by God how in the name of God am I or any other of its citizens going to challenge its authority "in the name of God"? It can't be did, leastways not here in the U. S. A. But why "only in the name of God?" That's what I want to know. I don't believe it. I don't believe God, leastways your God, ever ordained any such crooked business. I don't believe God is at all responsible, and I don't believe it because it seems unreasonable to me that an honest God would ever have created a Politician or a merciful One a Plutocrat, especially the bunch that's at present running this Holy Protestant Roman Ku Klux 100 per cent American Empire.

You won't believe it, because you weren't a Christian, but the jails of this Christian country are full of men whose only crime was and is that they wanted the Earth God Almighty said He gave to them forever. You may not be able to understand how good Christians could make the All-Father out a "liar and the father of liars," but, then, Christians have reformed a lot since you saved them by getting yourself lynched. You bet they have! They now do unto other workingmen just exactly what was done unto you and your fellow workers two thousand years ago, and they do it to the tune of "Onward Christian soldiers" too. I ain't lying. It's the truth I'm telling you. They, the Christians, have just ended a world war in which more than twenty million (20,000,000)—do you get that?—

boys and young men were slaughtered and maimed on the battlefields alone, and they did, to hear them tell it, "all for Jesus and Democracy"—that is, all except the German Kaiser's boobs, who said they done it "for God and Culture."

Now, I ask you, after all this, don't you think the Universalists have some gall to come here saying that God ordained the State? I don't believe it. Do you? I know you don't, even though the Universalists who hold that no soul will ever be lost but that all will be saved, which is some better than lots of others who come teaching in your name, mind you, that about ninety-nine per cent of the human race, especially the working class part of it, is headed straight for hell in spite of your teachings to the contrary. If I got up here and said that none of our rich men could get into heaven, like you did, without first selling all they had and dividing it up with the poor, I'd be on my way to Fort Leavenworth before I knew where I was at. You may not believe this, either, but Pilate had nothing on our judges, even though he too believed the State was God, Private Property the Holy Ghost, the Plutes their elect, and the Politicians their Priesthood. It's hell, I tell you, and the State is it—I don't care what the Priests, Preachers and Rabbis say. I can't help it. You know how it is, you who were, not only a heretic, but a "Blasphemer," an "enemy of Caesar," that is to say, of the State, and, worse still, "a friend of publicans and sinners," that is to say, of "damn radicals" and workingmen and women. You even had the nerve to defend prostitutes against respectability, and you did even worse —in an Empire where millions of men were out of work you were so unpatriotic as to incite them to criminal syndicalism by treasonably declaring that "the birds of the air have their nests and the beasts of the field their holes, but the son of man has not where to lay his head." Your "intent" to overthrow the government, to bring law and order into disrepute and contempt, and to blaspheme your "God, your Country and your Flag" could not have been made clearer had you tried. Worse still, you said: "Render unto Caesar the things that are Caesar's," when you well knew that if only those things were rendered unto Caesar that were lawfully and rightfully his, he would have to go to work for a living, and that is something no Politician and Plutocrat can contemplate without wanting to crucify somebody. You know how it is. So do we Wobblies.

Well, I've talked longer than I started out to, but even at that I've told you hardly anything at all about what's going on down here in Christian Civilization. Even the Heathens are rebelling against it. The Russians and Chinese are simply raising hell, but "we freeborn Americans mean to save the world for Christianity and Democracy if we have to kill every goddam rebel on Earth to do it." This may comfort you a little, for we are a great people (we say so ourselves), even if our plan does shoot your idea of the "Brotherhood of Man" all to pieces. That's all. Only, if God did ordain the State, what did he have against humanity?

Good luck and love from

VOC, the Barbarian.

---

# Working Too Hard

AFTER glancing at the title of this little narrative, the busy reader will be inclined to say, "Yes, that's what we are doing all the time, and getting very little for it! Give us something new, we are tired of that subject!" True enough, dear reader, I agree with you; but this is not written with the intention of elaborating on the dignity and beauty of manly toil, or honest labor; nor is it a homily, affirming or confirming that man must "'eat by the sweat of his brow," far far, from it, friend!

The writer in sweet anticipation of a new and a more just economic system, dares to look into the future ,and foretaste some of the quaint situations, which are bound to arise, out of a slave class set free from wage slavery and living in a society the direct antithesis of the one we have at present! In the economic system of today our masters never complain of our having "worked too hard!"

They would indeed tell us that such a thing were impossible.

Our master's belief is speed, celerity, alacrity, and still more of it; that is of course apart from their own mental and physical activities; the realm in which **they** are "fast" is a different one, of which any reader of the daily press is no doubt well acquainted!

In this forestalling of the coming era, in which everyone will be put to useful and productive labor, and where all shall share proportionally in the produce thereof, it does not need any great flight of the imagination to realize that the worker will have the time and opportunity for the leisurely pursuit of learning, sport, and amusement. In fact, the cultivation of such will most likely be insisted upon, by those whom we elect to our central councils, or industrial union councils, just as today children are

forced to go to school for their own good; and it is not difficult to predict that good, honest fellow-worker, "The Gyppo," is likely to fall foul of the new laws relating to that much-abused term "Work!"

If the reader is still with me, has had, as it were, the fortitude to follow this discourse thus far, I would beg him to exercise his patience still further, and take comfort in the thought that surely the writer has already done his worst, and the writer solemnly agrees to keep a firm hold on the lines and curb his fertile imagination as much as possible, from soaring into the unknown and unfathomed realm of utopia!

The story opens as a car drives up to the door of one of the national sanitariums, which are provided in lieu of prisons for the treatment of workers who are suffering from perverse habits or criminal instincts!

In these places those who are abnormal in any way are treated by doctors specially trained in psychology; the idea being that anyone who breaks the laws of the community must necessarily be sick! There must be something radically wrong with a man who would steal, when food, clothing and shelter and the comforts and necessities of life are the common birthright of all, or who would commit crimes of violence when all incentive has been taken away, and all are friends working in harmony together!

The sanitariums at this time, owing to the reduction of crime, are mostly used for the correction of those who have committed minor infractions of the new laws now in force!

As the car stops at the door of the sanitarium, two men alight and walking briskly up to the door, ring the bell; both are stalwart citizens, one a genial Irishman with merry, twinkling eyes, the other with exceptionally broad, stooping shoulders, dark saturnine complexion, and small, beady eyes, glancing around suspiciously, as though he does not like the looks of the place. The door is opened and they are admitted by an orderly into the consulting room where they are greeted by the doctor, a shrewd-looking, slim-built man of middle age.

The Irishman, taking a packet of papers from his pocket, hands them to the doctor, saying, "A new patient for you, Dr. Newman! A friend of mine, take good care of him!"

"I'll do that alright!" says the doctor, smilingly, as he opens the papers and commences reading as follows:

"From: Sec. Lumber Workers' District Council: The patient, Fellow Worker John Block, has become a nuisance to the community here owing to a propensity for working too hard. He has neglected all studies and seems determined to remain in an ignorant and uncultivated state all his life. It is true that he has only a meager intelligence, but even this he has refrained from exercising; his last escapade consisted in sneaking off into the local forest reserve at times when he should have been studying, exercising or amusing himself; and when discovered by the forest ranger, he was hard at work, 'sweating like a bull,' using a one-man saw, which has been forbidden, as a wicked waste of human energy. The ranger on investigating found that he had cut down and bucked nearly two hundred trees which had been marked for preservation.

"This is only one of his many outbreaks into what might be termed veritable orgies of physical labor. I hope you will be able to cure him of this obnoxious habit and send him back to the community normal. Yours truly, Sec. L. W. D. C."

The doctor then reads the patient's medical history sheet, which gives the following information:

"John Block, son of A. Block, who was perfectly normal, but whose father, John Block, was a "Gyppo" worker in the woods under the old capitalist system. The patient seems to be a throw-back and early in life at the age of fourteen became strange and moody, refusing to play with other boys, and developed an intense love for work, necessary or unnecessary. After undergoing a course of treatment at one of the eastern sanitariums the malady left him."

The doctor glances through the report of the eastern sanitarium and then goes into the next room to call his father, Professor Newman. The professor, an old, white-haired gentleman comes into the room and his son hands him the papers, saying: "A peculiar case, Professor! I would like to hear your opinion about it!"

The old gentleman puts on his glasses and, on reading the reports, walks over to Mr. Block and begins a minute examination of his head, in the same way as one would examine a statue, a picture, or some other "work of art." He scrutinizes it from all directions, at all angles, even going the length of feeling with his fingers among the thick shock of hair, to the intense disgust and annoyance of Mr. Block, who evidently does not like the proceedings in the least.

The professor seemingly at last satisfied with the result of his examination turns to the doctor and says, "This is indeed a srange case in these days; the patient is the victim of the law of heredity. A clear case of reverting to type; a mental throw-back, and a striking example of the 'Genus Scissorbill.' A product of the old capitalist system."

"What is a Scissorbill?" exclaims his son, who had never heard the term before; being one of the new school.

The professor smiles as he clears his throat in preparation to give answer; for it is not often that the aged get the chance to instruct, and he thought to take advantage of the opportunity. "It is a long story," he said, "but to be as brief as possible, the 'Scissorbill' was a class of worker under the old capitalist system, who gave a greater return to the masters for the amount of remuneration received, than the other workers. At that time in the history

of the world, the worker toiled for wages, which represented in money form, the amount of food, clothing and shelter, that it was necessary for laborers to have in order that they might be able to continue to produce surplus value for their master.

"The worker got the value of the first two hours of the working day, and the next six to eight hours that he worked were then surplus value for his employer.

"In order to incite the workers to greater efforts while on the job, different schemes were tried, among them being the contract or 'Gyppo system;' under this scheme the worker sub-contracted from the boss and worked 'by the piece,' 'by the mile' or 'by the bushel,' according to the class of work to be done.

"Very few workers fell for this system, for it meant more intensified labor, longer hours, worse conditions on the job, and a contract that couldn't be broken at a minute's notice, without severe financial loss.

"This was only another form of wage slavery, dignified by the mistaken notion that the worker was his own boss.

"This system was a paying one for the employers, who encouraged it in every way. They didn't require foremen to superintend, because the workers drove themselves mercilessly. The slaves who toiled under the contract system were called 'Gyppos' by the other workers because they were unfair to them or gypped them, as they termed it, doing more work for less pay. To be a good 'Gyppo' the requirements were 'a strong back, and a weak head,' and the stronger the back, and the weaker the mental processes, the better the 'Gyppo.'

"The workers at about this time started to organize into Industrial Unions to combat the capitalist class, and one of the greatest evils they had to fight against was this 'Gyppo system,' or piecework system.

"The workers flocked into their 'industrial unions' in large numbers and after several fiercely fought battles, on the industrial field, they were at last successful, and overthrew the master class, and put them to work in the industries.

'The patient is one of those unfortunate workers, who have inherited some of the evil characteristics, which were the direct outcome of that iniquitous system," said the professor in finishing, as he glanced at "Mr. Block," who shuffled uneasily on his feet, the very embodiment of mental distress.

The doctor, who had been studying the patient, throughout this examination, turned to the professor and said, "I begin to understand the case better now, Professor, after what you have told me, but what do you think would be the best treatment to use?"

The professor smiled reassuringly to "Mr. Block" as he made answer. "The case is an unusual one, and requires unusual treatment, but nothing that should alarm the poor unfortunate. I would advise a light diet, but with liberal quantities of fish of any variety for brain nourishment. I would also prescribe liberal doses of that old classical composition, 'The Right to Be Lazy,' by Paul La Fargue.

"The patient must be made to read it aloud, and encouraged to study it day and night; certain of the more vigorous, soul-searching passages he should be taught to memorize, until the truth seeps through to his unconscious mind, or inner intelligence. If this should prove to be unsuccessful, reduce the diet, until it has the desired effect."

The doctor nodded gravely, as he said: "I will follow your advice, Professor! I am sure it could not be improved upon; and I thank you, on behalf of the patient, for the consideration you have given his case!"

What sounds almost like a groan, escapes from the lips of Mr. Block as he hears sentence passed, and he winces perceivably at the mention of the reduction of diet. The doctor rings a bell for the orderly and, on his entering the room, gives him instructions to show the patient to his quarters, and see that he is made comfortable for the night. As Mr. Block is escorted away by the orderly, the doctor turns to the Irishman, who has been a quiet, though interested spectator of the whole proceedings, and says: "I am afraid you have brought us a very peculiar case, Fellow Worker, and one that won't readily succumb to any treatment; but we will do our best to send him back to the community perfectly cured."

The doctor signs some papers and hands them to the Irishman, who leaves the sanitarium and drives away. The next morning, the orderly rushes into the consulting room, in an excited state, and speaking to the doctor says: "The patient ran amuck early this morning! On going to his room, I found he had escaped, and in searching the grounds for him, discovered that he had been to the stable, where he had cleaned and harnessed four horses, cut and split nearly half a cord of wood, and when I found him in the garden, he was digging a hole, and was almost out of sight; when I pulled him out he was sweating profusely and almost exhausted. I asked him what he was digging for, and he said he was looking for the bottom!"

The doctor smiles sadly and shakes his head. "What an anachronism," he says, "in the old days the Long Bell or Baron Weyerhauser would have had thousands like him, but now all his kind have died. Now he's lonely and nervous—perhaps after all we'd better put him in a cage in the Museum of Natural History."

Men generally regard that to be their country's good which is correspondent with their own connection.—**Oliver Goldsmith.**

Let not your terrors rise to fever heat,
Our age is lenient with those who cheat.
—**Balzac.**

# Editorials

**SACCO AND VANZETTI.**—The cases of Sacco and Vanzetti are being discussed wherever working men and women are organized in all parts of the world. And rightly so. The persecution of one member of the working class on account of his activities in the cause of labor or because he has defended some other persecuted worker should rally to his defense every other organized worker no matter what organization he happens to be a part of. The motto of our organization, "An Injury to One is an Injury to All," will be applied by all members of the I. W. W. to this case. Read the article on Sacco and Vanzetti in this issue of the Pioneer, and do all you can to give them the help they need.

**OTHER PRISONERS.**—While the case of Sacco and Vanzetti has again been brought into the foreground and we must aid in every possible way the effort to save them from the electric chair, it is well to bear in mind that the victims of the Centralia conspiracy and the C. S. law are still behind the walls of the Walla Walla penitentiary with no immediate prospect of freedom; that scores of our fellow workers are still doing time in the hell holes of San Quentin and Folsom and a few in the penitentiaries of South Dakota, Kansas, Missouri and Maine; that Tom Mooney and Warren Billings, railroaded on perjured testimony ten years ago, and Herman Suhr, similarly framed in 1914 following the strike on Durst Bros.' ranch, are doing life because of their labor activities; that Rangel and Cline and others are still incarcerated in Texas.

The efforts now being made in behalf of all these victims of the class war should have the support of every member of the working class. Every time the employers succeed in lynching, executing or imprisoning a worker who has opposed their program, they are emboldened by that success and are ready to go to further extremes when another worker is marked as victim. They have shown their power in the Ludlow and Everett massacres and on many other occasions. They are showing their power today in the cases of Sacco and Vanzetti and the continued persecution of many of our fellow workers. Tomorrow and as long as the capitalist system exists the masters will again and again make savage attacks upon those of the workers who dare to oppose their plans. Sacco and Vanzetti today—perhaps you yourself or your best friend tomorrow. We cannot afford to assume an attitude of indifference. For our own sakes we must strive our utmost to wrest these victims from the clutches of the monster and, this accomplished, hold ourselves ever in readiness to resist further attacks.

Defense is both important and necessary and must be given every possible support. But with the work of defense must go the work of organization. Organized, the workers have power and as organization grows among the workers increased power is imparted to the defense. Your dollar for the defense is not enough. It is necessary for you also to do your part in building up the organization, adding the power of others to your own power and thereby weakening the power of the enemy. Every organized worker can and should do his part in both lines of endeavor; when he does there will be fewer working class victims and the workers, organized, will be ready for the final struggle.

**ORGANIZATION IS POWER.**—The captains of industry have power over the mass of the people and the governments that represent the people because they are organized for production. The overlords in the financial world have power over the lives of the people of other countries as well as those of their own country because they

have gained control of the world's finances through organization.

You must have a tooth pulled? The dentist tells you his price and you find it high. But a trip to the other agony offices convinces you that the dentists have agreed to charge a uniform price. Sure, they are organized.

The doctor may cancel your bill or take any part of it that you can pay, but he will tell you that he must charge the full fee as he is a member of the medical association.

Lawyers are organized and are not allowed to charge below the fee stipulated by their association.

To the extent that they are organized all of them exercise Power.

There are about thirty million wage workers in this country; less than one-sixth of them are in labor unions. Many of those who are organized are in unions that lack real power on account of their form of organization.

Capital organized and powerful; labor eighty per cent unorganized and correspondingly weak. Is labor's situation hopeless? By no means hopeless! The I. W. W. offers a plan of organization through which the workers can gain the power they now lack.

Read the preamble of the I. W. W. on the cover page of this issue. If you cannot get in touch with an organizer or delegate write to the Pioneer for information.

**HAND IN HAND.**—Organization and education go hand in hand. When working among the unorganized it is necessary to show the workers the quality of the organization we wish them to join. That in itself is part of the general scheme of education. When the particular worker is convinced that the I. W. W. offers him a plan of organization that will enable him, together with his co-workers, to better conditions on the job and increase his wages, he has at least started on his own education. But giving him a copy of the constitution and by-laws and expecting that to be sufficient to keep him in line as a class-conscious member of the organization, is a shortsighted policy.

What the new member needs is encouragement to continue his education along the lines of the class struggle. It is often impossible for the organizer or delegate who makes out the card to do more than hand out a few papers or leaflets and it is often the case that months pass before this recruit sees another copy of an I. W. W. paper. True, he is given the address of the main office of his industrial union and that of the general office, but 95% of the new members do not, for various reasons, write in to these offices to ask for papers or information.

The work of education should not stop when the worker becomes a member of the organization. If he will not take the first step the organization should. The names and addresses of new members should be listed at both the main office of the industrial union and at the general office of the I. W. W. at least once a month, and as soon as possible after he has joined, a communication should be sent to the new member encouraging him to take an interest in the periodicals and literature of the I. W. W. and outlining for him a course of reading that will go far to give him the education on economics that every worker should have.

Education and organization go hand in hand. Education through the holding of meetings and the distribution of literature is often followed by successful organization; but education should not stop there.

**THE COAL STRIKE.**—The English coal miners are still on strike. In fact, the strike is just now in its preliminary stages, as is indicated by the statements being put out by the strikers, the owners of the coal mines and the British government. No attempt is being to work the mines as the solidarity of the striking miners is absolute. The effort to starve them into submission will fail.

Was the general strike a failure? To the extent that the strikers permitted spineless, fearful, yellow leaders to represent them and gave them power to call the strike on or off, it was a failure. But the solidarity shown by the rank and file of the British workers who took part in the general strike, has proven to the world that these same workers can be depended upon not only

to carry through a general strike, but also to display the same solidarity when they are called upon to take over the industries for the real producers.

**PASSAIC.**—"Something New in strikes" was the characterization of the Passaic strike by one of its organizers in her speech at a meeting recently held in Chicago.

The strike is the old story of workers driven to desperation by the greed of employers. Unorganized, working long hours, driven to ever greater efforts in their daily grind, subjected to one cut after the other in their already miserably inadequate pay, to strike was their only chance for relief.

But the unconquerable spirit these child, women and men strikers have shown is something new and inspiring in the labor movement. Their courage and determination have made useless the fierce attacks upon them by police and company thugs; not only made these brutalities useless, but turned them to the advantage of the strikers themselves until now they have the hearty support of all other union men and women throughout the country.

That a decisive victory may be theirs is the wish of all workers who are true to their class.

## American History in an Economic Light

(Continued from Page 40)

coercion and intimidation to enforce support of the revolution the promoters of it had to hire thousands of European mercenaries to make up a sufficient army to carry the war to a successful conclusion.

George Washington, who owned slaves both black and white, was an aristocrat by birth and looked with contempt upon the poorly-clad and uncouth soldiers of the Continental army when he reviewed them. Patrick Henry, who said "Give me liberty or give me death," owned chattel slaves and wanted the liberty to trade and grow wealthier by exploiting his slaves.

The constitutional convention was a conspiracy of the land-owning and manufacturing classes to organize a government that would enable them to develop and perpetuate their system of exploitation. The workers were not represented. All of the delegates were of the propertied class or were their representatives. They sat behind locked doors and none were allowed to take notes of the proceedings without special permission from that body. All through the convention the question of how to prevent the workers from having any influence in government kept coming up. They could not afford to endanger their power.

That the constitution met with the approval of the propertied classes might well be illustrated by General Henry Knox from New York in a letter to his friend, Livingstone: "The commercial part of the state, to which are added the men of considerable property, the clergy, the lawyers, including all of the officers of the late army, and also the neighborhood of the great towns" were pleased with it.

The establishing of the Supreme Court was one of the well thought-out plans of the aristocracy to keep themselves and their heirs in power. The court may declare laws null and void or interpret them to please the class that appoints them to their lifetime job. A reading of Gustavus Meyers' "History of the Supreme Court" will give one an interesting insight to the workings of an institution that has well served the purpose for which it was created.

The late Teapot Dome exposure has revealed a little of the official crookedness that has been going on in this country from the inception of this glorious system of government. The game is not new. Alexander Hamilton, an influential delegate to the constitutional convention, like many others of the fathers of "our" country would probably be a fit companion for Harry M. Daugherty, were he alive today.

When the workers of America learn what kind of a game has been played against them, and of how they have been deceived by a dynasty of wealth-grabbing crooks, what will they do? Let us hope that they will organize to separate the robbers from their spoils.

### NO CHANCE

Brother: "Run upstairs and get my watch."
Madge: "Oh, wait awhile and it'll run down."
Brother: "No, it won't. Ours is a winding staircase."

# WOBBLES

Mrs. G. VanBlodiwad, young matron of America's blue-blooded circle, registers pained nausea at mention of the Passaic strike. "Indeed, my dear, those horrid bolsheviks caused all the trouble. The workers were quite happy and contented. Why, I am told some of them even have curtains to their windows."

The invasion of foreign armies you can always resist; the invasion of new ideas—never.—**Victor Hugo.**

## SO DO WE

The lecturer on health had finished his discourse and invited his audience to ask any questions they chose concerning points that might seem to need clearing up, when a tired looking man inquired anxiously: "Professor, what do you do when you can't sleep at night?"

"I usually stay awake, although, of course, everybody should feel at liberty to do otherwise. Are there any other questions?"

---

## WORMY BUSINESS

"She answered the ad of an American 'obesity specialist' who averred that a capsule a day keeps the fat away. She sent ten dollars for which she received a box of twenty-one capsules, one capsule to be swallowed before each meal. After she had taken half a dozen of them she happened to leave one of the capsules on the table, and an hour or so later she noticed it still there, but this time the rays from the mid-afternoon sun shone upon it. She looked at the capsule idly, and looking, she imagined she saw it move. She rubbed her eyes and looked again. It DID move. She opened the capsule and found, in the middle of a powdered compound, a very active little worm. Then she went after the other capsules and found a worm in each of them, all in different stages of growth. Investigation by an expert proved that each of these worms was a young intestinal parasite."

Well, business is business, even if it is a bit wormy. If the lady does not like that cure for obesity, she can try some other cure. Every child knows this is the most glorious country in the world.

## PREAMBLE OF THE INDUSTRIAL WORKERS OF THE WORLD

The working class and the employing class have nothing in common. There can he no peace so long as hunger and want are found among millions of working people and the few, who make up the employing class, have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system.

We find that the centering of the management of industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to he pitted against another set of workers in the same industry, therehy helping defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the helief that the working class have interests in common with their employers.

These conditions can be changed and the interest of the working class upheld only hy an organization formed in such a way that all its members in any one industry, or in all industries if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our hanner the revolutionary watchword, "Aholition of the wage system."

It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, hut also to carry on production when capitalism shall have been overthrown. By organizing industrially we are forming the structure of the new society within the shell of the old.

# The Stomach and the Undertaker

By PASQUALE RUSSO

**THE FOOD BARON'S PAUNCH GAINS WEIGHT WHILE YOURS IS PREPARED FOR EMBALMING**

THE ALARM clock announces the morning by its ringing; you must get up and away to work. You hesitate in leaving the warm and comfortable bed, and in doing so you feel yourself to be sick as usual; your stomach troubles you. But since you cannot well afford to lose a day's pay, you leave the bed and wash yourself, after which you take a glass of water containing a spoonful of bicarbonate of soda. You do this in the belief that it will relieve the acidity of your stomach. This however, is only an illusion. Temporarily the soda will relieve you, but in a short while you will again be tortured by the acidity of the stomach.

Going to some nearby restaurant you have your breakfast, and from there proceed to work. During the noon hour you eat a beef stew or some hash, and it is now that you discover, much to your own surprise that the bicarbonate of soda has been ineffective. In spite of this experience, you feel the need for relief, so the bicarbonate of soda is once more resorted to, continuing from day to day, from week to week and from month to month, until you are compelled to call a doctor, who, by the way, only adds to your misery. In due course, Death comes to relieve the misery, and the undertaker carts away your carcass.

The above mentioned in-

(Continued on next page.)

RESTAURANT FRUIT
What The Food Trust Makes of Man In An Age of Capitalism

Here you see a figure representing the hotel owner, the restaurant owner, the undertaker, or the coffin maker—what you like, so long as you imagine him connected with the business of purveying adulterated and unwholesome food, and carting away the victims of food poisoning. He celebrates jovially—he doesn't care what harm he does so long as he can get the cash. The hired assassin of old at least took some dangers along with his bribe—the modern gunman at least is sometimes placed on trial, like Durkin. But the killer who confines his activities within the frame of modern capitalism is not only free and unhampered in those activities—he is also one of our leading citizens. There is only one way to end the slaughter, and that is to overthrow capitalism. Let food workers, especially, remove the stain from their profession by joining Foodstuff Workers' Industrial Union No. 460, of the I. W. W.

cidents are not imaginery, but are real events that go to make up a daily trágedy taking place in all parts of United States. Thousands of men, women and children have been borne through the gate of the cemetery owing to improper regard for the stomach. They have paid the penalty of not asking the question, "Why am I sick?" The great majority, in Chicago, and elswhere for that matter, do not trouble themselves about the stomach's welfare. Why is this? Because in most instances they are mis-informed. They concern themselves about politics, baseball and jazz, but give no thought to their illness. This is a species of folly and, in a measure, explains why thousands are forced, prematurely, to silent rest in the cemetery.

Workingmen and workingwomen, not at all ready to die; having no particular desire to increase the revenues of the undertaker, should take a moment and ask themselves the question: "Why this disorder with my stomach?"

### Sad News

Statistics, alarming indeed, demonstrate that thousands of persons are killed each year in the United States by reckless drivers of automobiles. Other thousands in violating the Volstead act, commit a sort of unpremeditated suicide. Adding these two items the numbers are insignificant as compared with the deaths due to unwholesome and adulterated foods. No statistician yet has submitted a list of the victims of the greedy food barons. For a dirty dollar the boot-legger sells a poisonous concoction; he has no regard for the health of the public, and the same can be said with equal truth about another class of criminals, i. e., the restaurant owners. In order to enrich themselves, they deliberately supply large sections of the population with unwholesome food. They have no regard for the health of the public, and yet they pose as respectable citizens of the commonwealth. This greed, especially prevalent among hotel and restaurant owners, accounts, in large measure, for the loss of life of thousands.

Most persons condemn Druggan, Lake and the Gennas for selling illicit liquors to the public, and it is well that this is so, but there should also be some effective protest made about another class of criminals—those who deliberately sell unwholesome food to the public. The public is silent regarding this matter, in the main because the greater number of persons are kept in ignorance about the conditions maintained in every restaurant. The fact of the matter is that we are in a position to state positively that Ernest Stevens of the Hotel LaSalle, H. C. Moir of the Morrison Hotel, Joseph Byfield of the Sherman House, and hundreds of other hotel and restaurant owners are as guilty of selling unwholesome food as are the Lakes and Gennas of selling illicit liquors. This charge is not based on some fantastic dream, but on facts, obtainable by a few moments' investigation.

### Booze and Food

A thirsty man, little considering the risk, accepts a drink from a bootlegger. Little does he think of the poison with which he floods the stomach. The liquor satisfies a craving. The same reasoning may be applied to man when hungry. He goes to a restaurant and orders from the bill-of-fare to satisfy his hunger, little realizing that he exposes his stomach to danger, in so doing. He eats, little thinking of how the food is prepared; the sanitation of the kitchen he never questions, and the condition of the cooking vessels never enters his mind. In a sense, no blame should fall on him; he is a victim of a system based on profit. The man who eats in a restaurant little dreams that in the kitchen is a food bootlegger, called "cook" or "chef." The cook or chef receives instructions from manager or owner, and it is this latter who is *responsible* for the insanitary conditions prevailing in kitchens, and for the unwholesome food served to the public.

### The Foodlegger

In very nearly every case the proprietor of a restaurant is no more concerned about the health of his patrons than is the average boot-legger. He is in business, not for the purpose of conserving the health of the public or his patrons, but to accumulate money, and as a consequence it is no concern of his how many persons are brought to death annually by unwholesome food. True, there was a time (Cont'd on Page 30)

# REVOLT

(By HENRY GEORGE WEISS)

Go tell the courts of Master-kind the blessed day is here
When men shall voice their wrongs aloud, nor cringe from them
in fear.
Go blazon it throughout the land that Freedom is awake
To strive, to struggle and achieve, to dominate and take
The social ownership away from those who would oppress
Their fellow humans with a caste that denies them redress
For all the wrongs they ever knew, for all the wrongs they know,
For all the hunger, all the want, the misery and woe.

Go shriek it from the tall house-tops, go scream it in the streets,
Go plaster edicts on the walls until the message greets
The eyes of tyrants everywhere that Freedom is awake
And saying to its chosen ones, Arise, my children, take
The stored-up plenty that is yours, the produce of your toil
For which you worked in factory, mine, and tilled the fruitful
soil,
For which you harvested the seas, for which you sailed the main,
—The wealth the few have robbed you of, and which you take
again!

Go tell the courts of Master-kind that Freedom is awake,
And saying to its enslaved ones, ALL THINGS ARE YOURS—
PARTAKE!

# In Memory of Frank Little

By VIOLA GILBERT SNELL

"But in all the lurid history of Butte no event ever occured so startling, so savage, of such sinister, evil portent as the inconceivably vicious murder of Frank Little, a cripple, last Wednesday morning.

"Every decent-thinking man, woman and child in this community was stricken with horror when the news of this frightful crime was published. . .

"The realization was forced home, and then came the thought, 'What kind of brutes, what fiends in human form, could perpetrate such an outrage?' . . . .

"The papers endeavored to magnify every utterance of this man to the proportions of treason yet, most of the things he said are, and for many months have been, heard wherever men congregate and discuss current events. Be that as it may, the grewsome fact remains that Frank Little was foully murdered—and his murderers are still at large.

"But the working people of this district are aroused—and every one in Butte now realizes it. Nearly seven thousand people—to be exact, 6,800—followed Frank Little's body to its last resting place.'—SOLIDARITY, August 18,1917.

The plains you loved lie parched in the sun,
The streets you trampled are sweltering in the heat,
The fertile fields are arid with the drought,
The forests thick with smoldering fires and smoke.

Traitor and demagogue,
Wanton breeder of discontent—
That is what they call you—
Those cowards, who condemn sabotage
But hide themselves
Not only behind masks and cloaks
But behind all the armored positions
Of property and prejudice and the law.

Staunch friend and comrade,
Soldier of solidarity—
Like some bitter magic
The tale of your tragic death
Has spread throughout the land,
And from a thousand minds
Has torn the last shreds of doubt
Concerning Might and Right.

Young and virile and strong—
Like grim sentinels they stand
Awaiting each opportunity
To break another
Of slavery's chains
For WHATEVER stroke is needed
They are preparing.
So shall you be avenged.

Within our hearts is smouldering a heat
Fiercer than that which parches fields and plains;
Your memory, like a torch, shall light the flames
Of Revolution. We shall not forget.

# Butte Employers in Secret Conclave

## —PLUS A STENOGRAPHER!—

By A. S. EMBREE

The Picture To The Left Is That of The Car Barns In Butte, The Strike Spread To The Street Car System, And The Manager of The Company Took Part In The Plot To Bring Martial Law.

EARLY IN the month of February, 1919, notices were posted on the bulletin boards at the mines of the Anaconda Copper Mining Co. of Butte, and also at the mines owned by W. A. Clark and the other independent companies, announcing that, starting with that day, wages would be reduced one dollar a day.

There had been rumors of this cut for some weeks past. The Anaconda Standard and the Butte Post (one a democrat paper and the other a republican, both owned by A. C. M.) and the Butte Miner (owned by Clark) had been filled with propaganda for some time. This propaganda was mainly along the line that the cost of food and clothing was too high and that prices must be readjusted. Reports of committees appointed to examine the cause for high retail prices were published and in a general way the idea was conveyed that this investigation would result in a lowering of retail prices of food, clothing and rent all along the line. At the same time it was pointed out that the copper mining companies, with a surplus of copper on their hands amounting to more than one million pounds, would have to take some steps to curtail production or decrease its cost.

The great lesson of the 1917 strike and the short strike of September, 1918, was that in order to make a strike of miners successful it was necessary to have the full cooperation of the members of the A. F. of L. unions who were working on the hill. There were about sixteen of these unions, those in the key positions being the engineers and electricians. The former included hoistmen and pumpmen organized in Moyer's Intl. Union of Mine, Mill and Smelter Workers; the latter were in the regular A. F. of L. union of electricians. As the hoists were run by electrical power, the electricians employed by the Montana Power Co. (a subsidiary of the A. C. M.) occupied a strategic position. In 1917 the electricians had struck with the miners with the exception of a group in the powerhouses, but the engineers stubbornly refused to come out.

In The Upper Floor Of This Building Is The Real Government of Montana, Offices of The Anaconda.

Following the great strike of 1917 which had been carried on by an independent union of the miners and the I. W. W., the miners still held a strong organization which had passed under the leadership of the Metal Mine Workers Industrial Union of the I. W. W. Profiting by the experience gained in their last strikes, late in 1918 the miners sought to bring about a close understanding with the rank and file of the A. F. of L. unions. The miners at this time were also faced with another problem: soldiers were

returning from the front in large numbers and were being put to work in the mines. Many of them had been members of the I. W. W., but in order to reach all of these returning soldiers, and at the same time get co-operation desired with members of the craft unions, it was deemed advisable to form a council of workers, patterned as was natural at that time, after the Soldiers, Sailors and Workers Councils of Russia.

Accordingly a Soldiers and Workers Council was started late in 1918, composed of delegates from the I. W. W. and from many of the unions of the A. F. of L., a few of the latter representing their unions officially but most of them sent by radical groups of their unions. Meetings of returned soldiers were held and delegates elected to represent them. By the first of February the Council had acquired considerable strength

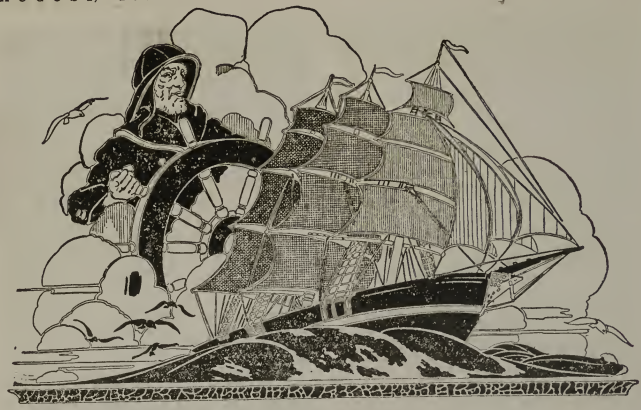
The propaganda being broadcast by the company papers did not escape the notice of the miners. The possibility of being forced to face a cut in wages was discussed both in the I. W. W. meetings and the Soldiers and Workers Council. But as there was no direct intimation of when the cut would be made, no action had been taken.

On the morning of Feb. 7th, then, the posting of the notices announcing the wage cut took the miners somewhat by surprise. At all the mines there was hot discussion in the change rooms and the sentiment of the miners favored the calling of a mass meeting to plan for action. When the miners came off the hill that evening, hundreds of them flocked to the I. W. W. hall on Wyoming St. and arrangements were made for mass meetings to be held the afternoon and evening of the following day.

But next morning, at the Elm Orlu mine, owned by Clark, while the miners were talking it over in the change room, a number of them expressed themselves decidedly in favor of immediate action.

Several of the miners went out and spoke to the group gathered around the shaft waiting for the whistle and a vote was taken on the spot. The vote was all one way and the entire day shift started down the hill. They had not gone far when they decided to go over to the Black Rock mine where a large crew was employed and they succeeded in reaching that mine before all the day shift was lowered. Another meeting was held and the crew of the Black Rock joined the strike, many of those who had already been lowered coming up on the next cage after they heard the news.

These two bodies of men, numbering almost a thousand, came marching down the hill, singing their class songs, and paraded into the I. W. W. hall for a meeting.



The mass meetings took place, the strike was voted and demands were formulated. Then the strike committee elected was instructed to co-operate fully with the Soldiers and Workers Council with the idea of making the strike general. Four delegates were elected to represent the I. W. W. on the Council during the strike. The Butte Daily Bulletin, owned by the labor unions of Butte, supported the Council and the strike.

A meeting of the Council was called immediately and took up the work. During the first few days of the strike picket lines were maintained and it was the policy of many of the craft unionists to go up the hill until they reached the picket line and then turn back. The Council issued calls to all the craft unions to hold meetings and vote to join the strike. They worked especially on the members of the engineers, electricians and street carmen. The third day of the strike a mass of pickets went to the car barns at an early hour and turned back the first street cars being brought out. The carmen then held a meeting in the barn and decided not to run the street cars until after their regular business meeting. The electricians met and decided not to strike formally but as individuals; nearly all of them came off the jobs with the exception of those in the employ of the Montana Power Co. About half the members of the engineers union quit work as individuals. In addition workers employed by the water company voted to strike and pulled their men off the jobs; the iron foundry workers struck; the Butte Workingmen's Union joined the strike; many of the teamsters came out; the newsboys declared a strike on the Butte Post; the machinists, the blacksmiths, the steamfitters, came off their jobs either completely or for the greater part of their forces. The bakery workers, the butchers, the cooks and waiters, the clerks and many other of the town workers sent their delegates to the council and offered to cease work when called upon. The Domestic Union of the I. W. W., against the orders of the Council, called their members off the job and tied up all the boarding houses, many of the restaurants and deprived the hotels of the services of chambermaids. Many of the A. F. of L. cooks and waiters walked out of the restaurants when the dishwashers (belonging to the I. W. W.) struck. They consented to return to work the following day when a committee from the Council pointed out to them that it was not advisable to close the restaurants until arrangements could be made to feed the strikers.

This was the situation when, about the fourth day of the strike a company of soldiers came to Butte, sent in by orders from Washington, *Major Jones* and *Major Halloran* in command.

At this point in the course of the strike a meeting of mine managers and business men was called by a group who styled themselves the County Council of Defence, Labor and Financial Interests. The meeting was not advertised and although the Workers Council heard of it, they did not get the details. Years later the stenographic report of this meeting came into the possession of a radical in Butte, and we are able to give now excerpts from the speeches made by most of the parties who were at the meeting.

# The Port of Missing Ships

—By T. P. SULLIVAN—

MUCH HAS been heard of the Port of Missing Ships, which of course denotes the resting place of ships that have during a voyage dropped out of sight never to be heard of again.

Many are the mysteries of the deep. Many ships in days gone by have sailed out of ports of Europe bound for the western world and new lands to conquer and many of them have never returned. On some of these ships the crews mutinied, killed the officers, or put them adrift in open boats. Some of them survived and reached their homelands to tell the tale, others were never heard from and the fate of the ships has thus remained a mystery. In the vernacular of the sea they are in the Port of "Missing Ships," the place consigned to ships that are unheard from.

During the days of the Vikings and other daring seafarers, the crews in many instances mutinied against the commanders of the voyages and defied the royal houses of Europe under whose name and by the grace of whose power the expeditions had set out to find and conquer new worlds in the name of some reigning sovereign, and many are the tales brought back by these hardy and daring men of the fabulous wealth discovered during the course of the voyage.

The voyages of the Vikings, Columbus, Magellan and Cortez were all fraught with the possibilities of disaster and mutiny and many is the member of the crews of these expeditions that have been forced to "walk the plank" because he could no longer stand the hardships perpetrated upon him by a commander whose only interest was to conquer new lands in the name of his sovereign to gain favor with the royal court. In some instances instead of individual mutiny, a spontaneous rebellion took place and the crews took possession of the ships and entered into the piracy and marauding field, seizing

the other ships and confiscating the wealth of their expeditions or capturing ships trading between some colonial possession and the homeland.

The seamen who embarked on these voyages were the hardiest of types and in many instances neither knew nor cared what dangers beset them, but through love of adventure and to fathom the mysteries that lay beyond the horizon they set out—knowing not whether they would ever return. This phase of daring is significant because in those days many thought that the world was flat and if a ship sailed far enough it would fall off the earth and into some deep abyss, probably into the River Styx and enter a land where the demons reigned supreme and where scorching and everlasting fire awaited them as a result of their daring.

Many times during the course of the voyage, when the food supply ran low and rations were cut to a minimum the men were forced to eat the leather chafing gear from the masts and rigging in order to sustain life. The superstitions that entered their minds drove many of them into frenzied fevers of terror and it was indeed difficult to hold such expeditions under lawful command and many mutinies occurred.

The officers and commanders during these voyages drove the men for all they could get out of them and an objection against the lawful command was summarily dealt with.

It was indeed gratifying to the members of these expeditions when land was sighted and in most instances it was strange land beset with the dangers of cannibalistic savages and unfriendly tribes who instinctively knew that the white man was coming on a voyage that meant no good to them. Even after being conquered and subjugated to the will of the royal sponsor of the voyage the natives revolted against the rule of the white men and many battles ensued in which the crews of these ships were swept off like flies or else were forced to take to sea, to escape the wrath of the savage tribesmen.

Conditions such as these drove the men to a fit of despondency but after landing at some of the friendly islands where the natives were more tolerant the seamen's spirits were buoyed up and they became lighthearted and filled with hope. During the stay at these islands they found the natives Nature loving peoples, whom Nature itself had endowed with all the necessities of life, and labor outside that which was absolutely necessary was taboo and unheard of. Up to this time the greed and avidity of the white man was unknown to these tribes and the crews of the expedition envied the natives for their carefree existence and thus was the seed of rebellion sown amongst the crew, who rightfully deduced the conclusion that nothing but hardship and endless toil and danger faced them on their voyage and the return to the homeland, while on the other hand here was a people who neither toiled nor spun and were blessed with the bounties of nature, more than sufficient to satisfy their every caprice, whim and desire.

To these hardy and daring seamen, the life of the tribesmen appealed and it was with difficulty that those in command were able to keep the discipline which was necessary to maitain the parts of the expedition in contact and control. The ships of the expedition stayed at these islands for many months replenishing their food supplies and taking on water for the return voyage or for further conquest.

Hatchets and other domestic necessities of civilized life were introduced to the tribes and accepted in exchange for jewels and charms which were of immense value in the civilized countries of Europe. The natives revered the clock and hearing it tick the seconds away thought it was imbued or controlled by some spirit whose wrath they feared and in many instances fled in a panic into the woods to escape from the power which moved the hands of the clock and continually 'spoke' to the natives in a language that they were unfamiliar with and which sometimes filled them with awe and again with terror.

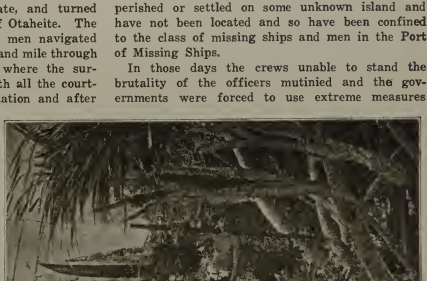
Sailors Have Too Much of This Kind of Life During Winter Storms

The seamen knew that here was a paradise, where they could live without the necessity of toil and exist economically secure in the bounties of nature which they observed on all sides and on the other hand, on shipboard, they faced a life of gruesome toil with misery and danger everywhere.

This impression in the minds of the seamen brought rebellion nearer still and in many cases such as the mutiny of H. M. S. Bounty in 1789, the seamen could

The Travelling Bourgeois Guzzle at Tables the Sailors See Perhaps But Newer Use.

no longer stand the hardships of the return voyage. The crew of the Bounty put Commander Bligh and eighteen others in an open boat in the South Pacific and left them to their fate, and turned the ships head back to the island of Otaheite. The commander and the other eighteen men navigated the thirty-five foot boat four thousand mile through treacherous seas to Coupang Bay where the survivors landed and were received with all the courtesy and consideration of the population and after sufficient recuperation they were placed aboard a Dutch ship bound for the Isle of Wight and back home to Britain to tell the world of this remarkable feat and test of endurance coupled with an undying will to survive their fate. It is significant that despite the hardships and misery of these eighteen men, all survived the four thousand mile trip but six of the men died as a result of the exposure while on their return to England on the Dutch ship. On the arrival of the survivors in England the king immediately dispatched H. M. S. Pandora to scour the seas in search of the mutineers and to bring them back to stand trial and face death at the hands of a court martial.



Some of the mutineer stayed at the island of Otaheite and the rest, fearing that the story would be heard with the result that the government would send out ships to search for them, refitted the ship and sailed for parts unknown taking with them fifteen native Otaheiteans and eighteen native women for the purpose of establishing a colony on some out of the way island where they would be free from molestation and harm. These women of Otaheite were beautiful and their skin was of olive texture; they were sympathetic by nature and needless to say each of the crew of the "Bounty" had has lady friend in the tribe.

H. M. S. Pandora arrived at Otaheite and took the mutineers who remained there back to England to stand trial. The ship on its return trip to England foundered and many of the prisoners went down with the ship, but about twelve survived and were court martialled and all but four put to death by the sentence of the court.

Those who did not stay at the island of Otaheite but set out on their own, arrived at an island now known as Pitcairn's Island in the South Pacific, where they lived for about fifty years, unheard of by the civilized world. Internal conflict between the Otaheiteans and the mutineers over the women and other causes resulted in the death of many of the mutineers, until a British ship arrived and found but one of the mutineers still surviving although the island and colony founded by them had a population of 123 people who were their descendents.

Many is the mutiny that has taken place similar to this one of H. M. S. Bounty in which the crews have never been heard from and either perished or settled on some unknown island and have not been located and so have been confined to the class of missing ships and men in the Port of Missing Ships.

In those days the crews unable to stand the brutality of the officers mutinied and the governments were forced to use extreme measures

So the Slave of the Wave Longs For This Primitive Comfort and Ease

SLEEPING QUARTERS ON SHIPBOARD IN THE TROPICS —VERY HOT

to hold the men in check and woe betide the mutinous crew who were captured on the high seas by a man of war of any nation. If captured by an English ship they were courtmartialed and sentenced to death, by other nationalities the punishment was more severe and frightful and served as an example to seamen not to mutiny under any circumstances.

For the suppression of piracy, the Portuguese, in their early intercourse with India, had a summary punishment, and accompanied it with a terrible example, to deter others from the commission of this crime or even of mutiny. Whenever they took a pirate ship or a ship that had mutinied, they instantly hanged every man, carried away the sails, rudder, and everything that was valuable in the ship and left her to be buffeted about by the winds and the waves, with the carcasses of the pirates or mutineers dangling from the yards, a horrid object of terror to all who might chance to fall in with her. And other countries had other penalties; even to this day a spice of these laws still remains in the maritime code of some of the European nations.

Piracy and mutiny were considered the most abhorrent of crimes in those days and it was even difficult for a commander of a vessel to explain to a courtmartial that his ship had been wrecked or foundered in a storm, the government practically always assuming a mutiny or an act of piracy; this was especially true when the commander of a lost ship and the crew were picked up on some island by a ship sent out to search for them and taken back to stand trial. The master was held entirely responsible for the fate of the ship, unlike the practice today when under the maritime code of most nations, including the United States, a mishap can be attributed to the hand of God and not to any negligence on the part of the master of the ship and its crew. Thus, in those days, if the pilot through ignorance or negligence lost the vessel, he was required to make full satisfaction to the merchant for the vessel or any damage sustained during a voyage, or lose his head as an alternative. In the case of wrecks, where the lord of the coast should be found in league with the pilots, and there was evidence that they ran the ship on rocks to get salvage, the said lord, the salvers, and all concerned were declared to be accursed and excommunicated, and punished as thieves and robbers; and the pilot was condemned to be hanged on a high gibbet, which was to abide and remain to succeeding ages on the place where erected, as a visible caution to pilots of other ships sailing thereby. Nor was the fate of the lord of the coast less severe; his property was to be confiscated and himself fastened to a post in the midst of his own mansion, which, being fired at the four corners, was all to be burned together; the wall of the mansion demolished and the spot on which it stood to be converted into a market place for the sale of hogs and swine only, to all posterity.

These and many other usages of barbarity were transferred into the meritime code which formed the *jus mercatorium* for a long period, and in which great care was taken for the security of ships against their crews. An act less than mutiny was in many instances punished by excruciatingly torturing the members of the crew who had a hand in it. According to a book, a copy of which is at present in the library of the Admiralty in England and known as the "The Black Book of the Admiralty" the following clauses denote the punishments for certain acts that were deemed detrimental to the ship or its owner:

*Whoever draws a sword upon the master of a vessel, or willfully falsifies the compass, shall have his right hand nailed to the mast.*

*Whoever behaves riotously shall be punished by being keel hauled.*

*Whoever is guilty of rebellion against the lawful command shall be thrown overboard.* (made to "walk the plank.")

As the western world and all large territories came under civilized influence and became inhabited by the white race and means of communication

COOL, COMFORTABLE NATIVE CLUBHOUSE ON SOUTH SEA ISLAND

Above, Dutch Ships of the Seventeenth Century; To the Left, Spanish Galleon of the Sixteenth Century. These Vessels, With English, French and Portuguese Ships of Similar Make, Carried the Adventurers.

were more readily established with the isolated parts of the world, fear became a thing of the past to the seamen and we see many acts of heroism today in the rescues of ships and crews, without any thought on the part of the rescuers of their own personal safety.

As the world came under civilized influence and tolerance became more general through the struggle of the oppressed to right the wrongs that had been inflicated upon them, we find that many of these extreme laws and punishments in relation to the sea have not been enforced, that is the corporal punishment or physical tortures connected with them, but prison terms are still a reality.

In the days of Bligh, Magellan and others it was not possible to desert a ship without facing a penalty of death for desertion and desertion was next to impossible without the aid of the rest of the crew and so necessarily a mutiny was the only possible way in which a crew could escape the misery and hardships perpetrated upon them and they were always in danger of ships searching for them as soon as the mutiny became known so that it was a matter of course for them to take the ship in order to be able to flee as danger of their being captured approached.

As civilization advanced into the recesses of the strange lands, they became more populated and settled and it was not very difficult to flee from

Piracy and ship stealing are now capitalised. It is one more case of little producers developing an industry, and then having the gigantic trust take over the works. Ships are no longer stolen by groups of mutineers, on the job. The capitalist class, through its executive committee, the national government, attends to that. Here to the right you see a photograph of the largest steamer afloat, now called the "Leviathan." It was built in Germany, and for a short time sailed the seas under the name, "Vaterland." When the World War broke loose (and this war was merely a duel between two gangs of modern pirates, ordinarily called "capitalists"), the "Vaterland" formed part of the loot. She was stolen by the shipping trust of America, and her sister ship, the "Imperator," was grabbed off by the British shipping trust, at that time in a criminal conspiracy with the American outfit.

a ship or desert in some land where the climate and natural resources and bounties were sufficient to satisfy the human appetite and desire of the seamen and to open a new world to them so that they could live an individual existence without fear of reproach from the hand of the law or the moral code laid down by society for them before they were born. The seaman is a natural rebel against the conventions of society and the wanderlust is greater in him the more he travels; he refuses to give in to those who attempt to make him conform with the laws and practices of civilized morals and ethics. He is imbued with a desire to find a paradise, a heaven on earth. He has visited many strange lands and sees in each of them some of the things he would like to enjoy and live for and so he deserts a ship in any part of the world that appeals to him and leads a carefree and contented existence away from the world of hustle and bustle and commercialism, which by his very nature he rebels against, and by this rebellion he becomes a part of the vanguard of a new society and a better world where more equality reigns and where he produces for himself and not for profit to inflate the bank account of some employer as he would do under the present system of production.

He leaves the ship in some strange land and leads an individual existence, as colorful as can be found, and which is the theme of many a playwright, who refers to the existence of the "beach comber" in some tropical land unperturbed by the call of the boatswain at 8 bells and with never a worry entering his mind as nature has supplied him with all the things that are necessary and man's law does not enter into his existence. It serves as an escape mechanism from a realistic world and he is satisfied as the rest of the world rolls by.

The spirit of the Norsemen and other daring explorers still courses through the veins of some of the seamen, especially that type that has organized to better conditions aboard the ships and thereby has incurred the enmity of the shipowners. Like the rebels of old he no longer will put up with the abominable conditions that exist and he openly shows his defiance to the master and shipowners when they attempt to force hardships upon him or mistreat him as they many times attempt to do. Many acts he commits now at sea are common and nothing is thought of them. In days gone by they were considered mutinous acts. He has raised himself to the same level as the captain and does not fear him and will openly resent any encroachments from that source. It is of this type that the I. W. W. is composed and so they fight for better conditions aboard ships with all the vim and vigor at their command and they have succeeded in bettering conditions and thereby alleviating the hard obnoxious life of the seaman aboard ship.

Once in a while the seamen through solidarity have put up a united front against the encroachments of the shipowners and they have been victorious and have succeeded in bringing the new society a step nearer and as a result the old laws contained in the "Black Book of the Admiralty" are used against them and they are brought into port in chains and sent to prison on frameup charges of mutiny, which only means they were fighting against the encroachments on their life, liberty and the pursuit of happiness, declared in the Declaration of Independence to be their right.

The seamen have tasted of liberty in strange lands and they seek to imbibe of the nectar, the drink of the gods, more freely, the drink of freedom, with equality and justice for all and production for use and not for profit. Such is the aim of the seamen enrolled under the banner of the Marine Transport Workers Industrial Union No. 510 of the Industrial Workers of the World. They are seeking the Port of Missing Ships, which to them means liberty and economic security and the better things of life for the workers who make life possible.

I. W. W. MEMBER OF CREW OF MODERN STEAMER
He Has the Same Will To Be Free that Drove the Vikings and the Mutineers to Heroic Deeds

This is a story of labor and life in California, about the year 1916. That was ten years ago, just before the United States went into the war. Those were the days of preparedness, of the invasion of Mexico, of the crushing of the little farmers, of the biggest real estate coups, of the Mooney case and of strange circuitous attempts at suppression of free speech and persecution of union labor. That was a period of unprecedented scandals in all stages of society, of enormous graft, of intrigue and fanaticism. Among the half sick, religion mad, exploited and exploiting inhabitants of Southern and Central California the characters of this novel make their way—gradually learning, as the reader simultaneously learns, what was back of the scheming of the Edison Co., what caused the great "spiritual revivals," why the towns like Vernon were left to flaunt their purple sins in the face of "chemically pure" metropolises, how the "frame-up" is sometimes circumvented, how workers sometimes win—and the freaks of fate. It will seem to some that this novel, beginning in the sweaty quiet of a dairy ranch, soon develops into both melodrama and burlesque as the hero and his friends and enemies are forced to leave their retirement and plunge into the whirlpool of events. For this the author does not apologize; so far as he can see, life itself is very melodramatic when it is not a roaring farce—especially in California. Anything can happen in California.

# THE TREE OF KNOWLEDGE

(By CARD No. 794514)

## Chapter I.

### A HARD HEARTED EDEN

MARMION JONES swept up, with an artful, quick, snakey motion of his fork, some loose strands of alfalfa that had dropped from the windrow when he doubled it. He placed them on the already formed haycock, the last in the windrow, and stuck his fork in the top of it. Over in the next windrow the Wob was doing the same, and they met as they both started for the ranch house. It was just twelve o'clock, in the hayfield of J. G. Jones, the dairy farmer. The hot California sun beat down out of an absolutely clear, blue, cloudless sky and as they walked over the short, stiff alfalfa stubble, grasshoppers bounced out of their road, and a little dust rose in spots where their toes kicked against dry gopher mounds. There was a gentle sizzling, singing sound all around—myriads of grass insects were joyously celebrating.

The Wob called attention to it, "Happy little buggers, ain't they?" he said. "I like 'em better than a lot of other bugs I've known. No one builds a flop-house for them, full of wire chicken coops called rooms, and, no one furnishes them with their meals free, charging human beings two bits a night for the privilege of being a louse's supper."

"What kind of a noise do those bugs make?" said Marmion, grinning, as he looked at the Wob. He liked to tease the Wob. They were only a little different in size, and the Wob was apparently only a few years older, that is, he might have been twenty-one or two, while Marmion was only "going on eighteen."

"Well," answered the Wob, "I never heard one sing, but they ought to make a noise like that thing buzzing in there." He pointed to the square green painted pump house, where the electric motor whined. Nature in the San Joaquin valley of California is a very prudent goddess, and chary with her gifts. There is not enough water to make alfalfa grow, and the dairy farmers, as well as all fruit and truck ranchers, have to pump the water needed for their land out of the ground. Deep pits are dug, twenty feet, thirty feet, forty feet, yes they keep getting deeper, year after year, as the level of the ground water for which all farmers seek sinks lower and lower. In each of these pits they put a centrifugal pump, connected with an electric motor, drawing water from a bored well below it. The switchboard stands at the head of the pit, in a little "pump house." The water roars mildly and benignly is at spurts in a six- or eight-inch solid stream into the reservoir. It was such a reservoir and such a pump house they were approaching as they talked.

But here another sound cut into the air, a pitiful rattling, scratching, squeaking noise. Marmion was killing a gopher which had been drowned out of an irrigated "check" of land, and had been caught toddling up the bank of the reservoir. When the gopher saw the two humans approaching,

he reared his furry, insignificant bulk on his hind quarters, fanned the air with his absurd little front paws, gritted his teeth and snarled. He was no coward, was he—Ajax defying the lightning had nothing on him when it came to supreme, unterrified audacity. But Marmion killed him as calmly as he had piled the hay, with two or three stamps of his shoe.

The Wob looked back and smiled bitterly, but made no move to interfere or protest. He only said to Marmion, "You're a funny kid. You don't believe in evolution because your Maw can't bear to think of 'Nature Red in Claw and Beak', but you and your Paw are the only parts of it that I ever saw really killing things around here. Jack Rabbit and John Farmer, and the gophers and the farmers' sons fight to the death—all the time—real struggle for the survival of the fittest; if you kill enough of them you raise the hay, and if enough of them live, they eat your alfalfa for you, and eat it too—clear case of struggle for existence, and you struggle—but you won't believe you struggle."

Marmion shrugged his shoulders. He had no time for sentimentality. Farming was a hard, dry, dirty business—full of poverty, no room for pity. Something of the heat and the dirt and the sweat and the menace of failure overpowered him as he burried his face in the can full of cool water caught just where it rushed into the reservoir.

As he drank it, he almost grudged its loss to the alfalfa—water was like liquid gold this year in value. He saw his father's anxious face every time he looked at the pump house—the Mt. Whitney Light and Power Co. charged all the traffic would bear, and he knew the meaning behind the Wob's comparison of this electric pump with the lice in a rooming house. The pump not only sucked the ground water out, but it sucked the bottoms out of the farmers' pockets.

"What beats me again," said the Wob, as they walked on, their thirst a little slaked, towards the white ranch house plain in sight through the cottonwoods around it, "is how you, Kid, with as much education as you have, going to high school these three years now, and starting another one day after tomorrow, can still go on believing in private property and the God of private property. Now here is your old man, poor devil; he thinks he owns this ranch. He hires me to work on it, and I won't work more than eight hours a day. But he works sixteen, and you work eight besides going to school, and neither one of you ever had a moment you could call your own. And neither he nor you will ever have a dollar that is really your own. Either the Mt. Whitney has it, or the grocer has it, or the veterinary has it, or some other bushwah has it, mortgaged to him at least six months before your old man gets his paws on it, and there you are. They're Hoosierin' up on you, Kid, and you and your old man go right on, as if you liked it. He'll die of overwork in a couple of years now, and you'll inherit his job—which is dog-robbing Mother Nature for the bushwah—a kind of flunkying for a two-legged parasite."

"No," said Marmion soberly, "he knows alright. That's why he sends me to high school. He wants me to be a business man. They teach me shorthand and stenography, and bookkeeping. About the time I get through, the farm will go broke, I guess."

"Oh, Hell," answered the Wob, "No, it won't yet. They have to have their dog-robbers. They'll keep the old man running for a little while. But you ain't starting out right to be a parasite. When did old Morgan ever do any shorthand? You ain't going to be a buzzwah, you're going to be a white-collar slave, God help you."

They came into the pleasant warm shade of the cottonwoods just then, and saw Marmion's father, bent and gray before his years, washing his wrinkled red neck at the pump. They washed too, and drank again—you can't get enough to drink in these hot haying days in the San Joaquin—and then they went into the house. The table was loaded—the farmers do not starve, whatever their worries. There was roundsteak and roast pork and potatoes, and rice and red beans. There was "pickellilly" and preserved fruit—regular California farmers' fare. There were no green vegetables. Ranchers don't eat them. They raise such things for the market. Jones thought lettuce and other similar "frills" filled up your stomach and didn't give you any strength. But there was milk and butter and buttermilk. After all, Marmion's father ran a dairy ranch. And somehow or other, in spite of his hatred of new-fangled notions, common to all farmers, everywhere, the new idea that milk and butter were good for the health didn't seem quite so strange to him as it did to other farmers—the neighbor next door who had a truck patch and raised watermelons, for instance. That neighbor thought buying butter was a wicked extravagance, and always had oleo on his table. There was bad feeling between them on that point.

Marmion's father finished a short grace. Marmion's mother sat at the table during the grace, fervently following the stilted, archaic Bible language with her withered lips. Perhaps she liked it especially because it was so different from uninteresting every day talk. She was not very old, not twice Marmion's age, and she had a romantic streak in her, surely, one time at least, as witness the name she gave her son. Romance, and love of adventure, however, if they persisted in her now, were degenerated into pietism and spiritual strife. She was dried out; she was thin, and lank, and her face was blistered from the oak wood fire over which she cooked. Her religion, however, caused her to bear her cross well, without complaint. Indeed, she seemed to receive some pleasure from the very weariness of her labors; certainly she

never asked her husband to buy her any of the new kitchen implements that mail order catalogues urged upon the countryside.

When the grace was finished she went back to her stove. The biscuits must not burn. Thereafter during their meal she divided her time between the stove and the doorway, between kitchen and dining room, interrupting the vigorous conversation of the men folks only to keep her husband from swearing. There was always some danger that old J. G. Jones might take the name of the Lord in vain when he got on the subject of oleomargarine. There was now some bill or other up before Congress to make it no longer obligatory on the manufacturers of margarine to label their product "artificial butter," and if it passed, J. G. foresaw that it would ruin the dairy business.

The Wob grinned familiarly, and took an easy share in the conversation. Frank Silva, the hired Portuguese milker, grinned too, in contempt, and did not talk. He didn't know what it was all about, but he didn't care. He wanted just a few more weeks until he had enough money saved to "taka-da-cows-on-shares" and be an independent farmer too. He had been "independent" three times before, and each time somehow he lost his cows, and had to go back to wage labor. But he had all the optimism of dense ignorance. The Wob used to argue with him at times in the bunkhouse, until he found out from a chance remark of Silva's that his only impression on the milker was to produce in him a conviction that if he ever had the "cows-on-shares" and needed a milker himself he would never hire an I. W. W., after which the Wob abandoned him as a hopeless scissorbill, and devoted his attention to Marmion.

Now, for Marmion's sake, and not because he hoped to affect Marmion's old man, he argued about oleo, and law and the social system. "Why don't you farmers recognize that you got to lose your ranches, sooner or later, and tell the bankers to go to hell, and Congress too? Take it easy until they take your ranch, because they'll get it away, whenever they want it, and stop being a slave to them like this. Then when you've lost it, you can join the industrial union of your class—"

But the rest was lost in a sputter of rage and profanity from J. G. Jones . . . . "Why God rot you," the old man wound up, "I've worked for this farm, I began right where you are now, and I got this piece of earth . . . "

"When did you begin," snapped the Wob, for he wasn't used to being sworn at, and he was beginning to get mad, too. "You began when it was open country and any man's for the pickin'—how long will you keep it—now that it isn't open country, no more room for everybody, too many fish in the pool and the big fish eatin' the little ones?"

"Uh," said Marmion diffidently, "maybe he's right. We'll probably lose it."

"We'll danged sure lose him first," retorted Marmion's father grimly, and pulled out his checkbook.

Marmion looked a little abashed. But he said nothing. Obedience lay strongly upon him, and he knew his father was determined, from many reasons, to get rid of the Wob. He wouldn't have hired him, anyway, only men were unusually scarce just now, and the Wob, who came through here every year, was a "right good hay hand," even if "hell and high water" wouldn't make him work longer than eight hours a day.

Then as the Wob went out of the door, nonchalantly tucking the check into his shirt pocket, Marmion's mother was upon them, with a shocked and trembling voice, scolding his father for blasphemy and cursing. Before the impromptu sermon was ended, they had all promised, to pacify her, that they would go to hear the Rev. Jonathan Jenkinson, at his special revival meeting next day, in Agua Nueva. Marmion tried to slide out of the trip, but his mother was insistent. Marmion did not like the directness and fervency of the Rev. Jonathan Jenkinson, and he hated his pasty-faced, self-satisfied, sleek son, the already famous "Boy Preacher Jenkinson," who would surely be there. He knew the "boy preacher" well enough—they went to school together. But his mother forced him, so he promised, and that was the beginning of bigger things.

## This is a Good Yarn---Why Not Read it All?

"THE TREE OF KNOWLEDGE" will be continued in several issues of Industrial Pioneer. By subscribing now, you will get it all. You would pay $2 for a novel of this sort in book form, but for $2 sent to the Pioneer, you will not only get the novel, but all sorts of other good literature besides. In next issue we promise you another short story by Versus, a study in the materialistic interpretation of history, showing why men invent Utopias, also an article on grape growing in Mendocino County, Cal., an industry created by prohibition. We have also a fine article on the lumber workers of Ontario, and an article on the scientific adulteration of food, by the author of "The Stomach and The Undertaker." And many others. Use the blank on Page 29.

"It's Nice to Be Kidnaped"

# "Hark! The Angelus Is Ringing!"

By GERALD V. MORRIS

ROMANCE has gone from the ramshackle hut in Arizona. Too many nights of it shatters the nervous system and weakens the knees. When one has passed thirty-five the kick doesn't last long.

The Temple bells are ringing. Thousands of devout worshippers bend the knee in thanksgiving. The City of Los Angeles is awaking from its nine days' wonder.

The lady was kidnapped. It must be true. She says so herself. She ought to know, and who would doubt one of the richest women in the State of California. I wouldn't dream of such a thing. As a newspaper reporter I've learned to tell too many lies myself not to appreciate and know the truth.

Some bold bad men slipped up and carried her off. "That's a fact." They sneaked up on the beach, snatched her away in a bathing suit like the villains do the moving picture beauties. Didn't even give her a chance to put clothes on. "It was a rotten way to treat a representative of the Lord, God Almighty.

"They kidnapped me because of my stand on moral questions and my attack on evolution. But Praise the Lord, the day of resurrection is at hand." That was her talk from the platform of the special train that brought her back to her worshipful flock.

When the Building Inspector of Tucson, Arizona, confronted her with the statement that he was positive he had seen her four days previous to her asserted escape from the kidnappers she didn't stammer a bit. She outtalked him and double discounted everything he said.

"But I'll forgive you—God bless you," she told him.

"Well if it wasn't you it was your twin sister," were the parting words of the Building Inspector. Think of it The idea of doubting the word of a lady!

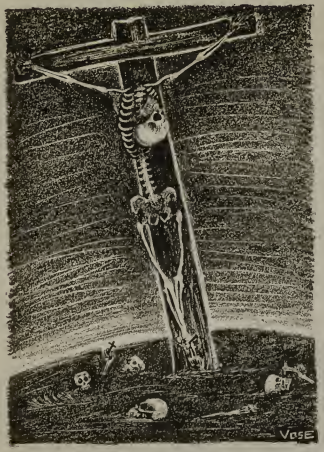
The beginning, the end, the middle of the story is of a women in an apparently dazed condition lying on a cot in an Arizona hospital.

"Two days ago I escaped from kidnappers. I was wandering about the desert. An automobile picked me up and brought me here." That was her first statement. The story of her abduction as she related it to the editor of an Arizona newspaper was:

"I went down to the beach with my secretary. There I changed into my bathing suit and slipped on a dress over it. We rented a little beach tent. I went in swimming. I sent my secretary to get the names of some soloists and some music.

"Before she returned I came back out on the beach. There were life savers drilling there. I went back into the water a short distance, and while I was watching the guards I heard someone calling my name.

"I turned to face a women who explained that her baby was dying, and that she wanted me to pray for it. She said her husband had the baby in a car nearby. She had a coat over her arm. I accompanied her to the car, in which there was another women with a bundle in her arms which I thought was a baby.



"The next thing I knew I was pushed into the car on the floor. The women threw the coat over me and a sweet sick odor assailed my nostrils and filled the automobile, which was a sedan.

"That was the last I knew until I came to on a bed like a hospital cot.

"It was in a room with a window almost completely closed.

"I was violently ill. A women was with me. It was dawn. I do not know whether or not it was next day, but she told me it was the morning following. The other women came in and I asked her what they wanted with me. They said they were holding me for half a million dollars ransom. I told them that they were foolish; that I did not have that much money, nor did the church have it, but they replied that they knew better and I was kept there day after day.

"Later they told me that they had made plans to get the ransom. Then from the remarks I heard later, I learned that they had almost been captured in San Francisco when trying to make arrangements to get the money. A few days ago I was moved. We were in two

automobiles and travelled a long distance. We came to another house and remained there two days. The men were not there. Previously they burned me with a cigar on the finger to make me answer the questions they said my mother had asked to prove I was alive. They threatened to cut off the finger (the one with the long white scar) so that my mother would know when she received it that they did have me captive.

"I refused to talk and while I did answer one question, I would not answer the rest, because I knew my mother, her friends, and members of the church would expend every effort and pay the sum of half a million dollars, which my captors demanded for my release."

Such is the story the anti-evolution, anti-union woman pastor who preaches morality, told on June 23rd, the day she was discovered.

She disappeared on May 18th, the day a handsome young member of her congregation moved out of town.

In her first sermon to the thousands of missing links that filled the great edifice she built on their money, the first Sunday after she had arisen from the dead, she told them that her captivity was like that of Daniel in the lion's den. The devil was responsible for her kidnapping, she said.

The devout anti-evolutionists and high minded moralists believe that. "I do myself." "Some devil had a hand in it."

There are newspaper men with lots of nerve. One reporter asked the lady if a love affair was really the cause of it all. Her morality wasn't shocked. "Oh no," she said. "The man I shall love must be six feet tall, good looking and he must be a boly man."

The hundred thousand dollar columnist for the Hearst newspapers commented on that statement thus: "The Lady doesn't want much, it sounds easy, but she'll have a hard time getting it."

She was kidnapped by the devil. He was mad at her for fighting evolution and enlightened thought.

She has no use for unionism of any kind. The name of the I. W. W. to her is like a red flag to a bull.

Inquisitive newspaper men doubt her story. The mayor of the town that is four miles from her asserted escape publicly states that it is all a frame-up. The Building Inspector is positive he saw her on the streets of Tuscon four days previous to her asserted escape from kidnappers.

Why mention her name? The newspapers have been full of her. She has arisen from the dead. With her short skirts and long hair she is the Messiah.

Such is the story of a recent episode in the life of a woman pastor who typifies the epitome of a decadent religious age. A preacher of purity and high minded morality, she is the enemy of all that makes life clean and fine and worth while.

She lives in California where working men are incarcerated in the penitentiary for expressing their opinions. From her Temple in Los Angeles she dominates the mob and bends them to her will. A woman of passion, she is the driving power that moves thousands of fanatics in defense of everything that retards human progress. She upholds the Criminal Syndicalism law of California. The right of the working man to organize is to her an evil thing. And she tells a story that I heard a fourteen year old school boy laugh at and call ridiculous.

"Will she get away with it?" "They say that truth and only truth is eternal." But she is a pillar of society and one never can tell. . . .

One can tell though, that a few of the residents of that famous Southern California asylum from the world, which the old Spanish settlers, with fine prophetic irony named, "The City of Our Lady, The Queen of the Angels," are beginning to think. The grand jury is having an awful time with this case, and nobody knows how many of the devout retired Middle Western farmers are having their faith undermined, especially those who have handed over their good money to the Red-hunting woman preacher.

# A Tall Story of the Tall Timber

(BOOK REVIEW)

In this encyclopedic opus, "Mammonart," Upton Sinclair offered a great deal of sound evidence in support of his main thesis, which is based upon the materialistic conception of history, to witt: Art is not an end in itself but a means to other ends, and that the great majority of artists who have achieved distinction and success, honor and applause have done so by adroitly turning their talents in a direction calculated to win the smiles and benediction of the ruling caste. One may find more evidence of this servile crouching spirit in the field of literature than in all the other arts put together. Many writers of undisputed talent have prostituted their abilities by supporting and embellishing the superstitions and prejudices of their powerful patrons. And in spite of many brave and brilliant attempts by literary specialists, ancient and modern, to wipe out the deadly murrain from the republic of letters, every fresh batch of books that reel from the press are, with depressingly few exceptions, tainted with the miasma.

**THE HERO AS LOGGER**

In "The Logger," the author, Salome Ellis, essays to prove that the grand prize can be won by any young man who prepares himself for the fray by taking an heroic dose of bourgeois idealogy.

David Alden having imbibed this precautionary soul-stirring tonic is in no wise dismayed when, owing to his father-in-law's stock and bond business going awry, he finds himself cast adrift among the job-less. He leaves Chicago, the scene of his father-in-law's lamentable failure, and hies himself, together with his reluctant wife, to Humptulips, Washington. Our hustling hero loses no time in taking over some timber claims bequeathed to him by an uncle Will, and hiring a foreman named Tim McEvoy along with a small crew of loggers starts a logging business. This important event takes place at the dawn of the present century.

After having "stagged his overalls and wearing the tail of his shirt out," Alden throws the works in high. He is evidently the first "business idealist" to explore the big timbers of Western Washington. His heart overflows with the milk of human kindness; he yearns to improve the condition of the lowly worker; "service before profits" is his motto.

Alden expounds his lofty principles to Tesa, his wife. Tesa, alas! remains unmoved before her husband's impassioned eloquence. She has no desire to aid an idealist in his laudable effort to "uplift humanity." And surely Madame Alden is quite devoid of emotion to be able to refuse her aid after hearing the following lyric:

**"One of the greatest phases in my dream towards my new era of industrialism is fighting for sanitation. We know it is a psychological fact that cleanliness is one of the most essential elements in the uplifting of humanity; and I am going to do all I can to lift labor conditions to a better standard. I have an immense theoretical knowledge." (Page 49).**

There is a Nietzschean flavor to that last sentence. A promise of deep delvings into difficult problems. A brilliant light is about to shine and penetrate the gloom that encircles the fields of philosophy and sociology. The reader whose hopes are kindled by the hero's modest claim is due to suffer a severe shock upon reaching page 84. On this page we learn that whenever our hero desired to add to his immense stock of information and slake his brobdinagian thirst for "real news" he turned to the Chicago Blade and Ledger-

After this chilling revelation it is no longer surprising to find the romantic logger wallowing in a puddle of contradictions and absurdities He is the "business idealist" running true to form. He sheds tears for the despised and rejected and never tires of intoning the confused credo of the confraternaty to which he belongs. It is reasonable to assume, after reading the first hundred pages of this book, that the master logger of Humptulips, despite his modest claims to immense knowledge, never dipped into the delightful work of Anatole France. Nevertheless he carries out with really passionate fervor one of that subtle ironist's thoughtful dictums: "Whoever believes that he holds the Truth must express it."

Alden's beliefs are many and peculiar... "True Socialism," he announces sagely, "is idealistic."

Further on: "I believe the true purpose in life is to aid our fellow men. I cannot accept the theory of the survival of the fittest. I believe the fit should aid the unfit until all are given the opportunity to meet on an equal basis." Following this touching declaration of adherence to the philosophy of mutual aid, our versatile philosopher recites a rhapsodical counter blast to it. Here it is:

**"I believe greatly in individualism . . . I believe that my life is governed by the life and experiences of no one who has ever lived before . . . . I am ME. Everything that I do, think or feel depends entirely on myself. I have it in me to become as great intellectually, morally, financially as I choose. Nothing need bar my way from the heights of success. So long as my faith in my own potency endures, I can continue upwards, so long as I am working for righteouness and justice nohing need stop me. Always I am the great ME, which endures as long as I have the breath of life in me."**

Sad to relate this sublime confidence in the great ME fails to support our hero when the drab business of logging thruts its cold reality upon

him, for he, himself, laying aside for the nonce his robes of superman, tells us that:

**"One might not suppose how necessary it is to have a man like Tim; he looks after his part and I look after mine. If I am the head of the business he is most assuredly the NECK" (Emphasis mine, W. H. E.)**

Fired with his laudable plan for "uplifting" the loggers in his employ, Alden instructs his faithful "neck" to install steel bunks, furnish new mattresses and blankets and order the crew to burn up their own lousy bedding. As the "burning of the baloons" is an incident inseparable from the history of the I. W. W., having accured about 1918—about ten years after the above order was given, and on the initiative of the I. W. W.—one is forced to concluude that the author of "The Logger" flatters the "idealist" labor-skinner unduly.

Alden makes, among other remarkable discoveries, one that might have disturbed a less gifted thinker. He finds, in brief, that the entire economic system is wrong. Alas! he was not born to set it right. On the contrary, he goes on record as being opposed to its overthrow. About this time (1905) a cloud appears to darken the idealist's sky.

**"There rose a class of men in the West, a branch of those who had been operating in the East who called themselves the Independent Workmen of the World. (sic.). They demanded better conditions. Conferences among the employers were held. The employers formed a body to fight the Independent Workmen of the World." (page 214).**

Alden refuses to fight against the "Independent dent Workers of the World."

"You don't mean to say that you uphold the Wobblies," roars one of his indignant colleagues.

Alden replies: "Most emphatically not. I uphold no man in the pursuit of wrong. But regarding their demands for better conditions, I know they are right." A reply that is at once heroic and peculiar.

Mrs. Alden fails lamentably to support her husband in his worthy efforts to uplift the toiling masses. She tries of the benevolent Alden and seeks consolation in the arms of a former swain, one Harold Wainwright, who is a leader in Chicago's "Smart Set."

Wainwright is installed as a guest in the Alden home. Then follow the usual alarums and excursions. The recalcitrant pair are surprised in **flagrante delicto** by Posy Murray, a portege of Alden's. This discovery costs poor Posy her job. Alden, however, refuses to drive out his erring wife, until, later on, he overhears her order a servant to show Wainwright to her room where she is confined. The wronged master-logger then obtains a divorce. Posy wins grace and is sent to a finishing school in Chicago.

The end of story is as affecting as it is inevitable. Two years grooming in the "finishing school" fits Posy for the high place reserved for her by the author, the place left vacant by the unsympathetic, indiscreet and bored Tesa.

The final scene is staged in the "luxurious parlor" of the Ranier Grand Hotel, Seattle.

"Alden could scarce believe that the marvelous creature sitting across from him was the same girl who had left him two years before."

And thus the master-logger ascends the throne of Success after "starting in the logging business single handed and alone . . ." but fortified by the knowledge that "The Great Divinity has qualified every man and women to make a success. . ."

Verily a touching story.

The book contains a good deal of material to delight the "booster." It advertises the resources of the North-West, mentions various lumber companies, tourist resorts, and hotels, besides making kindly reference to a certain brand of tobacco well known to loggers.

There is much in the book that will win for it the hearty approval of self-satisfied business men, the heirs of the Samuel Smiles tradition and the incurably romantic. But the intelligent worker who may happen to come across "The Logger" will quickly place it in its rightful category. He is familiar with the breed of benovolent bosses, and the torrents of twaddle that issue from the mouth of the heroic Alden will move him to derisive laughter. In the sordid struggle for the means of life the worker has learned to distrust the boss thoroughly and he cannot be fooled by the industrial Aldens who caper before him in the cap and gown of the idealist.

The actions of the bosses in their efforts to suppress and subdue the workers who have the temerity to demand a little more in the way wages, are more eloquently sinister than the benign braying of their hired apologists or the bristling banalities, the portly platitudes and abominable rubbish that bespatter the pages of "The Logger."

The class-conscious workers of the world are fully aware that the poverty, misery and degradation, which is the lot of the wage-slave, will never be wiped out under Capitalism, and in their continuous and protracted struggle against the class who fatten on the fruits of their industry they recognize the importance of unity as being the most effective weapon in their arsenal.

—W. H. EXELBY.

**THE LOGGER, by Salome Ellis, published by Small, Maynard & Co., Boston, Mass.**

# What I T'ink 'Bout Dis White Man Country

By ABORIGINAL LOUIS

Well, you ask me what I t'ink of — (What you call dat again?) "Civilization," eh, "Civilization," dat's righ. Well, she take me long time to tell you. Me, I have no — what you call — educate , but anyway, my frien' Pete, he say, I should tell you this; an' here she is.

I was born on Black Bear Island, in the Albany River. I'm full blood Injun man. I see lots of Jesuit priests in my country, an' some oder kine of missionary, and dey always tell us 'bout de Great White Spirit an' de Great White Fader an' what fine country you have down here, and how everybody hee's happy and satisfy and 'bout how good de God is.

Well, for many year I trap between de Albany River an' de Moose River, me an' my two broder. Well, two year ago de fur trader he not pay much for fur, just some tea an' tobacco an' fire water. So my frien' Pete, hee's purty smart Injun man; he go to de government school at Moose Factory for long time an' get big educate, an' he bring hee's furs down here an' he tole us he get heap big more dan what trader pay, so las' winter my broder an' me, we say we take our furs dere to, cause we have good catch las' winter, an, trader not pay much.

So me, I come out wit all de furs me an' my broder got, an' I meet my frien', Pete, an' ask him how I go dere, an he say, "I go too, I show you," so we come out de trail to Kapuskasing on de Canadian National Railroad, an' we ship our packs to a place you call Windsor, Ontario, an' buy ticket, and wait for train.

Well, while we wait for train, one white man come along an' say hee's hungry, an' hee's got no furs for ride on train, or buy something to eat, an' I say, "Why?" an' he say he no catch furs; he work in railroad camp for long time, an' den he got sick an' go to Sister's Hospital, an' dey take all hees money an' give it to de Great White Spirit, for make him better.

Me, I t'ink dat's funny story. Dat man, he work hard to build de railroad, an" den he can't get ride on him. So me an' Pete give him 'bout what we get for five mush rat, an' den de train come, an' we get on an' go for longest ride you never saw 'till we come to Windsor, an' den we get off de train an' get our furs an' we go an' see what dey call de "bootlegger man" for bring us cross de river, 'cause dey tell us we can't ride cross on de train 'cause we're not citizens, an' we have to give de police at de station 'bout four hundred mush rat skin for what hee call "duty", an' we only have to give de bootlegger man fifty for come across in de boat when he bring de fire water over to Detroit. An' I say to Pete, mus' be lots of Injun man in Detroit he bring lots of fire water over in all de leetle boat, an' Pete say, "No," an' he tole me dat all de white man on dis side of de river are on de Indian list an' have to buy from de bootlegger. Well, I tink dat's funny for white man do dat.

Well, we have to sell some more furs in Detroit to come to Chicago. So we get on de train an' come to Chicago,, an' I get 'bout twenty-one hundred dollar for my furs — lots of black an' silver fox in de pack.

So, den I say to Pete, we go an' see all de fine place an' de happy Christian man dat de missionary talk 'bout, but Pete, he say we mus' go an' hide some of our money in bank, or de Christian man he hit me on de head an' steal dat money. Me, I t'ink dat's funny, dat dat white man wit de Great White Spirit he call God an' say hees prayers to, would do dat. But Pete, he tell me to forget most what de missionary tell me, an' I know Pete he's smart Injun an' got lots of educate, so I do what he say, an' den we start around de town, an' Pete, he meet white man dat is friend of hees and he come too, an' he take us to see bigges' wigwam in de world, what he call de "Morrison" — I guess dey call dat after de big feller dat was factor for de Hudson Bay Company at Moose Factory for long time — he same name.

Well, we see lots of fine big white man wit de nice clothes an' fur coats, sit around dat place an' smoke de fine tobac, an' den de mounted police on foot he come an' put us out. Well, den Pete tell me dat de white man won't let you sleep under de tree an' we have to go buy a room up what dey call de "West Madison," 'cause dem fine big Christian man tell us dey don't want no lumberjack or trapper in hees wigwam. Well, we go on West Madison Street an' get two little room in what dey call "flop-house", an' we lay down for while, but der all dem oder feller in little room start to cough an' de place she stink like skunk, an' I say to Pete, "Let's take our blankets an' go sleep under tree," an' he say, "Dare's no tree", an' anyway, he already tole me dey wouldn' let you sleep under tree because big fat man, he own all de groun'.

Well, den we get 'noder place in noder wigwam, bigger room an' not so many peop' dere. Not so much stink but more pay for room.

Well, she's coming spring now, but big snowfall come next day an' fall for two days, 'an de train on street hee's not run very much an' we see de policeman chase all de fellers out de flop house an' out de Salvation Army, an' all out de mission where de Great White Spirit is, an' some fellers dey look sick, an' old, an' not much clothes an' no good moccasin on de feet, an' de're hungry an' got no furs an' no money an' I say dey must worked on railroad camp too, an' got sick an' give dere money

to Great White Spirit for make heem better, but Pete say, "No", dat thousands like dat in White Man's town, cause fat man own all de groun', an 'bout forty man wit hees squaw an' hees papoose have to live in one wigwam, where she stink like de flop-house on West Madison Street.

Well, I watch dat gang of pore fellers an' I feel sorry for dem, an' I say to de policeman, "Do you want some men for shovel de snow an' clear de trail?"

An' he say, "Yes."

"Well," I say, "go down to what dey call de "Morrison", an' you fine hundreds fine, big, healthy feller, with good warm clothes, an' fine moccasin on de feet — just sit aroun' an' smoke de fine tobac'."

Well, dat policeman he say if I don't keep my mouth shut an' mine my own business hee's going run me in jail, Crazy Injun!

Well, everybody tell me dat dem fellers in Morrison don't shovel snow. Well, dis is one Injun dat don't understan' why dey drive de old man an' hungry man, an' sick man to clear de trail — funny t'ing dat.

Well, after dat storm, she turn some nice wedder, an' one day I'm on Madison Street, down near what dey call de "slave market," an' pore feller ask me to buy heem somet'ing for eat, an' I see man near by he stan' in little door an' say, "Fine job, Boy, ship right out!", an' I ask him why he not go to work, an' he say hee's broke, an' job cost three dollars. Well, dat's de meanest 'ting I ever hear!

Well, I see de leetle papoose play in de street on de hard — what you call — pavement, an' de buggy an' train run by every minute an' papoose hee's got no order place to play an' no trees to climb. An' sometime de moder she work in factory all day long, like de fader, an' peop' not all be satisfy like de missionary say.

An' den I go fine out dat you have whole lot of differen' gov'men', an' differen' policeman, like de — what you call — de city police, an' de county police, an' de state police, an' de national police. an' all de inspector and den I go down to de court house an' fine out dare's about dozen different court house an' I go see some of dem but couldn't see dem all, an' I see big bunch of feller — what you call — lawyer, some of dem for put you in jail an' some of dem for get you out.

Well, den every street she have 'bout ten thousand trader on it—what you call—storekeeper. An' den I say, "No wonder poor white man have to work so hard to keep all dem govermen' peop' an' dem policeman an' dem lawyer an' dem inspector, an' all de trader dat don't work," an' den I fine out you got 'bout dozen different kind of jail an' penetentiary an' crazy house an' hospital an' all like dat, an' den I say, "Is dat what you call Civilization? Well, don't bring dat to de Injun."

Well, I t'ink I stay long enough in White Man's town an' I want go home but my frien', Pete, he say dat missionary priest is goin' to have big pow-wow here, an' dat nex' bes' frien' of de Great White Spirit is goin' be at de pow-wow, an' we wait an' see.

Well, while we wait, we go on street, where dey sell de fur coat. When we see one coat in store, she look purty nice, an' trader say she cost five hondred dollar. She's genuine black fox, he say. But when Pete an' I look close at dat coat, we fine out she's jus' dog skin, an' white man fix him up wit' paint, an' call him black fox, an' oder white man can't tell de difference. All trader just de same — dey all tell lie.

Well, anyway I t'ink 'bout time bes' friend of God come to town, teach dese peop' not to tell so many lie.

Well, we went to de pow-wow an' all de peop' be dare, an' I t'ink dat dat bes' frien' of de God, he come on de back of de mule like missionary say, an' with no moccasin on hees feet, but he come in great big fine — what you call eet — automobile, dat must have cost 'bout fifty silver fox or more, an' he have all de mounted police ride beside him an' he say everything be all better in White Man's town when he get over wit' de pow-wow.

Well, we went to de pow-wow an' everybody keep quiet for long time, an' den all de papoose sing de song to de Great White Spirit an' I say, dat's for de feast, but de Great White Spirit mus be he couldn't hear dem papoose sing for dere was no moose or deer cooked or nothing to eat dare, only over in de corner dey have little place where dey sell what you call de hot dog, an' charge fifty cents for dat, same you get out-side de pow-wow for ten cents. Well, after pow-wow, nothing change in White Man's town — ewerything just same like before, same flop-house, same police, same traders tell same lie.

Well. I say to Pete, let's get our money out de bank an' go home to de woods, where every man buil' his own wigwom an' not like dey do in White Man's town, buil' great big nice wigwam an' sleep in de flop-house. Well, Good bye. Nex' time I get Pete to tell you story — hee's got fine educate.

Me, I'm little more educate now, too.

# Great Builders, These General Construction Workers

This is not the house that Jack built. This is the dam the construction workers of America have built—the most talked of piece of masonry in the world just now, and for several years past. It has caused more different kinds of quarrels, crimination and recrimination, scandals, congressional investigations, bribery, abuse and praise than any other dam ever heard of. Power companies, from the Sam Insull interests eastward have fretted and fumed over it. Henry Ford, the auto king, has been in the thick of it, and the common ordinary farmers have stormed and wept over it on their shady porches during the noon hour.

In proof of all this, it is enough to say that this is the Wilson Dam, at Muscle Shoals, Alabama. What we wish to point out here, is not just the merry war of words that has waged about this namesake, this war baby, of the "President that (never) kept us out of war," but the fact that the fellows most concerned with the Wilson Dam, after all, are the men who made it, all of whom gave their sweat and human vigor, and quite a few of whom gave their lives to put this great wall of steel and concrete across the turbulent Tennessee.

Still, to understand the importance and magnitude of the work done here by the general construction workers of this continent, a few facts about their product will not be amiss.

When the United States financiers found that they had been betting on a losing contestant in the great war that was so rapidly becoming a foot race in Europe, when they discovered that the "Allies" were being licked by the "Central Powers," they gave their orders to the administration in Washington, and threw the U. S. A. into the fight on the side of the "Allies;" the reason being, of course, that their money was invested on that side. Naturally there was a lot of enthusiasm and emotional response, why not, was it not said long ago, "Where thy treasure is, there shall thy heart be also?"

But mere treasure and stout (not to say hard) hearts will not win the wars. High explosives are needed, and that means nitrogen. For the production of nitrogen one of two things is needed—either nitrogen compounds which can be mined, and which the United States does not have, or air, which contains lots of nitrogen, and of which the U. S. A. is well supplied, both with hot and other sorts.

But, for getting nitrogen out of the air electricity is needed, and that normally caused the folk who were contemplating high explosives as a substitute for bankruptcy, to think of power sites. So they thought of the Tennessee River. The Tennessee River is a crooked stream that starts in the Appalachian Mountain chain in North Carolina, and then goes through a corner of Tennessee, meanders down into Alabama (right close to the non-union coal fields there) and then up into Tennessee again, and finally enters the Ohio in Kentucky—something like as direct a route as that by which Henry Ford tried to inherit Muscle Shoals.

The Tennessee River is navigable, with slight improvements, from its mouth up to Muscle Shoals which are in Alabama. About a century ago the State of Alabama built a canal around Muscle Shoals, but this work was designed for the little ships of the time, and for the Mississippi commerce that has vanished. However, the fall is considerable in the Shoals, and the gentlemen interested in blowing up Germans (and boosting their own fortunes) immediately decided that Uncle Sam should build a dam low down on the falls, to be known as Dam No. 1, and make the river navigable to the site of the present Wilson Dam, to be officially designated as Dam No. 2. A further dam, to create more power, is proposed higher up the river, and will be, of course, Dam No. 3. Still more may built.

Hot air power was used in great quantity, and the Alabama Power Co., the company owning Muscle Shoals, was induced to sell the land to the U. S. government for $1. It was a case apparently, not of high pressure salesmanship, but of high pressure buying. The Alabama Power Co. has probably regretted its generosity, unless, as some say, it made enough out of the sale of power to the government during the construction of Dam No. 2 (the only one built so far) to break even or a little better. We do know that when Henry tried to buy the whole works from the Government, he set up considerable of a howl because the U. S. returned (?) to

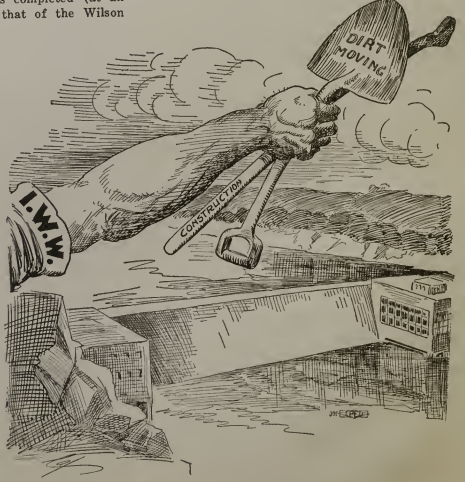
**GENERAL CONSTRUCTION WORKERS!** How long will you be blind to the situation? Don't you see that while you cover the whole land with the enduring products of your toil, while you build the roads, pave them, build the dams, make the reservoirs, lay out the railroads, and do all the foundation work for the whole industrial system of America—you are wasting your lives in a thankless task? This sort of thing will not go on forever. The great industrial system of America only needs about so much of this. They are playing you for suckers. They are getting you to do all of this necessary construction work, and then when it is finished, they will turn you adrift.

For you, and by you, General Construction Workers' Industrial Union No. 310, of the I. W. W., was created. It is your union that can win you higher wages and more of the good things of life. Unless you join it, you are helpless. If you join it, in all your invincible might, you can make it what you will, your savior now from overwork and underpay and your savior in times to come, when it will keep you from being thrown on the scrap heap. This union is a real workers' union, with low initiation, low monthly dues, little expense, and quick action. For further information, get in touch with Main Office of General Construction Workers' Industrial Union No. 310 of the I. W. W., at 3333 Belmont Avenue, Chicago, Ill.—W. H. WESTMAN, Secretary-Treasurer.

the Alabama Power Co. a high voltage line and other improvements built by the government money to convey the "juice" from the Alabama's other plants to the site of Dam No. 2. The Government officials in charge merely stated that this line was built for the Alabama Power Co., and borrowed from them for a while, and of course had to go back to them. Well, be that as it may, it is not the main point of our story.

The main idea is that millions of dollars were spent in constructing nitrate manufacturing plants here at Muscle Shoals, run by steam power, but to be taken care of by electricity generated at the Wilson Dam by water power as soon as it was ready.

The dam wasn't ready in time to help win the war, in fact, in 1921, when the appropriation for its construction was exhausted, there was still two years' work left. It was actually finished in 1925. Neither of the other two dams needed to complete the whole project is even started. And the fight is merely about who will win the Wilson Dam.



It's a valuable piece of property. The nitrates made at Muscle Shoals can be used to fertilize cotton land, and that explains the farmer's interest. The power plant will generate 260,000 horsepower with its present machinery; with more generators it can deliver something over 600,000 horsepower. If Dam No. 3 is completed (at an estimated cost of about half that of the Wilson Dam) the two together will produce a million horsepower. If some of the other smaller dams are put in there will be three million horsepower.

This great source of power is located very nicely, right in the center of the rough triangle formed by four growing manufacturing cities, the new manufacturing district of the South: Memphis, Nashville, Chattanooga, and Birmingham. Nor is this all. The greatest power plant of the Alabama Power Co. is at Warrior River, 90 miles south of Muscle Shoals, and right in the heart of the big coal fields of the South. That is the beginning of what is known as the "Southern Superpower System" which extends along the foothill region of the Gulf and South Atlantic states from Montgomery, Ala., to Greensboro, North Carolina, taking in the big new textile and general manufacturing districts around the cities of Columbus, Atlanta, Macon and Charlotte, and many others.

A piece of engineering with such capabilities and potentialities can't be too slim and fragile, so with a memory of the social and economic consequences of this structure, we are ready to take a glance at its physical characteristics. To begin with it is the biggest dam in America. It is one of the three biggest in the world. It is 4,156 feet long (nearly a mile); it is 98 feet high; at the top it is 27 feet wide, and at the bottom it is 76 feet wide. It contains just about a million cubic yards of concrete. Some mixing took place there!

The only dams with which it can be really compared are the Aussuan Dam in Egypt, built with cheap fellaheen labor under direction of the British masters, to irrigate the Soudan cotton fields. That dam is about 4,600 feet long, 96 feet high, 17 feet thick at the top and 100 feet thick at the base. Because of its peculiar structure in cross section, it contains only about 700,000 cubic yards of concrete. The other big dam is Vyrnwy Dam in England—length something over 4,000 feet, but other dimensions unknown to the author of this article.

Other dams in America are not so small. The famous Roosevelt Dam is higher than the Wil-

**THE WORN OUT SLAVE ON THE AUCTION BLOCK**
**Wake Up, Construction Workers! Do You Want to Come To This?**

son, being 284 feet from base to crest, is 16 feet thick at the top and 170 feet thick at the base, but is only 1080 feet long, and contains only 340,000 cubic yards of concrete. The Keokuk Dam of the Mississippi River Power Co., is 4,000 feet long, 53 feet high, 29 feet wide at the top and 46 feet wide at the bottom—quite a piece of work itself.

Now we come to the point. How do you suppose they got there—these tremendous masses, tons and tons of concrete and steel, towering walls with the weight of mountains and the height of mountains too, almost? They didn't grow that way. Capitalism, which uses them, and squabbles over them, didn't wave a magic wand and conjure them there. No, they represent the toil of human beings. Even the capitalists know that. One W. B. West, an expert for the Scientific American, writing in 1921, in protest against the stoppage caused by the exhaustion of the congressional appropriation says the work should go on, because, "There is an abundance of common labor and it is a proven fact that skilled labor will flow to the point where there is a demand for it." And various other agencies of capitalism, likewise, when boosting for the construction of the rest of the Muscle Shoals project have emphasized the abundance, and commonness, of the common labor of the South—good, old, American stock, uninfluenced by any imported ideas about radicalism, unions, living wages, etc.

However skilled the engineers, however intricate and successful the concrete mixing and other machinery, general construction work still involves a lot of everyday, hard, heavy labor—toil—work—done by men with horny hands and often with "hump on the back" from lifting things that are too heavy to be lifted, but must be lifted if the high voltage currents capitalism now demands are to be realised.

It is the human animal, the general construction worker, skilled or unskilled, that makes nitrate plants possible, that rears the mighty dams that congressmen, millionaires, and dollar patriots prattle about.

And what does this creature, this human beaver or ant, this great builder, the general construction worker get out of his heavy "swinking?" We have seen that his product makes wars possible, that it creates millions of horsepower for factories, that it makes and unmakes governments. But what does he get himself? Damn little. Usually he gets dyspepsia—but of course that is only a fancy way to starve to death. The result could be obtained by refraining from food, which way on the whole, would be cheaper and more comfortable than eating the rotten chuck often served in construction gangs. He gets a sleeping place that is hard and cold in winter, hard and hot in summer—in a tent or a shack. He could probably get that without working. And of course he draws wages, but they are pretty small for the sort of work he does, and trivial in comparison with its far reaching consequences. Let us take a glance at some of the general construction work going on now, a few of the jobs cataloged in the Bulletin of General Construction Workers Industrial Union No. 310 of

the I. W. W. They will serve to show the rewards of those who build monuments more useful and larger than the pyramids of Egypt. Wages are not appreciably different for the workers on dam sites, roads and railroads, for the same class of work. We see that at present at Buckley, Washington there are concrete mixers at work, without camps, and the men get $4.40 a day, and board themselves. Have to hire a room too. At Scenic, Washington, the big tunnel of the Great Northern R. R. is being constructed, A. Guthrie & Co. contractors. They pay for muckers and outside work (all except miners) a low wage of $4.80 in the first case, and $4 for others. And out of this comes a board bill of $1.35 a day, and a hospital fee. Very little, compared with the amounts the worker will have to spend to recuperate when he breaks down under the strain of it. There is a double tracking job going on out of Ogden, Utah, the Echo Canyon Division; laborers get 40 cents per hour for a nine hour day—other and more skilled men get more, but are of course in a minority on the job. Chuck and sleeping quarters are rotten.

And so it goes. There is usually a nine or ten hour day for all but the highly skilled men, drillers, etc. Wages run from forty to forty-five cents per hour. Food is intollerable, and sleeping quarters are bad. These are the living conditions of the men who make the dams, roads, bridges, railroad beds, etc. Repair work on these things is paid about the same.

And there is no hope for improvement? Can not some of the enormous wealth, the basic, necessary construction which these men perform, come to them? Indeed it can, in certain isolated and all too few cases, it has been started that way already.

In 1922, under the leadership of an I. W. W. strike committee, the general construction workers on the Wenatchee project, Great Northern Railroad Company construction, with A. Guthrie & Co. the contractors, struck, suddenly, and won the eight hour day, in flat contradiction to the course of events, for it was a time when the day's work was getting longer, all sorts of companies changing from a nine hour day to a ten hour day. It was a fine strike, as strikes usually are when the I. W. W. leads them. There was an attempt made to break it up by arresting some of the "leaders" but "we always got some more" active strike pickets, and strike committeemen. Finally the arrested men were turned loose.

There was an attempt made to break it up by importing scabs from Fargo, Minneapolis, Duluth, and Chicago, but the I. W. W. was there too, and pickets right outside of the employment agencies stopped the shipments. Finally the company yielded.

That is the way to do it, and that is the only way it can be done. The general construction workers of North America have raised enduring monuments to their prowess, but they have profited little from all that. Now let them, united in General Construction Workers Industrial Union No. 310 of the I. W. W., raise somewhat their wages and general standards of living, and see if that will not be more fun. If they could build the Wilson Dam they can build their organization, more useful by far to them than any dam or road can possibly be.

# The Decline and Fall of the Home

(By C. E. PAYNE)

HOME! AT any time for centuries this word has been one to conjure with among the people of Europe and America. Poets have rated it as one of the three sweetest words in the English language. So entwined in the lives of the people has the word become that the tune of "Home, Sweet Home" is never allowed in any prison; the ideal of home and the reality of prison form too great a contrast.

When the capitalist system came into control of world affairs, the home as we now know it came into existence. Ancient savages had some dwellings, but proximity to food was the chief consideration. The slave system might give creature comforts to the slaves, but there was too much uncertainty of abode for the slaves to call any place home, while the masters thought more in terms of castles and estates. Under serfdom the castles and estates still occupied the minds of the masters, while the serfs belonged to the land, but never did the land or a dwelling belong to the serf.

The slave and serf systems broke down because of the failure of those systems to keep pace with the required production of goods. Capitalism found it necessary to speed up production to make the new system succeed. The means to do this was found in the slogan of "Freedom and Home through hard work," and the erstwhile serfs became highly productive wage workers.

Homes by the million were set up during the settling of America, particularly in the United States and Canada. Many of them were true homes in every sense of endearment the human mind has known. Men and women going into the wilderness to carve out their own fortunes kept ever in memory the homes they had left, and

constantly before them the vision of a new home where they would have

*"All that is most beauteous, imaged there*
*In happier beauty. More pellucid streams,*
*An ampler ether, a diviner air*
*And fields invested with purpureal gleams.*
*Climes which the sun, who sheds the bright-*
*est day*
*Earth knows is all unworthy to survey."*

It was about a century ago that John Howard Payne wrote "Home, Sweet Home," which has perhaps awakened more sad memories in the minds of earth's wanderers than have all other melodies combined. The song was written when the idea of home had become throughly ingrained in the minds of the people, but also at a time when the possibility of homes for all in America had reached its zenith. The beautiful lines of

*"A charm from the skies*
*Seems to hallow us there,*
*Which, seek through the world,*
*Is ne'er met with elsewhere,"*

are now replaced by the raucously newer but more appropriate

*"There is a boarding house*
*Not far away,*
*Where they have ham and eggs*
*Three times a day."*

Rooming houses—furnished or unfurnished—do not call forth great sentiments on the subject of home. They run more to "Oh, what a pal was Mary."

Vaudeville entertainers have for some time had a gag line that "Home is the place where you go to change clothes." It is literally true that a very large number of Americans consider home to be the place where they hang their winter clothes in May, expecting to find them there in October. Some millions of migratory workers leave their winter clothes in May without expectations. In many of the cities and towns of the Pacific Northwest clothing merchants make a specialty of storing the "good clothes" of lumber workers who are going out to work. The good clothes are frequently stored 11 months or more in a year.

Many and heroic have been the attempts of America's workers, particularly the farmers, to set up and maintain homes for themselves. Two million of them had to give up the struggle in 1924. It must have been with many repressed emotions of sorrow that those former women packed all their earthly belongings, including the "Home, Sweet Home" motto, into their trunks and made their several ways to the cities where jobs "might" be had, hoping against failure they might—sometime—have a home—again—.

The home life of one family may be taken as typical of many others. The father and mother are about to celebrate their silver wedding and a quarter century in one place. The father has averaged over 14 hours of hard labor each day for six days a week during that time and is bent with toil. The mother would remind you of Mother Machree—"Her hands so toil-worn." Her work has been more arduous than her husband's.

Their children—two boys—are just entering manhood and the wage game, where they will either rise by chicanery or, after a valiant struggle, become slaves to the system as so many others have done. Their chances of setting up homes of their own are very small. But they may "rise in the world," as they have been inured to toil and to making every dollar count 100 cents of value. Yet, it is heartbreaking to see that where this family has had one comfort to brighten the home they have set up, their toil has enabled the bankers to wantonly waste the price of scores of such comforts, or even of many such complete homes themselves.

The home as an American institution is doomed —not because I or others say so, but because capitalism finds it no longer profitable. Vestiges of it will linger awhile, its memory will last sometime longer, but to millions of Americans even now the word means only the room where their suit cases may be left for the night or the week.

What is to take the place of the home is beyond guessing. The number of those who know its true meaning is rapidly diminishing, as also is the number of those who can be inveigled into hard work for its sake.

We do not love the home any the less because we know it is a thing of the past. But to those who do not know its meaning we must make some other appeal to stir them into action. It may be that if we can strike the right chord in the minds of those who have been dispossessed of their homes, we will have the power to overturn this rotten system and set up in its place homes for all, so that we can sing with new meaning,

*"There's no place like home."*

# The Stomach and the Undertaker

(Continued From Page 4)

in the past, when life was more simply ordered, that restaurant proprietors did concern themselves about good food in order to attract and hold patronage. But those days are gone. Now the prime object among owners of lunch-rooms, restaurant, hotels and cafeterias is to get rich quick.

There was a time when the cook was permitted to take pains and time in the preparation of meals, but this practice irritates the modern proprietor; now it is speed that is wanted. The work formerly done by four cooks is now performed by two. An excellent illustration of this can be seen in the Hotel LaSalle, at Madison and LaSalle St., Chicago.

In the sweat shop a cook is required to do at least the work of two to three men. Frequently at that place they have banquets or parties comprsing from 800 to 1000 persons, and on exceptional occasions twice that number attend. Suppose a party consisting of 800 persons, each of whom is to have tenderloin steak broiled. In order that all these steaks be properly broiled it requires the work of at least three cooks. At the Hotel LaSalle one cook does this work. A cook working as fast as such a demand compells cannot properly season the meat, nor can he be overly clean. Frequently in his haste he drops a steak on the floor, but since he has little time he picks it up, dirt and all, places it among those that are to be served. Such a situation is deplorable indeed, but whom are we to blame for the condition, the cook or the manager?

Nor is this all. In many instances, the pans in which the steaks are broiled are incrusted with dirt left by a dish-washer who also works at top-speed.

Then let us take a look at the fry-cook. It is required of him that he prepare, for the same party, a sufficient amount of potatoes au gratin. He, like other cooks, must work at full speed, and while working his aspect is that of a man mixing concrete. In order that this mess may be appetizing the cook covers the potatoes with a coating of adulterated cheese and paprika. Were it possible for a patron of the hotel to witness this operation he would be nauseated.

After the banquet there possibly remain uneaten a hundred steaks, whereupon, the following day the chef instructs the cook to serve them again, giving them some unintelligible foreign name, or possibly the bill-of-fare will read "sliced tenderloin saute with fresh mushrooms." For the most part these steaks are kept in rusty pans on the floor where the kitchen cats come and freely have a feast. Such practices are of course revolting to even the least fastidious, but for Ernest J. Stevens they are matters of business. "Business is Business," he will tell you.

The days when wholesome meals were obtainable are gone forever. Today the foods and liquors served to the American public are poor in quality and scanty in nutritive value. There was a time when Hollandiase Sauce was made from pure butter, now it is a concoction of cream sauce and yolk of eggs. Chiken a la King is artificially colored. Consomme is colored with black jack or "monkey," that is sugar burned for an hour. Baked beans and spaghetti are largely imitations. Cheese is really about two-thirds bread crumbs. Corned beef hash is a combination of dozens of different varieties of left over meats, and cod fish cakes is left over scraps of fish and potatoes. Such is the food served to the public, and it is the cause of many losing their lives. In the meantime, Mr. Stevens of the LaSalle, and Mr. Byfield of the Sherman House and others like them accumulate their millions of dollars.

### Stop and Think

Do not be in a hurry, life is short enough as it is. Before entering a restaurant give some thought to the health of your stomach. This is given as a sort of warning and before patronizing public eating houses it is *wise* to stop and consider. If your food is prepared in your own home and you carry it to shop or office you will be safe. A mere slice of bread with cheese is much more wholesome under such conditions than an elaborate meal at the restaurants. True, you will probably miss the strawberry pie or vegetable soup, but your deprivation will be for the better. The strawberry pie is probably made from decayed strawberries, and the soup is prepared in vessels

that are seldom cleansed. It is preferable that our house cat feasts on a box of sardines rather than partake of the chicken obtainable in hotel and restaurants. Are we justified in making such sweeping charges as are contained herein? We request your patience till we have done with our story. Below we append some evidence, easily verifiable by any earnest investigator. We go with a searchlight from kitchen to kitchen, and the first is the

### Hotel LaSalle, Chicago

Bread dressings served to the public are soaked in a filthy sink where the pots and pans are washed. After being soaked the dressing is stored for a week in wood barrels. Is this sanitary?

Soups and meats, in dirty containers stand on the floor all day without a covering with the result that they are covered with saw-dust and fly-dirt.

"Come-backs" from parties and banquets, such as bread, cheese, cold meats, steaks, celery and lettuce, are served over and over again until such time as they are disposed off and the last cent of profit extracted from them.

Bones, scraps of meat and vegetables are dumped into the "stock pot." It is boiled all day and far into the night. The pot is not covered, and flies and cockroaches easily find their way into it, nor are the bones used in this mess washed of such dirt as they accumulate.

All scraps of bread are used for dressings and all kinds of scrap meats are used for hash.

The above is only a few of a hundred charges we have made regarding the Hotel LaSalle. We challenge manager Ernest J. Stevens, or Chef Ferdinand Karcher to deny or refute these statements.

### California Cafeteria

The food served in the California Cafeteria, 16 W. Washington St., Chicago, is prepared under the most insanitary conditions. The proprietor is Harry Farrell, formerly president of the defunct California Cafeteria at 21 South Wabash Ave. The place now under his management is notorious for its rotten food. The Chop Suey served here is nothing other than the scraps that accumulate from day to day.

Scraps of fish, left over by the patrons, are collected and by adding cream sauce a compound is made which is served to the public again under the alluring name of "Tuna Fish on Toast."

Mr. Farrell commands the Chef to serve everything. Oatmeal, corn meal mush, corn fritters, scraps of meat, liver, potatoes, frankfurters and bits of beef and veal: all left-overs, are taken by Chef Gust Borgeaud and passed through a meat chopper. From the resulting mess he makes croquettes which he names "Chicken" or "Veal" Croquettes" as suits the demand. Should the croquettes be left-over for still another day they are then served as "Meat-balls with Spanish sauce." Or perhaps as "Hamburger Steak with Onions." Failing disposal of the mess under such names, it is mixed with corn-starch, bread crumbs and eggs and baked for two hours. Now it is ready to serve as "Veal Loaf with Creole Sauce" or "Vienna Loaf with Onion Sauce."

To give in detail an account of all forms in which filthy food is served in the California Cafeteria would require the space of a book. Here we can only indicate the more prominent features and pass on. However we wish to defy Mr. Farrell to refute the charges contained herein, brief as they are.

### Hotel Sherman

The management of the Hotel Sherman, Randolph and Clark St's, Chicago, spend annually thousands of dollars advertising the food served and its cuisine. In spite of this display, slimy french fried potatoes are served. The chickens and turkeys are of poor quality and in many instances putrefaction has set in. Decaying as the flesh is, it is served to the public. Shrimps served here have such a bad odor that cooks find it difficult to handle them. Sraps of meat are saved and used over and over again. Rotten cantaloupes are saved for days and when a great number have been accumulated they are boiled, adding sugar, vinegar and some spices, after which they are served under a "high faluting" name. The night chef who performs this work is Louis Vate.

Who is to blame for this condition of affairs? Naturally, the head chef, Thomas Maglians, blames the steward, Albert Stalle. Stalle blames Byfield. Truth to tell though, no particular individual is to blame. The real blame rest on the profit system which super-induces corruption and dishonesty.

### Virginia Hotel

The food prepared in the Virginia Hotel, Ohio and Rush Streets, Chicago, is injurious to the health of the patrons. The ice-box is dirty, and the meats are kept in rusty pans. Sauces and vegetables are kept in tomato cans. This practice is dangerous and is rightly condemned by the Board of Health, because it is realized that such food develops a poison called ptomain.

### Auditorium Hotel

The food served in the Auditorium Hotel, Michigan and Congress Streets, Chicago, is far from being first class and is prepared under the most insanitary conditions. Most of the pans about the place are rusty, and foods are kept in cans liable to contamination. The ice-boxes are damp and the potatoes after one day in the place are slimy. French fried potatoes are prepared in grease the color of ink. Most of the food is in rusty containers, left on the floor or in a damp ice-box. The toilets in this hotel are filthy and the Board of Health should demand the closing of the Auditorium Hotel kitchen at once. It is injurious to the health of all who work there beside being a menace to the well-being of its patrons.

In speaking of the Auditorium Hotel, it is well to remember they have sinks in which they keep

peeled potatoes. It is a daily occurence to see rats, the biggest and most terrible rats I ever saw —they look like rabbits, go to the same sink and drink out of it, and also run around over the potatoes, sometimes stopping on a particularly large spud for a rest, or to visit with their friends.

### More Truth

The average culinary worker prepares food under conditions that are insanitary. Since the worker is not a free agent in such matters the blame for the conditions is to be placed elswhere than on him.

Towel shortage is a condition and problem in every kitchen. The cooks are not furnished with sufficient towels, and as a consequence are compelled to use rags, greasy and otherwise. Frequently by necessity they use worn out shirts, as is the case at the Hotel LaSalle.

The pot-washer does his work in greasy and slimy water for which he is provided with little soap. Pot-washing for the most part is a very inefficient and careless piece of work.

Dish-washers, also, have trouble in obtaining clean towels for wiping dishes. In many places the workman is compelled to use table-cloths and napkins, already used by the guests. One can well imagine diseased guests handling table-cloths and napkins only to have them communicate the infection to the dishes apparently clean. This practice prevails in many restaurants.

For all these practices there are definite sanitary laws. One of the most flagrant violators of them is Tom Quigley, owner of the Rubaiyat Cafe, 950 Rush St., Chicago. In this place comparatively few towels are furnished to dish-washers. From morning to night napkins and table-cloths are used by the dish-washers. In this manner are germs communicated from one guest to another. The use of soiled napkins is highly insanitary.

Nor is this all. The butter, cream, bread and other foods, left over from one guest to another, and served time after time are a direct cause of the communication of disease in many restaurants.

Can these statements be substaniated? Here is a specific case: left-over pieces of butter containing cigarette butts, are used in the preparation of food, both the LaSalle and Auditorium Hotels.

In those places where food is kept in rusty pans or in tinned tomato containers, the guests are endangered with poisoning from spoiled food or metallic salt. At the Virginia Hotel such practices are a part of the day's work. After persons have eaten some of the meats from rusty pans or tinned containers, stomach troubles are a natural consequence, and in extreme cases ptomaine poisoning.

### In Conclusion

The above brief expose of the filthy and insanitary conditions in the various kitchens is a only a small part of the story. We have an abundance of facts at hand, but owing to certain material conditions are just now unable to publish them. However when circumstances so shape themselves we shall publish the truth regarding the conditions existing in hotels and restaurants in all parts of the country.

In the past we have demonstrated certain facts regarding hotels, restaurants and their owners; we have demonstrated that unwholesome and adulterated food is, as a matter of routine, served to the public; in short we have demonstrated that the food of the average restaurant and hotel is not fit to be eaten by any man or woman. All of which, as we have shown, is due to the greed of owners for profit.

Filthy kitchens, unwholesome food, with the resultant disordered stomachs, come from greed for the almighty dollar. Whom are we to blame for these conditions? The answer seems plain, undoubtedly it is the food barons.

What is the remedy? Under present conditions there seems to be only one available and that is publicity. The only thing we can do at the present time is to carry the fight before the public. This is not an easy task, owing to the fact that the public is misinformed by the yellow press. However we are not discouraged and shall continue fighting until every kitchen is spick and span, the food prepared under sanitary conditions, and the health of every person safe-guarded.

### The Road To Good Health

To insure good health it is necessary that the gastro-intestinal regions are kept clear of disease germs. If many persons have trouble with their stomachs, it is in almost every case, due to the poor quality of the food they consume. The average citizen has arrived at the place where he gives some care to the teeth, but he neglects his stomach shamefully. Each should be very much concerned about this vital and important part of his body.

Elswhere, in our article on "Physiological Reaction and the Class Struggle," we said: "The stomach is the principal organ of digestion and its task is to convert inorganic and organic matter into blood, thus supplying energy to the tissues of the body. No species of animal can exist unless it receives its means from the surrounding environment. In the work of gathering and assimilating this material, certain mechanical and chemical changes are necessary. In this work of digestion, the stomach performs the essential work."

It is our desire that you enjoy good health. In order to have good health, the stomach must be kept in a healthy condition, and for this last, good wholesome food is required. To attain all these results the food barons must be forced to serve good wholesome food prepared under sanitary conditions. There is a choice to be made. Unsanitary food leads to the cemetery, but wholesome food spells health. So long as impure food is served in public eating houses the undertaker wears a smile, but the enjoyment of a long and useful life is to be had by partaking of wholesome food.

**ASPUDDEN, Sweden.—A new feature in organization activity, as it seems to me, is the regularly occurring OPEN FORUM lectures dealing with the natural sciences. If this feature of I. W. W. activity becomes an established part of our educational system, as I hope it will, then it would not be amiss to contribute a few new ideas to it.**

**We know that scientific education is a necessity in the industrial world for those that direct the industries.**

**Hence it is logical to impart such education to the workers as they are the ones that in the future will partake in the directing of them. At this stage it is impossible to give every worker, or rather the average worker, an education that is equal to that possessed by the leaders of industry. If we had the control of the radio we would at least be able to broadcast a lecture of a scientific nature once a week, but as that is also impossible at present then let us do the best possible with the means we have at hand.—C. G. ANDERSON, in Industrial Solidarity.**

# LIFE, SOCIETY, ORGANIZATION

By SAMUEL W. BALL

**A Lecture Delivered May 2, 1926, Before the Chicago Open Forum of the Industrial Workers of the World**

A HUNGRY MAN, so we are informed by Tolstoi, A Russian novelist, once had but six pennies. Coming to a bake-shop he entered. For five of the pennies he obtained three buns, and a small sweet-cake or cooky that appeared to be appetizing, was obtained for the remaining cent.

Eating one of the buns the man was as hungry as before. The second and third were devoured, still the craving for food remained. Eating the cooky he was surprised to note that his hunger had vanished.

"Now," thought he, "Why not have only purchased the cooky and saved the money spent for buns? Hereafter, I shall know better."

This story, whatever its merits otherwise, illustrates a principle well understood in the domain of science, namely, the change of quantity into quality. Our Russian friend had eaten a quantity of buns but failed to obtain the desired satisfaction or quality. The quality sought for was only realized after he had eaten the cooky.

All things in the universe may be regarded, first, as an amount or quantity; as what it is, by and of itself, and second, as to what it does; by its virtues, properties or characteristics. What it is is quantity; what it does is quality. All matter has these two aspects.

Glass, for instance, is a quantity of matter having the quality of transparency. Sugar is sweet; vinegar sour; alum astringent. A locomotive is so much iron possessing a tractive quality. A watch records time, a pen writes, iron is malleable, the rose red, lead heavy, and man, so much matter, has a property or quality called thought. Money or coins are so much matter. When organized into great masses money takes on the quality of capital. All matter has qualities of one or another sort.

Qualities or properties are entirely due to the manner in which matter is put together; the way in which it is organized. If matter or quantity is organized in a given way, it does a particular thing. If it is organized in another way, it does something else.

An automobile is a quantity of matter, wood, iron, rubber, leather and gasoline. When organized and articulated we give it the qualitative name, automobile. A watch is a contrivance composed of metal, glass, rubies, ink, enamel, wheels, springs, escapment, hands, dial and stem. If these various parts of matter are arranged or organized in a given manner they record time. Recording time is a quality of matter so organized. It is not separate and distinct from the matter, but inherent in it.

But watches can be taken apart, laying the several parts in a heap. All the watch will be there—but it will not record time. Recording time is a virtue, quality, or property subtly connected with the arrangement or organization. Destroying the organization destroys the quality.

From this it is apparent that properties are intangible, yet comprehensible, and at all times associated with some form of matter. Properties

or qualities are always present in matter, but alter or change according to its organization. Quantity, then, can be made to manifest qualities.

Chemistry, as has been demonstrated experimentally, leads us to the same general conclusion. Formic acid is a compound composed of one atom of carbon, and two each of hydrogen and oxygen. Such a quantity requires one hundred degrees of heat to boil. If we quadruple the quantity of the first two constituents; four carbons, eight hydrogens and two oxygen, we obtain butyric acid, boiling only after 162 degrees of heat have been applied. Thirty carbons, sixty hydrogens and two oxygen will give us mellissic acid, which boils at 180 degrees. The differences in the amount gives each a different quality, requiring a differing amount of heat for boiling purposes.

Water when heated boils at 100 degrees centigrade. When this temperature has been attained, water changes from a liquid into a gas or vapor. One degree less than 100 the water remains a liquid. By the adding of heat in a given intensity the quality of the water is transformed.

Hang a weight on the end of a string, adding weight to weight, and the string will hold, but in due time, if the process is continued, a limit will be reached and the string broken. A stone is to be lifted by man-power. However, several strong men are unable to do so. Near by is a weak old lady who kindly lends a hand, and the stone is lifted. Her strength was not much, but little as it amounted to, it was sufficient to change quantity into quality.

### The Militarists Found It Too

Napoleon, the great military genius of France, in writing on cavalry tactics, leads us to believe that he understood and practiced the principle under discussion. While in Egypt with the well trained and disciplined soldiers of France, many battles were had with the Mamelukes or barbarians. The barbarians were the best of horsemen, and man for man could outride and outdo the very best of French cavalrymen. In fact, two Mamelukes, under fair conditions, could whip three Frenchmen. Two barbarians were, in any passage, more than a match for three of the bravest Frenchman. When they met each other in groups of one hundred on either side, the contest resulted in a drawn batle. Neither side seemed to obtain any advantage. When the numbers were increased to three hundred for each of the contestants the Mamelukes were invariably worsted, and, Napoleon was assured that a thousand well trained French cavalrymen could whip fifteen hundred barbarians. As the number of the French increased, their training and discipline; their qualitative effectiveness, become manifest. Man for man the barbarians had the better of it, but in large masses their independent and individualistic tactics led them to defeat before the well trained, co-operating French soldiers.

Money, of course, is money. A dollar in your pocket is so much matter. Organize the dollars in ten thousand men's pockets, (and by the way that is the function of savings banks) so that one man has access to it and the result is capital. A dollar is 100 cents. 10,000 dollars are 10,000 times 100 cents plus a new property or quality, which for convenience we name capital.

The mother is impregnated and for nine months the embryo grows and develops. Suddenly it emerges into a world of separate existence. It now begins a career of breathing, feeling, thinking. It takes on properties it did not posses while confined within the mother. Quantity is changed into quality.

### And In Living Things

In the egg of a chicken is a mass of matter called albumen. Apply heat under well defined conditions, the albumen germinates, takes on the quality of life. Albumen is thus changed from inert matter into a living chicken; the shell is broken and the new arrival announces the fact by saying, "peep, peep."

Our modern incubators and their attending results are ever recurring evidences of the fact that life is a property of matter. Nothing less nor more than this. Life is not some mysterious entity coming out of nothingness, but a quality associated with matter and its organization. Life only appears under certain well specified conditions in the organization of matter; it is the result of conditions now existing on our earth. Were these conditions to be radically altered, life would assume other forms, or, perhaps disappear. Matter is a quantity; life is one of its many manifestation or qualities.

### And In Society

This principle, the change of quantity into quality, also applies in the domain of society. The word "society," as here used refers to the relations and activities of all mankind regardless of age, color, sex, creed, wealth, or nationality. When using the word "society" in this sense, not the upper ten, the elite, nor the wealthy "four hundred," are to be given any undue prominence. Society, as here used, refers to all mankind, in all parts of the world, regardless of location or condition. Every new machine that is invented and put into successful operation; every business that fails, adds to the numbers of the working class. As their numbers increase, the quality of the development is improved and strengthened. The more there are of them the more effective they become. Social or historical forces bring such results as a necessity of their existence. It is a process operating independently of any particular man's will. No one man, nor group of men can for long thwart or interfere in this process. In due course, the most malignant and determined of men must bend their wills in conformity to historical events and social necessities. This process will continue until such time as a machine is set up that will bring a social revolution. The machines are now everywhere and on the increase; the workers who oper-

ate them or are displaced by them grow in numbers proportionately—the quantity is increasing, and in due time this quantity will be transformed into quality. Marx and Engels, nigh unto two generations ago, foresaw this event, which becomes more manifest as each day recedes.

The change of quantity into quality and the principle of its application, is highly scientific and was discovered in the domain of chemistry. From chemistry it has spread into every department of scientific knowledge. Even such straight-laced, strict, absolute and exact sciences as mathematics and physics have been profoundly effected by its application. Truth to tell, the recent revelations of Einstein are but wider applications of this principle. The change of quantity into quality makes all things relative—nothing now is fixed or absolute. The mutability of all things, even time and space, now becomes a part of our stock of knowledge. Two and two, since Einstein, do not always and invariably make four. Before Einstein, things mathematical and physical, "always was this way and always would be this way." Now the quality of anything, even the most apparently permanent thing, may change in a night. The stable and fixed universe of our fathers has been relegated to the museum of antiquated ideas.

Let us take a look at some of the implications of modern science. If the generalizations of modern science are correct, it simply means that neither God, Devil, Right, Wrong, Morality, Ethics, Telepathy nor Spiritualism have any controlling and directing influence in affairs of this universe, It is well that this is so. If the above mentioned entities, or other similar gods and philosophies, were able to influence the historical or social process there would be no hope for the working class.

### The Hand of God?

Since Evans, Petrie and Breasted have been digging in Egypt, Persia and Mesopotamia, we may be said to possess about nine thousand years of recorded history. During all these nine milleniums there has always been a large proportion of the population engaged in manual labor. The names for them have been many and various; sudras, coolies, slaves, serfs, wage-workers; there have been millions of them; aye, billions of them. During these nine thousand years, of which we have an account, God, at no time, concerned himself about the workers. God, granding his existenct, was content that the great mass, generation after generation, should live in squalor and poverty. In this long period of the past, God never so much as gave the working class a passing thought, until today it is the frailest of hopes that He is going to reform. Either He does not exist, or existing He is impotent; possesses neither the power of good nor evil. With such apparent and obvious impotency before us, a workingman who adheres to some religious docrine, conducts himself according to some ethical platitude, or obeys a master's creed, is simply his own worst enemy. He encumbers himself with impedimenta that retard his progress and stand in the way of his own well-being.

God, evidently, has been so busy that the working classes have never received even the slightest notice or consideration. It is evident, if the lessons of history are to be relied upon, that whatever is to be done for the working class must be done for themselves by themselves. AND (let us put the "AND" in capitals) if the working class can do for themselves, they then can get along well without the assistance of any God.

Returning to our consideration of the change of quantity into quantity, we recall its discovery in the domain of chemistry. Since this knowlege is of some importance to those who are interested in working class progress, let us, for the nonce, examine some of its basic and fundamental aspects.

### Analysis of Matter

This world or universe consists of matter, the entirety of which may be contemplated under the three general heads. We have very simple forms of matter, 92 different varieties, and these are known as chemical elements. The word "element," used in this sense implies simplicity, or indivisibility. * Chemical elements, where two or more of them are combined, form compounds. The compounds of the elements are of two kinds, classified roughly as non-living and living, or inorganic and organic. Water is a typical inorganic compound, whilst protoplasm is organic.

Upon investigation it has been discovered that these three forms of matter appeared in the world in the following order; first, chemical elements; second, inorganic compounds; and, third, organic compounds.

The organic compounds, or for our purposes, living bodies, came into the world but recently. They are the creations of yesterday. They are new forms, only appearing after long ages of preparation in a world of chemical elements, followed by an equally lengthy period of inorganic compounds.

The sun, which contains more than 99 per cent of all the matter in the solar system, has upon it, neither inorganic nor organic compounds. All the matter that goes to make up the sun is elemental. Matter on the sun exists in forms prior to its condensation into water, air or man. Some billion of years ago, the earth, which at that time was a portion of the sun, broke from its moorings, made its way into space and rapidly cooled.** As cooling progressed, the elements of which it was composed were compounded or organized so as to produce

*EDITOR'S NOTE.—Recent research in physics seems to have proven that some at least of the elements can be divided; electrons can be knocked out of their atoms so as to leave two different elements where there was one before. Needless to say, this fact does not vitiate the author's further argument in any way.

** EDITOR'S NOTE—This is one theory; there are several others. Scientific opinion is much divided over the question. All agree, however, that the earth did not always exist, but somehow or other was formed, either at the same time as the rest of the solar system, or later than part of it. Most scientists agree that it was hotter in the beginning than it is now.

rock, air, water, fish, bird and man. The earth became a solid; only after such a process could man and society arise.

Perhaps the first compound substances formed on the earth were carbonic acid, gas and water. The formation of these substances laid the foundation for the subsequent appearance of life. In the beginning, the temperature of this earth, was probably in excess of 6000 degrees above zero. But this intense heat, owing to the frigidity of outer space, had a tendency to diminish, giving rise to such substances as silicon, sodium, and magnesium. Then came the acids, alkalis, salts, and metals.

### Combination

When the temperature of the earth had been reduced to 100 degrees Centigrade, the element oxygen laid hold of the element hydrogen, forming an aqueous or watery gas. Thus water came to exist on this earth. As the heat diminished, living things began to appear; forms of matter that are basically carbon compounds. All living matter is essentially carbon, Carbon is the builder or structural content of life. Some elements are "one-handed;" can lay hold on only one other element beside themselves. Carbon, however, is "four-handed," and for this reason is capable of laying hold on many elements and producing a greater variety of organization. Carbon is a center or nucleus, around which a great variety of elements can group themselves, giving rise to a high and complex form of organization, such as has life, for instance.

Man, therefore, is a chemical substance, more specifically a carbon compound. In percentage he is 66 of water, 3.1 nitrogen, 2.1 hydrogen, 15.8 carbon, 2.5 calcium, 1.2 phosphorous, 6.7 oxygen, including about 10 ounces of potassium, fluorine, sulphur and magnesium. Man contains about 110 cubic feet of oxygen, 60 of nitrogen, 561 of hydrogen, with a drop or two of iodine. An ordinary man, weighing 150 pounds, analyzed chemically, consists of 10 gallons of water, carbon enough to make a shovelful of coal, iron sufficient for a ten penny nail, lime enough to fill a sack, phosphorous to make a box of matches; in him there is, also a teaspoonful of sugar and about the same amount of salt.

### Combination Creates Life

Chemical elements, when compounded in given proportions form protoplasm, the simplest form of life known. In fact that is the meaning of the word, protoplasm, first life or first plastic organism. It is the "physical basis of life," and is found free everywhere in nature. Photoplasm, in all its manifold forms, manifests the unique property of life, sensibility or awareness. It is a plastic body readily adapting itself to its surroundings. The compounding of the chemical elements pushed millions of these small protoplasmic bodies into existence. Those being most fitted to the surroundings survived; continued to live, and to reproduce themselves after their own fashion.

The lowest forms of life are found in the waters of the earth. This is a necessary condition to life's beginnings, since water contains all the elements necessary to the formation of living things. Water, owing to the fact that it is a liquid, permits a free mingling of the elements. Air or gas is so unstable that the elements in its midst, cannot organize permanently. In solids, the rigidity precludes the required intermingling of the elements In a liquid, such as water, the elements, carbon, hydrogen, oxygen, nitrogen and magnesium can mix freely. Sea water and blood are composed of the same elements, differing only in the order in which the elements are arranged.

Protoplasm, then, is a living organism, found in its pure state on the ocean bottom. It is the very simplest and lowest of living things, yet the most complicated and highest chemical compound. It is the bridge that spans the chasm from chemistry to biology; from the inorganic to the organic; from the non-living to the living. The whole group of protoplasmic animals is by Haeckel given the general name, "plasson bodies." They are chemical compounds which are plastic; readily shaped and affected by their surroundings.

### Life Itself

The leading characteristic of a plasson body is the ability to move itself; it lives; it is matter having the property of life. Life therefore is no more wonderful or mysterious than the properties associated with other forms of matter. As mentioned elswhere, sugar is sweet; vinegar sour. Vinegar and sugar are alike in being matter, they differ in their properties. When matter is in one form it is bitter; when in another form it lives. Protoplasm is a quantity of matter possessing the property of life. It is irritable; must have moisture, and absorbs sustenance from its surroundings. It could not exist on the sun for various reasons. The sun contains no water, nor are the chemical elements in such condition that they can, at this time, organize life. Life could not have appeared on earth two billion years ago, the temperature was then too high. And is it very probable a hundred million years from now life will have entirely disappeared from the face of the earth. It will then be too cold. There is no life on the moon, owing to the fact that the temperature there goes far below zero.

Life, then, results from certain conditions; it has a history; it came into the world at a given time after certain preliminary conditions had been fulfilled. It is one the incidents in the processes of nature, and, considered cosmically is of little or no importance.

Our bodies are organizations of cells, cells made of the chemical compound protoplasm. Every animal, men and women included, starts life as a single cell, barely discernible by the human eye. The cell, pushed into existence, gathers sustenance from the surrounding environment, grows and is transformed. From the moment the mother is im-

pregnated to mature manhood, the cell from which man starts passes through well defined stages of life history. Beginning as a cell in the mother's womb, in a few weeks he has the characteristic of a fish, later he takes on a lizard-like form, to be succeeded by an ape-like appearance; coming into the world he passes his childhood as a savage; in his youth he is a barbarian, and attaining the age of 35 becomes civilized.

Life, speaking in this general way, has been variously, protoplasm, fish, toad, lizard, serpent, bird, lower mammal and that mammal called "man" —in brief this is our racial history or phylogeny. Each individual, by this law of life, has in the small to relive or review each of the steps in the long history of the race. Thus the history of each individual or his ONTOGENY repeats or recapitulates the PHYLOGENY or history of the race.

Not only is this process of recapitulation true of man organically and biologically; it is equally true of the social man. From childhood to maturity, each individual repeats in his emotions, wishes, desires, ambitions, hopes, fears and play, those of the whole race of man in its passage from savagery to civilization. The boy with his gang-spirit, cave-digging and shanty building is in truth a barbarian. It takes years of patience, discipline, culture and education to civilize a boy, and then he only submits to the inevitable. *

For those readers who have come with us thus far it is necessary to round out our discussion by tabulating the various forms and organizations of life; indicate their various quantities and qualities. Tables of names and figures are, from the standpoint of the reader at least, extremely perplexing, but a moment or two given to their consideration will make the facts of chemistry and biology a little less difficult.

Nature, in her workings, combines the simplest or elemental things first, and from this moves on to higher forms of organization. Taking things apart is known as analysis, putting them together, which is nature's way, is synthesis. Nature creates by combining; putting together, in short, organizing. All forms of matter, with their various qualities, may then be said to be the result of synthesis. These synthetic creations of nature may be tabulated thus: (1) Electrons, (2) Atoms, (3) Molecules, (4) Protiens, (5) Protoplasm, (6) Plants, (7) Animals, (8) Man, (9) Society. Two or more electrons make atoms; combined atoms make molecules, and, man compounded makes society.

So much for the whole process in general, now, let us return over the road by which we came and place the plants in the following order: (1) Seaweeds: (2) Mosses: (3) Ferns: (4) Seeded and flowering plants. There are in truth but four kinds of plants, and each may be considered in its relation to moisture. The simplest plants grow in the sea, requiring a great amount of moisture. Mosses, the second group, require not as great an abundance of water, but yet a certain amount of wetness, whereas ferns survive where it is merely damp or less wet. Seeded plants have progressed to a point where moisture is only an incident to their well being. The seeded and flowering pants are the most highly organized, and are capable of greater adaptation to comparatively dry climates, far removed from the sea. They occupy the same relative position in the plant world that man does among the animals.

The animals may be classified under eight heads. In this table two names will be given. First, that of the particular type of animal, and following it the name of the great group to which it belongs:

1. Cells or Protozoa;
2. Sponges or Porifera;
3. Jelly-fish or Coelentrata;
4. Earthworms or Vermes;
5. Star-fish or Echinodermata;
6. Oysters or Mollusca;
7. Grasshoppers or Arthropoda;
8. Apes or Vertabrata.

Here again is to be seen the increase in complexity and organization as we read downward, from items one to eight. Studying each of these in their order, we find, beginning in simplicity, they become more complicated, more highly articulated, up to and including the back-boned animals, of which last, man is the most recent product.

These latter, back-boned animals, can be further

*EDITOR'S NOTE.—One should not get the impression from this that because the life of a child is in many respects like that of a savage, that savage or barbarous life is entirely like that of children. Adult tribesmen have very much more complete social systems, activities, and cultures than children of civilized men. Perhaps it would be better to say that just as the embryos of pig and man resemble each other more than the adults do, so do the culture of babarous child and civilized child resemble each other more than those of their parents.

classified according to the degree of organization attained at any given stage:

1. Fishes or Water Breathers;
2. Amphibians or Air and Water Breathers;
3. Reptiles or True Air Breathers;
4. Birds, Feathered and Warm Blooded;
5. Mammals, Suckle the Young:

Amphibians, the double breathers, second in the list, when newly born or hatched, breathe or aerate water like their ancesters the fishes. When grown, the amphibians breathe air like their descendents the reptiles. A frog is a typical amphibian. Reptiles, the next in order, are of an ancient race that once upon a time numbered eighteen branches, inhabiting the air, water and land. In their heyday they were the most highly developed creatures on earth. The climate of the world was then considerably warmer than now. In fact it was so warm that these creatures were cold-blooded; nature had not yet "invented" warm blood. Since their day the temperature of the earth has fallen considerably with the result that only five of the original eighteen branches have survived, four of which we now see as turtles, lizards, snakes and crocodiles. Such are the survivors of what once was a great race that dominated the world before the coming of the mammals and man.

As the mountains were pushed up, and with them the surrounding land, the climate became quite cold. *) Coldness brought feathers and warm blood into the world. Truth to tell, the birds, fourth in the list, are nothing other than warm blooded reptiles with feathers.

After the feathers came fur, a more convenient covering. Then came man with his large brain and inventive ingenuity. The rigors of a gradually lowering temperature hold no terrors for him.

Thus we see that all life is one; that it is a property of matter, and that this property or quality changes in accordance with alterations in the surroundings or environment. Life connects backward with the gaseous and inorganic; it connects forward with feeling, mind and society. Nor is the end yet. Out of the great womb of time will come a greater, finer civilization. Hasten the day when the workers of the world will, by the perfection of their organization make such an event possible.

*EDITOR'S NOTE.—The author adopts one of several theories over which scientists are now contending. All agree that the climate cooled. Also it is beyond doubt that it was once (during the ice age) much cooler than it is now, at least in the Northern Hemisphere.

# THE MORON

By VERSUS

"NOW, FATHAH," said the sweet young thing with the occasional Bostonese accent, "what are you hiding that book for? Naughty, naughty!" and she menaced him with her rosy finger, and smirked, and bobbed her empty pretty head.

The grim old man with the writhing fingers fumbling the telephone on his desk glared up, but had the grace to blush a little. Old C. A. Mather, President of Mather & Co., owner of enormous textile mills where members of every nationality in Europe and the Near East labored their youth away, owner of far stretching plantations where the children of the South sweated out their lives chopping cotton, owner of department stores where the thin-cheeked children of the cities, hectic and consumptive, rattled interminably, nervously, in shrill voices, selling his wares—this man, this POWER incarnate over little slaves—loved his daughter. Or at least, he felt that close, clannish feeling that may really be pride, but amounts to passion—because she was his only daughter, his only descendent, the last twig on a famous old family tree, always of the ruling class. So he let her smirk and giggle at his embarrassment, while he hid a copy of a forbidden book in his desk and blushed.

"Go on down to the charity meeting," he said gruffly, when he could use his voice.

"Oh, no charity meeting—charity is passe. It's social service now. We go right into the homes of the poor, and teach them to buy the cheapest cuts of meat."

"Well, damned good idea. Lazy, filthy, pampered hounds; they'll get no cut at all but a wage cut if this strike will only end. Get out! I got a conference."

"Ta-ta, Old Dear. Don't strain your eyes in the conference. They make those books in *such* fine print."

Mather jabbed the buzzer button, and there was a scurry of deferential feet. Then some one was ushered in, and by the time the boss raised his bulging, yellowed eyes to the slinking shadow that slipped through the rugs, six inches deep, towards his desk, he had already forgotten his daughter.

The shadow slouched in front of the desk, craven, fidgety. Mather regarded it cruelly.

"You read over that police dossier?" he snapped, finally.

The shadow made no sound, but seemed to contract a little.

"Hanging matter, ain't it?" said Mather. "How'd you like to hear that old crow, the D. A., cawing

over you, "We got a perfect hanging case? How'd you like to see the papers, "RAPIST AND MURDERER CAUGHT" . . . . Oh, get up off my desk, you toad. Here, take a good drink. Yes, stick the bottle in your pocket. I was only kidding. I got some real work for you. Right in your line, I guess. You know that damn, greasy Sheeney, the strike leader—well, I'm going to tell you how to fix him, ,and you're going to do the fixing—and you'll like it.

"We found out where he lives. This is the address. I went down myself to see the place. Its a shabby basement under a small apartment house. Private entrance. One room. Nobody can see you go in. Nobody pays any attention to it. The Sheeney spends his nights there, when he isn't raising hell at some strike committee meeting, which is most of the time nowdays.

"Now, I'm not in the habit of telling you boys too much. But this has to be done right, see, for there's hanging in it. You know these big nosed radical Russian Kikes are all perverts, don't you? Hell, yes. I been hearing that ever since I was out of Sunday School. Well, we going to catch this one right? in the act. He's a ripper see? How can I prove it? Well, you're the lad for that. About ten o'clock tonight I'm going down there, with a patrol wagon load of police, and they're going to find the body of a girl there, cut up—yeh' ripped open. See here, this book, it tells what they do. Yeh, get you a good razor or something; sure, make a lot of gashes, and tear out her liver, and put a lot of it in the Kike's bed; make a good mess. Cut off her breasts and put them under the pillow."

"The girl—what the hell do I care where you get her? You got a closed car and a driver ain't you? What do you think we are paying you for? Get her off the street down in the slums there. But listen, you pick out a good looker, see? Some young bitch all dressed up for a jambouree—paint and powder and short dress and bobbed hair. . . ."

The telephone rang. Mather answered it, "Yes." Oh, that you Sergeant O'Rourke? So you got the Sheeney, heh? Arrested right on the street with no one around? Listen Sergeant. Don't let anybody know you got him, see? The story will be that he spent the afternoon at home, see? Yes, take him to some hotel, not to jail. No, nothing on the blotter. 'Bye."

The shadowy person was uneasy again, but already seemed different, more material, more sinister. Evil. With moist, drooling lips, and dreamy glowing eyes that now looked full at his master, unafraid. Mather watched him a moment, and the same soft, rotten light came into his own more prominent eyes. For a moment there was mutual understanding between the two men—an equality —a meeting on common ground. Then the shadow passed on out, and was gone.

* * *

Real shadows crept down over the city, darker and darker. Mather sat in his office, now lighted, and read breathlessly through the book. Occasionally he glanced at the clock. Sometimes he licked his oily lips. There was a mound of cigar ash in the cloisonne tray.

Then the phone call, which he had been expecting. "Yeh, you got her did you? Everything all fixed up? Be right down. Wait here in my office for me. Want to see it myself."

* * *

That was about the last sane word he spoke. When his secretary rushed into the private office and wrenched the smoking gun from his hand, from which seven steel jacketed bullets had just crashed through the head of the nondescript person that was seen in conference with him about noon, he was a raving maniac. Before the sedative had done its work, his heart collapsed, and he was dead. Unnerved, the doctors said, by the horrible discovery of the mutilated body of his daughter, who played at social work and had been killed by a "moron."

The first rumor was that the daughter had had a love affair with the leader of the strike in her father's mills, and had been murdered by him in jealousy, but that story fell through because Police-sergeant O'Rourke, when told that his secret employer was dead, and hearing of the fate fallen upon "the sweet young thing," felt somehow superstitious, and with a sweating face, made haste to spread the news that the strike leader had been in custody all afternoon and evening.

## The Harvest

Yes, what shall the harvest be? This year more than ever, the harvest worker has need of organization. Great forces are working, back of the scenes, so to speak, to make the life of the men who take in the wheat, year by year, harder and their living more precarious. Two main tendencies can be traced, in quite recent years, each of them showing an inclination to increased importance.

The first of these is the actual displacement of men by machinery. It works indirectly to fill the ranks of the harvest workers, and of all other sorts of agricultural workers too, for that matter, and it works directly, to do so. The indirect effect is caused by the increase of unemployment in the cities, railroads and mines. Steel workers, textile workers, coal miners, are all being forced, through speed up systems (made possible by machinery) and by new inventions of labor saving devices, to join the army of the jobless. Many of these workers came originally from the farms, and many others have relatives or acquaintances who started their career of service to American capitalism in farming communities. To all of these, there comes, in their moment of great need, a hunger for the scenes of their childhood, where they remember that at least the table was well stocked with good food, and the work, if hard, seemed plentiful. They head out to take in the wheat, or look for opportunities as permanent farm hands. Usually they find there are few jobs, and these are the prize of competition with other workers, except in the wheat harvest, where a great number of men are needed for a very short time in each locality. The more men there are, the shorter the time they are needed.

But even worse than this, is the direct effect of labor saving devices on the farms themselves. Farm machinery increases in importance, right along. All kinds of improved plows, drills, harrows, and seeders, make it more and more possible for the individual farmer and his family to take care of the plowing, seeding and cultivating without hiring outside help. All kinds of reaping, binding, and especially small threshing machines and combined harvesters make the amount of hired help smaller than formerly even in the harvest.

This displacement of farm help by farm machinery has gone still farther in the "home guard" farm industry than in the harvest. Arthur Evans, special correspondent for a Chicago newspaper, writes as follows:

"One interesting phenomenon in Iowa is this: Labor-saving devices on the farm are releasing labor from agriculture, it appears, faster than it is absorbed by the manufacturing industries of the state.

"One machine alone, the corn husker, in the last four years has displaced 19,200 men who husked in the old fashioned way. Farm machinery is rapidly increasing. More than 37,000 tractors are on Iowa farms today and power farming is growing fast. There is nearly one automobile to every farm in the state and 19,000 auto trucks on farms, and 30,169 homesteads have lighting plants.

"One sees the effect in the towns and cities. There is no apparent farm labor shortage, but rather a surplusage of workers in the hamlets who used to put in the summer in the fields. The state employ-

ment office reports three or four applicants for every job available. Experienced, all the year around hands are in good demand and get good wages—single hands, $35 to $50 a month with keep, married couples $45 to $60. But the casual worker is in less and less demand, except in the rush season, and floating labor which now follows the harvest northward from Kansas to Canada in flivvers, finds that machinery is lessening the labor demand every year.

"Here's a significant fact; for three decades the number of folks actually on the farm in Iowa has been decreasing, but at the same time production has been increasing prodigiously. For instance, during the last fifteen years corn production in the United States has increased at the rate of about six million bushels a year. Of this, Iowa has contributed 5,000,000 bushels."

Passing casually over the fact that Arthur Evan's definition of a good wage ($35 to $50 a month) might not seem so correct to him if he were doing the work and drawing only that wage for it himself instead of holding down a high salaried position as a publicity man for Iowa, we take notice that the machine in the farming community has the same effect that it has in the city, only worse, because the factory owner, however good the machinery at his command, does not himself labor at real production, and fire his entire labor force, while that is exactly what does happen on many farms. And where things do not go quite that far, there is at least, greater production with less men taking part in the production; in the last few years, "the number of folks actually on the farm in Iowa has been decreasing," but, "Iowa has contributed 5,000,000 bushels" increased corn production during that same time.

Evans, nor any other capitalist apologist for that matter, will not tell you of the other side of the case, the increase of unemployment through the dispossession of the farmer from his land, or his crushing to the point where he temporarily leaves his land and goes into the labor market, following the wheat crop in a flivver. The Evans article would give you the impression that the farmers were all highly contented and satisfied, rich and prosperous, and that enough of this prosperity, despite the absence of jobs, had descended upon the farm laborer so that now that individual had his own means of locomotion, was a flivver owner himself.

The fact is that the farmer has been losing out, relative to the growth of population. The reason there are not so many "folks actually on the farm in Iowa" is because there, as in other states, they cannot make a living. Several million farmers have lost their farms during the last few years —and are now in the labor market. There are many abandoned farms, scattered through the Rocky Mountain region, on the edges of the Southwestern deserts, and in old New England.

The U. S. government does not like to put out figures showing the number driven from the land by low prices for farm products, and high prices for manufactured products, but it does let out the information about the relations of farm ownership as contrasted with farm renting. By this we see that in 1910 there were 465,000,000 acres owned by their farmers under cultivation in 1910, while ten years later, there were only 461,000,000 acres under cultivation by their owners. During the same period the number of tenants engaged in farming increased their acreage from 221,000,000 to 265,000,000. It is just these tenant farmers who are poverty stricken, hard to work for, anxious to work themselves after their harvest is in as day laborers for other and richer farmers, and who usually have small farms on which they can do most of the work themselves.

And it is these small tenant farmers, most of them sons of large farmer families who have no room for all their descendents on the inherited estate, who continually go broke, and enter permanently the ranks of the unemployed.

In Lincoln's day they used to say, Lincoln said it himself, that the regular thing in America was for a young man to work for wages, until he got money enough to rent some land, and then, work the land until he got money enough to buy it. Now the situation is just reversed, farmers start

out with land they own themselves, then they lose their land to the bank which has a mortgage upon it, then they rent the land from the bank, then they are crowded out of that by some big capitalistic undertaking which uses more machinery and fewer men, and become day laborers themselves, at the same time that the number of jobs at which day laborers can work is being reduced.

All this may be summed up in a few words: there are too many agricultural workers, and their numbers are growing; there are too few jobs, and the number will be less in the future; a large percentage of the present number of harvest workers are themselves part time farmers and part time workers, and these are not class conscious yet, and are therefore hard to organize.

And these conditions mean that in the near future wages will fall and hours be extended in harvest work, unless the workers themselves do something about it. The thing they can do is to organize, to educate the groups in their midst who are not aware of the situation, and to cut the hours (making more jobs) and raise the wages, making up for the shorter length of jobs. The bad times coming without organization are plainly recognized by the members of Agricultural Workers Industrial Union No. 110 of the I.W.W., and pointed out on numerous occasions by them. What is needed now is for the unorganized to wake up, and get busy and organize. That is their only hope. A. W. I. U. No. 110 of the I.W.W. is the only organization.

**OUTLAW STRIKES IN THE EAST.**—Indications point continually more directly to the fact that company unionism is losing its grip on some workers at least. There are numerous outlaw strikes in industries where the company thought the workers were thoroughly fooled. The largest is still the Passaic strike, against which the employers in their desperation, resorted to petty slander. In an attempt to discredit Albert Weisbord, Chairman of the strike committee, and start dissension, a woman called "Rosalind Lapnore" filed suit for breach of promise against him. This was a move to drive away certain religious groups who were giving relief to the strikers. The New York WORLD, entirely capitalistic, investigated the story and discovered that the "Lapnore" woman is handled by the celebrated international spy, Jacob Nosovitski, who brought her to the company offices.

The New York subway railway strike was a revolt of workers against a much stronger and better organized company union than any in the textile mills. It created endless confusion in the traffic, though the walkout was not complete. As this is written, it seems to be growing more complete.

The rebellion among the oil workers at Perth Amboy was a surprise to all company officials, and a sudden threat to strike won a wage increase. More "labor trouble" is developing there.

The spirit of revolt is spreading among the low paid factory and transport workers of the East. It is by just such as these, that the I. W. W. should be recognized as a unifing force, an organization for everybody. Join the I. W. W.!

**THEY STILL STRIKE.**—As this is written the British coal miners still strike, after over two months and a half of grim struggle with starvation. It is no light task to feed a million men and their families, probably about four million mouths to fill in all. A million dollar gift is only twenty-five cents for one day for each of them. These workers need money and need it badly. The British Government has practically given up its attempt to shut off outside strike relief, and American workers have no excuse for delaying any longer. Even the hoplessly reactionary, labor hating bureaucracy of the American Federation of Labor has grudgingly consented to have collections made.

It would be still better to stop the purchase of coal in America. The British government, without money to guarantee the continuation of the subsidy for payment of wages, has millions with which to buy coal to break the strike, and has contracted for

many shiploads from both union and non-union fields in America. So far, practically nothing effective has been done to stop the mining and transportation of this coal.

The last act is the proposition of the Miners' Federation of Britain to pull out the pump and maintenance men. This will raise a terrible storm from English capitalist and middle class circles, and such Christian Laborities as Ramsay MacDonald can be relied on to fight it to the last. When the pump men come out, the employers must win or surrender quickly, or there will not be any mines to make profit on in a few days. With the pumps stopped, water rises in the shafts and galleries, and the ground begins to cave.

We can expect every possible moralistic argument to be used to prevent this "destruction of property" but not one of them will have any real worth. The miners are under no obligation to make it easy for the mine owners to starve them into surrender. Let the owners face the prospect of surrendering or losing, not their lives as the miners may, but their property, and not really theirs, at that, but just land they have gained control of, and capital they have stolen from workers.

# Butte Employers in Secret Conclave

(Continued From Page 8)

The purpose of the meeting, of course, was to devise ways and means of breaking the strike. Two points will impress the reader; first the lack of logic displayed by the speakers, the weaving back and forth without arriving at any conclusion except that the U. S. army must be used for putting an end to the strike by violence. The impression they leave is that of a set of brainless apes at bay, snarling, spluttering and stuttering, offering only as a remedy, violence and destruction. The second point is that they all agree, while admitting that the strike was a protest against a wage cut, that it was an attempt to change "our" form of government, a "revolution." The prosecuting attorney wails that the Sheriff, the police and the courts are powerless and that only the strong arm of martial law can cope with the "bolsheviks."

This bunch of "leading lights" in the community displays the ethics of the Neanderthal and the the intellect of an undeveloped savage. They are a disgrace to themselves and a disgrace to the working class that allows itself to be ruled by them.

Mr. *Eugene Carroll* was nominated and elected chairman. He announced that "the Major has just gotten into town and wants to get a line on the situation here, as I understand it. In order that there can be no question as to what you say or as to what takes place at this meeting, there is a stenographer here who will take down and transcribe the full proceedings, so that there can be no question in the future as to what is said or done." (That was considerate, as otherwise we would not have had this account of the meeting).

The chairman introduced Mr. *John Gillie*, "manager of mines of the Anaconda Copper Mining Co., the largest producing company in our district."

Mr. Gillie told about the production of copper, stated that the district normally employs 18,000 to 20,000 men. He proceeds: "On account of employing everyone that came in we were loaded up with an element here that at different times before has made onslanghts on this place and is known as the I. W. W., and in connection with them the pro-German and revolutionary element. We kept them at work in order to produce." He then told of the surplus of copper following the close of the war, and touched on the sliding scale of wages (which was abolished as the result of the 1917 strike) and spoke of the cut in wages just made from $5.75 a day to $4.75. He goes on: "It seemed to be an opportune time for this disturbing element to take hold and they immediately got out and called a strike. No demands were made upon the company of any kind but they struck against any reduction, notwithstanding this reduction was practically agreed upon by representatives—the real representatives of labor. (He refers here to a handpicked delegation of labor skates headed by *McMullen* who had been summoned to Washington for consultation by Sec'y of Labor Wilson). This same element to prevent the production of copper organized a pro-German movement all through this country." He concludes by giving the assembly a conglomeration of falsehoods as to the picketing carried on by the strikers, and expressing his sorrow for the men who, he claims, are prevented from going to work.

The chairman, who is manager of the Butte

Water Co., complains that the men in the employ of his company have been "pulled out of the ditches and the tools have been taken away from them." He asks "why don't the state and county authorities handle the situation and why the necessity of the military doing it at this time?" He introduced *J. Bruce Kremer*, who is "familiar with the situation and has been in legal affairs of the mining companies for several years."

The speaker referred to the blowing up of the old miners union hall on June 13th, 1914. Then he rushed on: "It does not matter whether there is a strike on or not, the fact remains that men are not allowed to work. Industry is paralyzed, business is stagnant and the community faces a crisis that must mean financial ruin. Far greater and beyond that hunger and privation stands knocking at the door of many householders in this community— — — — — —.

**Any Methods**

"I believe it is important that something should be done.— — — —If it is apparent to us that the only way it can be established is to have the civil authorities step aside and the military authorities step in, then certainly that is the course that should be pursued.— — —I am satisfied that through the medium of the army officials anything that may confront it with reference to the method will be speedily faced."

Mr. *D. J. Charles*, banker, ex-county commissioner, was then introduced: "I believe that if the men are going to be beat up and families disturbed in order to keep men from employment, I think it has come to a point where something radical should be done.— — — —If these conditions are existing and the sheriff and the city authorities are not able to cope with the situation, perhaps this is the time to start martial law and allow people to be employed that want to work.— — — If this is the proper time, let's go to it."

*Judge Dwyer* (ex A. C. M. attorney) judge of the district court, was the next speaker. He reviewed 1914, and paid his respects to Muckie Donald, then said: "Going back to the cause of conditions, it is a little bit socialist and the rest radical element. In fact, it is a thing that was made in Germany for outside consumption and we are the consumers here. We have five thousand people in Butte at present who have no sense of right or wrong. They claim they cannot live on what they make but these men who run the miners off the hill, these Finlanders and others, sleep three shifts in the same bed and live on one dollar a day and save more than ever before heard of."

He then speaks of the high cost of living and adds: "There is no question but what on many things prices are high in this community and many working in the mines cannot live on the wages. These radicals seize on that as one of their causes and get to their support a lot of persons they otherwise would not get. The dangerous element to contend with here is those that know no other restraint than fear of law.— — — —I sometimes think it obvious, the principle of give and take. You cannot teach wobblies that principle. They have to be handled."

Mr. *Partelow*, secretary of the Montana Federation of Labor, was very non-commital. He merely revieved the dynamiting of the union hall in 1914 and closed by saying: "I have stated my viewpoint as a laboring man without authority to speak for my organization." (It might be pertinent to ask what he was doing among that bunch of labor haters?).

**The "Free Lance"**

We then have the editor of the Free Lance, a so-called "Labor Publication." His name is *F. A. Bigelow*, and he prefaces his remarks by a bow to his fellow fakir, Partelow, "As Mr. Partelow has just stated, a laboring man speaking at this time is in a peculiar position . . . ." However, he continues, "I say that I believe some drastic steps are necessary to rid the atmosphere at this time. If we could *get rid of* (emphasis mine— A. S. E.) one hundred men in this community it would clear up the atmosphere, so we could get along for possibly five years. . . . . I know that the civil authorities in this town can never straighten things up." (Mr. Bigelow is one of the best company men who ever worked on a labor paper).

It was plain that the Rotary Club was, as usual, in favor of strict suppression of all strikers. President *Charles S. Henderson* announced that at a meeting of the local members of the club on that same day, "The proposition was put up to them as to what was best to be done. The statement was made that as far as the bolshevists and wobblies were concerned they have practically done their work up to this time, paralyzed industry and stopped work. What more can they do? . . . The Rotary Club, composed of men of different lines of business went on record today and passed a resolution asking that martial law be started in this community as soon as it can be done."

*F. L. Melcher*, business manager of the Western Iron Works, and engaged in other capitalistic enterprises indicated that the rank and file of the unions had escaped from the control of their piecard artists. After describing the strike in the iron works, which included all departments, apparently, and telling of a few men who came back to work, and a few more who came back and offered to work if their wages were raised, he said, "There is one thing that came to my ears today. That officials at Washington had called representatives of labor there within the last two weeks. Those representatives have come back here. One of them undertook to talk last night to one of the unions and he was hissed and called down. They would not listen to him." Mr. Melcher seemed to think this was the crowning act of treason, for he further declared, "If this condition exists in this community it is time something was done. I suggest that we stop these things. Put the mil-

itary in power and clean this thing up. Find out who the disturbers are and get them out as soon as the law will provide."

### The End of the World

The strike of the workers on the street railway company was described by its manager, *J. R. Wharton*, as follows:

"Last Monday morning our men went to work and had four cars out of the barn. A mob of about four hundred men came down there and lined up in front of the gate. Watchman, who is a nervy fellow said, 'This is private property. Stop where you are'. Immediately called the sheriff's office. The sheriff got there with his force and some soldiers but they pulled our men off the work. The men told me they did not take the cars out and did not believe they could run the cars. I don't believe they could do it today except under your protection."

And the harrassed Mr. Wharton thinks the end of the capitalist system is in sight. "We have had strikes. We met the strikers in our own rooms and come to terms with them. But with the element now in control there is no talking. They are not trying to shut down the street railroad. It means it is no strike, it is revolution. They want a change of government and if they are not stopped they are going to succeed."

Then another labor fakir lifts his voice in the interests of his masters, once more betraying the men who elected him to office in their union. Says Mr. *Farrel*, Secretary of the Teamsters' Union: "Any man who is not in accord with the wild ideas or radical ideas of the wobblies or bolshevists is immediately abused and ridiculed and humiliated from end to end of the world as being opposed to the interests of the laboring classes and they use their best efforts to discredit those people. I speak simply as an individual. I do not pretend to represent the sentiments of the teamsters' union." It might be added in explanation of this diffidence on the part of Mr. Farrel, that his union had been asked to join the strike, many of them had walked off the jobs without waiting for a vote and Farrel was afraid that a reduction in the cost of gloves, shoes, and provisions was needed in order to quiet them. Still, he would do what he could to make them scab, and in this meeting he attacked the strike leaders vigorously. When he was with the strike committee he talked differently.

*Joseph R. Jackson*, the County Attorney of Silver Bow County (in which Butte is located) is introduced. Surprisingly enough, he admits frankly: "With respect to the men who are out in good faith they undoubtedly have a just cause for complaint as to the high cost of living and existing conditions. . . . I cannot see how the workingmen of the community have existed during the past year. It is not the retailer. The wholesaler, jobber, he is the man. He holds the community by the throat and calls the military to come in and kick the heads off the men that are down."

But this man is not as honest as he seems. He has a task to preform for his masters, and this admission of the justice of the strike which everybody knew anyway, is only his camouflage. The strike shall be broken by force, because it is a "revolution" not a strike. Never mind if they are striking against wage cuts, when they have to be shot, it as revolutionists they will be shot, not merely strikers. It does not occur to him to stop the revolution by granting the economic demands, which he admits are just. Instead, he reads the I. W. W. Preamble, and then says, "Take these men as undesireables, and deport them. Let's get them out of the community. . . ." He describes the impossibility of convicting any of the strikers under the civil law because, "in this town a jury is drawn entirely from our working people." So:

"I can say there is only one thing to be done and that the civil authorities cannot do. The thing to do is to put squarely all the power of the county into the hands of one man who is strong enough to handle the situation. . ." Evidently Mussolini was not very original.

### Others Chime In

A whole flock of little personages lift up parrot voices—probably sincerely enough, for their interests for once are the same. Colonel *Donahue* brags of his hard boiled tactics in 1914, when martial law prevailed, and advises it again, for "At the present time the (strike) movement here is composed of the Wobbly element."

*Raymond Ruhle*, manager of the McKee Printing Corporation, and Mr. Bigelow protest about the despicable acts of the printers, who were giving money to the Butte Bulletin, which supported the strike.

Mr. *Gillie* makes a peculiar statement, which if it means anything, indicates that some one was thinking of revenge on some prominent strikers, before they might possibly escape. He said: "I would like to call the attention of one point made by Mr. Jackson. If anything is done under military law it must be done right off. They will disappear like snow as soon as martial law is declared." Mr. Jackson, the County Attorney had outlined a campaign of arrests and persecution, to take place through Federal authorities, with the local jury system suspended.

And the voice of the Church is likewise listened to. A *Roman Catholic Priest*, who would not let his name go into the record, pleads the cause of poor and meek, thuswise: "Knowing, as I do, the good will of the company here employing labor to try to bring us over the period of difficulty that we are under just after the war, it is a case where people would become impatient. We must not delay to start these people (that is, the scabs. —A. S. E.) earning whose duties it is to provide necessaries for helpless children. I suggest that we handle this matter under the protection of the United States government."

Finally we have Mr. *John Berkin* who is introduced as a mine superintendent and businessman. In what other capacity he appears on the mine payroll when he is not superintending is not hard to guess.

He also refers to the 1914 disturbance and eagerly takes up the suggestion dropped by Gillie: "As soon as martial law is declared they will get out of this town. There is where we want to grab these fellows." He agrees with the man from the teamsters' union as to the cost of living and regrets that the cut in wages had not been delayed for sixty days.

### "Destroy These Men"

He states that five leaders control the strikers and that there are fifteen to twenty others that are "helpers or muckers to the man that works the machine," and refers to the majority of the strikers as aliens, placing the total out on strike at about 2500.

In 1917 Frank Little was taken from his bed in the dead of night by a gang of gunmen, company officials and businessmen whose names are generally known to the miners of Butte. They hanged Little to the Milwaukee trestle after battering his head with saps and otherwise maltreating him. Was that in the mind of Mr. Berkin when he offered the remedy following?

"*These five men you must destroy,* by what action I am unable to say. For all times take out root and core of this proposition. All right if they get me but I am going to get my part before I go. They got to walk over my dead body to do it. *Get to this Butte Bulletin and destroy it.* I know every man at the head of this organization. They are not going to do anything. If the street cars start tomorrow they will not molest the street cars, simply because the major is here.

"*Wait until the son-of-a-gun goes out of town then we will blow it up altogether.*"

So ends this mighty concourse of minds all burning with zeal for the cause of their master—the Anaconda Copper Mining Co.

Before going further we will point out a few discrepancies in their remarks. Berkin says there were 2500 strikers; Gillie states the district normally employs 18,000 to 20,000 men; J. Bruce Kremer says "industry is paralyzed;" the Rotary club man says, "they have paralyzed industry and stopped work." And the statements of several others make it clear that the miners were off the hill and that many other lines of industry were affected. But the company papers were insisting that a few men, revolutionists, had prevailed on a few hundred miners to strike; Berkin was following the lead of the papers, the others were telling one another the truth as to the extent of the strike.

The following morning martial law was declared. The I. W. W. hall was raided and cleared by a company of soldiers who charged in with bayonets fixed. One of the strikers, *John Kinnari*, was stabbed in the abdomen and his wife arrested when she "assaulted" the soldier who stabbed her husband. Martial law was proclaimed and squads of soldiers rushed along the sidewalks of the main streets ordering them cleared. They were not in the least particular as a score of business men and others not concerned in the strike were prodded with bayonets or beaten with rifle butts. The soldiers and the police undertook to drive the newsboy pickets off the streets. The boys ran circles around them and continued to prevent the boy scout scabs from selling or delivering the papers.

From the time the strike started returned soldiers took a leading part in it. Attired in their uniforms they acted as captains and lieutenants of picket squads and the picketing was very effective. Major Jones and one of his captains were particularly incensed on this account and many of these soldier strikers were seized, thrown into jail and stripped of their uniforms.

### Running Wild

The officers in charge went crazy and the soldiers under their command ran wild. Businessmen were actually ordered off the streets, pricked and beaten just as if they might be strikers. That would never do. Telegrams began to pour in on the White House and the Department of War at Washington, D. C. The morning following orders came from the war department that the imported soldiers were to protect the property of the mining companies, outside the city limits.

Although the soldiers on the hill and the police and gunmen in town made it hard for the strikers to maintain a picket line, very few tried to go back to work. But the engineers once more voted against joining the strike and the electricians followed suit. One by one the craft unions began to weaken. Then the miners, in order to maintain their organization, called the strike off after a ten day fight that was in reality a general strike.

Not long after the strike ended wages were again back at $5.75 a day.

# ALL OVER THE MAP

By DANIEL TOWER

**ARTHUR BRISBANE is a profound student of cause and effect. In a column of his, syndicated under the title "This Week," Arthur tells about an unwise father who threatened to cut off the head of his four-year-old son, thus trying to teach him obedience. "On Monday," says the great Hearst editor, "James Brand got an axe, trying to carry out his father's idea, cut off the head of his little brother. He killed the brother."**

* * *

Spontaneity runs rife among the Rotary and Kiwanis brethren in Montana. The Daily MISSOULIAN, in telling of the impending return of Arnold Gilette, a local celebrity, declares that "he should be met with the greatest reception ever given a conquering hero. The university authorities, the chamber of commerce, the Kiwanis, Rotary and all other organizations should lose no time in getting together to arrange for a reception that will remain without parallel for its enthusiasm and spontaneity."

* * *

Editors frequently strain their intellects wrestling with the prison problem. E. B. Ault of the Seattle UNION RECORD, formerly a labor paper, voices this alarming fear: "If the prisons are made into real workshops and the inmates enabled to earn real wages there is likely to be an enormous increase in 'crime' on the part of the unemployed to insure themselves steady jobs."

We doubt it. Minnesota and California boast of paying high wages to their prisoners, but there is no evidence of any rush to break into the penitentiaries in those states.

* * *

**People are not properly considerate of the feelings of our industrial magnates. When the National Association of Umbrella Manufacturers met in New York, a hotel orchestra at one of its banquets played "It Ain't Gonna Rain No More."**

* * *

Aimee Semple McPherson, the Los Angeles evangelist, feels hurt because various persons are skeptical of her story about being kidnaped for $500,000 ransom. She is not the first to have such a tale questioned. We remembered an honest looking janitor of a flat building in Chicago who went around the corner for one beer and didn't come back for four days. He weighed 300 pounds.

When he returned he explained that he had been taken prisoner by some rough men, blindfolded and gagged, placed on a low rakish craft, and taken across the lake to Michigan. In a barn among the dunes, he asserted, his captors removed the blindfold and flashed a lantern into his face. "Curses!" they cried. "We have stolen the wrong child!"

Last year when we were in Los Angeles, a middle-aged woman who sat adjacent to us in a street car handed us a card. It bore an advertisement of Mrs. McPherson's temple. "She cured me of epilepsy," the strange woman told us. "She's perfectly wonderful."

* * *

**The woman on the street car spoke to us with the same impulsiveness that we once observed in a visitor who inadvertently gained entrance to the news room of a San Francisco daily. Somehow he had got past the office boy at the door, and walked straight to the city editor's desk. He had with him a small boy with a bandaged leg. "I'll show you right where the dog bit him," were his opening words to the city editor, and then he proceeded to unwind the bandage.**

* * *

"Indians and Soldiers Walk Arm in Arm Where Custer's Men Were Slaughtered." Thus a news headline. We've never been able to work up much sympathy for Custer and his outfit. They brought their deaths upon themselves by attacking the Sioux. That attack was part of a campaign to take land from the Indians. The kick-back of the

redskins was a lesson in thoroughness of purpose; every one of Custer's 1,100 men was killed. Hornets ordinarily won't bother humans unless one troubles them.

* * *

Boy scouts served as scabs in the British general strike. Lately the Scouts have aroused the indignation of Eastern citizens by injuring trees. They put up signs pointing the way to their permanent camps, and fastened these signs to trees with four or five nails each. And then they talk in their literature about the wisdom of forest conversation.

**There was once a bright boy in Toledo who took a lot of honors and finally worked up to be a Scout commander. He was employed in a wholesale house, the owner of which made annual contributions to the Scout organization upkeep. When this country got tangled up with the war in Europe the bright lad was summoned in the draft. In filling out a "selective service" questionnaire, he came to the question: "What department of the army do you prefer to be in?" And his answer was: "Manager."**

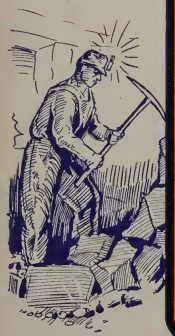
# *Your Headquarters in Chicago*

**Here are General Headquarters of the I. W. W., main offices of Agricultural Workers' Ind. Union, Lumber Workers' Ind. Union, General Construction Workers' Ind. Union, Building Construction Workers' Ind. Union, General Recruiting Union, General Defense Committee, Equity Printing Plant, Workers' International Educational Society and six I. W. W. publications.**

**This building is bought and partly paid for. It is useful to the working class, and especially to the revolutionary industrial unionists of which the I. W. W. is composed. Efforts are necessary to preserve it for this purpose. It is your headquarters, Fellow Workers, and you must do your share to keep it functioning for you. Read below to render assistance. Then give your aid.**

# One Day's Wages a Month

The General Executive Board of the I. W. W. has established a Debt Fund, to be kept separate from the other finances of the organization, to be administered by the General Secretary-Treasurer of the I. W. W. and three trustees, one of whom is the Secretary-Treasurer of the Workers' International Educational Society. The Debt Fund is for the purpose of paying the debts of the organization and to assist the Workers' International Educational Society to make payments on the headquarters building. No money can be drawn out of it for any other purpose, and no money can be drawn at all without the signatures of the trustees and the General Secretary-Treasurer of the I. W. W. Why not donate a day's wages a month to the debt fund until the I. W. W. is out of debt and the building is paid for? Why not loan money to the debt fund?



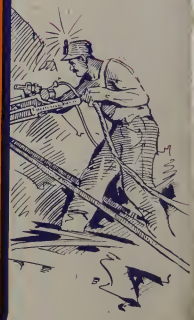
## *The*

## Workers' International Educational Society

**Why do we have a Workers' International Educational Society? Why not have the I. W. W. buy and own a building?**

**There are two reasons. First, the I. W. W. is not a real estate company, and its officials do not want to be and should not be continually pestered with financial difficulties connected with buildings. They are placed in office for the grand purpose of organizing the workers, and should be allowed to give their whole time to it. Secondly, experience has shown that when revolutionary labor organizations legally and formally own property, they are likely to lose it through the chicanery of capitalist courts, or through mob violence; and the same risk is not run in so great a measure by buildings used by the unions, but owned by a cooperative society of its members. The W. I. E. S. therefore has its function. Shares numbering 874 have been sold, already; why not more? Come on, Fellow Workers; there are some left!**

# MINERS JOIN--



A press dispatch gives us the news that the Anaconda is soon to take over the control of the world's biggest zinc mines located in Poland, thus gaining control of the international zinc market. The millions necessary to close this deal were produced by the mine workers of Butte.

The average value of the Anaconda, Copper Queen and United Verde ores is high enough to insure a heavy surplus for reinvestment and fat dividends for parasites. And the coal mines are adding steadily to the millions already piled up by the Rockefellers and their kind.

And the miners in metal and coal mines get in wages only enough to provide them a meager living; the work is dangerous; they are driven to their tasks, their lungs corroded by the deadly dust; their protests are stilled by the blacklist.

The mining companies gained Power through Organization. To overcome that Power the mine workers must gain equal or greater Power. Organization will bring to the miners the Power they require. Industrial Organization, all mine workers in One Big Union, will give them Real Power.

ORGANIZE NOW! Join Metal and Coal Mine Workers' Industrial Unions 210-220, I. W. W.

# PREAMBLE

## OF THE INDUSTRIAL WORKERS OF THE WORLD

The working class and the employing class have nothing in common. There can be no peace so long as hunger and want are found among millions of working people and the few, who make up the employing class, have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system.

We find that the centering of the management of industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers.

These conditions can be changed and the interest of the working class upheld only by an organization formed in such a way that all its members in any one industry, or in all industries if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."

It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown. By organizing industrially we are forming the structure of the new society within the shell of the old.

The Real Cause of the Mexican Situation Is Economic and It Is Up to The Mexican Workers Economically To Organize and Overthrow their Masters of Both Church and State

MEXICAN WORKERS ON STRIKE AGAINST AMERICAN OIL COMPANY; THE CHURCH IS THE TOOL OF SUCH CORPORATIONS

**THE KNIGHTS ARE CRYING**—It's getting to be a heck of a world in which innocent, liberty-loving, inoffensive Catholics are denied freedom of conscience in Mexico, isn't it? So say the Knights of Columbus, whose leaders approached officials of the American State Department calling for aid on behalf of the suffering faithful across the southern border.

Seriously, was ever historic travesty so superlatively evidenced as in this parading of Rome garbed as a paladin of religious freedom? The heretic hunters, frustrated not in the exercise religious freedom, but in their intrigues for political preferment, feel hunted; the witch burners tremble lest a church pew get scorched.

When Catholicism ruled the Christian world, creating empires and kingdoms, how much mercy did it show the nonconformists whose consciences were too stubborn to be fixed by the Holy See? How the church exulted in breaking the body to "save the soul"! And now the apostles of mental night, the friends and makers of reaction, the sycophantic supporters of capitalism, driven into a corner by their own political machinations, are squealing like a lot of rats. They cry for free conscience. Shades of Savonarola, Huss, d'Arc, Galileo, Bruno! Can anything beat the supreme gall of Rome?

It is certainly unjust to prevent a gang of foreign, overstuffed "merry jokes" on an ascetic Christ to meddle in the internal affairs of a nation, now isn't it? But how about the Valle Nacional where 15,000 Mexican peons were killed by toil each year? The whole slave population was decimated annually and replaced by other condemned workers whose only crime was that of debt. What tears had the Knights of Columbus for them? What solace had the Mexican episcopate for these damned? The church profited by their slavery and said nothing. This is in line with the learned St. Augustine's teaching. He said that slavery was punishment for the sins of those enslaved. It is punishment only for the sin of being unorganized.

**CAN THEY EVER LEARN?**—The other day the writer was told that when the I. W. W. engages in free speech fights it leaves the economic path and takes to political highways. It is timely to check such confusion. When the I. W. W. fights for free speech it is fighting for the opportunity to get its message to the workers. The I. W. W. message is economic, not political. In a strike a worker may have to defend himself with a club against scabs, but he is still a unionist and not a slugger. We need free speech in our economic program, and when we fight for it such struggle is part of our industrial union activity and can not be characterized as political. It should also be remem-

bered that in our free speech fights the I. W. W. was not battling for free speech for the Salvation Army or the Y. M. Q. B's. There is nothing abstract about this matter so far as our organization is concerned. Free speech is a necessity to revolutionary industrial union propaganda. Fighting to obtain or maintain it is part of our economic course.

**A MOVIE STAR PASSES**—News paper headlines lately were carrying the news of a Hollywood idol's illness, and when he died whole pages of biography, pathos and pictures appeared. The capitalist sheets say that Valentino made a million dollars during the last year, most of which he spent. We are also informed that millions of women wept when he died, and that the nation mourned.

Altogether, we think the young man had a very enjoyable time with his painted women while life lasted, and the working class will be a lot nearer to economic freedom when it has more commiseration for its own kind and none for parasites, talented or otherwise. Right along there are thousands upon thousands of men, women and children of the working class, the only useful class, dying of diseases produced by poverty. Why not some tears for them? Or infinitely better, why not some industrial union organization to remove the poverty and bring plenty to all workers? It's the old story of "bread and circuses" for the people and the scenario shiek was part of the circus. He aided in supplying aphrodisiacal entertainment, with whose comfort the Scissorbillicus Americanus seems to forget about more important fare.

**A JUDGE ON LAW**—In a recent statement, Chief Justice William H. Taft, of the United States Supreme Court, attributes the increase of crime in this country to administrative defects in American criminal law. He thinks that judges are hampered by not being able to inflict sufficiently deterrent penalties.

This opinion correctly places the thought of the fossils who worm through the musty statutes. It is, moreover, very worthy of the man who, while campaigning for president, said "God knows!" when asked what he would do if he was unemployed and penniless and had a family to support. The chief justice says nothing of preventive measures other than heavy sentences. He dare not, even if he be aware of the truth, go to the bottom of the crime condition, because it results naturally from this crooked social scheme of which he is a prominent apologist.

"Society is the real criminal." Capitalism is thievery on a grand scale. It is murder of the most brutal and wholesale kind. It is all that is gigantically vile, and must be removed. Crime festers within it because the creature is environment's plaything and the world can not have justice, honesty, fraternity and equality until the workers organize and destroy this system.

Incidentally, it should be remarked that we have failed to see judges harshly restrained from inflicting the most atrocious sentences on class war prisoners. It is highly respectable for jurists to speak of salves for cancerous conditions. For class conscious industrial unionists to mention the major surgical operation of social revolution is positively treasonable.

**CONTRIBUTORS WANTED**—The I. W. W. press needs more writers. Already we have a number of very talented correspondents and cartoonists, but we need many more. We have the opportunity to cooperate and make the publications better than ever before. The Industrial Pioneer is foremost in the field of labor monthlies, but it can be vastly improved if a larger number of our members and friends who have the gift of graphic or literary expression get busy and submit their productions. Often our articles are too long, and it is not wise to tire the readers. We specially need newsy material without any excess of words, and photographs with the stories. Revising manuscripts is almost sure to result in improvements, and revision frequently reveals ways in which to cut superfluous language. Try your skill, fellow workers. This magazine and all I. W. W. publications are certain to benefit as our contributors become more numerous.

# The Harvest Isn't Over Yet

By FRANK THORPE
Sec'y-Treasurer, Agricultural Workers' Industrial Union No. 110, of the I. W. W.

**SOME of the workers, reading the undoubtedly true stories of the poor wheat crops in Oklahoma, Kansas, Nebraska, and South Dakota, and hearing of the replacing of men by machinery, have perhaps jumped to the conclusion that there is "nothin' doin' any more in the harvest." To these, the word is, "There is as much to do as ever. All that we need is active workers in the field. There is going to be a successful harvest drive for the I. W. W. this year."**

One reason for the present situation is the fact that the poor harvest did not affect North Dakota, Montana, and Canada very much. Instead of thousands of men and hundreds of jobs, as in Nebraska, there is the reversed situation. John Farmer in North Dakota is looking for help. He prefers to hire his help on his own terms, paying perhaps $3.50 per day, but he has to have help, and if the boys demand more wages, he will have to come through.

### Wheat Crop Greater

The July wheat grain repots, put out by the U. S. government, show that although the **grain** crop, taken as a whole, is lighter this year by 380 million bushels than it was last year, and is 270 million bushels less than the average for the last five years, the **wheat** crop, taken alone, is 71 million bushels greater than last year.

These figures mean little to the ordinary person, far removed from the scene of action. But when it is realized that the increase in **wheat** crop affects most of all the harvest drive of the I. W. W., which does not get as much into the corn, barley, oats, rye, etc., as into the wheat harvest, something of their importance begins to appear. Then when it is remembered that there was a very light wheat crop in the southern end of the grain belt, and that the increase is practically all in the northern end, further light is thrown on the bare cold figures.

If you all could stand on the plains of North Dakota, and see the rolling waves of thick, tall wheat, showing part green and part yellow, and every day, every hour almost, turning from green to yellow, and see the anxious faces of the farmers as they discuss whether they will get enough men to get the wheat cut at just the right time, and shocked at the right time, and left long enough to dry ready for threshing, without waiting so long that it either shatters out of the head, or gets rained on, and mildews (as it will if it rains too much), then you see what this means.

It means that the farmer will not stand in the slave market and demand men with weak minds and strong backs; the farmer will be glad to take any men, and if he gets some intelligent, class conscious workers, who will join the I. W. W. and force him to pay a little

more than the going wage — he has to take that risk.

Another thing is that Harold Teen is getting blisters on his hands and going back where the Sheba Sundays bubble. Perhaps you saw that the comic artists took in the harvest this year? The callow creation of the high schools of the cities, quite well taken off by the faithful pencil wielder of the Chicago Tribune and other newspapers in its syndicate, is launched into the grain fields this year. There the capitalistic artist makes him meet up with the I. W. W. who call a strike, and out of the strike meeting young Harold Teen gets booted for making a speech to the effect that this is the grandest and freest and most wonderful country in the world, where everybody has a chance to get rich taking in the farmers' wheat. Of course the I. W. W. are all represented as bearded foreigners with Slavic names. (Seriously, did anybody ever see a Wobbly with a beard?)

UNORGANIZED, YOU'LL FIND THIS SITUATION BRISTLING AGAINST US

Well, part of the trouble in the southern end of the harvest region was that the real, true Harold Teens from the high schools did go out to make their fortune by shocking wheat. They have most of them got plenty of it by now, and been cheated by John Farmer in addition, or fired for incompetence. They are all going back to the cities from which they came.

They made things a little harder for the real workers for a while by cluttering up the slave market, and jumping at jobs that promised little more than board. But neither they nor the employers are satisfied with the performance. Our harvest drive is still a place for migratory workers, not vacationing jelly beans.

We speak of the "migratory" harvest worker. Practically all real harvest workers are migratory. The real harvest hand is a man who is without property, a true proletarian. Since the harvest will not stand still for him, he has to move along after it. He has to travel on the freight trains, and there is absolutely no shame or crime in this. If he did not move this way, the wheat would not be harvested.

### Hi-Jacks and Police

His life is filled more with hard work than with adventure, but he has the doubtful honor of being frequently the prey of railroad police, town constables, and "hi-jacks," or robbers. Frequently too, all these are the same. The railroad police or the constable dons overalls, puts his badge in his pocket, and approaches a string of empty freight cars filled with workers who have gained fifteen or twenty dollars apiece in the harvest so far. The hi-jacks come up to both sides of a car, flash their searchlights, flourish their guns, and rob everybody, then lock the car, and go on to the next one. They are absolutely ruthless, and will kill at the slightest provocation. Sometimes they ride the freights, and deliberately kill men they find in the car with them by crushing in their heads and throwing them from the trains, usually at night. The law affords the workers no safety from these fiends, often for the best of reasons, as stated above. When the hi-jacks are not in league with the police, they are in little danger anyway, because the authorities do not care what happens to migratory workers.

### Organization Death to Robbers

This year there is reported a great campaign of hi-jacking throughout the Northwest. During the first week in August, over a hundred men were held up between Spokane and Missoula,

all in a bunch. Against this sort of thing only organization and retaliation give any protection. The I. W. W. is the only organization that can drive out hi-jacks.

Wheat harvesting is rather hard work. The prevailing method is still, on prairie ground, to cut the grain with a binder, which the farmer or his son or some trusted house slave of a "monthly hand" usually drives. The binder not only cuts the grain by means of a notched knife, but by an ingenious piece of mechanism, ties it into sheaves, or bundles as big around as a man can conveniently hold under his arm, and with all the heads one way. The bundles are dumped out in a row, or a row of piles, along the cut over field.

ORGANIZED, YOU COMMAND CONDITIONS LIKE THIS

The first task of the migratory harvest workers is to take up these bundles or sheaves, and holding one in each hand, butt their heads together, and set them down with the heads up, and each bundle supporting the other. Then other bundles are packed or thrown on these, making a shock, a pyramid or cone of bundles or sheaves, all with their hands standing up. It looks like a criminal offense to the farmer if he sees you standing any of them the other way, as that causes the water from rain or dew to soak down through the bundles and make them mould. Yet the Herold Teens always want to stand a few of them upside down in order to make a more symmetrical shock.

After the wheat is all shocked, or as they say in Canada, "stooked," some of the crew move on for more shocking, following the line of the ripening grain up into the far Northwest. But others remain for the threshing.

Threshing machines are mechanical flails. A number of steel hooks are fastened on a revolving drum, turned by steam or gasoline motor power, and appropriately enclosed in a housing, moved on wheels. In front of this revolving drum an endless belt of canvass, the draper, carries the sheaves of wheat down into the whirling steel hooks, which beat the grain out of the heads.

A revolving fan and an arrangement of sieves separates the wheat from the straw and chaff, and all the latter is blown out the rear end of the threshing machine, the wheat usually coming down a spout in the side and into the tank, or box, set on wagon wheels in which it is carted to the grain elevator. In some western districts they run the wheat into sacks, each holding about two bushels. These jute bags, or wheat sacks, are one of the main products of the prison jute mill in San Francisco, California, though they do not all come from there.

The engineer who runs the gasoline or straw or oil burning engine that provides power for the threshing machine, and the separator tender or other mechanicians around the thresher itself are usually "home guards", though not always. They are often the owners or the farmer's oldest son.

The business of the hired migratory harvest hand during threshing is to load the sheaves of wheat on the flat bed hay wagons, and drive them up to the machine, and one wagon on each side of it, unloaded the sheaves on to the draper that carries them against the drum of the thresher. It takes a certain amount of skill to pitch the sheaves onto the wagon right, and still more skill to load them so they will not slip off the first time the wagon wheel drifts into a hole or hits a rock. The butts of the sheaves must be towards the outside, and a nice proportion must be maintained between the number thrown into the center and the number stacked up along the sides of the load. When the wagon is driven, an unskilled driver can easily turn too short and "break out the reach". This always moves the farmer to tears and profanity.

The "reach" is nothing but a coupling rod, connecting the front and hind wheels of the wagon and made of a piece of ordinary pine scantling, cut down a little here and there and with a couple of holes bored in it. But no far-

mer was ever known to have another "reach" ready to use in case of an emergency. It seems to be against the traditions of farming, some way.

When the wagons pull up to the threshing machine, there is sometimes a few minutes rest for one driver while another is unloading. There should be, if the workers realize **their** business.

The chief bone of contention at the threshing machine is when to stop, and turn it into the wind so the men unloading from the wagons will not be working in a cloud of dust. If the wind would only stay in one place, there would be less labor trouble around a thresher. But it doesn't, and the farmer hates to stop his machine and change its direction. The workers hate even more to swallow all the flying salad that those big winds in North Dakota bring to him, and so the class struggle goes on. It is really only a few minutes' work to change the direction of the thresher, and a well organized crew will compel this whenever necessary.

More and more harvesting is being done each year by combined harvesters, but there are still some places where the land is too rough, or the seasons require grain to stand in a shock and dry out. Combined harvesting has been described several times for the readers of the Industrial Pioneer, and we will not go into it here.

A kind of intermediate stage between combined threshing and the binder and shocking method of harvesting is that by headers and stacks. The header is a gigantic mowing machine which cuts the grain and runs it into a wagon. Loading a wagon under a header spout is one of the hardest jobs in the harvest; throwing the loose grain off onto a stack is the next hardest. When the stack is made, a thresher is used to thresh the grain, which is picked off the stack by a derrick, and large hay fork, or "hoed down" by men with forks shaped like hoes, or by both methods. A picture of "stack threshing" is on the front cover of this magazine.

No farmer ever wanted to work his crew less than from sunup to sundown, or at least thirteen hours. Without organization of the workers, the farmers will get away with that schedule, too. But in general, the hours have been beaten down by I. W. W. organization and by nothing else, to about ten. They could easily go up again if the danger of I. W. W. organization were removed, and a more complete realization of the need of organization by harvest workers would cut them still lower.

The fact that it is the I. W. W. that is getting the hours down and making the farmers change their machines around when the gale swings into the rear is apparent when we consider the efforts made to stop us. Every year the farmers' organizations and the county agents (really state officials) enter into a conspiracy against us. Their general program is to have all they can get of the delegates arrested right in the beginning, before the drive gets started. Then they announce the wages all over the state, and put them good and low. Then they fight hard to keep the farmers anxious to get their crops out, and anxious to use real harvest hands, not Harold Teens, to stick to the scale. It can't be done. If the crop is good, the harvest worker who is organized, and knows what is what, will always win. All the way from the great big Campbell Farming of Hardin, Montana to the smallest, one horse farm in Dakota or Minnesota, the farmers understand the trick. But we can beat them with organization; for if we refuse to work for low wages, and organize the crews for a strike, the farmer has to yield. He can't wait. Mother Nature will spank him if he does. The wheat has to come off at a certain time.

### Drive Just Going Good

So the harvest drive is just going good. It will not be over for a couple of months yet, when the last stragglers come down out of Alberta and Saskatchewan and begin to think about some of the minor crops. As the Wenatchee apples and the Montana and Idaho potatoes ripen, the numbers of men the wheat harvest has to find place for gradually diminish.

And as the numbers of men hunting jobs grow less, from now on, the chances of organization get better and better. From now on, conditions are ready for the I. W. W. in the wheat harvest — and the workers there need the I. W. W.

The first persecution has started, already in Minnesota, five of our delegates are in jail.* But that is the regular thing. Last year they put over a hundred in jail in Fargo, and had to turn then all out again. Agricultural Workers Industrial Union No. 110 of the I. W. W. has very good solidarity and finds a way. It may not be necessarry to flood any jails with men this year, but if necessarry, it can be done. Meanwhile, remember the words of the 110 Bulletin:

**"You, the membership of One Ten, must act! You must act now! Support your delegates! Put the drive over as you know how to do it when you stand together and meet all odds with your inspiring solidarity!"**

* Since this was written the delegates in Minnesota have been tried and acquitted. A frame-up against them failed.

# Is This Why Indians Go Blind?

By J. BAXTER

In the state of Nevada, there are many Indians, both in the schools, on the reservations, and at large; and a curious and unaccountable incident in the life of these unfortunate aborigines, is that after the age of 60 or 70 years they nearly all go blind. No one has ever been able to account for this strange occurrence and malevolent affliction upon the Indians. Scientists and anthropologists have studied their case, but without ever being able to ascertain the cause or source of their strange affliction.

When these Indians go blind, apparently their only source of livelihood lies in the source of begging, and they can be seen sitting on the stone sidewalks of Reno, Nevada, with a little tin can in front of them, soliciting alms from passers-by.

Curious to ascertain the source of these unfortunate peoples' affliction, the present speaker was one day walking down the main street of Reno, and, seeing a blind squaw sprawled out on the sidewalk with a little tin can in front of her, he stepped aside to where another person was standing and asked, "Say, Mister, what makes those Indians go blind?"

Turning and glancing at the squaw, the fellow said, "I dunno. That's always been a mystery. My belief is that they go blind watching for someone to drop something into that can."

# Mendocino: --- Where Volstead Made Two Grapevines Grow Where None Ever Grew Before!

By SAM MURRAY

EVER HEARD of Mendocino—a Californoa? Ever heard of the small coast valleys in California? Sure I knew dam well you hadn't that's the reason I am writing this. Having been born in Iowa or Kansas or perhaps in Michigan or Ohio you think that Los Angeles is all there is of California. Of course "Los" would like to annex the whole state but about the only part she is likely to get in the near future is Eureka in Humboldt Co. (Even the I. W. W. in Eureka has gone emergency. That ought to be some indication.)

The worst part of a trip to the middle states is that they accuse you of being from L. A. Of course they all have a brother or cousin in the real estate game down there and are filled with the usual essence of bovine masculinity with which the sharks stuff the suckers from their home towns of the middle west.

Now if there is anything that gets the goat of a native of California when he gets back east it is for someone to mention L. A. It is just like asking him how his brother who is in San Quentin for stealing sheep is getting along. But it can't be helped; the people back there just can't understand that there is any part of California that L. A. hasn't annexed and staked out in lots.

Also, no natives of California ever come from Los Angeles. Nobody is ever born in Los Angeles —no native sons there—Fleas? Yes lots of them but none of the other kind. On account of the high price of real estate you haven't room to rock a cradle down there. That's why they get them all from Iowa where the hogs are fat and the yellow corn meal rich in albumen.

But to return to the subject: The small coast valleys and the uplands that border on them are in many respects the most interesting part of the state. For climate, diversified scenery and fruit I think they are far superior to the rest of this much overadvertised state.

Shortly aftr the gold rush days while California was still in the midst of her glory as the greatest wheat producing state some enterprising persons discovered that if they shipped California wine to France and labeled it with a French trademark it could be shipped back and our corned beef and cabbage connoisseurs, our newly rich aristocracy couldn't tell the difference. The Spanish Californians had cultivated the grape but only for home consumption so the only way California wines could break in on the market, having no reputation of their own, was to ride in on that of the French.

Now the wine grape is a very humble plant and does not take kindly to the deep rich soils of the valleys. Descended from the vine which has been grown for centuries on the barren cliffs of southern Europe where you have to carry soil up in a bushel basket to give it a foothold is just naturally can't stand prosperity in the shape of good rich loam. Likewise, the side hills and uplands surrounding the small valleys near the coast contain a vast acreage that heretofore produced nothing but scrub oak, madrone and manzanita and was thought to be useless except for a little winter pasture but with experimentation it was discovered that this otherwise worthless land was spagethi and mushroom sauce to the Italian wine grape. So many of these sidehills became dotted with vines and grape culture became a thriving industry. But the market was not extensive and as the grape land was almost unlimited before the culture had extended, very far a serious glut in the market was experienced. So there came an evil day for the wine growers. Wine and grapes became the cheapest thing in California. I can remember when a bottle of wine was served free with a ten cent meal in Frisco. If you liked grapes you could go down to the docks where the river steamers Napa City and Zinfendel came in and nothing was said so long as you didn't carry away the empty box. In vain did the wine growers try to educate the American public up to the drinking of cheap wine. They were descended mostly from a whiskey and beer drinking ancestry and besides there was the brewery and distillery interests. There seemed to be a conspiracy on the part of the saloons to prevent wine drinking for when the wineries were selling wine in the barrel for as low as fifteen cents a gallon the saloons were charging ten cents for a gill while a scoop of beer with a bowl of stew cost a nickle a throw. Quite a prejudice was worked up. They called it "Dago red," "Dago foot juice." "Red paint" and worse names, its very cheapness was against it and people were led to believe that it was a rotten drink—good enough for Italians and Portuguese but entirely unfit for consumption by the "supermen" of the "Nordic strain." These good beer and whiskey guzzling christians claimed that the last drink that Christ took before expiring on the cross was a disreputible drink and only fit for "Wine bums."*) However,

* The English translators of the gospels say that it was vinegar. I have learned lately that the simple language in which the books of the new testament were first written

a good drink like a good man can't be kept down forever and after the panic which preceeded the Spanish war had subsided the vineyard game began to show sings of new life. But the opposition continued to breed misery for the wine growers. Prohi's tried to rule it off the tables and through a system of high license came near doing it so that your bottle of wine often cost you a dime or more extra with your meals. Most saloons refused to handle good wine or to sell it at a reasonable price. Then came the war and the "Big drougth." Although the beer and whiskey interests had been behind the temperance agitators in outlawing wine from restaurants and bars they had never failed to enlist the wine men against the dry movement. Growers were told that if prohibition came they would have to plow out their vineyards and as the land was worth little for anything else they would be ruined. Now your vineyardist is a very unsophisticated person and when the eighteenth amendment went over he really thought it meant prohibition. He did not know that the government had a way of springing a great joke occasionally in the form of an amendment to the federal constitution. For instance: There is the free speach, free press and right to assemble amendment. Ha! Ha! What a funny joke. You can say what you like and assemble all you want so long as the American Legion don't object, the Koo Koo Klan tar and feather you or the cop pinch you. Then there is that one about the negro having the right to vote providing the white man don't get there first with his gun. The poor simple minded vineyardists really thought that the government was a law enforcing political machine. The truth had never occured to them, viz., that the government from the federal bureaucracies down to the dog catchers is nothing but a giant industry. An industry devoted to the collecting of taxes, imposing of fines and taking of bribes. A government by a ring retaining their power by force of arms —that is whenever the reptile press and the "moral" influence of molders of opinion fail to perform the job in a more satisfactory way. Of the people gainfully employed in this country, one in twelve are getting their living directly through this gigantic enterprise besides those indirectly benefitting such as lawyers, pensioners, bootleggers and a host of retainers that hang on the fringe of public office.

For fifty years the reformers had been kicking the yellow dog of a booze industry around and blaming him for everything from an epidemic of whooping cough to unseasonable weather. Restrictions sensible and otherwise followed one another in an endless procession of legal enactments and in the trail of each, there followed the usual shakedown and harvest of bribes by the "patriotic" enforcement officials. So they evidently figured that if twenty five per cent restriction was good for—say twenty five dollars in graft, that one hundred per cent prohibition should be good for one hundred dollars. So prohibition went over the top with a bang. In the opinion of the wine growers this meant the crack of doom for them. Some of them plowed up their vines while others simply neglected them for the time being hoping that something would happen—and it did. Home brewing become the most popular indoor sport. Everything from old shoes to Galwa grape juice was being put through all kinds of processes in an endeavor to develop a kick. Somebody conceived the idea of putting raisens in his home brewed beer. He then proceeded to beat up his wife, cleaned up on the policeman and when they finally succeeded in overpowering him he was out in the Golden Gate Park trying to break into the grizzley bears' cage. So the "Sunmaids" came into a new prominence and the popular California slogan. "Have you had your iron today?" was changed to "Have you had your scrapiron today?" Now the wine grape is not a raisen grape in the prevolstead sense of the term. However they can be dried and it was found that for the purpose of producing the bran new sensation they had the iron bound Fresno variety backed off the board and they began to appear on the market. Then you know, sacramental wine was permitted. Now, the followers of the lowly carpenter are only allowed a periodical sip along with their nibble of the "flesh" but the Jews have certain ceremonies which require the consumption of as much as seven gallons. So the Jewish religion became very popular. One of their "missionaries" opened up among the Roman Catholic Portugues in West Oakland and in a very short time succeeded in securing thirty five hundred converts who at once displayed a frenzied zeal for that part of their new faith which called for the drinking of the "Blood of the Lamb" although we are informed that the consumption of pork did not fall so as you could notice it. So when the next grape season rolled around the growers discovered that the product of their neglected vineyards had soared to prices never dreamed of in the old days. The bootlegging industry was in process of formation and as had been predicted an army of government functionaries were put to work to share the profits or collect the fines. Wine had at last come into its own; was expensive and hard to get and therefore popular. Again the grape business had secured a new lease on life and wine grapes which during the war had reached the unheard price of $25.00 a ton now rose to $82.00. Some idea of the extent of the industry can be gained from the fact that despite the large amount of grape produced in Michigan, northern Ohio and some sections of the south, California produces 92% of America's grape crop about two thirds of which are wine grapes

had a name for sour wine but no name for vinegar. When their wine turned to vinegar they still called it wine. So the translators use the word "vinegar" instead of the correct English word "Claret." What they gave Jesus on the end of the staff was a shot of "Dago Red."

absolutely worthless for any other purpose while several of the most popular wines are made exclusively from table grapes, for example, Tokay, and Muscatel.

Through all the years that the Americans had been in posession of California that part of Mendocino Co. which lies outside the redwood forests had slept serenely on her sunkissed hills (110 in the shade). Never had it produced anything except poison oak and beef cattle. Although it was ideal wine land something had always happened to the industry before it got that far up in the hills. There were Napa and Sanoma counties—rich it is true but with side hills near the market which produced the vine in abundance for former needs. Sanoma Valley—a great wine producer, is better known as the home of Jack Londen. Shortly after Jack became interested in Sanoma Co. real estate he wrote a booster story called The Valley of the Moon. Sanoma Valley has a southeastern exposure and the full moon after rising has a habit of peeking around the Napa hills and throwing a shaft of silvery light across the valley. Therefore they said that the Indians had called it Sanoma which they claimed meant the Valley of the Moon. Quite poetic! and it took well with the natives. Unfortunately there was still alive an old timer who understood the language of the extinct tribe of Suisune Indians and their traditions as well.

Dr. Vallejo, whose father, the general, had owned nearly all of the two valleys mentioned, until the Americans got them away from him, was living in retirement in the navy yard town that bears his family name and he gave the snap away. Sanoma don't mean "Valley of The Moon" at all. According to a legend of the Suisuness there once lived a tribe of Indians in this valley ruled over by a chief who sported a nose like Mutt. Sano means nose and the Ma part signifies "Land." "Country" or like the Spanish "*Pais.*" Sanoma simply means "Nosieland." However, though truth is sometimes stranger than fiction it stands no chance with fiction before the mob. So just as most American school children still think that Columbus discovered America the kids in Sanoma Co. are taught that they are living in the Valley of the Moon. If you were to go to Santa Rosa and tell the natives that they are living in Eaglebeaksprudderland instead of the land of the silvery orb of night you would be run out of town.

Well, at any rate the hardy wine grape has at last invaded the uplands of Mendocino Co. The hillsides are becoming mottled with the beautiful landscape effect of vineyards. One hill after the other is being cleared. John Farmer with the property complex is in his seventh heaven of delight. Land is cheap but a Madrone or Black Oak stump is at best a tough hombre and nothing short of dynamite will coax him out of the ground. The bank furnishes the dynamite and John furnishes the muscle so the hills are reverberating with the sound of the blast. It means several years of effort to get a place in bearing but at present prices a vineyard will sometimes pay the cost of land, clearing and raising of the vines in one crop.

Of course wages are low. There are plenty of homeguards to do the work except in picking time when some outsiders are hired. They pay from $3.50 to $4.00 a ton and they say it takes a good man to pick a ton a day. Of course you have to carry your own nosebag as California fruit farmers never feed or lodge their help. Since it generally takes a whole family to earn a day's pay the auto tramp is about the only person that stands a show.

However, since the price has been steadily dropping the last few years as the young vines are coming into bearing, I am of the opinion that the next slump will arrive about the time that the first of the mortgages are paid off. However, there is a silver lining in the dark cloud. They call it "Modification." Lately some newspapers conducted a canvas and it was found that the same people who were a few years ago a majority for preventing the other fellow from getting a drink are now seven to one thirsty. Of course to repeal the amendment would be a rather hard matter now that they have the bootlegging industry and the enhanced force of government officials to deal with so they are going to try modification. Great idea that! They are going to try to convince you that you are not soused when you are pickled on "Dago Red." Hereafter when you wax too hilarious over the birth of the Son of Man, Xmas Eve, or get too noisy in anticipation of your regular Newyear's swearoff and have to shake hands with the judge next morning all the council you will need is a federal constitution under one arm and an empty wine jug under the other. Since the stuff is supposed to be "Intoxicating in fact" it will be easy to cite precedents to convince Baldy that a fact, in this country, is harder to prove than a fiction.

In the meantime the farmers will go on pulling stumps and the banks will go on pulling their legs—but for all that, Mendocino is a wonderful country with the wild beauty of her Madrone covered hills and the greater domestic beauty of her vineyards, and the wine—Oh Boy! The wine! If T-Bone Slim had a shot of it he wouldn't say: "Prohibition is the worst stuff I ever drank."

**The October Pioneer will carry special articles on education for workers. Several such manuscripts are now here and will be recognized by all readers as products of the best minds of the revolutionary labor movement. Our next issue will be specially devoted to the Work People's College.**

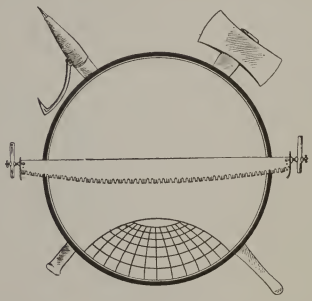
**There will also be several book reviews, and other timely features which are sure to make the October number a real hit. Some fine articles are here now which could not be run this month due to reducing the magazine's size. They'll appear in October. Also look for a continuation of "The Empire of Oil."**

LUMBER WORKERS: It was not many years ago when you were universally known as timberbeasts. The organized bosses kept you in a bestial condition. You were compelled to work long, exhausting hours; to exist on near-garbage, and to sleep in the foul air of crowded bunkhouses infested with vermin and other pests. The I. W. W. message rang out through the forests. Many heard it, and being convinced carried it forward over every hill, into every camp, until there was no place that was not reached. The message was for better conditions all along the line; for the eight-hour workday; for higher wages. It touched a responsive chord in the hearts of lumber workers, and they showed the world what the solidarity of labor means and what it can accomplish. But now in the camps the old conditions will return unless you stand together again in a revival of organization activity. It is up to you. Will you join the I. W. W. and be men, or stay divided and be suckers for the boss? Read the article beginning on the next page, and follow the example that is being set by the Ontario loggers.

# ORGANIZING ONTARIO

By A. E. WINDLE

THE tons of philosophy and reams of theory with which many organizations have been bombarding the workers seems to have left the great masses of labor quite unmoved. While it is very true that every philosophy has its followers, every theory its converts, it is doubly true that philosophies are largely dreams and a theory, even at its best, is but a plan. While the verbose expoundance of a high-sounding philosophy may amuse the youth, and comfort those of the aged who still cling to their illusions—it fills no one's stomach. The soundest and most scientific theory, when inscribed upon parchment, and framed in mahogany, makes a beautiful wall decoration, but it does not and cannot supply the clothing and shelter that would enable one to smile in the face of a blizzard.



The practical application of the theory, the determined and thorough execution of carefully thought out and well laid plans, is what gets results. Ample proof of this statement is to be seen in the steady and healthy progress made by the I. W. W. in Ontario, a new district. While other districts have been marking time, Ontario has been forging ahead. After two years of struggling against all the obstacles that organizers meet in new territory, plus the disruptive tactics of a group of freaks who would like to control our organization, we have something worth showing. Our growing membership is most certainly something to shout about in this benighted country. Add to this a strong and enthusiastic auxiliary that never fails to make good when and where its services are needed, and that means always and everywhere, and you will agree that not only have we gained a foothold in Ontario—we are established!

Mark this well! Lumber Workers' Industrial Union No. 120 of the I. W. W. is **established** in the East. Not upon a philosophic, theoristic basis, but on a rock-bottom foundation of job organization. How has this been accomplished? By hard work, and lots of it! We are happily free from those twin gerrymanderers, the spittoon philosopher and hall cat legislator. Our members have put a literal interpretation upon the name, Industrial **Workers** of the World. Through ice-laden blizzards that bring tears to the eyes and cut the flesh, through cold so bitter it burns; over muskeg trails that sap the strength of the strongest, against the common foe and the damnable treachery of the self-seeking ego-maniacs in our own ranks they have fought, and fought with that bulldog tenacity we must all admire.

When they read they will laugh and say, "All that is commonplace, it is part of our life. We are nothing but common working stiffs and he tries to dress us up as idealists." They are idealists, and have this in common with all other idealists. Their ideal must remain a fond dream, a beautiful vision far off on the horizon, until their material needs are attended. They have

come to realize with the great Aristotle that, "It is necessary first to have a maintenance, and then to practice virtue." If you can imagine purest virtue having its abode in the same bunkhouse with double-pole bunks, a legion of lice, little or no ventilation, a grand array of stinking sox hanging over the stove, and a spittle-smeared floor, dear friend, you are wasting your talent in the lumber industry. You should be writing stories for magazines at a penny a word. These Wobs, idealists though they be, are practical idealists. They are bereft of all illusions. They refuse to place their faith in the age-old legend of the mythical Messiah who, some happy day, will come down to earth and lift them, body and soul, (pole bunks and lice), out of their present sorry state ,and carry them off upon his magic carpet to some etherial world where the sun is always shining. Wouldn't caulk boots raise hell with the gold pavements?

Before an ideal can become a reality, there must be a foundation to support it. This being a material world peopled by mortals who need bread for subsistence, the foundation for our ideals, the basis of our morals, must be one of bread—and plenty of it. Philosophers are found wanting and theologians have failed to show us the way to a better life, and so we must fall back upon our own resources—seek salvation in our own humble way. After all, porkchops are more often to be found in butcher shops than in temples.

Here before our eyes is the longest unbroken stretch of timber land in the world, extending from northern Quebec to the Pacific seaboard of British Columbia. It is rich in pine, spruce, fir and other woods. Potential wealth beyond the wildest dreams of avarice is here, but not worth a red cent until the fallers and buckers, the skidders and rollers, the rigging men and donkey punchers strut their stuff. Utterly worthless until Labor, creator of all wealth, plays its part. There is nothing etherial or philosophic about those trees. They are strictly material. They will submit to the assault of saw and axe, but never an inch will they bend before theologic cant and twaddle.

The organized lumber barons are as firm and unbending in the face of pleas and heartfelt entreaties as the trees of this great north woods are deaf to the most eloquent sermon. The fact that you need a new pair of shoes means nothing to him who has ten pairs of patent leathers. As the trees will submit only to saw and axe, so will the masters submit only to economic pressure. This is neither the time nor the place to philosophize. Prayers and humble invocations to imaginary deities may return to you the hollow mockery of their own faint echoes, but certainly nothing more. The master will laugh in the face of the worker who, moron-like, will kneel at his feet in humble subservience, begging a crumb from the table that labor's creative effort has overburdened with the good things of life. The same master would grovel in abject terror before an organized working class.

The Wobblies here know that philosophy will not fill their stomachs, and, the prayers they so trustfully offered up in innocent childhood being still unanswered, they are organizing their fellow workers to fight for the wealth they are producing and the fruits of which have been denied them. It is not the grandiloquent gestures and carefully-coined phrases of the orator, the Oxfordian compositions of writers; nor yet the "hurrah-boy" enthusiasm that vents itself in a wild burst of cheering at a propaganda meeting. It is none of these things that are building the I. W. W. in Ontario. It is that sincere, hard-working, day by day plugger, Fellow Worker Jimmie Higgins, Job Delegate, who is making the I. W. W. known and respected—hated and feared in this land where the hoosiers are no less than 1,000 per cent. It is out there on the job, there with his fellow workers in their own element, that Jim goes with his message of industrial unionism. Out there with object lessons on all sides with which to drive home his arguments. His task is no light one. He

is driven from camp to camp, usually penniless, often hungry, but never beaten. It is a revival of that spirit of '17 that established the 8-hour day in defiance of the guns and whips of sheriffs' posses. The spirit that wrote **Solidarity** on the cell walls of Everett County Jail will, carry One-Twenty on to another and even greater victory than that of 1917.

Most of the cards written out in this country were written on the skidway or the deacon-seat. And this in spite of all the master's stoolpigeons. Grim, though this fight be, it has its element of humor, which perhaps can best be illustrated by a business meeting held in one of the camps last winter. In this camp the majority of workers were Finns, and where you find Finns, there too, and only there, you find a bath-house. There being comparatively few members in the camp at that time, it was hardly advisable to hold a business meeting in the bunkhouse, so we held it in the bath-house dressing room. The dressing room was partitioned off into two parts, and while non-members who used the other room were having their bath, the business meeting was called to order. The chairman, who stood six foot one in his bare feet, was a noble looking specimen of manhood in his single garment, a large bath towel. The recording secretary was a striking figure, gorgeously attired in his robe of office: a green and black mackinaw tied about his middle. When it came our turn to get steamed, someone moved the motion: That this meeting adjourn for a bath, to reconvene in 30 minutes—which was carried and duly recorded with all the solemnity of parliamentary procedure. Before the spring breakup this camp gave over 50 new members to the I. W. W. Great though the difficulties be, to men who are doers there is always a way. Men who hold business meetings in bath-houses and use the skidway for a desk are the kind of men who can organize in any country.

Why do they endure hardships, smash their way through every barrier and never get discouraged? Because they have come to recognize and learned to face this hard, cold fact. There is nothing worth while in life for the wage slave; no hope for the future, until labor stands organized to fight for its rights—the rights that prayers and pleas have failed to gain. To you of the tall timbers of the West and the turpentine bush of the South, who are organized, we say: "Waste no time or energy orating at length upon your own imagined virtues and the shortcomings of your neighbor. Get out on the job and do YOUR part towards making One Twenty a name to be conjured with in the lumber industry. If you will only make up your mind to do it, all debts can be swept away like so much chaff and 120 become an industrial union of which you can be justly proud. And to the great mass of unorganized we say: Your knees must now be sore from cringing at the chancel-rail mumbling prayers that are never heard, much less answered.

With hours getting longer and wages ever shrinking, the most beautiful philosophy can no longer afford you any comfort.

Get up from your knees and fight like men! The I. W. W. points the way to emancipation and shows you how to get there, but it can not drag you along. You must stand up and walk, and fight every inch of the way. We give you no empty promises, but simply tell you that you will get what you fight for .

You have lived in poverty long enough —too long. Here before you is the world and its wealth. Is this a prize worth fighting for? It is?

**Then fight, fellow workers, fight!**

# SLINGS and ARROWS

By DANIEL TOWER

Navy representatives leave the forecasting field to God. Following the gigantic TNT blow-up at Lake Denmark, N. J., the New York TIMES stated this: "At 2 a. m., however, the magazines were still intact and officers at the arsenal said they did not know whether they would explode."

* * *

**Arrangements have been made for a physical examination of John W. Thompson, St. Louis contractor, to determine whether he is in a condition to serve a two-year sentence in Leavenworth. Thompson was convicted with Colonel Charles Forbes of fraud in connection with hospital contracts. United Sates Judge Carpenter of Chicago suggested the examination. If any poor men are ever examined to determine whether they can endure a prison term, the newspapers keep it a dark secret.**

* * *

As a special favor to a superstitious prisoner in the death house, the Maryland authorities have consented to hang him on the 12th of the month instead of doing it on the 13th. Our idea is that it is just as unlucky to be hanged on the 12th as on the 13th. But the authorities want to spare the man's feelings.

* * *

**Letters from Pontius Pilate to Herod have just been published in book form for the first time, according to an advertisement of a New York publisher. They were written following the crucifixion of Christ. We haven't read those letters, but doubtless they indicate what a California judge thinks about after he has sentenced a Wobbly to San Quentin on a criminal syndicalism charge.**

* * *

Each month's newspaper dispatches tell of the capture of one or more of the three D'Autremont brothers, always in some new portion of the country. The brothers are billed as I. W. W. members (although they aren't) in the police reward notices in connection with the Siskiyou train robbery in Oregon. You read that a suspect has been identified as one of the three, and then you don't hear anything more about that suspect.

News about captures of the D'Autremont boys is akin to the casualty statistics during the war in Europe. Some of the big newspapers and press associations killed off more Germans in their news columns that there were soldiers in all the armies on both sides.

* * *

When we hear super-patriots fighting the so-called "great" war over again, we take comfort in thought about a comment on it uttered by an old-time grocer in our home town in Illinois.

He was busy picking over sprouted onions when a traveling man came in, with two sample cases and a copy of a Chicago paper.

"They're having a tremendous battle over on the Marne," remarked the traveling man.

"Well, they've certainly got a good day for it," said the grocer.

* * *

**There was a stirring reunion of veterans of that war the other day in Dallas, Texas, with a leading hotel there as headquarters. The gathering occurred when the hotel clerk, who was a lieutenant in France, summoned the head waiter, who had been a corporal, and the captain of the bellhops, who had been a sergeant, and had them throw out an ex-colonel, who was cluttering up the lobby.**

* * *

One more great man has passed on, and another steps forward to take his place. Robert Todd Lincoln, who distinguished himself by being the son of Abraham, and by being head of the Pullman Company, payer of low wages to porters, is dead. Simultaneously with the demise of Mr. Lincoln, we read that Anton Friberg, manager of a copper company's branch office at Bisbee, Arizona, has worked up to the eminence of being the tallest man in the Benevolent Protective Order of Elks. He is 6 feet 9, and still growing.

* * *

**In the Hall-Mills murder case, lately reopened after four years in New Brunswick, N. J., it develops that a detective employed to investigate the crime shortly after its occurrence, carefully wiped with a handkerchief the spectacles found upon the slain clergyman and said: "Those aren't fingerprints; those are fly specks."**

**Jersey cops and Jersey justice are wonderful things. During the Passaic strike, a cop there arrested a picket in a hardware store and took him outside.**

**"Lemme go in and get my cap," said the prisoner, "I left it inside."**

**"Nix," answered the policeman; "you think I'm a boob, don't you? If I let you go in and get that cap, you'd sneak out the back door and get away from me. . . . You wait here and I'll go in and get the cap for you."**

We hear from Florida that the prohibition enforcement officials are falling over one another in their search for lawbreakers. H. B. Boone, an observant traveler who is sojourning in the great swamp state, writes from the town of Daizey describing how the searching is done.

"We do not often see a prohibition agent in Daizey," Boone explains. "I had never seen one before until I happened to be at the store in Daizey buying some groceries. The store is a new one facing, across the road, a clearing ready to be planted with orange trees. Behind it is a clearing with the young orange trees already in the ground.

"The agent drove up in a 1926 Cadillac. It was a hot day and he was a fat man. He breathed quickly. He addressed the storekeeper. 'Mr. Crawford,' he said, 'I've got a warrant to search your place. Somebody says you sell whiskey. I'm a government man.'

" 'Sure,' said Mr. Crawford. 'Help yourself.'

"The government man regarded his car. 'It's safe in the road, isn't it? It's a Cadillac.'

" 'I reckon so,' said the storekeeper. 'I've seen Renaults and Rolls-Royces parked where yours is. A Cadillac is like a Ford on this road. Will you have a cold bottle of Coca-Cola?'

" 'I don't mind,' said the G. A. 'Gee, it's hot! I've been in Sanford, and they sent me up here to go over it. What you got here, a wilderness?'

" 'Man, ain't this a clearing?' The storekeeper swept with his hand the palmetto-covered flat before them and the palmetto-covered flat to right and left. 'Go on with your search, fellow, I'm busy.'

" 'Say,' said the storekeeper, "weren't you a barber in Jacksonville?'

" 'Sure,' said the G. A. 'And weren't you a deputy sheriff?'

" 'Sure,' said the storekeeper. 'I graduated, and you ain't even what you was.'

" 'That's the truth,' answered the G. A. 'Well, I've been over this territory. I'll bet there's snakes in those palmettos. I didn't find any whiskey here, but I've been here, eh?'

" 'Sure,' said the storekeeper. 'Count on me to tell 'em.' "

* * *

We know a lawyer in Chicago who was a Department of Justice operative during the war. He resigned immediately after the Armistice, and says he almost broke his neck in his haste to get out of the service. He happens to be Irish, and he told us one day about the zest with which some of the D. of J. men performed their daily work. Here is one example:

A secret service man rings a doorbell of a flat out on the South Side. The door is opened by a red-haired man.

"Are you Mister McGinnis?" inquires the caller.

"I am that."

"Well, Mister McGinnis, my name is McGloggerty, and I'm from the Department of Justice. . . . Mister McGinnis, you never said that Woodrow Wilson was no good and ought to be bumped off, did you?"

"Well, I thought you didn't," says the D. of J. man, "but we've got to investigate all these charges. Excuse me for botherin' you."

* * *

**Blurb-writers on the New York TIMES wear seven-league boots at work. They announce an article on the discovery of a Viking burial ground and Runic inscriptions "near Seattle, Washington." Seattle, as we recall it, is some 300 miles from Spokane, where the graveyard and strange writings actually were found.**

* * *

From reading a want ad in the TIMES, we suspect that a mysterious slaying has lately occurred.

"$50 REWARD—Parrot, green, lost from 814 West 59th, answering to 'I Love You,' 'Oh, doctor,' and imitates children crying."

---

# The Awakening

By RICHARD POWERS

THE modern slave now stands at bay
Awakening from the dream at last.
His chains are falling day by day—
He is breathing from the feudal past.
Crushed by misery, want and woe,
He hears his children cry for bread.
The masters say it must be so;
" 'Tis written in the book," they said.
But the die is cast; "the battle's on."
And freedom's star is rising fast.
The hope bequeathed from sire to son
Is dawning on the world at last—
A glad world siring like a dream
Free from poverty and from crime,
Where man will be at last supreme,
Lord of himself and king of time.

SLAVERY
ON THE SEAS

# The I. W. W. on a Full-Rigged Ship

By HARRY CLAYTON

A CONSIDERABLE amount of trade is still conducted in sailing vessels. These old relics of a bygone industrial era are, like other backwaters of capitalism, an opportunity for exploitation of labor to make up for technical inferiority. The fact that they can be still kept running shows that the power of exploitation is something marvelous. As I am now a slave on a "windjammer" and have not seen this particular part of the capitalist system recently exposed to the shame it deserves, I will take this opportunity to spread a little information about it, not new perhaps to the marine workers, but probably interesting to those who have never "gone to sea."

We signed on "The Star of Russia" in Tacoma, June 1st of this year and are now out at sea thirty days. During that time we have seen but one steamer, the "President Wilson," and have sighted no land except some island of the "Union Group"—these a long distance away over the waters of the South Pacific. How long the voyage will take depends entirely on the winds. A direct course to our final destination would be something like 6,000 miles, but we are apt to cover 10,000 or more because of weather conditions over which we have no control.

### A Venerable Old Hulk

The "Star of Russia" is a full rigged sailing vessel, formerly owned by the Alaska Parkers' Association. It has been sold by them to a French company in New Caledonia, a French possession, 700 miles off the north coast of Australia, where the French capitalist government maintains a penal and exile colony, and inflicts like blessings of civilization upon the native population. The French company expects to strip down our ship and use it as a barge in Noumia, New Caledonia.

Talk as you like about the famous old shell games, three card monte games, and other million to one chances to lose money which the gambling fraternity has invented, but those propositions were highly moral and fair compared with the deals handed to the workers in these days. Our case, that of the "Star of Russia," is one in point. The Alaska Parkers, a Guggenheim outfit, finds it convenient to dispose of this relic of the past, so they sell it to the Frenchmen for many times its original cost. But they are not satisfied with this, they must make still more profits and take out of the workers' hides the cost of delivering the obsolete old hulk. So workers in Tacoma load her with timber to be delivered and sold at ports on the way for a handsome profit, and this much more than pays the few dollars the crew get for delivering the ship itself to the buyer in Noumia. They put on 1,500,000 feet of lumber in Tacoma; 250,000 feet will be discharged at Appia, Samoa, our first stop, and the rest at Noumia.

### A Senator Speaks of Ships

And what do we get out of it? If you believe some people, we ought to pay for the privilege of living such a happy life. Senator Free, of California, in speaking officially on maritime affairs, said in substance that all that is required of those who man the ships of every sea is a strong back and a weak mind, and intimated that of course that is all they should be paid for. He was speaking in opposition to a raise in wages for American seamen. He arrived at this conclusion after making a few trips as a first class passenger on a steamboat.

This wordy congressman from the worthy state of California now knows full well that any lubber, himself included, can box the compass, keep the ship on its course in very troubled water, pull the braces, square and brace the yards, "jump up aloft" (sometimes 200 feet or more) and make fast the sails, launch the lifeboats without mishap to life or limb, splice wire and rope, set up standard rigging, stand by the fore bolling when the top sail is hauled in tacking ship, go up the old wooden gallen yard and put on a head earing without using the bull wunger. The good congressman is quite sure that any lubber, himself included, will know the difference between a bunt line and a gant line, and will realize when it is necessary to rig down a royal yard. Should the elements tear the sails to shreds, the expert Congressman Free will tell you that no skill or intelligence is necessary to distinguish between the roping of a sail and the flat seam in order to use a palm and needle; most any "hairy ape" will know how to put in a reef cringle when it is torn away; the seaman with nothing but muscle headgear to recommend his will keep cool and collected in times of trying emergencies when the lives of all on board depend on his executing complicated and technical orders with precision and exactness. Nothing need be said of the courage (perhaps the congressman doesn't know what it means) needed to face snowstorms and climb aloft to make fast sails while terrific gales are raging and when cold blasts have covered the rigging with ice.

Well, Congressman Free was discussing the wages

of sailors. He probably knows, but how many of the workers on land realize, how little a seaman has to look forward to when he reaches his voyage's end? Ordinary seamen receive $47.50 on Shipping Board Vessels, and "A. B.'s" get $62.50. Crews on other ships (they are in a majority) rate less wages —even as little as $20 a month on the Panamanian Line. One cannot be particular as to what flag he sails under as economic necessity knows no national boundaries. At the highest rates a seaman can earn $750 for a 365-day year, which means that he would have to have a steady berth, a thing that almost never happens; there is a long time of waiting between trips that must be spent "on the beach" is unremunerative idleness.

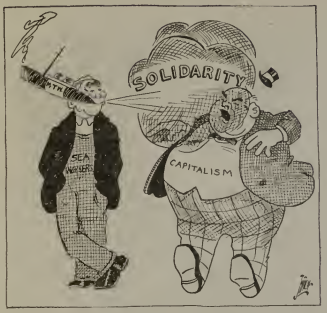
But wages are not after all our major interest, or should not be. One of the most deplorable features of the whole system is the fact that the workers in all industries measure their welfare almost exclusively in dollars, in the amount of wages paid them, neglecting conditions, and especially living standards. The workers as a whole do not yet realize that since they produce all the wealth that there is, they are entitled to the very best and finest there is in life. One who makes this assertion will still meet with ridicule from workers themselves. They think it a huge joke when anybody seriously affirms that workers should ride in Pullman cars instead of box cars and in first class cabins instead of stuffy, foul-smelling fo'c'sles, or if one says that workers should have choice cuts of meat instead of hamburger steak—and in general should scorn the scraps and crumbs of the social product and demand and take the best.

On ship board they may not even get enough scraps. On this particular ship we know what actual hunger is. As I write it is just past midnight. Those on the "graveyard watch" (12 to 4 p. m.) are on duty. The night is cold, the kind of a night when men would relish a warm cup of coffee, but we are not allowed even that. The table is bare with the exception of some dry bread. We would like to have that congressman here!

When we are fed it is nothing wonderful. There was a time, when I enjoyed the hospitality of the State of Sovereign Moronity, California, that I looked upon beans as a hateful abomination. But now pork has usurped the place of beans in my hierarchy of dislikes.

Our cook hasn't washed himself since the three wise men went to visit the savior; the crew has him marked for frying if we should ever be wrecked and cast adrift on some foodless island, for he is already larded. But our cook, God rasp his greasy hide, is a genius of a sort. He can think of more ways to cook pork than the bible has contradictions. We get pork plain, parboiled, souped, fried, made into cakes, as wet hash and as dry hash, and as a spread for bread. Salt, fat pork it is, without a streak of lean, for breakfast, dinner and supper, all these many days. It's ancient, too; I'm inclined to think that we are just now eating, on this voyage, the male of that famous pair of swine that was saved from the wrath of God at the time of the flood.

We begin to think kindly of cannibalism. It is said that these South Sea Islanders had only one domestic animal, the pig. What wonder that they went to any extreme to secure a change of diet? And these supposedly ignorant savages of New Caledonia and such places live on the most aristocratic meat in the world, man meat, while we poor sailors get the flesh of that mud wallowing, filth devouring, slime hound, the hog—and eat it right to the bristly snout! It's not fair.



Of course, there is other food served to us. There is salt canned horse. Poor old Dobbin! After long years of arduous service, his well hardened muscles to be ungratefully stewed and dished out to us, his fellow slaves! This "hoss" we are eating now, I am persuaded, is the same identical one made famous so many years ago in song and story by Oliver Wendell Holmes—the "hoss" that pulled the One Hoss Shay.

Then, salt cod! Salt cod laid to rest in a hogshead when the art of salting was first invented, along about the time they built the Great Chinese Wall!

Looking forward to meal time is about as joyful as the last days of a condemned man.

Of this sort of diet we are supposed to work twelve hours a day in fair weather and any number of hours in bad weather, to be called from our bunks in the wee hours of the morning to help tack ship, or to climb aloft in the dangerous, shrieking dark. It is far-fetched imagination that can find any pleasurable romance in this. Poets sing the beauty of the stars, but men who work watches of four hours on and four off find themselves too fagged to enjoy anything but the tired doze of a beast. Even the impressiveness of the mighty Pacific Ocean palls on one when we see nothing but its vast expanse of water, day after day.

This sort of life is bad for men, and surely no-

body has to be convinced of it. But it was not until the I. W. W. came aboard this ship that anything was done to help much. On the last trip the whole crew was unorganized. There was a mixture of nationalities, and two men were part colored. The second mate, who is a born sucker, took every mean advantage of them and roundly abused them, calling the two mixed bloods, "Niggers," and "Black Bastards," flourishing a gun while he did all this.

Seven of that crew are still with us, but you can bet your sweet life that none of them are abused in the manner described, by mate, second mate, or skipper. As a matter of fact, the second mate now gives "orders" in a tone of apology. We made him realize right from the start that we were sticking together against those "aft" and that we would consider an injury to one an injury to all, resenting it with direct action.

This condition was brought about by the fact that soon after we came aboard, we lined up the seven old members of the crew, making it 100 per cent organized, I. W. W. We found that the old-timers on board had been working for less than the Shipping Board wage. We held a meeting, formulated demands for a uniform scale but didn't present them until the skipper came to give orders to "cast off lines." How could the master win and how could we lose with this kind of direct action tactics? He couldn't do anything else but give in. He has to submit or stand to lose many times the sum involved in the raise in wages.

It didn't take a ton of beef to convince the new members of the I. W. W. on this ship that the I. W. W. form of organization can deliver the goods. They may not all stay with the union, but the majority of them will, and they will be real social rebels. It is rebels we need.

The skipper may try some tricks on us at the end of the voyage, but we look to our solidarity to frustrate him. As I was writing the above he had the messboy in his cabin to feel him out about the crew. He asked the messboy, "Are you a W? You better keep away from them, Young Man, it's a good thing to keep clear of those W's."

But his whole crew are "W's" now.

# MY BROTHER

By HENRY GEORGE WEISS

He is my brother who is thirsty
after love,
Who in the long gray days
ponders sad of heart,
And inly weeps for sorrows
passing by uncomforted.
Of me he is,
And I of him,
A sad, sad army of sadder
souls who lie in prison
cells,
And crouch by wayside tracks,
Tramps, vagabonds,
Thieves, prostitutes,
And workers racked with pain.
He is my brother who forever
cries out, I am my brother's keeper,
Who stands and boldly says,
This man is Christ and crucified for me,—
In jails, in penitentiaries, and
convict camps,—
Who cries, Mary, my sister,
Thou kneelest at a cross of
bartered flesh
Where purity hangs spiked
with nails of gold;
Let me raise thee up:
Who in the night hours wakes,
And feels all his manhood
surge to life for godlike
souls,
Starved, beaten, chained in
dungeons of oppression.
He is my brother!
Oh, that our strength were
one, our wills, our souls!
Then would the thunder roll,
The lightning flash,
The heavens open, and the
workers come!

# GOOD ADVICE

THE EDITOR:

Sir,—The verses of which I enclose a copy are, I think you will agree with me, worthy of reproduction and of the wide circulation your journal can give them. The piece is entitled "To Foreign Agitators in America," and the author is Glen Allen. M. A. E.

You and your fellows clutter up our streets
With soap-box orators whose shoutings vex us;
Now, turn about, we'd like to ask of you
Some questions that considerably perplex us.

The first thing we should really like to ask—
If we seem personal, you must excuse us—
Is this, Why did you come? Why leave your homes
And travel all this way—just to abuse us?

We have no tyrants here with heads to take off
No czar, no king, nor any potentate.
With sport so good at home, what brings you where
There are no tyrannies to agitate?

We have one ruler here and only one—
A sovereign we obey most willingly —
The Ballot Box! Its verdict we accept,
With calmness bow ourselves to its decree.

We never asked you here—so much is flat!
We could have worried on contentedly
It's gauche to mention it, but haven't you
Transgressed the laws of hospitality?

It's our intention to suggest to you—
And some might even call it plainly hinting—
We're weary of the kind of guests you are!
So—here's your hats! And are you good at sprinting?

---

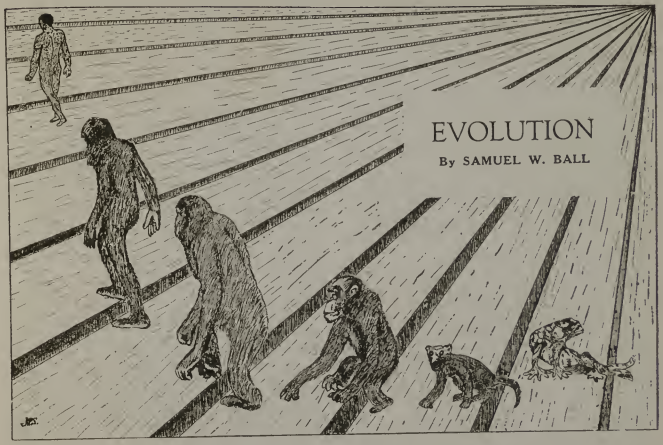
TO M. A. E.:

Sir.—The verses of which you enclose a copy are, I think all will agree with me, devoid of any original ideas, but since the mistaken notions with which they abound have already wide circulation, our journal will answer them with what publicity it can. The answer may be entitled, "To the Business Men of America."

We notice that our plain words seem to blister
You hundred-plus per cent of Yankee pride;
We grant that you're perplexed; we'll try, Sob Sister,
To more remember how much you must learn.

Why did we come? Perhaps first YOU should answer
Why did YOU come? No Sioux invited you!
His social body found you like a cencer;
You took his hills, his game, his trees, his life.

The goodly fruit of saw and plow and market,
The very street you now forbid to us,
Your conquering car, where'er you choose to park it,
Rest on the usurped land you rulers stole.



For you are rulers, yes; the ballot's flutter
But shows the steady slush fund's oozy drift
You golden kings stoop not to reach the gutter;
Your birth was there; in foulest ways you rule.

These little truths are hard for you to swallow,
Fat Bourgois of this fat America,
But while in products of OUR toil you wallow,
Remember OUR right here's as good as yours!

Our right to our toil's products better still—
Yes, some might even call it plainly hinting—
We're weary of the kind of hosts you are!
So—here's your hats! And are you good at sprinting?

---

THE GREAT MAJORITY OF THE INDUSTRIAL PROLETARIAT IN AMERICA ARE EITHER FOREIGN BORN OR THE CHILDREN OF FOREIGN BORN PARENTS

# EVOLUTION

By SAMUEL W. BALL

A PIANO and a rifle, at first sight, seem to have no obvious relation, one to the other. No one, hastily thinking of either, realizes that both came from one generalized form or parent.

Such, however, are the facts. Both piano and rifle can in history be traced back to a common beginning in the bow and arrow. With the bow and arrow man discovered a more efficient means of obtaining action at a distance. This was gradually improved through the ages and culminated in the modern rifle, that kills at a mile or more.

The bowman, when he released the taut string, noted the musical tones as a result of its vibration. This knowledge and its subsequent additions gave rise to a whole series of stringed instruments, improved upon from time to time, with the result that we have the modern piano.

The bow and arrow being a generalized form gave rise to great progeny of inventions, all varying among themselves. This, in small, is a concrete illustration of the whole theory of evolution. It indicates the nature of the facts from which the theory of evolution has been substantiated.

The best definition of evolution, perhaps, was advanced by Prof. James Scully. He described evolution as, "A natural history of the cosmos, including organic beings, expressed in physical terms as a mechanical process."

Ever since man has attained to the status *reason*, some of his numbers have concerned themselves and speculated about how the world came to be. In addition they asked, how did it come to have the particular form that it now has? Man queried, "How did I and all other creatures come here? There must be some underlying cause and explanation for it all." How far back in history these thoughts and speculation go we cannot now know. Man's early past has now been all but completely obliterated, so much so, that we will probably never arrive at any definite conclusion regarding OUR beginning. What the men of earliest Egypt, Assyria, Babylon and other oriental tribes and nations thought about the world and man's presence here is at its best but conjecture; later, in those countries, creation myths diveloped.

Coming to the Greeks, the very lively, highly imaginative and free thinking race of the central Mediterranean, some definite non-mythical ideas begin to emerge. As early as 600 years B. C. some of their men had formulated general explanations for the beginning of the world, life, animals and man. Later, more audacious speculators in ideas began to question the origin of the habits, customs and institutions of man. In Ionia, on the mainland of western Asia Minor, three men, Thales, Anaximander and Anaximenes, sought to explain the existence of the world and life as generated out of some form of primordial matter. In this, these men of 2500 years ago resemble modern scientists. Both groups contend that this basic, simple substance has generative and transmutative powers which caused it to grow into all these more complicated forms.

Empedocles, who lived in the island of Sicily, improved and strengthened the idea of evolution. In fact, if we may so say, Empedocles was the Darwin of the Greeks. He did attempt, however vainly, to explain the beginnings of organic beings. The variations among the forms of life were theoretically explained by this man of Western Greece. As a reasoner, Empedocles was very fanciful, yet he did seek a mechanical and materialistic explanation for all things.

The next man of importance, in this seeking out of simplified beginnings of things, was Democritus. He was the originator of the Atomic Theory. In this he reduced the original substance to the last word of simplicity, the inference flowing from this conclusion being that once upon a time, all things came from this undifferentiated substance.

Aristotle, the heir to all the learning of Greece, is the next man of importance, being in and by himself a veritable encyclopaedia. No theory or idea brought forward in the 350 years of speculation prior to his time was foreign to this great thinker. He, also, made his contributions to evolution, most significant of which is that contained in his book on *Politics*. In this he demonstrates that human history has a naturalistic basis, is conditioned by necessity, ever changing and varying from day to day. Neither Aristotle, nor his precursors, probably ever used such a definite term as evolution, yet the essential idea, in germ, is contained in their works and runs through all their thinking.

The first act of the great drama of history was now finished and with the downgoing of the curtain the world of intellect fell into "dreadful night." Its place in the affairs of men thereafter was insignificant. During the darkness, while the second act was in process, embracing all the years from Aristotle to Bruno, the idea of evolution was vague and indistinct. All during this period men were hampered, not in speculation, perhaps, but in the expression of their ideas. It was not until after the discovery of the new world by Columbus that thinking came again into its early freedom and attained its pristine glory with Bruno.

When it was actually proven that the world is round, rotating daily, thought took on a new lease of life. With the discoveries of other lands and peoples, the increase of trade, growth of the middle class and merchants, the third act of the human drama opens, and comes to its culmination with Charles Darwin.

The significance of Darwin is not in the formulation of the theory nor in the discovery of evolution. The theory of evolution had been stated and stated over and over again, in fact it had been restated in one or another form, every generation for 2400 years, in rare instances even more clearly than by either Darwin or Spencer. Darwin's significance is entirely that he of all men actually proved evolution to be a fact.

The voyage of the Beagle, going to the Canary Islands, South America and Australia, carrying Darwin as naturalist, came back with the proofs of evolution and presented them to the people of England, later to be transmitted to the entire world. Upon his arrival home, Darwin began arranging his facts, which in 1859 were set forth in the epoch-making book the *Origin of Species*. Never before, in all the long history of the human intellect, had such an event, revolution, if you will, taken place. From that time forward, science, knowledge of the world and life, was to come to its full stature and march forward with a sure and steady step.

Evolution now become a tangible proven fact—it become the one, all embracing generalization regarding the world, its beginning and gradual development. Heretofore many "tools of the mind" had been devised or invented, but the greatest and most efficient was that of evolution as expounded by Charles Robert Darwin.

Darwin was the gatherer of the proofs. Soon after him came Herbert Spencer who took the "tool of the mind" thus efficiently made and applied it to every department of Nature's manifestations. Spencer applied the theory to suns and stars, to planets. He demonstrated how life came to elements. After life came feeling, leading to consciousness and intellect. Intellect gave rise to society in whose train came religion, philosophy, ethics, art, manufacturing and law. Spencer was the agency through which we came to know the inter-relation existing between the "fartherest star and every beating heart." So we may now quite confidently say that with the closing of the nineteenth century, man, in his intellectual progress; in his understanding of the world, passed to manhood. Heretofore, he had been a child, with the vague ideas and wonder of a child. Now he became a man with a clear, definite and determined purpose.

Prior to the nineteenth century the great majority of men centered their interest around some form of religious thought. Such wealth as was

PRIMITIVE CARVING ON FACE AND WEAPON OF TRIBESMAN

produced flowed toward religious institutions, and to these the aspiring man looked for a realization of his ambitions and the rounding out of a career. It came to be that religion monopolized the talent of the day.

With the coming of Darwin the face of the world of intellect changed. Now science, with its inductive method, superceded religion and philosohpy in the minds of the great thinkers. Men of talent and genius began to enroll themselves in the ranks of science. With this ever increasing army of workers every department of Nature was investigated. Now relatively few men seek careers in religion and philosophy, but the halls of science are crowded with eager aspirants. Those men realize, as we do now, and realize it more clearly as each day passes, that the fate and welfare of man on earth is indissolubly bound up with the development of science and its hand-maiden, evolution.

Since evolution and science have thus attained this eminent and foremost place, it will not, at this time, come amiss to devote some time to a discussion of their most salient features.

The anatomists know definitely that all animals, man included, have the same general structural plan. The plan is the same for fish, reptile, bird, mammal and man; the heart, the lungs of each function the same for each. The counterpart of man's skeleton, bone for bone, can be found in the horse, the monkey, the seal and the bat. The wings of a bird and the fins of a fish are like men's limbs. Of the five laws of evolution anatomy furnishes undeniable proof of the truth of the first, i.e., like produces like, or in other words, heredity.

We also know, not less definitely, that life results from the compounding of the chemical elements. Since those chemical elements of which life is composed could more easily mix in water than elsewhere, life very probably began in the sea.

The creatures gradually migrated from the water to dry land, and learned how to breathe air. In Africa, at the present time, there lives a specic of fish, *protopterus* or "lung fish." This creature differs from other fish in so far as to be able to aerate water, and maintain itself as an air breather when necessary. If there is much water it does not drown. In cases of long dry seasons it can survive. The lung-fish is an animal that is half-way between the water breathers and the air breathers. It is one of the missing links in the chain of life, and demonstrates the process by which life made the transition from water to land.

With the coming of life, came feeling, and out of the feeling grew consciousness. From consciousness came the intellect which has grown in acuteness and range through the ages, the creature having the best developed intellect being man. Since this is manifest it is of more than passing interest, and we should use some of the time at our disposal for a consideration of man's advent into the world.

In entering upon this phase of the subject we should keep steadily in mind the fact that the world was probably a billion years of age before man appeared.

After the appearance of the land, animals learned how to breathe air and came upon it. Thus began the age of amphibians or double-breathers. In the next geological age the snake, crocodiles and alligators appear. They are reptiles or true air breathers. The temprature of the land surface was lowered with the consequence that cold-blooded reptiles developed warm blood and feathers, transforming them into birds. The geological record demonstrates how slowly and impreceptibly this great transformation or evolution was accomplished.

The temperature of the earth's surface continued to lower, and as it did so the mammals or fur-bearing animals appeared, from which as a final term, came the anthropoid apes.

From this family of apes, the branch known as the catarrhines, came man. Environmental conditions being not suitable to him the intellect was developed as a counterpoise to untoward surroundings. With the aid of his large brain, man discovered fire, migrated, and in due time gradually disposed of the fur that once covered him. The results can be tabled by arranging them un-

der eight heads as follows: Age of fire, water, islands, reptiles, birds, mammals, man and invention.

So much for the story of our earth and its inhabitants. Now some will be disposed to ask; "Is there life in other parts of the universe? Of this we must confess our absolute ignorance. There may be on other worlds than ours, but of this we have no evidence. Some years ago a lawyer in Pittsburgh announced that he had found a meteor containing life. When examined minutely no evidence of life was found. Arrhenius, the very eminent Swedish scientist is of the opinion that life is communicated from one world to another by beams of light. However he submits no tangible proof of his theory. Schiaparelli, Italian astronomer, insists that there is life on Mars, and Camille Flammarion of France contends that life maintains on the other planets of the solar system.

No one of these men have, up to this time, submitted tangible proof. All that we have is their mere say so, and, since men are able to say anything, such statements should only be accepted provisionally. To prove is quite a difficult and different matter.

On this earth there is life, the proofs for this are reliable. Up to this time no one has proven that life exists elsewhere. Until that is done we can only confess our ignorance. Therefore, let us return to a consideration of life and its evolution upon earth.

In looking about us the most astounding thing about life is the great variety of its forms. There are hundreds of thousands of insects, 1500 varieties of men, and about half a million different plants. All are different, yet so much alike, that scientists have concluded that all came from one original source. The botanists have shown that all plants are related one to the other. Sponges are similar to plants; fishes and sponges are related. Amphibians are the direct descendents of fishes, reptiles follow amphibians, and birds are nothing less than feathered, warm blooded reptiles. The structure of bird and mammals is the same. Any man nowadays who denies or contradicts these facts has no standing in the scientific world. Denial, to be given consideration, must be substantiated by adequate proofs, none of which seems to be forthcoming.

At the top of this long line of life, the ultimate product of long ages of evolution, stands man, of the species *homo*, department *Vertabrata*, class *Mammalia*, and sub-class *Placentalia*. This animal, man, is like a whole tribe in having a back-bone, it suckles the young like tens of thousands, and feeds the embryo like other thousands. Tissue and flesh of man are the same as in other animals. In skeleton, muscles, nervous system, digestive apparatus, blood vessels and excretive system there is no difference worthy of note. He has the same number of limbs, eyes, ears and digits, works on the same principle, and functions like other animals.

BEFORE THE WHEEL WAS INVENTED

Fears, emotions, sensibilities are manifested by the animals. Dogs, cats, horses, chickens, pigeons, snakes and fish, as feeling creatures are beyond doubt closely allied to man. The body of the gibbon, hands of a gorilla, skull of a chimpanzee, head of an ouran-outang, and the face of the lemur, if put into a composite picture would be an exact resemblance to man.

Nor is this the end of the story. Astronomy, geology, biology; all, offer overwhelming proof of our theses, but the evidence supplied by embryology is even more convincing. In this branch of science we learn that man as an embryo and foetus, from conception to birth, passes through each gradation or step in the long history of the race. The history of man as an embryo, recapitulates the history of man as a race. The ontogeny and phylogeny intermingle and run their courses concurrently. Each man begins life as a simple primordial cell, which after becoming impregnated grows and becomes fish-like. Later, as it develops, it takes on the characteristics of an amphibian, and yet later those of a reptile. Following this in order are the bird and mammalian stages, culminating by its emergence into the world man-like.

The embryo of man, in the short space of nine months, begins as a cell 125,000th of an inch in diameter and evolves into a baby. Twenty-seven years later it is capable of formulating a philosophy,writing a great drama, or propounding a Darwinian Hypothesis. If such great and far-reaching transformations can take place in so short a time as thirty years what can we not expect from Nature who has an abundance of material and time at her disposal? Nature is and can well be prodigal and extravagant with the forms produced.

The development of man, his various transformations in embryo, has been named "The Law of Bio-genesis." It is only one of a multifarious array of proofs of man's animal ancestry—just simple plain facts. It is true such facts come unwelcomed. The average man receives them but re-

luctantly. This may be because he has an innate desire to be of and from the gods. To explain man's ancestry upon an animal basis is all too simple for him. He regards it as a rather coarse idea. Such being the case many generations of men will have to come and go before this truth is tolerated and entertained by the great majority. Owing to the systems of heraldry and long pedigrees of the Middle Ages, man has inherited ideas of his own importance and godliness. Science, therefore, has a long, arduous and thankless task ridding man of such superficial notions. However, great and difficult as the task appears, it will be in due time accomplished.

Science endeavors not to confound, but to simplify; to make all reasonable and understandable. But your average man has given his intellectual allegiance to the strange, marvelous and unknowable. All of us, in more than one sense, are metaphysicians. We are not satisfied with simplicity. Facts are unwelcome, and, perhaps the most unwelcome of all has been that of evolution with its inference that man has a long line of animal ancestry behind him.

Let us, is spite of this popular opposition, grant the truths of evolution, and if we can do this we can then postulate that at some time in some part of the world, a member of the ape family, gradually and very slowly, during many generations, acquired a large brain, the ability to vary his vocal sounds, began to walk upright as the arms shortened and fur disappeared, and came to have a double curved spine.

Picturing such a development to ourselves we can then imagine this creature walking on the ground partly erect. This much and no more would differentiate him from all other apes. Moreover, such exercise would have a tendency to increase and sharpen such intellect as he happened to possess at the time. That in itself, even so little as it may have been, would open the way for greater acquisitions in the same direction, and in due course would result in the full fledged man that we now see hereabouts.

If we examine and weigh the various brain masses of the animals beginning with amphioxide and passing in order to fish, amphibian, reptile, bird and mammal, with man as a final term, we discover a gradual and proportional increase in the whole series. Plants have no need for a brain. Nutriment for them is inorganic and is abundant in most every locality; they have no need of locomotion, they thrive where they are placed. With animals, subsisting upon organic food which is relatively scarce, the ability to move is essential to life. To move, sense and find food, requires a center or ganglion to record impressions. The necessity for activity gave rise to a brain, and having been developed it was enlarged by activity and exercise. As we ascend the scale of development we find that this has been the general mode of procedure. In this process there comes a time when the ape leaves the trees and begins walking erect upon the ground. Truth to tell the development from ape to man is simple as compared with the great strides taken from fish to ape.

Walking about, especially in habitats natural to apes, was, to say the least, rather hazardous. In such localities lions, tigers and leopards abound. They are large, ferocious and hungry. In their midst the defenceless ran the risk of being eaten. He could only compete with such large animals by wit or sagacity. On the basis of strength, the ape was outclassed. In sagacity and in agility he was their superior, and there is every reason for inferring that he did not neglect to use such ability as he happened to possess.

In addition to this, the food for the most part was in trees; quite out of his reach. This also required cunning or sagacity to obtain. Exercising such faculties as he had would have a tendency to increase and develop them. Thus the brain mass of the creature was increased and this in turn enhanced its qualitative effectiveness.

This would develop to the place where events and surroundings would give rise to the necessity for speech or language. In fact all the mammals, the fur-bearing animals, have well developed vocal cords. Most of the reptiles, on the other hand, are silent. This is well exemplified to the visitor at the zoo in New York City. In the snake-house all is silent as the tomb, while on the opposite side of the street, in either the bird or animal houses, there are noises and chatterings of all sorts. In fact, birds, which are high in the scale of life, are the noisiest of all animals. Passing to the mammals we find the vocal sounds more orderly and refined. Coming to man we find this carried to a higher degree of refinement and gradation. Man has now discriminated sounds in such manner as to serve purposes of communication.

Probably language among man began with gestures. Signs and gesticulation came before any word was distinctly uttered. Arapaho Indians and Bushmen, who have but the simplest spoken language, communicate almost entirely by gesture. Among them, and no doubt among all peoples using gesture language, there intervenes an obstacle—the darkness. After the sunset they cannot adequately express themselves. Since they have but simple and dim sources of light, understandable sounds become imperative. In due course mankind discovered or invented the necessary sounds. This in itself would increase man's intelligence. As definite words were formulated and memorized the effect would be to increase his knowledge. With such rude beginnings did language start and the vastness and power of present knowledge is due to its cumulation through the ages.

Communication by sound, though, has certain disadvantages. In this way ideas can only be communicated a given distancess. Man then is confronted with the problem of communicating at a distance. He solved it by the written word. With

the invention of writing, knowledge was not only deepened and strengthened, but widened.

In the meantime the arts of subsistance had been improved, men now traveled farther and farther from home. Population grew by leaps and bounds; man faced a third problem. Not only was gesture language inadequate, but sound and written language as well. More and more people had been brought into activities requiring rapid communication, and for this writing was found not to answer the demand. This man solved by inventing printing. Printing gave rise to a whole train of unforseen benefits. First of all it made it possible for all men to be brought to a given level of intelligence; it more rapidly and extensively communicated a greater fund of information or knowledge; it intensified intellectual competition up to the place where we see it in operation in our own midst. Just to contemplate this one phase of evolution is to be convinced of how we go forward by insensible gradations, that after thousands of years are so stupendous as to amount to a revolution.

Many persons are of the opinion that evolution is based entirely upon inference, and, since one inference is as valid as another, they dismiss the whole matter with a scornful gesture. And well they might if evolution was solely and exclusively a theory, hypothesis or inference. But such is not the whole of the matter. Evolution is based on actual, observable transmutations taking place right now in our very midst. New plants and animals come into existence every day, and having come into existence scientists watch their variations and directions of growth very closely. They note how many varieties grow from the one parent form. Thomas H. Morgan of Columbia University informs us that he knows of scores of new forms of fruit flies that had no previous existence. Only recently the Popular Science Monthly called our attention to the rather checkered but astounding career of the humble tomato. "Not many years ago," says the Monthly, "Tomatoes were called 'love apples', believed to be poisonous. They were scarcely fit to eat—mostly juice and seeds. To-day a dozen lucious varieties of varying shades and sizes have been developed from them. Again, the potato in its first known form was hardly larger than a walnut, hard and bitter. To-day there exists thousands of forms of animals and plants that reproduce their kind that did not exist a century ago. And science says too, we can see evidences of evolution in our gardens, among our children, in the marvelous machines developed for our uses from the crudest of implements—even in ideas that we conceive and unfold."

Barely seventy-five years have passed into history since the full strength and power of evolution came into men's consciousness. In so short a time as that no previous system of thought has ever drawn to itself such an array of fact and intelligence as has evolution. All the eminent men in all branches of science are now evolutionists, and no science is efficient without this magic formula, evolution.

To tabulate the names of all the eminent men now enrolled in this great intellectual advance would require the space of a large city directory. At this time we have not the space, but to give an outline of the effect of evolution on each of the major sciences is a simpler matter. First let us arrange the sciences in their order, thus: astronomy, geology, geography, physics, chemistry, biology, plasmatology, embryology, botany, zoology, psychology, sociology, anthropology, ethnology, philiology, and, last but not least, pedagogy.

Never before in the history of the world has any system of thought attained such a degree of uniformity and unanimity. Religion in its heydey was such a battlefield of opinion that the average man could make neither head nor tale of it all. In science with evolution as a guide such is not the case. Science is systematic, orderly and definite. Approach it from any side by any avenue and the inquirer is led at once to the heart or central fact. About this central fact there are no two opinions. It is one great unified and comprehensive system of knowledge without precedent or equal during the life of man on this planet.*

Perhaps your wishes can be best served by a resume or review of this grand army of the sciences marching forward, led by one all comprehending principle.

# Labor's Magic Bootstraps

BY COVAMI

ORTHODOX American trades unionism has always preached the "mutual interests of workers and employers" as a cardinal principle of its faith. This much desired, if somewhat illusive state, was to be arrived at by "collective bargaining", or the wholesaling of labor power. This dogma became a religion with President Gompers and a social philosophy with Professor Commons, and their disciples have industriously added to and embellished the simple creed of the fathers. Today it is nothing to hear labor economists and leaders confidently proclaim from the housetops: "the higher the wages and shorter the hours of the workers, the fatter and more certain the interest, rent and profits of the bosses are and will be, World without end." It is all very beautiful, but just how the **workingclass** can pay an ever-increasing horde of parasites usury for the right to access to the Earth and the socialized machinery of production and exchange and at the same time continue to mainain its standard of living, much less improve it, no one has yet arisen to explain.

As I have said, illusions are all very beautiful, but they are also extremely dangerous to those who depend on them for salvation and a living. I know I've been there, and, right now, I would rather have some of my illusions with me than so damn many facts I can't understand or explain. Nonetheless it is the cold, hard facts that finally determine our destiny, for which reason, if for no other, we should show them considerably more respect than we usually do. All of which reminds me of the latest magic bootstraps being offered Labor as an aid to lifting itself out of the Proletariat into the Plutocracy. These brand new uplifters are called "Labor-Management Co-operation for the elimination of waste and inefficiency in industry". These magic bootstraps are being guaranteed to work wonders. It is said that the Amalgamated Clothing Workers and the B. & O. Railway Shopmen have all but entered Eden by using them as per directions. Maybe so. But—

Just what is the "Management" of industry, especially of trustified American industry? Is it a free and autonomous power any more than is "Labor"? It is not. The managers of industry are, as every child knows, or ought to know, nothing more nor less than the hired and hand-picked overseers of the capitalist class. Their "individual initiative" is about on a par with that of my grandmother's slave drivers. Like Labor they do what they are ordered to do or "get off the grass". Hence they who talk of the "Co-operation of Labor and Management" are either ignorant of the actual facts of the ownership and rulership of industry or, else, they are seeking to camouflage something from somebody. Not only is Labor not co-operating with management for the elimination of waste and the promotion of efficiency, but, organized as it is organized, it can learn nothing whatsoever of the **conduct** of **industry** — it can only aid in the **ordering** of the **job**. That, helping to more efficiently boss themselves for the boss, — that is all the workers are actually accomplishing under these so-called "Labor-Management co-operation" schemes, — for it is not with the hireling managers that the unions are in reality co-operating but with their masters, the ruling, owning, exploiting oligarchy — the capitalist class — and they are co-operating to their own emasculation and destruction and to the completer final enslavement of the working class.

My language is "too strong"? Possibly. Always there must be some co-operation between the classes if society is to function? True. But it is also true that as evolution perfects its work there inevitably comes a day when the Old is to die and the New is to be born. When that day arrives, there is and can be no question of compromise. The New either comes into being or else both it and the Old rot and perish. Further, always the Coming New must in every way seek to remove the Passing Old from its path. This, remove the Old Order from the path of the New, American Labor is most certainly not trying to do today. All its co-operation is, not for the purpose of gaining industrial control and exercising economic responsibility, but to prove Union Labor more efficient than open shop or scab labor. That is the danger of it — the servile spirit in which the Unions offer their co-operation to the Bosses. Instead of this spirit, every effort ought to be put forth to make the Unions so powerful in industry that it will be the Bosses who will have to offer to "co-operate" and, then, every such offer accepted by the Unions should be accepted only with a view to still further extending Labor's control over industry. This is the only way Labor Unions should "co-operate with Capital"—just, in other words, as Capital always "co-operates" with Labor—for Labor's final undoing.

The human race cannot possibly pay the ever-increasing toll the Capitalist class is demanding of society and at the same time elevate itself to a higher standard of living, either economically or spiritually. This being true, the Race cannot possibly co-operate with the Ruling

So say we all, of us radicals, but we do not say likewise, with Crosby, "I would abolish nothing except by discussion." Something stronger is needed, to accomplish even disuse—the capitalist will not cease to use his power over us because of Crosby's plaintive criticism.

—*V.S.*

**BROADCAST, by Ernest Crosby. Published by Funk and Wagnall's Co., 44—60 East 23rd Street, New York. Try and get it.**

**The Amazons: The First Rebels**

Radicals usually consider the subjugation of women by men the first actual breach in the social structure of the stage of primitive equality, the tribal organization of savagery and lower barbarism. Before the system began to break up, women were at least equal to men, and had certain ceremonial rights of their own, to have descent of both men and women traced through the women's side of the family, etc. They were not confined to one single husband, and were not under the orders of any husband in their family relations.

The change from maternal descent to paternal descent, and more or less at the same time, the change of which this is symbolic, the reduction of the women of the tribe to the less interesting sorts of work, and to lower places in the social scheme, was brought about by cultural development, creation of property, desire of men to have their own sons (not merely sons of wives they might share with other men), inherit their personal property, and the increase of the importance of war. Such a change marked a kind of humanly reactionary, but historically progressive, revolution.

We have now, in a little book "The Amazons," by Emanuel Kanter, a neat piece of research and a reconstruction by a process of historical detective work, of one phase of this primeval class conflict —using the word "class" in quite a loose way.

Kanter refutes a whole host of bourgeois anthropologists, historians, ethnologists, etc., who have denied the existence of the Amazons, and have tried to make them allegorical and mythological. Kanter shows by the analogy of the discomfiture of such people in the case of the pygmies and centaurs that things they called lies of the ancient historians, Diodorus and others, are now being rapidly established facts. He also quotes several little known travellers of the sixteenth century to show that Amazonian societies existed in South America and Africa down to quite recent times.

The groups chiefly discussed by Kanter are those of Asia Minor (the Amazons of the Greek historians and myth maker) and of Africa (mentioned by Diodorus in ancient times and by Father Alvares connected wih the Portuguese embassy to Abysinnia, 1520—1527.

Those of Asia Minor were part of a tribe of Scythians in the second stage of barbarism (Morgan's classification) with a gentile organization in which women were not yet subjugated. Many of their men were killed in battle; the women killed the rest, and maintained a society modeled somewhat on that of the gentile tribe or federation of tribes. They found it necessary to keep all men out of their territories because of the example of the tribes around them which had advanced to the patriarchial, hero-ruler stage. The women burned off the left breasts of young girls so as to be better able to handle the bow and weapons, and were terrible fighters, once having invaded the lands of the Greeks, by whom they were finally subjugated. They continued the population by temporary unions with friendly tribes around them, saved and reared the girl children and made away with the boys.

In Africa the same mutilation of women for the purpose of greater warlike ability was practised, but men were maintained in the society, in a subordinate position. The women were the warriors, the hunters, and the rulers. Men stayed at home and took care of the children, kept house, etc.

From these examples Kanter infers four principles of universal application: (1) The disruption of primitive communist society usually results in the division of the sexes into hostile groups each contending for supremacy—except where the whole society has been conquered and enslaved by some people of a superior culture, as were the Indians of Mexico and Peru; (2) Where the males are victorious, which is the usual case, there they establish a hero society, a patriarchial society, and finally a nation; (3) Where the females are victorious, as they were in the African case described, they establish a political matriarchiate as opposed to a patriarchiate; (4) Whenever a female group does not conquer the male group, or is itself not conquered, there they must live alone, manless, the individuals mating only temporarily with men of friendly tribes.

In a general survey of the position of women, Kanter's conclusion is that however humanly admirable the struggle of the Amazons was, it was historically reactionary, and foredoomed to failure. Women have remained subjugated (some elements of their subjugation he describes) up to the present time. Now, however, they are much on the plane of their men folks in the various classes, if subjugated, then to about the same extent as men, and not much more. Rich women have about the same rights to exploit proletarians as rich men, and proletarian women are not much more exploited; civil and social rights of most importance are about equal. The present fight is not a war between the sexes but a battle between economic classes.

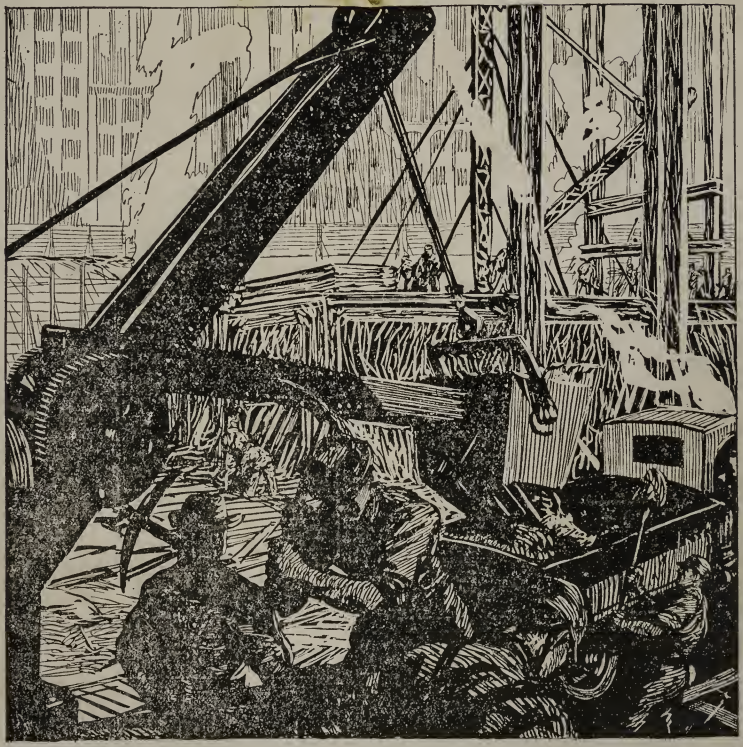
| June | 505.00 |
| July | 1,195.00 |
| August | ? |
| Sept. | ? |



The Workers' International Educational Society is a corporation, but not a profit-making corporation. It exploits no labor. It is organized under a resolution passed by the last general convention of the I. W. W. approving of the creation of such a company in which membership is voluntary, and which has for one of its purposes the acquiring of a headquarters building which can give quarters to the I. W. W. general offices and offices of publications, etc.

The idea is that the union and general officials of the I. W. W. shall have their entire time free for organizing the workers, and attending to the routine of union business, without being bothered with the details of buying and managing a building.

As was to be expected, there was a certain amount of ignorance at first among the members of the I. W. W. and their friends, as to the necessity of taking this step, which showed itself in the lack of purchasers of the stock of the Workers' International Educational Society. The way in which the membership has aroused itself to the task of safeguarding their headquarters building is shown by the table to the left, of the monthly receipts of the W. I. E. S. Month by month as the need of the I. W. W. for financial aid comes more to the knowledge of the membership, they have joined the W. I. E. S.

At present the number of shares held by language groups friendly to the I. W. W. is 187; the number held by the I. W. W. unions themselves is 158; the number held by individuals is 697. Only six individuals hold ten shares each, no individual holds more than ten, sixty-eight individuals hold two shares each, and 395 individuals hold one share each. It is obvious that the W. I. E. S. is a democratic institution. Your purchase of at least one five-dollar share of its stock is really your duty to the cause of industrial unionism.

**Get a $5 share of stock in the Workers' International Educational Society. Write to JOSEPH WAGNER, Sec'y-Treas., 3333 Belmont Avenue, Chicago, Ill., for all particulars.**

# WE BUILD THE NEW SOCIETY

And we build it with machinery. The I. W. W. is the only organization of workers which realized from its very beginning the revolutionary role of modern machinery. Craft unions, other unions, saw that the new machinery of production and transportation undermined their monopoly of craft skill by making that skill useless; they understood that the machine threw them out of work by making it easy for one man to do the labor that had formerly required many, and they fought machinery. We do not blame them, but we do not follow them to certain defeat. We welcome machinery; we will use it, for our form of organization is such that the destruction of one form of skill, one craft or one trade does not injure our members. All the workers in the industry are in one industrial union, an integral part of the I. W. W., the Industrial Workers of the World. We will combat the menace of unemployment by a fight for shorter workdays and higher pay. We will control industry and all its machinery, for use and not for profit, and when we do that, that will be the revolution. Our strength is in the industrial proletariat; as the industrial proletariat organizes into the I. W. W. we gain the power to accomplish our ends.

LABOR PRODUCES ALL WEALTH

AN INJURY TO ONE IS AN INJURY TO ALL

OFFICIAL ORGAN of the Industrial Workers of the World

Volume XXIV — No 33 — Whole No. 664 | CHICAGO ILL, NOVEMBER 13 1948 | Entered as second class matter October 7, 1927, at the post office at Chicago, Illinois, under the act of March 3, 1879 | Five Cents a Copy

## By HENRY JONES

## People Do It!

A Useful Bump
One More Union Jeh
Maka World Safe for All
How to Get IOU's
Blood for Butter
By Working Capital

ONE CONCLUSION widely drawn from that election is that there is still some hope that angry members may use the bump on top of their heads back-home supposed to be for the purpose it is supposed to serve: thinking

* * *

Those pictures of the man in bed on top of the box-car didn't carry Proposition 2 in sunny Cal—to end the safety practices that railroad attorneys call featherbedding.

* * *

SAFETY IS A UNION JOB. The Air Line Pilots—still on strike at National Airlines—announce that as their current contention, over half the time pay will be devoted to a study of our safety and methods of fostering its improvement.

* * *

Some day we hope to see union conventions studying how to safely bow to make the job safe, but how to make the world safe for people. We've taught a mess of wars to try making it safe for democracy. Thing else.) There's little grounds to expect it will be safe for people, until unions start dreading what work they will do and for whom. It's doing the wrong work and doing our work in the wrong people that makes the world a mess.

* * *

WE OWE THE MASS WORK to ourselves collectively according to the Democratic Economy: That's a $250 billion public debt and a $150 billion private debt—both figures at set time high, that add up to one very national income. The only way it can be paid is up: more work for more hours, avoid work. Most of it was added up during the years when we were all busy producing more than ever, giving them a bad name—and then selling before the war more profits than ever on the buildings and machines than ever, and more funds than ever besides giving them all these IOU's. All they did for it was to use effort hoy to scratch the 'NO' off the 'No Help Wanted' sign. We did the rest.

That's the way this system works. Can you make the world safe for people and bank systems?

* * *

PARISIANS, who have run out of coupons for butter and sugar and of francs for black-market buying, go to the hospital, donate 300 grams of blood and are given a pound of butter and a pound of sugar in return. One pound of butter and the pound of sugar will not restore the 300 grams of blood to their bodies—but the hospitals are doing quite a business.

That practice symbolizes the whole process of European recovery. And if you propose making the most effective use of the man-power and resources of the world to end its gnawing want, that's subversive.

* * *

"WE have four billion more working capital now than a year ago. It runs close to $64 billion now without counting the banks and insurance companies which are hush too. Out of the $6 million who have jobs, there's about 40 million wage earners, and about 30 million who by most modern standards could be called "producers." That addition to working capital in one year indicates that each of these just for this group alone, produced $1,253 that he didn't get. We also produced a lot more that we didn't get, and did a lot of work there was no sense doing. That $64 billion isn't ours — but the whole world can't owe it much better off than we've been, could be ours if once we organize as the workers of the world to get it. Why not!

### Newsboys Get Half Cent

San Francisco news vendors get 2 cents out of the current nickel for a paper. When the papers are raised to 7 cents, they will get half a cent more, or a quarter of the increase—and are signing a two year contract.

Regardless of election or anything else, there is no disagreement in high circles that we must restore Free Enterprise in Europe. It's America's gift to mankind.

There are 15 million unemployed there, even before the recent strike wave—which was hurt for the sake of the Marshall Plan. Sensible men more striking just now than ever before, and even the French elections can't seem to stop Communism, even when they belong to the Marshall Plan union and get their wage increase. In Paris they trade blood at the black market for meat and sugar.

Planes, ammunition, military equipment—these things must use up enormous funds, dropping more to prevent the spread of Kremlinism into Europe. To prevent and to bring, and the best use of available resources, would seem more effective, but that isn't the way we prefer.

**Comic Books Fintasce**

For instance under the Economic Co-operation plan, Fawcett Publications will send to Europe—but none, that's a secret—as part of something they desperately want! No, it will send 10,000 copies of its comic books that authorities are convinced are a main influence in the to diminish juvenile delinquency. It will also send such other publications of American culture as Startling Detective, True Confessions and Movie Story—and be assured that the peasants of Europe will thrill to in those hard-to get dollars, by arrangement with Congressman Bernard McFadden will be there with his inventor-publisher Bernarr Mac-fadden—True Story on the same terms as Fawcett—not unlike the Free Enterprise. And General Clay will himself approve it on the grounds that these publications are not unsuitable from a security point of view.

We have killed French strikers and machine gun Free Enterprise as this issue goes to press.

## IN BRIEF

UNITED RUBBER workers are being sued for half a million by Armstrong Tire on the grounds that they struck while contract says "no contract remains in effect during negotiations." They have struck Armstrong since last August.

* * *

ATOMIC ENERGY COMMISSION has ordered GE to break up its relations with GM, Ford, Electrical Workers so far as it covers atomic workers's domestic affairs. In turning the order Lilienthal points out that the commission earned have unquestioned loyalty and have been absolutely investigated. Object of order is to ensure that all seem loyal to the United States.

* * *

Communism for a billion dollars damage.

* * *

NLRB reverses its position that it cannot take steps to hold election and certify a union where employer has declined to recognize it for bargaining. Now it declares that by employer does not make union card-proof, and it held a bar to the certification prevents unions from ever getting a bargaining certification. Policy inevitable. On previous ruling unions could not be certified, ers might not have inducement to become Taft-Hartley unions.

* * *

BRITISH DOCKERS on strike against Communist rule have also opposed by Communist longshoremen in Australia, New Zealand, Canada, France and Italy.

* * *

BARGE CAPTAINS and other barge craft workers threaten to strike Thanksgiving Day unless Years Eve, unless they catch up with the cost of living. And the deckhands have voted on last-offer ultimatum of three to strike if as this issue goes to press.

## Rail Wage Boost No Calamity

The 16 non-ops have answered the railroads talk of the calamity that would befall them if they paid wages closer to those paid by other industries and overtime for week-end work. They point out that railroad industry feels no standard behaviour of the carriers. During the 1946 rail fact got 18½ cents until strike action of BRT and RLE after seizure of the roads and the wage increase would cost them $900,000,000 it actually worked out to about a third of that.

For many of the non-ops weekend work can be avoided if there is a premium wage for it. This will cut down the figure estimated for the cost of granting time and a half the same as other workers enjoy for such work. An other way of avoiding overtime is to run like steel mills and adopt continuous process industry so that the same six weeks' work gets on Tuesday and others on Saturday and Sunday—and the railroad labor steadily cuts the cost of any wage increase. Under such employment stopped the 1947 wage increase from getting the figure carriers said it would cost.

### LIKE YOUR JOB?

Dr. Herbert A. of the Illinois State Employment Service, told the Chicago Conference of Illinois Chief 50 per cent of workers "are not satisfied with their jobs and would like to do something some older job finished. He says that is a big difference from a few years ago when 70 per cent of workers by the company on other lines.

### WITNESSES OUT OF JAIL

Two more witnesses in the investigation of subversive activities sent to jail by a judge who has a habit refusing to answer whether they knew the nature of the county officers of the Communist Party, were later released on bail on order of the Federal Court, while the decision was appealed.

## Pacific Coast Is It Peace?

SAN FRANCISCO—It may may have been the elections, or it may have been the persistent solidarity of workers. It may have been that these businessmen hit by their own class lockout had agreed not to weaken until after the elections, or it may have been that there would be an AFL longshore strike when the lockout began. Whatever the reason, the door of peace has been distinctly heard flutteringly above the waters of San Francisco Bay, an area that for over months has been stirred up by the sci strike, the maritime tie-up and other great labor struggles.

It's now Sunday Nov. 7, the CIO longshoremen had to take to redio to avert a misunderstanding that the maritime dispute was already settled. Next day came an announcement that a formula had been agreed upon for the settlement. At this writing this is understood to be such as to bring actual CIO into the picture before the next dispute arises, and to include a withdrawal of the demand of the employers that longshore work be performed by ships' crews and become Taft - Hartley unions That doesn't seem to be so popular any more. For the longshoremen it has also the virtue of simplicity. (Next week we will comment on how the longshoremen's union have facilitated the trend toward company unionism in their area and aide the union structure, to comply with the law and thus make it subject to the employers.)

One result of the strike seems to be the ousting of the local office of the Shepard Line, and an ILWU agreement with the line. The longshoremen have there might take a 500 to 1000 tons in the Australia trade.

Once this is settled there is a practically unlimited supply of stuff awaiting shipment

**Setback in Oil**

The united out previously, oil workers were up against something that no united labor movement could cope with—something that requires a greater solidarity of labor than has yet been built. Two days after election, the union settled with Sibell, and peace movements became general with all companies. The wage boost is the one they struck against, leaving wages much lower than in the industry elsewhere—pressured scabs will be freemen over them on their return, and those guilty of violence and of the law will not be re-hired. (If that last provision could be greatly extended it would seem necessary to replace management personnel with longshoremen on picket lines with locomotives and cars in their yards.)

These oil workers are going back on a contract which provides a real bond of solidarity acted out on the job can protect them from abuses by scale promoted to beat them down. But the oil companies union and companies are dropped in the strife—a blow to labor in forcing this settlement was the NLRB encouragement for elections to certify a union.

**East Coast Parlor**

As employers and maritime unions talked about peace on waterfront, the Federal District Court regretfully denied an injunction to terminate the back on a longshore strike after Nov. 9 Shippers were trying to get a decision that declaration of vessels before the deadline To have a decision that up would have created a greater pressure on the business class to settle. Perhaps that is why the dove is fluttering . . . but until no striker was board to regret that Rep Kersten, handing the committee to investigate this "subversiveness" in the unions didn't get back in Back East Paddy Ryan used to the longshoremen called all strike talk "subversive"

## Honest Cop of Mooney Case Dies

Draper Hand former San Francisco police sergeant who testified in the Mooney defense in 1921 that the trial of Tom Mooney had been framed and that he had been participated as a witness for the prosecution, died in San Diego of skull fractures. The source of these injuries is unknown. He was tried before the police commission for making this frame-up charge, and was acquitted.

## Kennecott Runs Cracked Record

Kennecott Copper has paid as much as $4.01 per day than in another record in some regions. Its employees average $1.50 Copper, struck 320 strong on the Utah - Bingham copper production. They have hearty support from the company unions, the company so ads and letters runs that "we are not fighting the union," but only "some wage demands." The company is making the essential fact that it a 30 cent an hour increase in wages with those paid the same number of workers by the company on other lines.

## Calumny on Joe Hill Refuted

### Analysis of Trial Record by Committee of Friends Gives Answer To Professor Stegner's New Republic Attack on Hill's Character

#### FOREWORD

In April, 1948, the Friends of Joe Hill Committee, including both members and non-members of the Industrial Workers of the World, picketed the offices of the New Republic, New York weekly, to protest publication of an article by Wallace Stegner, entitled **Joe Hill. The Wobblies' Trouble-dou**, published the previous January 5. The picketing was the culmination of a long history of the widely known IWW song-writer and organizer who was shot by a firing squad in Utah in 1915 for alleged murder, but who they declared was innocent.

Though admitting that the prosecution hardly proved Joe Hill's guilt beyond reasonable doubt, Prof. Stegner, formerly of Stanford University's faculty asserted that he probably was guilty. The gist of his belief was contained in Hill's character by two other writers who never knew the man, and by "old-timers" who claimed to have known him, but whose names were not given, so their credibility could not be checked.

At the time of the protest, the New Republic's editors, in conference with Prof. Stegner, Friends of Joe Hill agreed to give space in their pages for the committee to present the case for Hill from the IWW's viewpoint. The organization elected Hall, Ike Sasco and Yanzetti, was the unfortunate victim of circumstances in a stormy period, when the IWW, which the defendant was staunchly supporting, was being ruthlessly fought by industrialists.

Immediately the committee moved to obtain copies of the official trial record. Red tape and bureaucratic delay in getting these documents took many weeks. Careful study of them, and of other data, has now been completed. The record of the trial transcript, containing the defense testimony, was available, but Volume I, comprising that of the prosecution, has been mysteriously missing from Utah's archives at least three years. So for that part of the case Prof. Stegner and the writers of this article alike had to depend mainly on newspaper reports of the trial, the defense appeal brief, and the State Supreme Court review of the evidence.

Here is the result of the committee's study. When this statement was submitted to the New Republic editors, they found that they could give space only to a 3,500-word digest. That condensation appears in their current issue, dated November 15, timely because it marks the week of Joe Hill's execution 33 years ago. But the Industrial Worker, knowing the wide interest in the facts in that case, now publishes the committee's statement in full.

#### THE FACTS OF THE CASE

On Saturday, January 10, 1914, about 9:45 p.m., two armed men entered a Salt Lake City grocery store. G M Morrison and his two sons were closing for the night. Shouting "We've got you now, Morrison!" one gunman fired from the doorway of the store room. When he returned after the firing stopped, he found his victim lying mortally wounded on the floor. Behind the counter the revolver near his hand. One of six cartridges in this gun was empty. The murderer had fired all his shots. Acting had fired it, but no bullet to fit that cartridge was found.

Were both assailants masked with red bandanna handkerchiefs, or only one? Daily news reports stated they gave both ways. This vital discrepancy is discussed farther on.

The police force taking nothing, so the generally accepted theory was that their motive was revenge. Twice before Morrison had been attacked, and shot in out encounters. Empty cartridges found in the store ware "of the same kind" as those left on the ground after he was held up and fired for four months earlier by the same gunmen. Captain Hansel Chipman a few days before his death he had lived to regret that service. Hampel said Morrison had been a witness against the bandits. Moreover, the widow declared he lately spoke of two men he regarded as dangerous. "If anything happens to me, you may have to look them up." But neither was arrested.

#### Ex-Convict Sought

The official description of the slayers gave the height of both as 5 feet 9 inches, and their weight as 150 pounds. Neither of the suspects were quickly arrested — one near the murder scene, with a blood-stained handkerchief in his pocket, the blind beggar of on outgoing train; others in lodging houser. All wars later released. The police sought Frank Z. Wilson, ex-convict, seen in town that day. Peter Rhengren, railroad worker, saw a tall man mounting the ground about a mile directly west of the crime scene, saw him get up and walk uncertainly toward a street car line. This was about 11.30 p.m. That man boarded a car, but the conductor smelled no liquor on him. He understood his passenger was an ex-convict, of whom he was shown a picture.

Three days later Joe Hill, six-foot machinist and IWW organizer and song-writer (born Hillstrom in Sweden), was arrested in the home of friends named Eetlun in Murray, five miles south

(Continued on page 2)

## High Spots in a Frame-Up

In the conviction of Joe Hill for the murder of the grocer Morrison, did you know that:

1. The ONLY reason for arresting Hill was that he was wounded, a s d it was supposed that he had shot Morrison's assailants MIGHT have been bandits.

2. That the Supreme Court of Utah sustained the conviction as the nonsensical argument that he knew as he explained wound puts the lawyer of proof on the defendant the same as the possession of stolen goods.

3. That the bullet taken from the victim DID NOT agree EXACTLY as they would be if he was shot with the handheld high as in a stick-up.) Circumstance I is a friend with the ONLY reason for his arrest.

4. That the trial court would not permit Hill to call an expert on wounds, to answer the question whether Hill's wound could have been inflicted if he was in any other position than standing with his hands high.

5. Yet logic requires for a verdict on circumstantial evidence that ALL the circumstances point to the verdict and it was conceded that here all evidence was circumstantial!

6. That the Utah Supreme Court, without examination of Hill's wounds or related physical facts, disregarded this evidence and to sustain con-

## Joe Hill and Your Future

The I W W has a past of which we are proud, but its reason for existence is your future

When occasion calls for a look back at the inspiring record of those who have battled for the solidarity of labor in the days gone by, as in this present issue so largely devoted to Joe Hill, some may think the I W W consists of aging veterans of the class struggle warming their hearts at the memory of heroic youth. But while we have and cherish our veterans, this is not the correct picture of the lads whose picket line at the New Republic last April gave occasion for the document that fills this issue, nor of the lads who cut classes at the university here to help pass leaflets at the Pullman shops recently, nor of the lads who are battling daily to preserve labor solidarity along the west coast waterfront, nor of most of those who keep the I W W flag flying. They belong to it because they look ahead.

And to you who as yet do not belong to the One Big Union of Labor that we are building, we propose that you join in and help us build, not because of a history that has happened but because of the history we are making and will continue to make

Whether we look at the Marshall Plan, at the puzzle of boom or bust, at the prospects of war, at the shooting of French miners, at the Taft-Hartley Act, or whatever significant thing we stop to look at we see the evidence of a disorganized world that needs organization, the evidence of an unsafe concentration of power that must be gotten back to those who are its source, the working class, the evidence of the misdirection of our work, and consequently of the history that can be born of nothing but our daily work, by a malignant minority

WHAT BETTER THING TO DO than build an organization of those who do the work of the world so they can do the work right and for their own good? If we do that need we fear the power that others have had only because we did our work the [illegible] they told us, and delivered our products where they said? [illegible] need [illegible] parasites [illegible] set us [illegible]

AND WHAT HOP[illegible] mankind apart from such solidarity of labor? Can national states, themselves anachronism, and designed for the one function of obstructing and damaging each other, end this disorganization of the world? Is there any indication of this in the mutual obstruction played in Berlin and China, in the scuttling and damaging of industry, in the enforcement of idleness throughout vast areas of the world in want? Can we solve the problem of an already unsafe concentration of power by giving more power to those who already have too much?

The basic problem of the world is not that of bread, or that of bombs, or that of law It is the problem of power. The foolish twenties and the threadbare thirties, the rise of fascism and the precipitation of war, the high cost of living and the threat of more war all these come from the fact that too few people had too much power None of them could occur otherwise.

THAT'S WHERE Joe Hill and the glorious past of the I W W come into your future They saw the solution for the problem of power They wanted a union to unite the working class Long before the days of the Labor Front they realized that such a union would be of use to the working class only if the working ran it instead of being run by it So the sort of union they build was that kind of a union. Out of that past has come an organization that by principle, by structure, by constitutional provision, and by tradition, is prevented from going scabby, going yellow, or going dictatorial It is not an untried plan on paper. It is not the first rough draft of a Utopia It is a body that through 43 years has proved itself and improved itself, working out in the battle of everyday life a form of organization that works, and it works not by compromising principle but by applying it This is the gift of the past to your future. It is there to be used, and the more it is used the more there is of it

## Repeal Taft-HartleyISM

From the 81st Congress can be expected a new labor-management law bearing some other name than Taft-Hartley When finished it will probably recall the old French formula: **"The more she changes, the more she is the same."**

The 81st Congress can repeal the law; but it can't repeal Taft-Hartleyism Unions can

Legislation to decrease the likelihood of strikes has been piling up steadily for many years, especially since 1888 It's nothing new It was the declared purpose even of the Wagner Act We expect more of it

This sort of legislation results from the endless conflict between workers who sell labor-power and employers who buy it, an irrepressible conflict that can end only when we arrange to do our work without selling our ability to employers To deny the worker selling labor-power the right to refuse to sell it except on terms acceptable to him is to make him a slave. Yet judges tell miners and railroad workers that to let them strike would hurt society too much The more the evolution of society makes our work interdependent and puts the man who says "No" to us beyond all pressures we can exert, the more the reason the judges will have for saying "Sorry, but it hurts too much to let you strike" **This situation was not created by the 80th Congress and cannot be repealed by the 81st.**

Congress can appease many powerful labor leaders by minor changes in the law that will continue the conversion of unions into Taft-Hartley unions Permitting the union shop without an election, enforcing its acceptance by an election; perhaps even permitting the closed shop to unions in trade for assistance in carrying out certain policies of governme[illegible] —such things as these are quite possible. **But they will on[illegible] cultivate Taft-Hartleyism, not end it. The long run tre[illegible] the subversion of bona fide concerted activity of workers, [illegible] to an instrument of government policy over workers.** One saw [illegible]at clearly in the WLB days before Taft-Hartley The basic ass[illegible]ion underlying all the evils of the Taft-Hartley Act is the d[illegible]rine that union officers are responsible, not to their members, but to the employer and "the public." This doctrine will not be [illegible]apped. Until it is scrapped we cannot have a labor movem[illegible] serviceable to labor.

It is impossible for either Congress or [illegible]r leaders to end Taft-Hartleyism. That's a job for union [illegible] The obvious procedure for doing it consists of such step[illegible] these:

1. **Press in each union for the revocati[illegible] those affidavits and a boycott of NLRB.** It has no service [illegible]er. It is useful only for promoting raids to disrupt labor [illegible]arity.

2. **Educate.** You can make resolut[illegible] but education is best accomplished by educating. We need [illegible]ucation to **expose the automatic frame-up that makes the st[illegible]ker appear as the** disturber of social wellbeing and hides th[illegible]ct that management's job is to prevent the possibility of a[illegible]ant living Such education will put capitalism where labor [illegible]unfortunately has been—on the defensive. A most effective [illegible]eans for this, as well as for improving our bargaining positio[illegible] the **construction of a flow sheet of all essential production** as [illegible] plan to live well with workers directing industry as an altern[illegible]e to living poorly with capitalist management misdirecting us.

3. **Build concerted action.** No union w[illegible] end Taft-Hartleyism alone. The fight to end it will be waged [illegible]ter in any union when it is plain that it is being waged in othe[illegible] That educational program, that flow-sheet idea, require conce[illegible]ed action from all fields of industry.

4. **Practice unionism.** Insist upon solidarity with your fellow workers in other unions instead of crashing their picket lines Insist upon helping each other win the fight of all And above all, remember unionism isn't a functio[illegible] of labor leaders—it is the carrying out on the job of a com[illegible]on understanding between those who work on it.

5. **Use the I.W.W.** It's very useful, and just what you need Its literature, such as this paper, can help your fellow workers see what the score is, and make it easier for you to get their co-operation in this fight. If you want to t[illegible] things over with members of other unions in your locality w[illegible] want to end Taft-Hartleyism, you'll find them at IWW mee[illegible] They are in it because while trying to do the best that the[illegible]n with the existing efforts at solidarity, they know they [illegible]ll need to build One Big Union to win the final battle. As [illegible] find more who are willing to build good unionism, get them [illegible] join the I W W too. **Picture the progress that you can make [illegible] your community if the more alert members of all unions meet [illegible]th you regularly as members of the I.W.W.**

Repealing Taft-Hartleyism is beyond [illegible]ngress or labor leaders even if they wanted to And they [illegible]'t want to. How labor will fare both from the 81st Congress [illegible]d from the large social forces that work outside of Congres[illegible]st depend chiefly upon how much action of the sort indicate[illegible] above is taken To stop the repetition of an unpleasant effe[illegible] is necessary to remove the cause.

## OFFICIAL NOTICES

### Ballots In Field

Ballots for election of General Secretary, G.E.B. Members and various Industrial Union officers are now in circulation Members not in vicinity of branch or delegate should write in for their ballot

J. A. Farley,
General Secretary

### LUMBER WORKERS' CONFERENCE

There will be a conference of Lumber Workers' Industrial Union No 120 held at 225 N Bernard St., Spokane, Wash., Dec. 24th at 9 in the morning. Members of other Industrial Unions in the district are welcome, so that the conference may discuss any possible way for putting the I.W.W. across in this district

Frank Grad,
G O C Member, I U 120.

### Meetings at New Oakland Hall

The next general membership meeting of I W W in Oakland, Calif. will be held in the new hall at 1010 Broadway, Room No. 4 on Sunday Nov 21 at 2:00 p m and on every third Sunday of each month thereafter Specially called Industrial Union meetings will also be at this address. Mail should be directed to the secretary, Claude Erwin, 1018 Jackson st., until further notice

Claude Erwin, Secretary

### HOUSTON NOTICE

Joseph Kerrigan has been elected secretary of the Houston branch of Marine Transport Workers Industrial Union No 510. All mail should be sent him at 1316 - 75th st., Houston 11, Texas.

R. VAUGHN.
Outgoing Secretary.

### [illegible]ORDE[illegible] LITE[illegible]ATURE

[illegible]at new 32 page rai road pamphlet, price 20 cents, is soon due off press, also two types of Railroad leaflets, the leaflet "It's Poison"

## Book Reviews

THE LEGAC[illegible] OF SACCO AND VANZETTI, *by G Louis Joughin and E[illegible]nd M Morgan*. 600 pages, published by Harcourt Brace & [illegible] price $6.00.

In 1939 the L[illegible] of Massachusetts was changed [illegible]vide that in a capital case t[illegible]ole case on appeal is transfer[illegible] the Supreme Judicial Cou[illegible]r its consideration of the l[illegible]and the evidence, and the cou[illegible] order a new trial if sat[illegible]that the verdict was against [illegible]w or the weight of the evid[illegible] or because of newly discov[illegible]evidence, or for any other rea[illegible] that justice may require" Th[illegible] one of the more substantial r[illegible]s of the Sacco-Vanzetti Case

As Arthur [illegible]inger points out in the introd[illegible] to this book, most of us [illegible]recall where we were and wh[illegible] we were doing when the l[illegible] hope for saving Sacco and V[illegible] from the electric chair wa[illegible]t. and that few avents stand [illegible]n this way in the memory of [illegible]any people There have been o[illegible] cases where there was a widespread refusal to believe that the evidence justified the verdict — but they have left no such imprint [illegible]s. This book is primarily a s[illegible] of society and literature. us[illegible] case as key As a method [illegible] historical writing in this resp[illegible] is almost unexampled since [illegible]e Hammonds explored the m[illegible] of the rich in "The Town Labor[illegible]

As basis f[illegible] study, the evidence and law[illegible] the case are first scrutinized by [illegible]mund Morgan of Harvard Law [illegible]ool and a foremost authority [illegible] the law of evidence The tot[illegible]aterial contained makes it alm[illegible] difficult to review as an enc[illegible]pedia About the only thing bearing on the case and its handling t[illegible]s not explored is what the [illegible]munists did with the money t[illegible]ollected for it

The entire [illegible]ok, and especially Morgan's p[illegible] of it, deserve serious study [illegible] all who are concerned eithe[illegible]ith labor cases, or defendants p[illegible]t a disadvantage by any strong [illegible]ejudice It is painfully plain th[illegible] the men were not competently [illegible]ended. The case is given here w[illegible] scholarly impartiality [illegible] to cast sus[illegible] [illegible]eration, mak[illegible] the book [illegible] sharply wit[illegible] he strongly [illegible] vated argun[illegible] hitherto available. outside of [illegible]ix-volume "transcript" publi[illegible] by Holt in 1928 that few have read.

In brief what is the evidence? Against Vanzetti nothing worth consideration outside of his connection with Sacco Against Sacco what? Three witnesses that he was there before the shooting, two of whom had no chance for accurate observation while the third is completely unbelievable, and one witness to say that Sacco shot, who subsequently denied his testimony and who could not have seen the shooting according to the evidence given by his fellow workers Besides this, the bullet alleged to have killed Berardelli, and a revolver Sacco acknowledged to have been taken from him at the time of his arrest

The question of guilt or innocence thus boils down to whether or not that bullet came from that revolver According to Morgan's showing the inexcusable laxness of the defense in regard to the expert's testimony regarding this bullet seems to point to a hope of defeating it by trickery through the defense's expert To this reviewer the certainty of the prosecution that it came from Sacco's revolver, prior to examination, and in fact in the absence through the whole case of the most rigid examination possible, creates a suspicion that they may have been so certain from having submitted a bullet they fired in place of one from the body of the murdered man What's there to stop the prosecution from doing that sort of thing?

For appraisal of the evidence it seems hard to beat the conclusion of Gov Al Smith

> **"I haven't studied the case as I should have to study it if it had to come before me, but if I had studied the case, and it left me in such a state of mind that I had to call in a couple of college presidents to tell me what to do, I'd call that a reasonable doubt and let them go free."**

But this study also makes abundantly clear why this "common sense" view of Al Smith did not prevail. In the language of Robert [illegible] the Bo[illegible] Her[illegible] lishe[illegible] **order required the execution of S and V." It was this momen**tum" that made all rationality impossible. No one outside of Judge Thayer seemed to relish his part in sending these men to the electric chair Even the prosecutor who had arranged to suppress the testimony that the state's ballistic expert wanted to give, that the fatal bullet could not be said to have been fired from Sacco's revolver, wept at the verdict he secured. The legal steps to avert execution were vain appeals to men practically powerless under the procedure and tradition of the law, to look at the facts and do justice The 1939 change in the law of that state may remedy some of these difficulties, but it does not remove the "momentum of the established order" of which publisher O'Brien spoke When labor exposes a frame-up the problem always occurs. How can the state concede error and yet save its prestige?

There is in this book an extensive study of the literature relating to the case during its seven long years, and its subsequent legacy The extent of this literature is evidence of the social importance of the burning of this shoe-maker and fish-peddler Sinclair's Boston receives credit as the most painstaking study of the case, there is Well's "Mr Blettsworthy," Asch's 'Pay Day," Dos Passos'' "Big Money," Farrell's "Bernard Clare" to mention a few novels, there are plays like Anderson's "Wintersat" and "Gods of Lightning," and Thurber's 'Male Animal', poems beyond enumeration, of which the professor of literature who writes this section believed a dozen have the quality that will make them endure as literature — beside the voluminous technical and legal studies that have been written during and after the case

Much of this world becomes clear to one who understands the history of the prosecution of these two men so much so that this reviewer hopes to return to material in this volume on some other occasion, for it is one that helps make the world and its injustices understandable —F T

### C.P. TRIAL NOV. 15

The trial of the leading lights of the Communist Party is set for Nov 15, a month later than original date They are charged with teaching forcible overthrow of the government.

## The Case for Joe Hill

(Continued from page 1)

of the Morrison store on a tip to the police from Dr F N. McHugh He stated that Hill came to his office about 11 45 p.m., Saturday. Hill said he had been shot in a quarrel over a woman, that he was as much to blame as the other fellow, and wanted the affair kept quiet A bullet had entered his chest and gone through his body

### Doctors See Gun Handle

As McHugh finished dressing the wound, Dr A A Bird, passing, saw a light, looked in McHugh asked him to take Hill in his car to Murray, two and a half miles away. While Joe was putting on his clothes a shoulder holster containing an automatic pistol fell from his coat Dr McHugh handed it back to him The doctors **saw only the handle of the gun.** (All emphasis in this article is by its authors, and reasons for it will be obvious.)

Asked where that gun was, Joe said he threw it away when Dr Bird, who had engine trouble, got out to crank his car Morrison was killed by a 38 caliber automatic pistol, probably a Colt Hill declared that his gun was a 30 caliber Luger of foreign make Endeavoring to prove this shortly before his trial, he went with detectives to a pawnshop where he had bought his weapon. But the shop records showed only the purchase, not the caliber nor make The clerk who sold that gun was now in Chicago Telegraphing an inquiry to him, Joe returned to jail waiting hopefully for an answer An ironic sequel to that appears later in this narrative

Otto Applequist, also a machinist, who had been rooming with Hill, disappeared after the murders A police dragnet was put out, on the supposition that he was one of the assassins, though a photograph of his strikingly Scandinavian face was not recognized by any witness. The quest was futile.

### Jailed in Dock Strike

If the police did not already know that Hill was an aggressive IWW member, they learned it when they checked with San Pedro (Calif) officers One of the Eselius brothers told them he had worked with Joe there. Hill had served thirty days in jail for his activity in a San Pedro dock strike a few months earlier, he was strike committee secretary, the charge was "vagrancy," a frequent charge against strikers in California in those days Soon after Hill's arrest in the Morrison case, the press publicized his IWW connections.

Having no money to hire counsel, Joe acted as his own attorney at his preliminary hearing before a Justice of the Peace on January 28, 1914 He cross-examined the state's witnesses briefly No one could identify him as one of the killers, but some of the witnesses spoke of similarities between one of those men and the defendant Merlin Morrison said Hill resembled one of the two in general build. Joe then asked him "When you saw me in the jail the morning after my arrest, did you not say. 'No, that is not the man at all. The ones I saw were shorter and heavier'." Merlin denied saying this.

The doctors told their stories. Testimony about bullets was given, and about a red bandanna handkerchief being found in an alley near the Morrison store on the murder night and an[illegible] [illegible] "Many persons have red handkerchiefs and it is no uncommon thing to lose them"

Apparently Hill was unworried that night, though he was held for trial, and his confidence in being exonerated continued. In May he wrote Katie Phar, 10-year-old singer of his songs and daughter of a Spokane IWW member. "My case is coming up this month, and everything looks good."

### Insidious Forces at Wark

But insidious psychological forces had been working against him. Using "information" from the police, the local press had been evolving a shadowy picture of his alleged past, which helped convict him in the public eye long before his trial.

The Deseret Evening News of January 22, 1914, printed a letter from the San Pedro (Los Angeles) police to Police Chief Grant of Salt Lake asserting that Hill and Applequist held up a street car in 1913, that Hill was arrested, but that neither car crew nor passengers could identify him. Also that Hill was then sentenced to 30 days in jail on a vagrancy charge.

Two days later the same paper published another story with a grossly misleading and prejudiced two-column bold head:

(Continued on page 3)

## The Preamble

### of the Industrial Workers of the World

☆ ★ ☆

● THE WORKING CLASS and the employing class have nothing in common. There can be no peace so long as hunger and want are found among millions of working people and the few, who make up the employing class, have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system.

We find that the centering of management of the industries into fewer and fewer hands makes the trade unions unable to cope with the ever-growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers.

These conditions can be changed and the interest of the working class upheld only by an organization formed in such a way that all its members in any one industry, or in all industries if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."

● IT IS THE HISTORIC MISSION OF THE WORKING CLASS to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown. By organizing industrially we are forming the structure of the new society within the shell of the old.

# Joe Hill Frame-Up Exposed from Record

(Continued from page 2)

"Hillstrom's Crime Record in California Sent Here" This topped photographs of Joe, "made after the arrest of Hillstrom and his associates as the car robbery suspects" Nothing was said about the failure to identify either man Undoubtedly men who later served on the Hill jury read those stories and were influenced by them, though such "information" was not used as evidence at the trial.

Actually Hill had been secretary of the strike committee during a dock strike and because of this activity an attempt was made to frame him for the street car hold-up When that attempt failed he was given 30 days for purported vagrancy. This was his only "crime record"

### Stage Set for Conviction

Earlier the **Salt Lake Tribune** reported that a cartoon of a masked man shooting a policeman, "thought to have been drawn by Hillstrom," was found by the police in a suitcase left by Applequist. But the **Deseret News** said that although the lodging house room where the two stayed shortly before January 10 "was searched carefully nothing to serve as incriminating evidence" was discovered. That cartoon is not mentioned by the Utah Supreme Court in its detailed summation of the evidence But without proof that it was made by Hill, it was one of the props used in setting the stage for his conviction

Offered aid by IWW members, Joe at first declined it, holding that his plight was a personal affair Not until April did the IWW enter the situation, when a defense committee was formed The first story about the case in the IWW press appeared April 18 in **Solidarity**, then issued in Cleveland.

It was a bad time for an IWW organizer to be tried for a felony in Salt Lake City Its public officials were hostile to the Industrial Workers of the World, derisively dubbed Wobblies. With that city as a center, IWW Local 69 had been notably militant in 1913 and 1914. Every construction camp, mine, stone quarry, and other industrial job within 100 miles had its little group of organizers—"agitators," the employers called them IWW street meetings drew crowds.

### Thugs Attack IWW

In June, 1913, there came a big successful strike at Tucker, 83 miles southeast, in which 1,500 "shovel stiffs" employed by the Utah Construction Company walked out. They had been building a grade on the Denver & Rio Grande Railroad, rising six miles to lofty Soldier Summit Joe Hill's songs, in the IWW's little red songbooks, were sung on the picket-line Solidarity of the strikers astonished the company heads, who quickly granted a wage increase from $2 25 to $2.50 a day Soon afterward thugs began to attack IWW groups in various parts of Utah

On August 12 Axel Steele, ex-deputy sheriff then head of Utah Copper Company guards in Bingham Canyon, led fifteen roughnecks, most of them using revolvers as clubs, in breaking up an IWW street meeting in Salt Lake City, causing a riot, which the fire department stopped with water from a fire hose. That meeting had begun with a Joe Hill song, **Mr. Block**.
